CAUTION.

BASS & CO.'S ALES.

PROCLAMATION OF THE JAPANESE GOVERNMENT.

TRANSLATION.

"The British Authorities have complained that certain parties in this Country have been imitating the Trade Mark of Messrs. Bass & Co., a firm of Brewers in the English capital and selling Beer so labelled. The manufacture of Beer is not prohibited in this country, but it is wrong, according to Commercial law, to imitate Trade Marks.

"Henceforward, therefore, persons whose business is Brewing Beer must apply for LICENSES, and send in a specimen of Trade Mark not likely to be confused with others.

"The above to be universally notified.

"9th Month, 1871. (Signed)
"TOKEI FU."

In consequence of extensive forgeries of our Labels and Trade Mark having come to our knowledge, the attention of the public is called to the above PROCLAMATION.

We, therefore, CAUTION all persons against either selling or purchasing, as our manufacture, beer, whether in bottle or in cask, bearing such forged and fraudulent Labels, Capsules or Trade Mark.

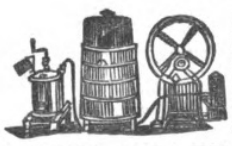
BASS & Co.,
London, and Burton-on-Trent.

REFERRING TO THE ABOVE.

CAMERON & SAUNDERS,

AGENTS TO BASS & CO.,

INTIMATE THAT ALL



Bass's Pale Ale sold by them in bottle has Messrs. Bass's Label, Cameron & Saunders' Green Caution Label and Capsule affixed to each bottle; and that all three bear Messrs. Bass & Co.'s Signature and Trade Mark (a Red Triangle)

AND ALSO THE WORDS.

"Cameron & Saunders, London."

W. & C. SCOTT & SON.

FIRST PRIZE MEDAL and DIPLOMA OF HONOUR awarded, CENTENNIAL EXHIBITION, Philadelphia, 1876. For excellence of Materials and Workmanship in their PREMIER QUALITY and medium grades. Their New PATENT TRIPLEX action and COMPENSATING LUMP.

The attention of Sportsmen is requested to the above new system of action. Its superior strength and solidity imparts greatly improved shooting powers. Hard hitting being the desideratum required is obtained by this powerful Gun.

Prices of the TRIPLEX: £22.10.0, £30.0.0, and £37.10.0. This latter is our highest quality and is marked "THE PREMIER QUALITY."

Excellent DOUBLE-GRIP BREECH-LOADERS at £8.10.0, £12.0.0, £16.0.0 and £20.0.0. Shooting guaranteed.

OUR PATENT TOP LEVER with PURDEY solid double bolt. Shooting guaranted. Sound plain finish £15/0/0. Well finished, good materials £21.0.0. Cases and implements £4, £6 and £8 extra.

In the New York International Gun Trial competition, 1873, the Committee awarded our guns the Diploma, being declared first for points of merit of action, materials, proportion and shooting qualities.

Extract from Forest and Stream, New York, December 26th, 1876. Contributed by one of the judges of awards of guns at the Centennial. "The crowning glory of the display was the case of W. & C. Scott & Son. This firm has sent more good guns to this country during the past few years than any other, and they especially commend themselves to American sportsmen from the fact that they furnish good guns, honestly made, and of high shooting powers at very moderate prices. Their TRIPLEX ACTION combines, in the highest degree, strength with simplicity, and it must rapidly secure the favor of all who test its merits."

OUR PATENT COMPENSATING LUMP strongly recommended; should be ordered on every gun (cost, 30 shillings extra). For the Sportsman abroad, this invention is invaluable, being secured against the joint becoming loose after several years wear.

CHOKE BORED GUNS.—Slight, Medium or Full.

BREECH LOADERS in all systems from lowest qualities.

SINGLE and DOUBLE MUZZLE LOADERS.

Makers of the NEW SWINBURN-HENRY Sporting Express and SWINBURN-HENRY RIFLES and Carbines taking Government Ammunition. This Rifle is a great improvement on the Martini.

BUGS, FLEAS, MOTHS, BEETLES,

and all other insects are destroyed by

KEATING'S INSECT DESTROYING POWDER

which is quite harmless to Domestic Animals.

Sold in tins 1s. and 2s. 6d. each, by THOMAS KEATING, St. Paul's Churchyard, London, and all Chemists. The 1s. tins are so made that the Powder is easily distributed from them, and will be found a great improvement on the old paper packets. In exterminating Beetles the success of this powder is extraordinary, and no one need be troubled by those pests. It is perfectly clean in application.

SOLD IN TINS AND BOTTLES, BY ALL DRUGGISTS.

KEATING'S BON BONS OR WORM TABLETS

A PURELY VEGETABLE SWEETMEAT both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for INTESTINAL or THREAD WORMS. It is a perfectly safe and mild preparation, and is especially adapted for Children.

TESTIMONIAL.

Mr. KEATING. Medical Hall, Gildersome, Nov. 28th, 1876.

Dear Sir,—I think it nothing but my duty to inform you of the immense sale I have for your Worm Tablets, which I may justly say is enormous, and in every case gives the greatest satisfaction. I have now in stock two bottles containing the Round Worms brought me during the last few days by customers, one Worm 40 yards long. I dare not be without the remedy.

Yours respectfully,
M. E. WALKER.

SOLD IN BOTTLES, BY ALL CHEMISTS AND DRUGGISTS.

Proprietor—THOMAS KEATING, London.

REWARD AND CAUTION.—Whereas I am informed fraudulent imitations of this unsurpassed remedy have been sold, I hereby request anyone knowing of the vendor of the same to communicate with me, and on conviction of the offender a liberal Reward will be paid.

THE GREATEST

WONDER OF MODERN TIMES!
HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!
HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of al kinds It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

DIED.

At No. 72, on the 8th instant, at 1 a.m., CHARLIE H. COOK, aged 4 years 11 months.

Notes of the Week.

Mr. Terashima, Minister of Foreign Affairs, has gone to Kiôto, and it is stated that Mr. Mori who has just returned from Pekin is at the *Gaimusho*, acting in his place. There is a wide spread rumour to the effect that Mr. Ito is in Tôkiô, but we give it with all reserve. Oyama Tsunayoshi, ex-Governor of Kagoshima has been sent to Nagasaki, for trial, together with thirty more of those implicated in the southern rebellion; but strange to say the judges who were to try them, Ogi and Yamada, have left for Tôkiô. Again the air is filled with rumours of overtures made, on the part of the Government, to effect a compromise with Saigo, which it is said are rejected by the sturdy General, who refuses to listen to the men who plotted his assassination, and declares that he will treat with the Emperor alone. Without having confirmation of these reports, it is quite reasonable to suppose that the Government is anxious to bring about a settlement by the only course which seems likely to preserve, at least, a portion of its credit, and to save it from utter defeat, and there is little doubt that the rumour has very good foundation. The pressure that is being brought against the Government cannot long be withstood. It is coming to the end of its resources, both of men and money, while it is making no headway whatever against those who have risen up against it. The fighting in Kiushiu during the last ten days has been of the most insignificant nature, and in most cases the insurgents have everything their own way. They have no lack of cannon, arms, ammunition, and supplies of all kinds, and are in numbers largely superior to the Imperialists. It is only by compromise that a speedy peace can be looked for, and it would probably have to be made on such terms as Saigo and those who think and act with him might choose to dictate. He knows full well the power he now possesses, and unless his demands are granted, he will continue the war until he enforces them.

The greatest disquietude continues to reign in Tosa. The Government evidently fear the worst, as they have already sent six thousand troops and policemen thither, and a collision may take place at any moment. It is reported in the native journals that two thousand of the Tosa *samurai* have "disappeared," a most vague and unsatisfactory announcement, for examples are not wanting of these sudden vanishings being followed by unexpected manifestations. A number of Satsuma *samurai* have also managed to cross over to Sikoku, where also, it is said, Kirino has gone. In Suruga, the Tokugawa *samurai* are showing signs of turbulence and troops have been despatched thither. The *Nichi Nichi Shimbun* of this morning does not contain a single item of intelligence from the seat of war. The *Chôya Shimbun* states that great agitation prevails at Uwajima in Awa. From Chôshiu there is no further news.

We are informed that the death of the Imperial General Nodzu, which though often rumoured has never been officially announced, actually took place some weeks since. He was really the only Commander in whom the troops had any confidence, and there is no one on the side of the Government who is competent to fill his place.

The long period of inactivity on the part of the Imperialists that followed their occupation of Kumamoto was very severely commented on by the native Press, and it certainly seemed to all onlookers passing strange that no efforts were made to overtake or arrest the movements of the Satsuma forces, who were allowed ample time to accomplish a leisurely retreat, and to recruit their strength while perfecting their defences. It will be remembered that one or more of the native papers stated that the cause of the delay was the refusal of the troops to fight under the leadership of Yamagata, although it is supposed that differences existed between Kuroda and Yamagata. This report was only set afloat to conceal the real reason, which is stated to be as follows. In the conflicts before Kumamoto, Saigo had taken a large number of prisoners. After the occupation of the castle, he caused these men to be drawn up, and addressed them, telling them that they had been made to fight in the cause of a Government of whose intentions they were profoundly ignorant; that they belonged to a class that were not trained to war, and that their duty was to till their fields and look after their families; that he was not fighting against them, or men of their class. He then released the whole of them, giving to each man a small sum of money. When those who returned told their comrades of this generous action, there was great excitement among the Government troops, and they refused to fight against Saigo. Much disaffection ensued accompanied by desertion, in order to account for which it was reported that Yamagata was unpopular with the army.

On the 14th May last, a very remarkable disturbance of the sea took place at Kamaishi in Heigori, and enquiries at the different light-house stations along the Eastern coast prove

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

that the same phenomenon was observable from Hakodate to Sagami.

Between 9 and 10 o'clock in the morning, the tide began to rise with such rapidity, that within half an hour the fishing villages, upon either side of the harbour, were flooded, to the great consternation of the inhabitants, who had however hardly commenced to remove their effects to the neighbouring hills for safety, before the water had subsided again, and even receded to an unusually low level. At noon the same alarming occurrence repeated itself, and again at 2 o'clock or thereabouts, after which it continued to recur at shorter intervals, until between five and six p.m. the water level rose and fell not less than than ten feet every five minutes. How long after sunset this state of things continued we are unable to say, but it was affirmed by the fishermen—who spent the night upon the hills with their families, in anticipation of some such great calamity as the inundation which swept away their habitations and wrecked their boats seventeen years before and which grew from the same commencements—that by midnight the sea had resumed its usual tranquillity. It is worthy of record that during the continuance of this disturbance the weather was calm and mild, and the sea both within and outside the little harbour unruffled. Nothing of the nature of wave or roller was apparent at any time, the water seeming simply to swell up and then quietly subside. It was surmised by certain gentlemen who witnessed the phenomenon, that a destructive earthquake upon the coast of America was the cause of this occurrence, and the conjecture has proved to be correct, as by last mail, telegraphic advices were received, dated Valparaiso, May 12th, of the total destruction of the city of Iquique in Peru by one of these terrible convulsions.

In our issue of the 7th of August, 1875, we gave our readers a translation of the Constitution and Regulations of the Japanese Courts. They have been since amended, and we print elsewhere a Notification from Her Britannic Majesty's Legation, publishing, at the request of the Japanese Minister for Foreign Affairs, for the information of British subjects, the Regulations in their amended form. We have received from Her Majesty's Legation another Notification, which will appear in our next issue, publishing an Arrangement which has been concluded concerning the procedure in cases brought by British subjects in Japanese Local Courts as Courts of First Instance, or in the Superior Courts either as Courts of First Instance or Courts of Appeal, and intended to facilitate the presentation and prosecution of their claims by British subjects.

An officer of the English army has written to the *Times* stating that an international Anti-Torpedo Association is about to be set on foot, which has for its object the urging upon all countries to discontinue the manufacture and prohibit the use of the torpedo. He states that nations unanimously agreed that chain shot and explosive bullets should not be used in war; that poison is prohibited, and that torpedoes are actually more subtle and deadly than poison, inasmuch as there is no antidote or escape from them. He then goes on to say that were he permitted to fire from a mortar gutta percha bags filled with strychnine, and charged with burster and time fuse to cause the bag to burst and scatter its contents over some obstinate city or fort which would not capitulate, the visitation would be far more merciful in its way to the people of the city or fort than the use of torpedoes against crews and ships, because strychnine could be seen and avoided by flight, whereas torpedoes secretly moored or even fish torpedoes, "insure complete, sudden, unexpected and unavoidable destruction" He further adds, as a powerful argument against their continued use, that several clever artisans have been killed while pumping compressed air into the tails of loaded fish torpedoes, and surmises that had the torpedoes been loaded with gun cotton for service on board ship, or had one of them exploded during action, or had a shot or shell by chance struck the vessel at the time of starting the torpedo on its death track, the consequences would have been very fearful. Undoubtedly they would. The consequences were very fearful to the Turkish monitor that blew up on the Danube recently, owing to a shell penetrating the boiler and thereby exploding the magazine. Humanitarians might therefore agree that vessels of war should no longer be provided with magazines or boilers. Many clever artisans have been killed by shells exploding while being filled, while examples are not wanting of terrible accidents occurring from the bursting or unexpected discharge of cannon. Let us therefore have an anti-cannon association. If the humane and gallant officer should seriously propose to fire strychnine shells into some beleaguered city, there could be no possible objection to his doing so provided he chose to pay his own druggist's bill. Unless it be the custom of the besieged to taste the contents of all shells that may be dropped upon them, we cannot see what possible harm can accrue to them by the use of strychnine shells. The fact is, that however humane the motives which prompt the founding of the International Anti-Torpedo Association, their arguments against the use of these engines of destruction are singularly weak. As well at once strike at the root of the evil and endeavour to get nations unanimously to agree to abolish the use of gunpowder. It would be a good thing if science could so progress as to make wars impossible. It is a very weak humanitarianism that objects to the quality of murder, not to the murder itself.

In two of the translations that appear in our columns to-day on the situation in Tosa, one is the letter of a Tosa man and the other an editorial criticism of the opinions expressed. There is also a sensible article on the absurdity of supposing that the war was to end with the taking of Kumamoto. The metaphors used in Japanese writing are often—as in this case—more forcible than nice, but the comparisons drawn are amusingly apt.

To what may be ascribed the depressed state of athletics and sports in this settlement? Are they influenced by the bad state of trade of which so many complain, or is trade so brisk that our residents have no time to devote to pleasure? Throughout the East cricket finds ardent supporters, and lovers of the game in Yokohama never used to be a whit behind the other ports of China and Japan in their pursuit of it. Yet although the Cricket Club can boast of more members than it has possessed for some time past, the first match of the season was played only yesterday, "Settlement *versus* The Fleet." As it was, the "Settlement" failed to bring forward a team composed of their best players to meet their opponents; their fielding was as bad as could be well imagined, a fault which was evidently due to want of practice, so that it is no matter for surprise that they were thoroughly beaten by "The Fleet," who won the match with four wickets to go down. As the summer is now upon us, it can hardly be expected that another match will be played before the Autumn, but we hope that the Club will then look to its laurels, and make an effort to record a long list of well contested and frequently won matches.

The Very Rev. Dean Butcher will preach in Christ Church to-morrow morning.

Some short time ago we called attention to the fact that a number of Chinamen had been sent to the tea districts near Kiôto for the purpose of making black tea of the Japanese leaf. We regard the success of the undertaking as quite problematical, but as many people imagine that black and green teas are the products of entirely different shrubs, we publish elsewhere in our columns an account of the process which is gone through in China to produce the two varieties.

We are glad to note that that the Amateur Dramatic Corps of H. M. S. *Audacious* are going to give another performance at the Gaiety Theatre on Thursday evening next, the 14th instant, in aid of the *Thunderer* Relief Fund, which we trust will meet with support from the residents here worthy of the object for which it is given. Judging from what we have already seen of the *Audacious* Dramatic Corps, we feel sure that their performance will be one worth witnessing and we heartily wish them a good house.

The trial of Peter Garhard Hansen for complicity in the forgery on the Hongkong and Shanghai Banking Corporation, took place yesterday, when the prisoner, by advice of his Counsel, pleaded guilty to the third count of the indictment, which runs as follows:—

Alfred Henry Charles Haselwood aforesaid further charges that Anton Bennett *alias* Julius Hakon Kinchoff at some time unknown to the aforesaid prosecutor but before the said seventh day of February in the year of our Lord one thousand eight hundred and seventy seven feloniously did forge a certain note of the Hongkong and Shanghai Banking Corporation commonly called a Bank note for the payment of five hundred Dollars with intent thereby then to defraud. And Alfred Henry Charles Haselwood aforesaid further charges that the said Peter Gerhard Hansen before the said last mentioned felony was committed did *maliciously and feloniously incite move procure hire counsel aid and abet* the said Anton Bennett *alias* Julius Hakon Kirchoff the said last mentioned felony in the manner and form aforesaid to do and commit against the form of the statute in such case made and provided and against the peace of our Lady the Queen her crown and dignity.

It will be seen that in this count the prisoner was charged that he did "incite, move, procure, hire, counsel, aid and abet" in the felony, and it might perhaps appear that the sentence of hard labour for one year, which was passed on the prisoner, was a lenient one. It should be remembered, however, that Sir Edmund Hornby long ago laid it down as his opinion that one year's imprisonment out here was held as equivalent to three years at home, and probably the remembrance of this ruling influences the decisions of those who preside over criminal cases here, though we are inclined to think that in many instances the offender gets an undue benefit by this consideration.

After an interval of three months the Asiatic Society are about to hold a meeting in Yokohama, it having been announced that Dr. Syle will read a paper at the Grand Hotel on Wednesday evening on "Primitive Music, especially that of Japan." The subject is an interesting one, and it is to be hoped that the members of the Society will attend in force and show a landable curiosity to discover what Dr. Syle can find to say in favour of the music of this country. Although much that is interesting may be said of its construction, still to most of us the mere mention of Japanese music conveys anything but a sense of pleasure, as we know it only by the monotonous strumming on the *samisen*, or ear piercing notes of a flute, often supported by the too liberal base of a noisy drum, altogether making anything but a "concord of sweet sounds."

From the "Japan Mail Daily Advertiser."

Monday, 4th.

From the *Akébono Shimbun.*

About one hundred and fifty *samurai* of Chôshiu are said to have broken out at Sasanami in that province. Some fighting is said to have taken place on the 31st of last month.

The 1600 police men enrolled at Miyagi *ken* (Sendai) will arrive at Tôkiô in a day or two.

A telegram despatched from Kiôto at 11.05 p.m. on the 31st ultimo announces that the troops of the second division of the Imperial army attacked and took possession of the rebel positions on Terakaku-yama. The pickets of the Imperialists are now within twenty *chô* of Hitoyoshi, but as the roads are so bad and the troops fatigued, an immediate assault upon Hitoyoshi cannot be made. Such being the case, the main body have pitched their tents on Mosui-yama, and are waiting for the right and left wings to come up.

Some troops of the 2nd division had an engagement with the insurgents on the 30th instant and took possession of some batteries at Shi-ita-goi.

The Imperialists stationed on the banks of the Kumagawa have advanced as far Mawarise.

All the Imperial forces intend to unite and advance further towards Hitoyoshi.

From the *Nichi Nichi Shimbun.*

On the 31st instant about two hundred policemen enlisted at Aichi (Owari) and Miyagi (Sendai) *ken* arrived at Tôkiô.

From the *Chôya Shimbun.*

A telegram despatched from Yamaguchi at 1.30 a.m. on the 1st instant announces that on that night a suspicious looking person was arrested and examined in Yamaguchi. He confessed that some two hundred men (of whom he was one) had, the night before last (the 30th), proposed to make the enlisting of *samurai* as troops a pretext for taking possession of the arms and ammunition at the depôt at Hagiwara, and then to march through Yamaguchi into Kiushiu.

A telegram despatched from Kiôto at 2 a.m. on the 31st ultimo announces that reports have been received from various quarters that some *samurai* of Hagi and Susa, both in Chôshiu, had risen to arms and were advancing towards Yamaguchi by the country roads. Policemen have been called out to oppose them.

At about 1 a.m. on the 1st instant some two hundred prisoners at Mayebashi in Jôshiu (Gumma *ken*) broke out of the prison and escaped, three only having been since arrested. These confessed that they intended to break into the prison at Takasaki and cause a great disturbance.

The new recruits of the Tôkiô garrison who have been sent up for drill to Narashino-hara, are to be recalled immediately, and sent to Kobe on the 3rd or 4th instant.

Tuesday, 5th.

On Sunday morning some children who were searching for birds' nests on Hachoji-yama, beyond Homoko, came across the body of a young Japanese who had evidently recently committed suicide by shooting himself in the mouth with a revolver. On examining the body, a letter was found giving name and reasons for the act, which must have been committed on Saturday evening, as several persons living in the neighbourhood remembered seeing the deceased pass in a *jinrikisha* on his way to the spot where the body was discovered. According to the statement found upon him the unfortunate young fellow, who had resided for some time in England, had returned from Shanghai last week by the *Saikio Maru*, and was living at some hotel in Benten-dori. Inability to find means to meet money engagements was stated to be the cause of suicide. He was only nineteen years of age.

Hachoji-yama has an evil reputation, as the Japanese say that it is a notorious spot for suicides. In former years the average was said to have been one a month, and they are very frequent even now.

From the *Mainichi Shimbun.*

Some troops from Wakayama *ken* (Kishiu) were creating some disturbance at a theatre in Dotombori, Osaka, on the 28th ultimo. The police on duty interfered and remonstrated with them, a proceeding which only made matters worse, as the bugles were sounded and the whole regiment quickly assembled with the announced intention of attacking the police. The soldiers were restrained by their officers from the projected attack, but the latter warned the police that they were doubtful if they could keep their men quiet for any length of time. About eight hundred police assembled to repel any attack that might be made, and of course the Dotombori quarter of the city was in a great state of excitement.

From the *Hôchi Shimbun.*

A telegram despatched from Kumamoto at 11 p.m. on the 2nd instant announces that since the 30th of last month the Imperialists, fired with zeal, have been fighting in a desperate manner. The town of Hitoyoshi was taken from the insurgents at 9 a.m. on the 2nd instant, and destroyed by fire.

From the *Chôya Shimbun.*

Two hundred and twenty four policemen enlisted at Fukushima *ken* (Iwashiro) arrived at Tôkiô on the 3rd instant.

From the *Nichi Nichi Shimbun.*

A telegram despatched from Kumamoto on the 2nd instant at 8.11 p.m, announces that at dawn of the 31st ultimo the Imperialists attacked the villages of Uyashiki, Semenshowa and Matsgakubo, but greatly to their surprise could not find a single insurgent. They then advanced through Watari-mura to Nakagano, a village about one *ri* from Hitoyoshi, where they encountered a large force of rebels. At first the Imperialists were taken unawares but finally obtained an advantage over the rebels.

A telegram despatched from Kumamoto at 10.35 a.m. on the 2nd instant announces that the Imperialists have advanced as far as Chushiwo-mura, on the highway to Demidzu. Spies are sent to Susowa daily to watch the movements of the rebels.

The *Keiho Maru*, belonging to the Mitsu Bishi Company, will leave Shimonoseki on the 17th instant for Corea, in the service of the Home Department.

Saigo, with one battalion of picked men, has taken up his position in the castle at Sadowara in Hiuga, and has constructed strong stockades on the neighbouring hills. The rebels seem to have used up most of their powder, for all that which was held by

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the farmers and hunters has been seized and used by the rebels. All the *samurai* of the lower class, called *Gôshi*, are being enlisted into the rebel army.

Kirino is also in the province of Hiuga at present.

Wednesday, 6th.

We published the following in our Overland Mail issue yesterday :—

Just as we are going to press, we hear of a most shameful murder, or murders as it may turn out, committed last night, between seven and eight o'clock, by a party of sailors belonging to the German frigate *Elisabeth*, the victims being some sailors and bandsmen of the French flag ship *Atalante*. It appears that on Sunday a fight had taken place between members of the crews of these vessels, in which the Germans got the worst of it. Yesterday afternoon, about half past five, a body of the Germans, numbering about a hundred and thirty men, landed with the avowed intention of revenging themselves for the defeat of the previous evening, and distributed themselves throughout the settlement on the look out for any Frenchmen they might come across. A large number of these went during the evening to the Takashimacho and there found twelve men of the *Atalante*, mostly bandsmen, who had been dining quietly at a restaurant. The Germans at once made a dastardly and unprovoked attack on them with stones, bottles and knives. The unfortunate French sailors scattered and ran, but were followed by their assailants, who caught and wounded four of them. One was stabbed in the head in three or four places, and also in the groin, the wound perforating the intestines so that his recovery is almost hopeless. Another, a quartermaster, in his attempt to escape, ran down an alley having no outlet and was pursued and deliberately stabbed in the heart. Two of the bandsmen were seriously wounded. Police constable Hazell saved the life of one French sailor by pushing him into a house, just in time to escape the notice of a company of Germans who turned the corner at the moment. The assailants then proceeded to stop every *jinrikisha* and question the occupants as to their nationality, and it would doubtless have gone hard with any Frenchman they might have encountered. We hear that the the German vessel not will leave this port until a searching enquiry has been made. In view of the feeling known to exist between the respective crews, it seems especially reprehensible on the part of a commander to permit so large a body of men to leave their ship, and we trust that a strict examination will be held and effective measures taken to prevent the repetition of scenes that are making our settlement shamefully notorious.

At the funeral service which was held at the French Cathedral a very large number of people, amongst whom were the French and German Ministers and Consuls and several officers from the *Elisabeth* and *Atalante*, assembled, and afterwards followed the coffin of the murdered man to the grave.

We learn from the *Akébono Shimbun* that the Satsuma insurgents evacuated Hitoyoshi, as they found its position was such that there was a great difficulty in supplying the town with provisions, and they have therefore preferred to entrench themselves at Shinkô, Takajo, Takaoka and other places in Hiuga, which are situated about forty-five miles from the east coast of that province. Between these places and the coast is the town of Sadowara, conveniently situated on a broad river, and only about five miles from the sea. Spies sent out by the Imperialists report that Saigo himself is at Sadowara, where he is constructing batteries and erecting stockades, evidently showing that he means to make a determined defence at that place. Rice is plentiful in Hiuga, so that there is no fear but that the insurgents will be plentifully provided with provisions, and their position on the banks of the Ishizaki-gawa, the principal river in the province, will be of immense advantage to them. The insurgents have completely evacuated the province of Higo, of which the Imperialists have the doubtful advantage of being in possession. The insurgents now hold the southern part of the province of Bungo, the whole of Hiuga and Osumi, and Satsuma with the exception of the town of Kagoshima itself. As the native papers say, the Imperialists in Kagoshima seem as if *they* were besieged there, and we hear of no advance being made on their part. It is to be feared that the war is far from being finished. Kirino is in the neighbourhood of Kagoshima, where about one half of the insurgent force is stationed, comprising, it is reported, from ten to twelve thousand men. Saigo is said to have about the same number of troops with him at Sadowara, so that all things considered, his change of venue may mean strength rather than weakness.

We had occasion some short time ago to drawn attention to the extreme youthfulness of the levies sent to fight against the Satsuma *samurai*. The troops despatched to the South yesterday by the *Candia* and the *Toyoshima Maru* comprised not only boys but many old men, whose ability to wield the swords with which they were armed must have been sadly impaired by years. The *Candia* is at present under charter, as the transfer of the vessel to the purchasers, the Mitsu Bishi Company, has not yet been effected.

A private telegram received from Kobe yesterday stated that reports are current of further opposition to the Government, which will seriously complicate matters.

Mr. Kikuchi Dairoku, B. A., St. Johns College, Cambridge, and 19th Wrangler 1877, has been appointed Professor of Mathematics in the Tôkiô Dai Gakko.

A Loan for five million taels has been contracted by the Chinese Government. It has been arranged by the Hongkong & Shanghai Banking Company and Messrs. Jardine, Matheson & Co.—*Japan Herald.*

From the *Nichi Nichi Shimbun.*

All the small arms brought back from Kiushiu to be repaired at the Government Arsenal at Koishikawa, Tôkiô, are rusted with blood, and even the stocks of many of them are broken. Some of the pieces were found to be loaded with six or even seven charges, many of them are burst and some of them twisted.

From the *Osaka Nippô.*

A person who has been at Okuyama, a place about 16 *ri* from Yashiro, informs us that on the 17th of May last six of the insurgents came to the police station at Amakusa and surrendered themselves. They said that they had not tasted any thing but sweet potatoes for some time back. They have acted since as guides to the Imperialists, because they are well acquainted with the country round.

From the *Chôya Shimbun.*

The Kanagawa *ken* has been ordered to enrol a number of policemen, for which purpose enlisting will be actively carried on at Odawara, Hachoji and other towns.

From the *Hôchi Shimbun.*

An old Satsuma *samurai*, living at Osaka, on hearing that a son of his had entered the rebel army, visited him at Hitoyoshi. He has since returned, and says that when he arrived at that town Saigo, Kirino, and Murata were there, though the officers in command of the troops in different places were not of high rank. Shinowara has really been killed. Kirino and Murata are determined to collect a large force and fight against the Imperialists. Saigo himself said : "The war is not yet half finished, and the Imperialists must find it pleasant work. I am sure of being able to incite the *samurai* to fight for me, and as there are still plenty of arms and ammunition and provisions, the war can now be continued for two years longer. Some time ago Shimadzu Saburo visited me and said that it was wrong to resist the Imperial forces, but the *samurai* with me would not listen to him. They said that formerly he was their master, but that he is no longer so, and that what they had once commenced they should continue to their lives' end. Shimadzu returned on finding that it was vain to try and persuade them not to oppose the Government."

The O. & O. Co.'s steamer *Oceanic* left for San Francisco this morning, taking 39 bales of Silk and the following cargo of Tea :—

From	San Fran.	N. York.	Other cities.	Total.
Shanghai	—	138	—	138
Nagasaki	—	—	—	—
Hiogo	1	3,330	1,615	4,946
Yokohama	3,371	7,059	5,574	16,004
Hongkong	208	4,065	806	5,079
Total	3,580	14,592	7,995	26,167

Thursday, 7th.

The *Gordon Castle* left Singapore for Hongkong on the 26th ultimo, and the *Glengyle* on the 28th. The M. M. Co.'s steamer *Amazone* left Saigon, outwards, on the 26th ultimo.

The plaintiff in the case of Howles *v.* E. C. Kirby and others, on motion, has been granted permission to appeal *in formâ pauperis* against the verdict given in the Court at Kanagawa. It will be remembered that the case was tried before H. S. Wilkinson, Esq., the Acting Law Secretary, and a jury, and the appeal will now be carried to the Acting Chief Judge at Shanghai.

H. E. Terashima will leave for Kobe by the *Nagoya Maru* tomorrow, the 8th instant.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

From the *Akébono Shimbun.*

One half of the rebels who were under the command of Kishima Kiyoshi, one of the rebel leaders, have surrendered themselves to the Imperialists at Kagoshima. The above has been telegraphed from Kiôto.

After investigation we have ascertained that no great agitation or likelihood of disturbance exists in Tosa. The Government, however, is thoroughly prepared to check any rising which may occur.

From the *Nichi Nichi Shimbun.*

A telegram despatched from Kiôto at 6.30 p.m. on the 4th instant states that the Imperialists, with the intention of taking possession of Kamikibą, have advanced and taken Ôseki-yama, Chozaimonga-hama, Shiro-yama, Kurami and Kukino. As Kukino is not a favourable place for defence the Imperialists have encamped at Mayeno-dani. When these places were taken the rebels were utterly routed and fled, leaving their dead, wounded and arms behind them. Forty of the Imperialists were either killed or wounded.

H. E. Ôgi, the Minister of Justice, returned by the *Nagoya Maru* yesterday.

From the *Hôchi Shimbun.*

The three hundred policemen sent from Kiôto arrived at Yamaguchi, in Chôshiu, on the 3rd instant. One hundred of them have been sent to Hagi, although the riot there has been effectually suppressed. The police are now occupied in arresting those implicated in the rising.

From the *Osaka Nippô.*

As the proposal for the establishment of Militia forces in Tosa was disapproved of by the authorities, a large number of *samurai* went to the Kôchi *Kencho* on the 19th of last month and there had some sharp discussion with the officials.

SECOND NATIONAL BANK.

(Dai-Ni Koku-ritsu Ginko.)

Statement for the week ending 2nd June, 1877 :—

Total Amount of notes (dollars) received by us from the *Shihei-rio*		1,200,000
On hand	851,005	
In circulation	348,995	
	1,200,000	
Reserve Fund		348,995
In Foreign money :—		
In dollars	170,057.52	
In Bank notes and cheques	15,028.58	
Deposited with Foreign Banks	67,908.90	
	252,995.00	
Do in native currency	96,000.00	
	348,995,00	

Friday, 8th.

On the 29th May at 2 o'clock in the afternoon, a frightfnl hail storm visited the neighbourhood of Shirayama-mura, in the province of Mino. It was preceded by thunder and most violent rains. The hailstones were of enormous size, weighing three and four ounces, and caused terrible destruction to the corps of barley and young rice. A similar storm took place at Akimura, which nearly stripped the mulberry trees of leaves. There has, consequently, been great loss among the young silk-worms.

The *Nichi Nichi Shimbun* states that on the 14th of last month a fisherman at Otani-mura, in Fukushima *ken*, on going to examine the bonito nets found a large whale entangled therein. Seven fishing boats proceeded to the spot, and succeeded in so securing the monster with ropes that they were able to drag it into shallow water and despatch it. It proved to be a hundred and twenty feet in length. Wonder is expressed that no accident occurred to any of the boats, and that the whale surrendered without struggle. It was thus probably in a dying condition, otherwise it is not easy to imagine its capture by such primitive means.

The steamer *Gadshill* and the schooner *John M'Kean* have been sold to the Japanese.

From the *Chôya Shimbun.*

About two thousand *samurai* of Kôchi *ken* (Tosa) have disappeared.

From the *Mainichi Shimbun.*

It is said that the *samurai* of Tosa do not permit even a pilgrim to enter their province. Hitherto there were only about four hundred troops garrisoned at Marugame, in the province of Sanuki in Shikoku, but a force of about seven hundred men has now been sent there from the garrison at Himeji. Pickets have been stationed on all sides of Marugame, and policemen belonging to that place have been sent to Awa and Tosa for purposes of investigation. A new fortress has been erected on Cape Wada, in Hiôgo, perhaps as a defence against any assault that might, he made from Shikoku. The garrison at Temposan, Osaka, was reinforced by two companies of infantry on the 3rd of this month.

One regiment from the Sendai garrison has been posted on the sea coast at Sakai.

Eight hundred policemen have been collected in Sakai *ken*, and are being drilled daily. The above account has been sent to us from our reporter at Osaka.

Some people in Tôkiô say that the Government has decided to use the Tosa *samurai* for the suppression of the Satsuma rebels, and to establish a Representative Assembly when an end is thus put to the war.

From the *Hôchi Shimbun.*

The rebels who are at Usuki, in the province of Bungo, have greatly increased in numbers. It was found impossible to keep them in check by the police forces and the *samurai* of Usuki, for which reason one regiment of troops from the second division of the Imperial army has been sent against them.

A telegram despatched from Kiôto at 4.30 p.m. on the 5th instant says that the rebels at Oguchi have, since the capture of Hitoyoshi, retreated to Tano, and those who were at Kakuto have gone to Okoba, a place about 3 *ri* from Hitoyoshi, where they have constructed stockades for their defence.

A telegram from Kiôto, despatched at noon on the 6th instant, announces that forty rebels of Hagi in Chôshiu have been arrested, and tranquillity is again established in that province.

Some farmers of Arima-mura, in Nagasaki *ken*, became riotous and destroyed two school houses, but the disturbance was very soon suppressed.

About five hundred men were engaged in the outbreak which took place in Chôshiu, comprising two hundred men of the former *Kihei-tai* society and the remnants of Mayebara's party, and about three hundred insurgents who had crossed over from Bungo.

From the *Nichi Nichi Shimbun.*

The Army Department is about to enrol five thousand men from Aidzu and Yonezawa, who will be sent South after they have been drilled for a time.

On the 5th instant one thousand five hundred policemen, enlisted at the Niigata, Miyagi and Awomori *Ken* arrived at Tôkiô. Further reinforcements are expected from other *Ken* to-morrow (8th instant).

Saturday, 9th.

About the middle of last April, a collision occurred between the pilot boats *White Cloud* and *Eddie*, owned respectively by the pilots Ewalt and Connor, about twelve miles off Cape Idzu. In consequence of this a suit was brought by the latter against the former to recover $20 for damage done to the *Eddie*, Mr. Bavier, His Danish Majesty's Consul, who heard the suit, deciding that the accident did not happen through the absence of lights on board the *White Cloud*, and that there was no evidence to show on which side the blame lay. Both cutters were steering for the American ship *Haze*, which was coming up the Bay bound for Yokohama, and each was endeavouring to outstrip the other when they fouled. The pilot on board the *White Cloud* hailed the ship, the captain candidly admits ; but Ewalt was the first to reach the deck, and was immediately engaged to pilot the *Haze* to an anchorage. The other pilot was on board a moment afterwards, and disputed Ewalt's right to the pilotage on the ground that the first to hail was entitled to the preference. Captain Wilkinson kept to his engagement with Ewalt, however, refusing to give any opinion in the matter. On arrival in port, the parties agreed to leave the issue of the dispute to the decision of General Van Buren, whom they begged to act as a friendly arbitrator between them. After listening to the views of both parties, and taking what evidence they were able to adduce, the General concluded that owing to the want of proper pilotage regulations no satisfactory decision could be arrived at, though under the circumstances he considered Ewalt entitled to the fee which Captain Wilkinson had deposited in the Consulate, and would therefore pay it over to him. General Van Buren expressed an opinion that it would be well for the pilots to represent to the proper authorities the want of some necessary provision in the regulations, by which all such disputes might be avoided in the future.

On the beach at Hope's Inlet is lying—or was on Thursday evening—the body of a man, which has been cast up by the waves after long immersion. The body is far advanced in de-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

composition, and its appearance indicates that death must have happened many weeks since. Surely the people in the neighbourhood might communicate with the proper authorities, who would doubtless lose no time in making the necessary enquiries, and having the remains decently buried. The body is apparently that of a Japanese.

Anton Williams, who, it will be remembered, was arrested whilst attempting to pass a forged $500 note of the Hongkong and Shanghai Banking Corporation in February last, has now been set at liberty. When making his deposition, General Van Buren promised Williams that if his testimony led to the conviction of the principal offenders, his own part in the crime would be leniently dealt with, and in the meanwhile he would be detained as a witness. The result confirming his Honour's anticipations, and the prosecutors meanwhile withdrawing their charge, Williams has accordingly obtained his freedom.

Oyama Tsunayoshi and thirty nine others were sent by the *Nagoya Maru* to Nagasaki yesterday, to take their trial at the *Saibansho* specially established for the trial of those implicated in the present rebellion.

From the *Nichi Nichi Shimbun.*

Only about fifteen hundred of the rebels have succeeded in making their way to Saiki in Bungo, and no great trouble is apprehended from them, as a division of the Imperial army has marched against them.

All the troops hitherto garrisoned at Himeji in Harima have been sent to Marugame in the province of Sanuki, Island of Shikoku. These troops are to be posted in various favourable positions to guard the sea coast.

About three hundred *samurai* of Miye *ken* have requested the Government to send them to the south in order that they may fight for the Imperial cause. Two hundred of them are said to be *samurai* of Kuwana.

From the *Akébono Shimbun.*

A telegram has been received from Hagi in Chôshiu, stating that in all one hundred and six of the insurgents there have been arrested.

A telegram despatched from Kióto says that a message sent by Kawaji on the 7th instant has been received. It was to the effect that on the morning of the 6th instant, there being a dense fog, the Imperialists took advantage of the same and attacked and took the rebel positions at Matsuo and Utsunohara, in Satsuma. Three prisoners were taken, with one field piece and thirty small arms.

From the *Chôya Shimbun.*

It is said that agitation prevails among the farmers of the Hayami district in the province of Bungo, who say that they desire to present a petition to the Government. It is thought that the cause of their agitation must be required reform of the land taxes.

A telegram, despatched from Kióto at 8.30. a.m. on the 7th instant, announces that on the 5th instant a sudden attack was made upon Onigatake. The position was quickly taken, together with four prisoners, 104 charges for large guns, seventeen boxes of cartridges, and many other articles. The rebels made a very desperate attack in the afternoon, but they failed to retake the position.

The Government seems, not unnaturally, to be looking pretty sharp after the Tosa folks just now. The *Heian-maru*, which trades regularly between here and Kochi, was due to leave the railway pier at 3 p.m. on Wednesday, but was detained by the Government and her cargo turned out of her and searched for contraband of war. So far as we could ascertain none was seized, and we heard that some boxes which looked like cartridge boxes, and may perhaps have given rise to some suspicion, turned out to be packages of type. A small quantity of lead (which had been openly shipped) may also have had some influence on the minds of the Authorities, as we see by a late notification that it is included amongst the things which the officials are to keep an eye upon.—*Hiogo News.*

Those who seek for knowledge under difficulties, without other aids than their own organs of perception, groping in the dark, as it were, sometimes meet with unpleasant surprises. A Japanese professor in a public institution of a city not a thousand miles from here, was heating some caustic potash over live coals, and, with his head over the fire, was vigorously fanning it with his breath, when —Scat! the durned thing went off! His face presented the appearance of a severe case of incipient small pox, and it now wears the aspect of mildewed canvas, but it is pleasant to learn that his wounds are not serious. It is doubtful whether he will regard the knowledge thus gained an encouragement to further experiments in the same direction, but however that may be, we may take it as quite certain that caustic potash will never play a trick on him again, at least in the same way.—*Hiogo News.*

THE WEALTH OF YESSO.

WE have received from His Excellency KURODA, of the Kaitakushi Department, a general report on the Geology of Yesso or Hokkaidô, as it is commonly called, drawn up by Mr. LYMAN, the Chief-Geologist and Mining Engineer. In reading through the report, which is extremely complete, and shows that a most careful survey has been made by a thoroughly competent man, one cannot but become convinced that in this Northern portion of the Empire lie the germs of much of its future wealth. The Department of the Kaitakushi has been subjected from time to time to very severe criticism. It has been said that for the millions spent in experimental farms and nurseries, roads and surveys, in the praiseworthy attempt of the Government to colonize this island there is nothing to show. To a great extent, no doubt, these strictures have been legitimate. Much more money has been expended than was necessary to carry out the operations in Yesso. A great deal has been spent on objects which were entirely purposeless, and much of the work done has been—perforce—allowed to fall into decay. Much outlay has been made on works that will for some years yield no return. But it must be borne in mind that when the scheme for developing Yesso first came under consideration, the authorities were far less experienced in the method of carrying out such undertakings. They refused to listen to those who were competent to guide them, and who wished to perform the duties assigned them in all honesty, and whose exhortations and warnings would have saved much waste and much disappointment. These were, however, mostly the mistakes of inexperience; mistakes that have occurred in all undertakings throughout the country generally, and—except in the case of the unlucky Shimosa stock farm—such as they are not likely to commit again unless talked over by insidious and interested advisers, of whom unfortunately the land is not yet rid.

But admirably adapted as the island is for farming, and for cattle operations, it is not in such developments that the value of Yesso is to be sought. The wealth is hidden wealth, but it is surely there, and needs only energy, and honest and careful administration to bring it to the surface. And if Mr. LYMAN does not calculate too hopefully on the resources of the island (we trust he will not for a moment imagine that we throw the least doubt on his exhaustive and conscientious statements) there seems to be no reason why Japan should long remain in her present state of abject impecuniosity.

Although gold is to be found in many places Mr. LYMAN'S report affords no grounds for supposing that it will be a source of wealth. The only fields that have any pretension whatever to workableness are the Toshibetsu and the Musa, and of these mines only a small portion promises a paying result. Mr. LYMAN reasonably concludes that in former times a far smaller return satisfied gold-washers than would be considered satisfactory at the present day, and states that he has no belief that anything will be found to justify the wild hopes of those who would gladly have plunged into large and costly mining operations without even a preliminary survey. It is in coal that Yesso is to prove her gold producing power, for while there are deposits of other minerals, they do not appear to exist—with the exception of sulphur—

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

in workable quantities. But the promising field for labour for generations to come is in the coal fields, and it is in testifiying to their richness that Mr. LYMAN's thorough survey will prove its value.

On this subject we will quote at length his own remarks.

"RESULTS OF THE SURVEY.—One of the chief results of the survey is a knowledge of the fact that there are probably a hundred and fifty thousand million tons of workable coal in Yesso, or about two-thirds as much as the coal of the same thickness of the famous fields of Great Britaim, which are such an immense source of wealth to that country, by far the largest coal producer in the world. That amount of coal in Yesso would enable the island to yield the present enormous yearly product of Great Britain for nearly a thousand years; and in doing so would bring to the Government, at the rate of thirty cents a ton, thirty thousand million dollars of revenue, in addition to other still greater benefits to the Government and profit to the public.

Indeed, the proof of the probable existence of so much coal in Yesso may well be considered a matter of great national importance, not only assuring in the future great wealth to the empire, but having in the immediate present most important financial bearings. If, as some men thought last winter, even the publication of a necessarily meagre unprofessional report on the mines of Japan could produce an unfavourable effect on the credit of the Government, it is not too much to hope that the same credit may be improved by the detailed demonstration furnished by the maps, sections, and reports of our survey.

In case any men in Japan should still be so narrow and unenlightened as to look with contempt upon what seems to them so unpractical and useless as surveying and mapping, it may be worth while to point out how the effect of our survey on the government's credit may alone be worth in money (to which such sordid minds must have every thing reduced before they can appreciate it) far more than our outlay has been. Suppose the government should wish to borrow money abroad, where it is cheapest, not necessarily to increase the public debt, but, say, to replace the present debt at a lower rate of interest. Is it not clear that the rate will be low in some proportion to the known wealth and resources of the country? Even if faith be lacking in the steadfast integrity of the government, the existence of certain material resources enables them to be pledged in some safe manner as security, and with security the rate of interest must be lower. The coal of Yesso when generally known to the public might then well enable the government to borrow money at a lower rate than it could without it. If the present very high rate were lessened one per cent., that would amount on a loan of three hundred million dollars (not an enormous one for an empire, and only one-fifth of a cent for each ton of the above-mentioned amount of coal) to a yearly saving of three millions of dollars, or, roughly, ten thousand dollars a day. But even if the effect of public information as to our Yesso coal were only one-tenth of that, it would still amply repay within a couple of months the whole expense of the survey.

But a few ounces of brains outweigh millions of tons of coal; for nobody wishes to lend money to a rich rogue or to a rich fool; and for good credit it is necessary to have a reputation not only for wealth and integrity but for intelligence and enlightenment. Perhaps, therefore, the financial effect of that vast amount of coal would be fully equalled by a knowledge that the government had had the prudence and wisdom to have a geological survey made at all, in order to ensure, in the very worst event, that the money of the public should not be foolishly wasted in unwarrantable mining speculations. It is not improbable either that even money lenders may be affected by the general reputation for intelligence that a nation would acquire by encouraging investigations of still more purely scholarly interest. The Kaitakushi will at least have the credit of carrying out in respect of our survey (until last winter at least) the recommendation of the American adviser (General Horace Capron) whom it had the fortune to engage five years ago, and who had the sagacity to insist upon such work at the outset rather than to plunge into costly and unjustifiable (but perhaps more obviously "practical") mining ventures, as some desired to do. The Kaitakushi has the credit of beginning and carrying nearly to completion the first geological survey of the kind undertaken by any native Asiatic Government, and of publishing the results to the world, not merely for the benefit to the finances of its own Government, but for the better information of all who are interested in geology."

Mr. LYMAN is of opinion that it is impossible for the Government to undertake the working of the Yesso mines by itself, as nothing could be surer to result in loss, or at least less profit than could be made by a system of leasing. "The management would unevitably be more or less jealously careful of the Government money than a private operator would be of his own." Most entirely true, and it is pleasant to find Mr. LYMAN addressing his employers in so manly and straightforward a way. In order to properly develope these coal mines, recourse must be had to foreign energy and foreign capital, and before these can become available the foreign capitalist must be assured that for employment of the latter he has complete security, and for the former a fair field. Such assurance cannot be forthcoming until the Government abandons its present exclusive policy, and either permits foreigners to lease mines, or by special treaty agreement allows them to form mining companies with natives, with some guaranty that the capital advanced is to be honestly applied. With reference to this question Mr. LYMAN writes as follows:—

"If foreign capital should be admitted to the working of Japanese mines, every body knows very well from what country that capital would chiefly come; from the one, namely, that has the largest amount of capital in excess of the good opportunity for its employment at home. As that is by no means my own country I shall hardly be thought prejudiced by patriotic feelings in urging that foreign capital be so admitted, if it can be done without lessening the extent of Japanese jurisdiction, which I trust will in respect of justice rapidly become satisfactory to the most fastidious foreigners. In America too, the same question of the introduction of foreign capital has arisen, uncomplicated to be sure by the question of jurisdiction; and silly jealousy has often been felt by individuals that foreigners should be gaining the profit yielded by our mines or railroads. But the advantage is reciprocal, and a merchant might as well complain because his purchaser gets as much benefit from a sale as he does himself; and the desire to enjoy the profit of both sides of a bargain is like the child's wish to "eat his cake and have it too." The working of mines and of railroads is immensely advantageous to a country, increasing its business and prosperity both directly and indirectly, and adding to the revenue of the government. The result is accomplished by means of capital, and if we can hire (or in any way induce) foreign capital to do the work more cheaply than we could do it with our own, we ought to be well satisfied and not begrudge the hire. Of course valuable privileges (such as digging coal) need not be given away for nothing, but may be sold or leased on fair terms to natives and foreigners alike, with the assurance that if some of the privileges should be left to be obtained by foreigners it is because the price is more valuable to the native than the privileges are. If the terms were fair, both sides should be satisfied; and the nationality of the buyer is as immaterial as it is in a shop where merchandise is sold. But it may be urged that the foreigner takes his profit home and spends it there, whereas, if a native accepted the terms and gained the profit he would spend it here, and so doubly benefit the country. "If!" You might as well say: "If the sky fall, we shall all catch larks." Besides, if the balance of trade is favourable, that is, if there is anything to buy that seems to foreigners worth the money (and mining would tend to bring about such a result), the foreigner will also be likely to spend his profit here and add to the exports of merchandise (the wish of every country, though some other nation must likewise get profit from the transaction); and, what is more, if successful, he will bring more capital to spend here to the 'benefit of the country.'"

We cannot close these remarks without noticing Mr. LYMAN's recognition of the intelligence, assiduity, and correctness of the dozen Japanese students who assisted him in the survey. He says:—

"But aside from the information or reputation gained directly

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

or indirectly by the Government or the public, one very important [result of the geological survey has been the training it has given to a dozen Japanese young men, the first Asiatics who have given themselves to the study and practice of geology. Their progress has been such as fully to confirm me in a report nearly three years ago that Japan would 'become in a few years independent of foreign countries in their profession.' That is, in making geological surveys, for, of course, in one sense no country in the world is independent of all others in respect to geological learning. And by 'becoming independent in a few years' of course, it is not meant that in so short a time could be acquired the highest skill for which in other countries a life time is justly not thought too much. But it is now well assured that even long before these same young men reach to middle age (but 'a few years' certainly) they may become very amply competent to make, and teach others to make, wholly satisfactory geological surveys to any extent that may be required in this country. It may be somewhat longer (if they keep their modesty) before they give to the world any profound theories in regard to the condition of the central portions of the earth or to its earliest history; but they will be making surveys and maps that will answer all practical mining requirements and that will furnish information with very important bearings on the theories of the earth's history. Eleven of the above named assistants kept on through the survey (as far as health permitted) and with one temporary exception caused by sickness, are still with me at other geological work. They are not only intelligent, industrious, studious and fond of their occupation, and therefore pretty sure to keep on learning and improving in skill; but are so thoroughly honest that their word can be relied on, a matter of the utmost importance in geological work (whatever you may say of it elsewhere), and one that might well have been a source of difficulty.

Taken altogether this report is one of the most useful and complete that we have seen on subjects connected with the development of Japan. After the narrow, envious and misleading views that so constantly find expression on the part of those who claim to be the exponents of American opinion, but who we know full well no more express it than Dr. KENEALY'S mad vituperations express the feelings of sensible Englishmen, it is pleasant to come across such liberal, sound, and unprejudiced writing, as we find in this report. The Kaitakushi seems to have the true spirit of vitality. We may here remark that an Agricultural College has been established, where practical farming is to be thoroughly taught, by duly qualified men. From what we can learn it will be conducted in no haphazard way, but in a manner calculated to produce the most useful results. We may not hear of any future Derby colt or ten thousand dollar pig being raised on it, but a few years may show a considerable portion of the island of Yesso under sound and profitable cultivation. If the Government had always been as fortunate in its choice of advisers, as the Kaitakushi in securing the services of Mr. LYMAN and several other gentlemen, it might,—nay, doubtless would—have escaped the ruinous losses and grievous mortifications that have resulted from lending a too ready ear to the interested advice of needy and unscrupulous adventurers.

Some time ago, as our readers no doubt remember, we gave an account of a newly-opened and rather handsome Japanese temple in the Peking Road. The precise object of the Japanese Buddhists in establishing places of worship in Shanghai is difficult to conceive, but they appear nevertheless to be a very active and enthusiastic class. Yesterday the transfer took place of a plot of land on the Cha-poo Road, Hongkew, which is the future site of a new and we believe still larger temple, to be built under the auspices of the bonzes from Japan. Perhaps there is a proselyting object at the bottom of the movement. Surely there is not a sufficient number of Japanese in Shanghai to render such extensive worship-accommodation a necessity. It is noticeable that the priests belong to the Buddhist religion, no representatives of Shintoism being at present in Shanghai, as far as we are aware.—*Shanghai Courier.*

SPIRIT OF THE JAPANESE PRESS.

TOSA.

(Hôchi Shimbun, June 5th, 1877.)

I am a native of Tosa. Hearing that at the present time, the public entertain great suspicion in regard to the events which are passing there, I wish to give a brief description of the condition of things, which I hope may restore confidence in the minds of both city folks and country people.

When I first heard of the sufferings caused to the people by the war in the south-west, it appeared as if the people of the *ken* to which I belong took no interest in them, but now that they have been informed of the cruel calamity which has overtaken the subjects of the Kumamoto *ken*, patriotic men have consulted together and said:—"Our *ken* is not far distant from Kumamoto. Suppose that the rebels should increase in fierceness and that our 1,000,000 of poople should suffer the same fate as the Kumamoto people. This we could never endure to look upon. It is true that we have the protection of the Government, but still what should we do under the same circumstances as at Kumamoto. When we reflect on it, we feel that although we have the protection of the Government, it is also incumbent on us to protect our own province." This was the opinion put forward by the *Risshisha*, but fearing lest in the present excitement of the popular mind mischief might arise from large assemblages, they resolved to give notice to the local authorities and accordingly addressed them a letter to that effect. The authorities apparently imagined that this was a proposal to form a local militia, so it was explained that the object was not to form a militia, but to hold an assembly to discuss the question of forming a militia, and that a petition to the latter effect would afterwards be laid before them when a final decision had been arrived at. The local officials, however, seem to have attached a needless importance to this request, and did not grant it, but whiled away the time by delays. Meanwhile the project assumed a different form, and it was resolved to present a memorial. The two societies, the *Risshisha* and the *Seikensha* have in concert reduced their ideas to writing, and I believe will shortly lay them before the Government. The purport of the representations of the *Risshisha* are as follows:—"The Government should reflect upon the past, and consider the future, and cast the responsibility on themselves and not on others; they should observe the current of public opinion and establish the Elective Assembly which it demands." The *Seikensha* repeat the old-fashioned cry "Remove wicked officials; drive out hypocrites from the Government." If these demands are acceded to, harmony will be restored among the people of the *ken*, and they will unite their force so as in less than three weeks to destroy the Satsuma rebels.

There is a report that the memorial of the *Risshisha* has been already brought to Tôkiô by Mr.——, but this is not the case. It was ready to be brought here a few days since, but some objections were started, and it is still under consideration. It is said that the *Seikensha's* memorial has been already presented, and also that it has not; which of these statements is the true one, I cannot say.

The fact is that in the Kôchi *ken* there is not a single man who has any idea of resorting to force. They all wish to follow the path of principle to the end. There are none who care by any rash or violent measure to make themselves a laughing-stock at home and abroad throughout all ages. For this reason it gave me great pain to observe that the readers of the Tôkiô newspapers entertain suspicions regarding our *ken* which have no foundation in fact. It is true that amongst the statements made in the *ken* by the *Risshisha* and the *Seikensha*, there are many which are untrue and this is hardly to be wondered at, at a distance of 300 *ri*. On the other hand, it is natural that in other *ken* there should be similar errors in regard to ours.

I hope the newspaper editors will give their attention to this, and for my own I feel it my duty to write them this candid letter.

AKASAKA JÔTA.

THE LOYALTY OF TOSA.

(Hôchi Shimbun, June 5th, 1877.)

The public have now for a long time been suspicious of the *samurai* of Tosa, nor can it be that their suspicions are altogether without reason, or that even the Tosa *samurai* themselves will find it easy to dispel them.

Consider for a moment. All those who have attacked the present Government since the Revolution were the men by whom the present Government was founded. Etô, Mayebara, and Saigô all exerted themselves to the utmost to establish the existing Government, and yet when it was about to become consolidated, they at

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

last changed their minds, and became its enemies. Before attacking the Government, they resigned office, and retired to their native provinces where they gave themselves to uniting the strength of their fellow-provincials, in order therewith to attack the Government. At different times the same succession of events has followed, as we have had opportunities of observing with our own eyes. So true is this that it has given rise to the saying, "The resignation of deserving officials is the seed of rebellion." Of this there can be no doubt. It is man's nature to forecast the future from the past, and all human conjectures are founded on events which have passed under their observation. Even Hodge, who in his native village has observed that potatoes when thrown into a ditch are metamorphosed into eels, is bound to infer, when he comes up to the metropolis and sees potatoes lying in a drain, that they will turn into eels too.

According to ordinary reasoning, such an inference would seem perfectly just, but if we must investigate the nature of potatoes and inquire through what physiological influences they are converted into eels, it would further be necessary to examine whether the potatoes previously observed the drain in which they were seen lying and the mud in that drain were the same or different, and to take note of the influences in each case favourable to such a metamorphosis. All this process Hodge must perform before he can decide that the potatoes of the metropolis will turn into eels like those of his own village.

Observe that the Tosa *samurai* and the Satsuma *samurai* are in appearance potatoes of very much the same stock; both alike must be admitted to have distinguished themselves, both have assisted in the work of the revolution, both have aided to establish the present Government. Among both there are men who have resigned office and returned to their native province, and in both the occasional assemblage of men of the same political party has been advocated. And, finally, the position of both is not without resemblance to that of potatoes which have fallen into a drain. No wonder that Hodge thinks that here is another case of potatoes sunk in a drain, and infers that they, too, will become converted into eels.

But cases are not unknown where in spite of an outward resemblance the nature of two classes of things is essentially different. Even amongst potatoes there are different species, however much they resemble each other outwardly, and they cannot all be included in the same category. The suspicion entertained by the public of these Tosa *samurai* is doubtless not an unfair one. Their position has strong a resemblance to that of the *samurai* who have already risen in rebellion. It is, however, a suspicion before inquiry, and we cannot assume that it is a well-grounded suspicion. Hence we reason somewhat differently from the public in regard to the Tosa *samurai*. Let us for a moment examine the grounds on which is based the suspicion entertained by the public.

The public attention has been chiefly concentrated (in so far as regards Tosa) on the doings of the *Risshisha* society, whose leader is the ex-*Sangi* Itagaki. The object of this society is the establishment of a popular Representative Assembly, and the means by which they propose to move the people in this direction is moral suasion. They do not wish to resort to violence, but to make known their opinions to the world through the peaceful medium of letters, not by force of arms. We cannot enter into an explanation of all the motives which influence the members of this society, but from the policy publicly declared by them it may be concluded that their objects are as stated above. The public ought to regard the *Risshisha* itself as the product of the two forces of moral suasion and letters, and to hope that the most important results will flow from these principles. If we can believe that the *Risshisha* will prosper and affect the mind of the nation to any considerable extent, we should expect that the public will proceed more and more in the same genuine road of progress and that an appeal will be made to public opinion.

We see, therefore, that the *Risshisha* is by its very nature different in fashion from the disturbers of the public peace. The latter are conservatives, the former are liberals; the objects of the latter involve an appeal to force, of the former an appeal to the power of the pen. In their case are not the physiological conditions which would convert the potato into an eel entirely wanting? We should therefore not entertain a suspicion of all alike founded on mere appearances.

Supposing now that we consider the question from the point of view of the interests of the Tosa men. If they are sincere in their reliance on the might of the pen and on moral suasion to further their views, they will gain the confidence of the nation which can only be won by truth and consistency, and not by rashness and violence. The society might make temporary progress by abandoning its reliance on the power of letters, but then it would forfeit the confidence of the public, and if it once divorced itself from the public confidence, what would it accomplish? But if their suspicions which we have attributed to Hodge should one day prove correct, if we should have to surrender him all our credit as philosophers, and if the opinions of self-styled philosopers should turn out to be mistaken, then the confidence reposed in the *Risshisha* by the public and the credit they have gained would be lost principal and interest. If bystanders aspersing the society proceed to attack it with violence this cannot be helped; against bigoted violence the *Risshisha's* force is unavailing. We must say, however, that this society cannot escape the responsibtlity of repudiating the violent opinions which are attributed to it by bigoted conservatives.

Too Hasty Conclusions.

(Nichi Nichi Shimbun, June 6th, 1877.)

When will the unfortunate disturbance in the south-west be put down? To this great question no one has been able to furnish us with an answer, and we ourselves are certainly unable to give one. The only way left is for each one to judge according to his own opinion. In forming this opinion, however, we must take as a guide the teachings of past experience and present observation, without which we shall probably miss the mark, and run great risk of committing ourselves to baseless and erroneous calculations. If we now proceed to put before our readers successively the chief results of our observation and experience, they may be able, out of the obscurity which envelopes the subject, to arrive at an opinion for themselves.

As we showed yesterday morning, the actual situation of the campaign appears to be as follows.—The rebels having been defeated at Hitoyoshi, have retired into the provinces of Satsuma and Hiuga, and would seem to be on the verge of embarrassment. But to look upon them as completely annihilated simply because Hitoyoshi has been taken would be to form a very hasty conclusion. At the outset, when the rebel army, besides maintaining the blockade of Kumamoto, advanced in force into the north-east, the safety of the whole country depended upon the fate of that place. Without considering the suitability of the locality for military operations, or whether the tactics adopted were in accordance with strategical rules, troops were sent down by the Government, detachment after detachment, and unlimited supplies of arms were furnished, the object being to defeat the rebel forces and relieve Kumamoto, even though the rivers should be choked with corpses and enough bullets be fired to make a mountain. It was, in fact, an attack by means of sheer force. The advance took place on all sides, and the rebels were finally compelled to retire unsuccessful from Kumamoto.

What induced people to rush to the conclusion that all anxiety was over, peace restored, and fears for the future unnecessary, simply because the Imperial armies, after hard fighting for seven weeks, had opened communications with Kumamoto? Suppose a patient were dangerously ill with diseased lungs and liver, and moreover for several days had been unable to obtain any natural relief. Suppose that the physician called in to attend on him, left the diseased lungs and liver to themselves for a while, and impressed with the necessity of relieving the bowels and bladder with all speed, administered purgatives and gave a clyster, which were at last productive of the required effect. Suppose that the nurses, on seeing the effect, were excited with joy, and said "Behold, he has got relief! The disease is completely cured!" What would people think of such behaviour? Now, the relief of Kumamoto was like relief after constipation. The constipation was not the principal disease, the seat of which was in the lungs and liver. Satsuma, Osumi and Hiuga are the lungs and liver occupied by the rebels. To say that the relief of Kumamoto by the Imperial forces meant putting an end to the civil war, is just like supposing the disease to be cured when the remedy has been temporarily efficacious. We cannot adopt the views of those who would blame the nurses for their hasty conclusions, and are yet guilty of imitating their very hasty conclusions themselves.

With the exception of the intelligent who have their eyes about them, most people, misled by hastily concluded false opinions formed in consequence of the relief of Kumamoto, expected before many days had passed to sing songs of victory over the suppression of the rebellion. But the result has belied their expectations; six weeks have passed and Hitoyoshi has only just been taken. It is true that the rebel forces have been defeated in every encounter, that their troops are wearied and their spirit so broken, that they no longer are like the audacious and formidable men they were at

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

first. And yet, though it will not be difficult following up the victory to defeat them at every point, and to name a day when the rebel nest shall be overwhelmed and the ringleaders be punished with death, —when we come to discuss the tactics to be pursued, we must not base our calculations of victory on the weakness of the enemy, which sort of miscalculation every intelligent person avoids; but we should, on the contrary, estimate them at the highest possible value, and place ourselves very low in the scale, in order to calculate aright. Following this process, then, we find that we have regained possession of Higo, while Satsuma, Osumi and Hiuga remain in the hands of the rebels; and whether by compulsion or persuasion the million inhabitants of these three provinces obey them, take their side and render them assistance. If we are negligent and leave the slightest opening of which they could take advantage, they would again be in a position to indulge in hopes. Consequently we must not contemptuously regard them in the light of a few surviving weakened rebels, or wandering rebels who are deprived of refuge, simply because they retreated from Kumamoto and fled from Yatsushiro. Ought we not to increase the number of our troops, and vigorously attack the rebels again without stopping to take breath, and give them no time for defence? Every day that the suppression is delayed is an additional day of calamity, which is the opportunity of civil dissension. Look at the Chikuzen and Buzen rebels, and again at the present moment those of Chôshiu. Without considering whether their aims were the same, but inflamed with the same spirit as the Satsuma rebels, violent men have collected together and designed to assist them. Fortunately their numbers were so few that they were subdued at once and without loss of time, but still they benefitted the rebels more or less by diverting the attention of part of the Imperial forces. Moreover, at this moment rumours are current of fears lest strange influences may not be combining in a corner of the Nankaido (*i.e.* in Tosa) and far off in the Tôsaudo (*i.e.* Shonai), and if even any actual manifestation takes place in these quarters it will be a much more serious affair than the disturbances in Buzen, Chikuzen and Chôshiu. Already we are suffering from insufficiency of soldiers; what troops could we despatch to the Nankaido and Tôsando without weakening the army in the south-west (*i.e.* Kiushiu)? Can any one give us a clear answer?

The Progress of the War.

("Nichi Nichi Shimbun," 5th June.)

The capture of Hitoyoshi by the Imperialists will cause some change in the state of affairs in the South. Let us trace the progress of the present war. A body of the rebels first advanced against Kumamoto, and beseiged the castle, while another body advanced towards Uyeki, and taking advantage of the weakness of the Imperial forces, blockaded the road from Kodome to Takase, and showed their intention of advancing directly to Minaminoseki and Kanematsu. But the Government troops lost no time. The insurgents advancing from Yamaga marched to Iwamura, and thence from Uyeki to Tawara, and here they found themselves obliged to abandon their plan of attack and to act on the defensive. This occurred about the first of March, and may be called the first stage of the war.

The rebels then took up their positions at Tawarazaka and Nabeta, both strong points and it took the Imperialists twenty days, fighting day and night to obtain possession of them. This took place on the 20th March, and on the day following Yamaga was captured. The insurgents now retreated southward and were in possession of no point north of Midori. This terminated the second stage of the war.

Though Yamaga and Tawara were lost to them the insurgents still retained Kodome, Uyeki, Torinosu and Sanno-take. At this time communication had not been opened with Kumamoto. A body of Imperialists advanced toward the garrison by way of Yashiro. They marched to Kumamoto without encountering many checks. The garrison had been closely beseiged for a period of two months and were very short of provisions. But the power of the Imperialists became more and more overwhelming, and finally on the 4th April the insurgents were compelled to raise the seige, and retreat towards the East. They then took up positions at Koyama, Mifune, Namba, Otsu and Takenouchi, and it seemed as though they might be able to defend these places for a long period, but on the 20th April, they were compelled to retreat to Hitoyoshi. This way be termed the third stage of war.

Hitoyoshi being a naturally strong position was the most difficult place to take, but this did not dismay the Imperialists, for as our readers have seen in our columns they took Yashiro, Sashiki, Kumagawa, Tomachi, and Goka one after the other, and finally succeeded in taking Hitoyoshi on the 1st instant. This ends the fourth stage.

The war has thus had four stages, and it is now entering on its fifth. Telegrams report that the insurgents have retreated toward Kakutogoi. Where will they intrench themselves? They will most probably go into Hiuga to Sadowara or Miyakono-jô; or they may go into Satsuma, pass through Yoshimatsuand Kurino, and take up their position at Kajiki.

The insurgents at Oguchi have been holding out for some time past, but the van has already reached Yamano. Moreover when they hear that Hitoyoshi has fallen, Oguchi will also probably fall into the hands of the Imperialists, who will pursue the insurgents towards Isa and Hishikari districts (the former place being in Satsuma and the latter in Osumi). The Imperialists at Demidzu have gone as far as Yonedzu, by the way of Midzumata, and will probably meet the other attacking forces who will be marching from Oguchi, in the neighbourhood of Sennai-gawa. In the mean time the Imperialists at Kagoshima are quietly waiting, surrounded by the insurgents, no decisive engagements being fought, but they will doubtless soon march out, and attack the enemy simultaneously with the forces that are advancing South.

The True Causes of Satsuma's Defection.

(Chôya Shimbun, 3rd June.)

If we do not look closely into the origin of a war, we shall only see its outward effects, without perceiving the underlying motives.

A hundred and twenty days have passed since Satsuma broke out into rebellion, and opposed the Government authority by armed force, during which time the public have had ample opportunities of judging of the Satsuma men as rebels and traitors. Some say that the real motive of these men in the present revolution is to enforce their demand that a hostile expedition be sent against Corea, a question that they have agitated for several years past. Others allege that their hatred against certain officials, whom they insist shall be dismissed from the Government, is the true cause of their uprising, while there are some who attribute it to the discovery of a plot to assassinate the Satsuma leaders. We have thoroughly investigated the matter, and judging from the events that have occurred during the past ten years, we have come to the conclusion that none of the above mentioned reasons have anything to do with the attitude of Satsuma.

Satsuma is only striving to attain an object that she has at no time lost sight of during the past ten years. Even though an expedition should be sent against Corea, the obnoxious officials be dismissed, or the assassination plot be proved to be groundless, they would not cease from their present course. The position that Satsuma has taken, and her object in assuming it, can be clearly traced by anyone who will glance over past history.

When Satsuma took the leading part in the Restoration, it was not with any strong feeling of respect or loyalty for the Mikado, but with the desire of usurping the power of the Shôgun held by the house of Tokugawa. We all know the faithless manner in which Satsuma acted previous to the great civil war, making the most sacred alliances with other clans only to break them when it seemed fit. At the overthrow of the house of Tokugawa, the attempted usurpation of the power of the Shôgunate was opposed by the powerful clans of Chôshiu and Tosa, and also Hizen and Higo, in the island of Kiushiu. The present members of the minstry who are men of broad views, being desirous of carrying on the administration in a liberal minded way, also opposed the ambition of Satsuma.

But her leaders were not to be disheartened by their obstructions, but set to work collecting supplies of arms and ammunition, and enlisting and drilling large bodies of troops. When the *han* were abolished and the *ken* established, the condition of affairs in Satsuma remained unaltered from the feudal times, and thus she has been gradually preparing herself for action, and waiting for an opportunity to declare herself. She first set to work to weaken all those clans who were likely to oppose her wishes. There is no doubt that Etô Shimpei of Hizen, Maycbara of Chôshiu, and the *Jimpu* party of Higo were all incited to those actions which cost them their lives and ruined their honour, by Satsuma, for no other purpose than to get them out of the way. The power of these clans being weakened, Satsuma wrought the present great rebellion.

The Satsuma forces have now successfully withstood the Imperial troops for several months, yet do not appear to have lost ground or to have become weakened, and this proves that the outbreak is the result of years of patient preparation.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

It is a common fact that many Satsuma men know only Shimadzu and Saigo, and are not aware of the existence of the Mikado. Had these leaders not wished the people to rise against the Government, they could have taught them that there is a rightful ruler of the country whose authority must not be opposed. This they have not done, and hence it is very plain that the part they took in the revolution was merely a pretext for overthrowing the house of Tokugawa.

Satsuma men who hold positions in Government offices or in the Army or Navy remain true to the Imperial cause, and they are thus compelled to fight against their brothers and relatives. It is a struggle between the real and false upholders of the Imperial authority; and the main object of Satsuma is to gain the power formerly held by Tokugawa.

Truly has an ancient sage said that "apparent sincerity veils the deepest cunning."

NOTIFICATION.

The undersigned has been directed by Her Majesty's Minister to publish for the information of British Subjects the annexed note from the Japanese Minister for Foreign Affairs communicating the Rules of Procedure for appeals in Japanese Courts as recently amended by the Japanese Government.

A translation of the Constitution of the various Courts, which forms part of the Notification referred to in the note of the Japanese Foreign Minister is also appended.

AUGUSTUS H. MOUNSEY.
H. B. M.'s Secretary of Legation.

Her Britannic Majesty's Legation,
Yedo, June 9, 1877.

(*Translation.*)

February 23, 1877.

SIR,—I have the honor to forward to you herewith a copy of a Notification which has now been issued publishing revised Rules of Procedure for Appeals to Superior Courts and to the Supreme Court. I shall be obliged if you will notify these rules for the guidance of British Subjects resident in Japan.

I have etc.,
(Signed) TERASHIMA MUNENORI,
Minister for Foreign Affairs.

H. E.,
Sir, HARRY S. PARKES, K.C.B.
&c., &c., &c.

NOTIFICATION No. 9.

The Constitution and Regulations for the Supreme and other Courts, published in Notification No. 91 of May 1875, together with the Rules of Procedure in Appeals published in Notification No. 93 of the same date, have now been amended, and are hereby published in their amended form.

The Rules and Constitution of Circuit Courts are cancelled.

IWAKURA TOMOMI,
Udaijin.

19th February, 1877.

CONSTITUTION OF THE SUPREME COURT.
(*Daishinin.*)

ONE PRESIDENT.

(Appointed from the ranks of Judges of the first class.)

1.—The President marks out the division of departments, and issues orders for the distribution of the work. He will, whenever necessary, preside in the various Courts and conduct the trial of civil and criminal cases.

JUDGES (*Hanji*).

1.—They will examine appeals, both civil and criminal, and they will also have charge of trials of important cases between Japanese and foreigners, and the trial of offences committed by Judges.

2.—They will examine the draft sentences of death.

CLERKS.

REGULATIONS OF THE SUPREME COURT.
(*Daishinin*).

1.—The Supreme Court receives appeals* both in civil and criminal cases, and cancels erroneous judgments given by all Courts from the Superior Courts downwards. It is its business to maintain a uniform system of law for the whole country.

2.—When it has cancelled an erroneous judgment, it may either refer the case for trial to another Court, or it may itself try the case, if convenient.

3.—If when a case has in this way been referred to another Court for trial, the latter should not accord with the opinion of the Supreme Court, the Supreme Court will decide the case itself.

4.—The Supreme Court will cancel decisions in which Naval or Marine Courts have exceeded their powers, and will refer such cases to the proper Court.

5.—All offences committed by Judges, with the exception of police offences, will be tried by the Supreme Court.

6.—The Supreme Court will try all important cases, whether civil or criminal, in which both Japanese and foreigners are concerned.

7.—It will examine and sanction the sentences of death which are laid before it by the Superior Courts, and then send them back to them. If any are decided to be erroneous, it will ascertain afresh the law applicable to the case, after which it will return it.

CONSTITUTION OF THE SUPERIOR COURTS.

A CHIEF JUDGE.

(A Judge who holds his appointment directly from the Emperor will be chosen for this office).

1.—The chief Judge marks out the departments, and distributes the work, and will, if circumstances render it desirable, be himself present in Court, and hear cases, civil or criminal.

JUDGES.

1.—They will receive and try appeals which come up from Courts within their jurisdiction.

2.—They are charged with the decision of capital cases.

ASSISTANT JUDGES.

1.—They try such cases as may be placed in their hands by the Judges.

CLERKS.

REGULATIONS OF THE SUPERIOR COURTS.

1.—The Superior Courts examine appeals from the decisions of the Local Courts.

2.—The Superior Courts decide capital cases laid before them by the Local Courts, the decision to be notified to the original Court when the sanction of the Supreme Court has been obtained.

3.—The Superior Courts examine the draft judgments of penal servitude for life which are submitted for their sanction by the Local Courts.

CONSTITUTION OF LOCAL COURTS.

ONE CHIEF JUDGE.

(Appointed by the Emperor on the recommendation of the Minister of Justice.)

He marks out the departments, and distributes cases to them. In other respects his duties are the same as those of ordinary judges.

* The original has two words for appeal, *Kôso* and *Jôkoku*, the former of which is used for appeals to the Superior Courts, the other for appeals to the Supreme Court.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

JUDGES.

They hear civil cases of first instance, and conduct trials of criminal cases where the punishment does not exceed penal servitude.

ASSISTANT JUDGES.

They conduct trials under the directions of the judges.

CLERKS.

REGULATIONS OF LOCAL COURTS.

1.—The Local Courts shall try all civil cases and such criminal cases as do not involve a more severe punishment than penal servitude.

2.—All cases, great or small, brought before the Local Courts, are accounted cases of first instance.

3.—Unimportant civil and criminal cases in which both Japanese and foreigners are concerned may be decided forthwith. Important cases should on the one hand be heard, and on the other hand reported to the Minister of Justice.

4.—Capital cases are heard in them, a draft of the evidence and sentence prepared and forwarded to the Superior Courts, on the sanction of which being received, the sentence is to be carried out.

5.—In cases of penal servitude for life, a draft judgment should be prepared, and forwarded for the approval of the Superior Court, after receiving which it should be carried into effect.

RULES OF PROCEDURE.

CHAPTER I.

PROCEDURE IN APPEALS TO SUPERIOR COURTS.

1.—When a person is dissatisfied with the original judgment in first instance of a Local Court, and petitions a Superior Court for a fresh trial, this is called an appeal *(Kôso)*.

2.—Appeals *(Kôso)* are allowed in civil cases only, not in criminal cases.

3.—Appeals are only allowed once, not twice.

4.—If either or both parties to a cause are dissatisfied with the judgment delivered by a Local Court, they will take seven days (counting from the day following the delivery of the judgment) to consider well its justice, and will be allowed to present the Appeal on the next day following. In case, however, the cause concerns mercantile affairs, and it is necessary to appeal at once, the Appeal may be sent in even before the seven days have elapsed.

5.—No Appeal can be received after three months (of thirty days) have elapsed after the judgment of the Local Court. In the case of Local Courts, however, which are more than eight *ri* from the Superior Court, one day over the three months will be allowed for every such eight *ri*.

6.—Appellants must report the appeal to the Local Court of first instance. It is, however, unnecessary to ask for a forwarding letter.

7.—A Local Court receiving such a notice will stay execution of the judgment, and when required by the Superior Court, will supply it with the plaint, answer, evidence, and the proposed judgment of the Local Court.

8.—The Petition (of Appeal) to the Superior Court must be drawn up according to the "Forms of Plaints and Answers."

CHAPTER II.

GENERAL RULES FOR APPEALS TO THE SUPREME COURT.

9.—When application is made to the Supreme Court to cancel the judgment of any Court on account of its being erroneous in point of law, this is called an Appeal *(Jôkoku.)*

10.—Cases in which appeals to the Supreme Court are allowable:—

a.—Where the case was beyond the competence of the lower Court to try.

b.—Cases which have been irregularly tried.

c.—Decisions contrary to law.

11.—The Supreme Court receives *Jôkoku* (appeals on points of law) but does not receive *Kôso* (ordinary appeals). If a case which is properly a *Kôso* is by error made a *Jôkoku*, it will be rejected and no notice taken of it.

12.—An appeal (*Jôkoku*) lies to the Supreme Court in cases where Naval or Military authorities have, in giving their decision, overstepped the bounds of their authority.

13.—If a case appealed to the Supreme Court has already been decided by it, a fresh complaint will not be heard.

CHAPTER III.

APPEALS TO THE SUPREME COURT IN CIVIL CASES.

14.—Appeals *(Jôkoku)* to the Supreme Court in civil cases are only allowable in cases where appeal has already been made to, and the case tried by, a Superior Court.

15.—The person who wishes to appeal *(Jôkoku)* must forward his petition of appeal to the Supreme Court within two months from the date of judgment, and at the same time ask that notice be given to the other party to the case. In the case of places more than eight *ri* distant from the Supreme Court, one day additional will be allowed for every eight *ri*. No appeal can be received in which this limit is exceeded.

The petition of appeal must contain the following particulars:—

a.—The residence, status, and name of plaintiff.

b.—If there is an attorney, his residence, status, and name.

c.—The residence, status, and name of defendant.

d.—If there is a security, or other responsible party, his residence, status, and name.

e.—The date on which the plaint was laid before the local court, or in the case of a defendant, of receiving the summons, and also the date of judgment being given.

f.—The date on which the appeal was laid before the Superior Court, or in the case of a defendant, of being summoned, and also the date on which judgment was given.

The petition of appeal must be sent in in original with five copies.

The petition of appeal must be accompanied by the following documents:—

a.—Copy of the plaint and answer in the Local Court, and copy of the judgment.

b.—Copy of the petition of appeal and answer in the Superior Court, and copy of the judgment.

c.—Copies of any documents referred to as proof in the petition of appeal, such documents to be numbered in red, and made into a book, or several books if the leaves are numerous. If the appellant is not in possession of a copy of such plaint, answer, or documentary proof, he will receive permission to copy it in presence of the usher from the records of the original Court which will be produced in Court.

If in consequence of the refusal of the original Court to grant permission to copy any document, the appellant is unable to produce it, a statement to that effect should be noted in the petition of appeal.

16.—The petitioner must lodge with the Supreme Court along with his appeal the sum of 10 *yen*. No appeal can be received if this amount is not lodged.

a.—If the appeal is not received, the money lodged is forfeited.

b.—If the appeal is received, and the original judgment cancelled, the money lodged will be returned.

c.—If the appeal is rejected after the plaintiff is examined and confronted with the defendant, and the original judgment is not cancelled, the money lodged will be forfeited, and the plaintiff will be made to indemnify the defendant for his expenses according to the rules for judicial expenses. (By defendant is here meant the party other than the appellant.)

17.—An appellant must first give notice to the original Court which will forward the papers in the case to the Supreme Court within three days.

18.—Execution of a judgment is not stayed on account of an appeal to the Supreme Court, but as soon as the decision of the original Court is cancelled, the Supreme Court will notify it to the latter (by post) and stay the execution. If the judgment has been already carried out the execution of the former judgment will be annulled,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

and the latter judgment carried out. In the case, however, of appeals where one party is a Japanese subject and the other a person not under Japanese jurisdiction, execution of the judgment of the original Court is to be stayed.

19.—The appellant is at liberty to present his appeal either in person, or by attorney.

20.—If, upon examining the case in the Supreme Court, the judges decide that the appeal is an improper one, they will make an order stating the grounds on which it is refused to hear the appeal.

21.—If the judges on examining the case, decide that the appeal is a proper one, they will, in granting an order for it to be tried, within two days issue a summons for the appearance of the defendant, to which summons shall be appended the documents enclosed in the petition of appeal.

22.—Within thirty days from the receipt of the summons, the defendant must prepare and present his answer, either in person or by attorney. One day's delay will, however, be allowed for every eight *ri* over eight *ri* which the defendant's residence is away from the Supreme Court.

23.—When the defendant's answer has been received by the Supreme Court, the President will select one judge and give him special charge of the case. This judge will collect the papers in the case, and prepare a history of it without delay. A day will then be fixed for confronting and examining the plaintiff and defendant, and three days before a summons to appear will be sent to both parties.

24.—When both parties are confronted and examined in Court, the judges will take their seats on the bench, and the judge in special charge of the case will read his history of it already prepared. The plaintiff will then make his statement, and then the mutual explanations of both plaintiff and defendant will be heard. If the decision which ensues is in favour of the appeal, the judgment will be to the effect that inasmuch as the decision of the original Court is cancelled on such and such grounds, a new decision is to be received from such and such a Court, or that judgment will be given by the Supreme Court.

26.—If the decision is against the appeal, the judgment will state on what grounds the appeal is rejected.

Chapter IV.
APPEAL TO THE SUPREME COURT IN CRIMINAL CASES.

26.—An appeal (*Jôkoku*) lies to the Supreme Court in all criminal cases with the exception of capital crimes and of police offences.

27.—Persons who may appeal in criminal cases:—

a.—Condemned persons.

b.—*Kenji*, or where there are no *Kenji*, police officials.

28.—Condemned persons who wish to appeal must lodge a petition of appeal with the Court within three days after sentence has been passed (the sentence is not carried out for three days), and he must within ten days prepare a careful statement of his grounds for appealing and lay it before the Court. The Court will communicate this to the local official charged with the execution of the judgment.

29.—If a *Kenji* wishes to appeal, he will inform the condemned within twenty-four hours after the sentence, and will in ten days prepare a careful statement of his grounds for doing so, which he will forward to the Minister of Justice. The *Kenji* will give notice of the appeal to the local official charged with the execution of the sentence.

30.—The *Kenji*, or condemned, loses the right of appeal by a delay beyond the fixed period.

31.—The official charged with the execution of the sentence will postpone the execution of the sentence on receiving notice of appeal from the *Kenji* or condemned person, and will await the decision of the appeal. In the meantime, the condemned shall be confined in a separate cell. Where there are no separate cells, he will be confined as may be found convenient.

32.—If the condemned is unable to do so himself he may send for a representative to come to the prison to draw up for him his statement of his grounds of appeal.' (The interior of the prison should be partitioned off and a conference room prepared so as to prevent the appellant being mixed up with the other prisoners.) The name of the appellant's representative should be signed along with his own to the statement of grounds of appeal. If the appellant cannot sign his name, a note should be made to that effect. When a representative of a condemned is sent for to him, the jailer will be notified of it and he will inform the Court.

33.—If on account of his tender age (under fifteen), the condemned is not cognizant of his right of appeal, relatives (relatives of the five degrees are here meant) are allowed to act for him.

34.—When a statement of grounds of appeal is received by the Court, it will forward it along with the documents in the case to the Supreme Court within three days.

35.—The Supreme Court will examine the appeal, and if it is decided that it is improper or unreasonable, a decision stating the grounds (of rejecting it) will be sent to the original Court, which will communicate it to the appellant, and the sentence will then be carried out. If the appeal is decided to be reasonable, the judgment of the original Court is cancelled, and the case referred to another Court for trial. The Supreme Court may, however, resolve to try the case itself, or it may discuss the law of the case, and communicate its views to the original Court, and procure a decision in this way. The decision and grounds of decision are both to be sent.

36.—When the appeal proceeds from a *Kenji*, a careful statement of the grounds of appeal together with the other documents shall be forwarded direct to the Minister of Justice, who will cause it to be laid before the Supreme Court by a competent *Kenji*, the decision of which Court will afterwards be forwarded to the original Court through the Minister of Justice.

THE PREPARATION OF TEA IN CHINA FOR THE FOREIGN MARKETS.

Teas both black and green are produced from the same plants, the difference being only in the manipulation. The Chinese rarely make the two kinds in one district, but this is more for the sake of convenience and from custom than for any other reason, hence there are black and green tea districts in China.

Green Tea.

When the leaves are brought in from the plantations, they are spread out thinly in bamboo trays in order to dry any superfluous moisture. They remain for a very short time exposed in this manner, generally from one to two hours. This, however, depends much on the state of the weather. In the mean time the roasting pans have been heated with a brisk wood fire, a portion of the leaves are now thrown into each pan, rapidly moved about and shaken with both hands. They are immediately affected by the heat, begin to make a crackling noise and become quite moist and flaccid, while at the same time they give out a considerable portion of vapour. They remain in this state for four or five minutes and are then drawn quickly out and placed upon the rolling table.

The rolling process now commences. Several men take their station at the rolling table and divide the leaves among them. Each takes as many as he can press with his hands and makes them up in the form of a ball, which is rolled upon the rattan worked table and greatly compressed, the object being to get rid of a portion of the sap and moisture and at the same time to burst the leaves.

These balls are frequently shaken out and passed from hand to hand until they reach the head workman, who examines them carefully to see if they have taken the requisite twist. When he is satisfied of this, the leaves are removed from the table and shaken out upon flat trays, until the remaining portion have undergone the same process. In no case are they allowed to be long in this state and sometimes they are taken at once to the roasting pan.

Having been thrown again into the pan a slow and steady charcoal fire is kept up, and the leaves are kept in rapid motion by the hands of the workmen. Sometimes they are thrown upon the rattan table and rolled a second time. In about an hour or an hour and a half the leaves are well dried and their colour has become "fixed,"—that is, there is no longer any danger of their becoming black.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

They are of a dullish green colour but become bright afterwards. The most particular part of the operation has now been finished, and the tea may be put aside until a larger quantity has been made.

The second part of the process consists in winnowing and passing the tea through sieves of different sizes, in order to get rid of the dust and other impurities, and divide the tea into the different kinds known as Twankay, Hyson Skin, Young Hyson, Gunpowder, etc.

During this process it is refired, the coarse kinds once and the finer sorts three or four times. By this time the colour has come out more fully and the leaves of the finer kinds are of a dull bluish green.

It will be observed then with reference to green tea,—firstly, that the leaves are roasted almost immediately after they are gathered, and, secondly, that they are dried off quickly after the rolling process.

Black Tea.

When the leaves are brought in from the plantations they are spread out upon large bamboo mats or trays and "are allowed to lie in this state for a considerable time." If they are brought in at night they lie until next morning.

The leaves are next gathered up by the workmen with both hands, thrown into the air and allowed to separate and fall down again. They are tossed about in this manner and slightly beat or patted with the hands for a considerable space of time. At length, when they become soft and flaccid, they are thrown in heaps and allowed to lie in this state for about an hour or perhaps a little longer. When examined at the end of this time they appear to have undergone a slight change in colour, are soft and moist and emit a fragrant smell.

The next part of the process is exactly the same as in the manipulation of green tea, the leaves are thrown into an iron pan, where they are roasted for about five minutes and then rolled upon the rattan table.

After being rolled, the leaves are shaken out thinly on sieves and exposed to the air out of doors. A frame work for this purpose made of bamboo is generally seen in front of all the cottages amongst the tea hills. The leaves are allowed to remain in this condition for about three hours, during which time the workmen are employed in going over sieves in rotation turning the leaves and separating them from each other. A fine dry day when the sun is not too bright seems to be preferred for this part of the operation.

The leaves having now lost a portion of their moisture, and having been reduced considerably in size are removed into the factory. They are put a second time into the roasting pan for three or four minutes and taken out and rolled as before.

The charcoal fires are now got ready ; a tubular basket narrow at the middle and wide at both ends is placed over the fire ; a sieve is dropped into this tube and covered with leaves which are shaken on it to about an inch in thickness. After five or six minutes, during which time they are carefully watched, they are removed from the fire and rolled a third time.

As the balls of leaves come from the hands of the roller they are placed in an heap until the whole have been rolled. They are again shaken in the sieves as before, and set over the fire for a little while longer. Sometimes the last operation, namely beating and rolling, is repeated a fourth time. The leaves have now assumed their dark colour.

When the whole has been gone over in this manner, the leaves are placed thickly in the baskets, which are again set over the charcoal fire. The workman now makes a hole with his hand through the centre of the leaves in order to allow vent to any smoke or vapour which may arise from the charcoal, as well as to let the heat up, and then covers the whole over with a flat basket. Previous to this the heat has been greatly reduced by the fires being covered up.

The tea now remains over the slow charcoal fire until it is perfectly dry. It is, however, carefully watched by the manufacturer, who every now and then stirs it up with his hands so that the whole may be equally treated. The black colour is now fairly brought out, but afterwards improves in appearance ; the after process, such as sifting, picking and refiring are carried on at the convenience of the workmen.

It will be remarked therefore with reference to the leaves which are to be converted into black tea,

1st.—That they are allowed to lie some time spread out in the factory after being gathered and before they are roasted.

2nd.—That they are tossed about until they become soft and flaccid and then left in heaps, and that this also is done before they are roasted.

3rd.—That after being roasted for a few minutes and rolled they are exposed for some hours to the air in a soft and moist state.

4th.—That they are at last dried slowly over charcoal fires. The differences in the manufacture of black and green teas are therefore most marked.

The plants in the districts of Hungchow and Woo-e, where the finest black and green teas are produced, are the same species, the slight differences observed being the results of reproduction and difference of climate. The Canton plant called *Thea Bohea* by botanists, though different from the above in constitution and habit is identical in species. To an inexperienced eye there is no apparent difference between the tea shrub of the north and the tea shrub of the south of China, but doubtless high cultivation and climate affect the quality of the leaf and induce a variety.

Colouring Teas.

Green teas for the foreign markets are invariably coloured, or what is termed have a face put on them. The colouring process is as follows :—

A portion of Prussian blue is thrown into a porcelain bowl and crushed into powder. At the same time some gypsum is burned in the charcoal fire which roasts the tea, and being thus calcined is easily reduced into a fine powder. The two substances are then mixed together in the proportion of four parts of gypsum to three of Prussian blue, thus forming a light blue powder. This colouring matter is applied to the teas during the last process of roasting, about five minutes before the tea is removed from the pan, the time being regulated by the burning of a joss stick, a portion of the colouring matter is placed in a small porcelain spoon and scattered over the leaves in each pan. The workmen then turn the leaves rapidly round with both hands in order that the colour may be generally diffused. The proportion of colouring matter to tea is eight (8) mace two and a half ($2\frac{1}{2}$) candareens, or rather more than an ounce of the powder, to fourteen and a half ($14\frac{1}{2}$) lbs. of the latter.

The financial condition of China is revealed to us in fitful glimpses, but all the aspects are alarming. It is certain that the whole Empire is poverty stricken, and not even a year's good harvest can restore the country to its average status. But if, unhappily, the growing crops should again fail, the result will be a terrible catastrophe, as the empire cannot endure, in its present condition, another lean year. The large and constantly accumulating stocks of foreign goods, the reduced demand, and low prices show how painfully foreign traders are affected by the general distresses of China, and we fear the hope raised by the opening of new ports will for this year at least be disappointed. We hear that the Shansi merchants and bankers have determined on (practically) withdrawing from commerce and finance for this year. The reason given to foreigners is that trade *must* be bad until after October at the least, and that if a bad harvest is gathered the country generally will be well-nigh ruined for a time. —*Shanghai Courier*.

Our Hankow letters are the reverse of satisfactory. The quality of the first arrival of tea is, as a rule, below average, and some chops are not only weak and thin but have a sourish flavour. The prices paid are, all things considered, excessive. No heed is given to many things which are easy to understand, such as last season's losses, present stocks in England, failure of the Russian market, bad trade in the United Kingdom, and the alarming increase and yield of the fine strong Indian teas. The Hankow tea-tasters and merchants ignore all such considerations, and are buying interior teas at high prices with all the old and unfailing recklessness of consequences. Recent letters from Moscow say that upon the unsold teas in stock there, (bought at extravagant rates in Hankow last year) the average loss may be estimated as at least forty per cent. Upon some chops which have become soft; or otherwise out of condition, the deficit will be even more severe. The London tea market seems to be in almost as bad a state as that of Moscow, as losses of thirty-five and forty per cent are unfortunately not uncommon.—*Shanghai Courier*.

WHAT CAN IT MEAN?

"Let my heart be still a moment, and this mystery explore."

Where is the man of woman born that is not attracted by a mystery? A mystery! why there's magic in the very word. Mark well the sibillation, hinting of nods and shrugs, and whisperings behind the hand. How flowingly it trickleth from between the lips, this mystery, fashioning the features in its exit, so as to leave a momentary trace upon them,—like the breath upon a mirror—of its import. Then what rare good company is a mystery. How it submits to be taken out and handled on all occasions, and turned over and tested, and even torn to pieces and dissolved. What pleasure it yieldeth to the fortunate possessor, who need never experience loneliness when he can command its company. What winning tricks it hath! How it retreats before you, and lures you on, and when you would lay your hand upon it eludes your grasp and is out of sight. It's a thousand chances too, but what it mocks you outright, in the end, and like the enchanted horse which changed itself into a fish and slipped from between its riders legs when, fording a river, you find that the mysterious hobby you fancied yourself securely astride of, has resolved itself into a miserable commonplace and disappeared. And the oddest thing of all is that you're not a bit discouraged by it. Not a bit. Deceived once, you're ready the next moment to be deceived again; the more readily, perhaps, because the deceiver is oftenest yourself.

A mere mystery may be guilty of such gambols, to be sure, but an *impenetrable mystery* never. IMPENETRABLE MYSTERY! What a piling up of mystery on mystery is here implied. What a sable pall, dense as midnight, and resisting all attempts to raise a corner so as to catch a a glimpse beneath it, is folded round a mystery in that awful word impenetrable. Awful, truly, for doth it not also confer immortality on the mystery? What, for instance, would have secured vitality for the letters of Junius, but the impenetrable mystery of their authorship? Who, but for the same reason, would waste a thought upon the man in the iron mask or the murderer of martyred Charles?

Can any one assert that the meaning of a word is not, so to speak, apparent on it? Of a surety not we. For our part, we always felt inclined to accept in its integrity, the story of the Eastern Prince, who had two children brought up in absolute silence, the better to ascertain whether, like original sin, the power of expressing their wants in articulate language was born with them ready made, or not, and who was enabled to arrive at a definite conclusion on their asking him one day for *bread*. *Bread* demanded the hungry little people, the story affirmeth, rummaging out from their own inner consciousness, and employing all uninstructed, the very one equivalent which expresses in a syllable the staff of life, and which, modified it is true in every language by special conditions unnecessary to touch on, naturally suggests itself. But we are prepared to go even further, and submit that our glorious English language at least, is full of words which not only explain their meaning by their sound, but also present a picture to the mind perfect in detail. The advantages of such a conceit, if true, are many and great. A single paragraph from any newspaper or book, for instance, attentively regarded, presents before the eye are endless panorama of pictures which you can regard as it best pleaseth you. You have naught to pay for admission to the gallery, no one offends you by standing in your light, and you require no catalogue. To illustrate our meaning, let us take the word 'cathedral.' It is the first which suggests itself and will answer our purpose as well as any other. Does not the word 'cathedral' call into existence, as by the waving of an enchanter's wand, a venerable building devoted to purposes of worship? Does it not embrace in three grand syllables, the mighty pile and its adjuncts and decorations? Is the stained glass window absent, or the groined and fretted roof? Miss we a single torn and dusty banner from its place, or a scutcheon from a Knightly stall, or the dim religious light which tempers outlines and paints with varying colours as the sun declineth, the sleeping effigies upon their marble pillows?

Ye Gods! What a volume of *sound* too, there is contained in 'cathedral.' How it hurls itself along, dwelling for a little space upon the penultimate and then rolling away upon the last syllable in thunder, like the crash of a mighty organ reverberating down the aisles of space.

In good sooth there is hardly a sense that such a word does not appeal to. We have just feebly shown how it may be seen and heard. To taste is not more difficult. You have but to roll it over in your mouth, not bolting it as do some hasty readers, but mouthing it, the rather, as an alderman is said to eat his turtle steak. How it fills your mouth, and slips along your tongue. What a soft and pleasing consistency it hath, semisolid at the first bite, but melting gradually into liquid at the end and leaving a pleasant aftertaste provocative of delightful fantasies, born of some such connection between the senses as is demonstrable by physiology, but of a more etherial quality. Ghosts of faint perfumes, beyond incense, and a vague and indescribable odour of antiquity.

Then, as regards the sense of touch———But we refuse to risk offending our intelligent readers by undertaking, with excess of zeal, to prove what surely needs no proof. As if a thing of so material a nature as to suffer itself to be seen and heard and tasted and smelt, could possibly be lacking in that quality appertaining to matter which yields resistence to the sense of touch. We scorn to discuss so self-evident a syllogism, and resist the promptings of the devil at our elbow, which tempts us to travel further upon the "airy stilts of abstraction."

But whither are we wandering? We have surely been dreaming on the breezy headland where we have been for some time back, reclining at our ease amongst the fragrant scrub and tender ferns, and breathing deep draughts of sweetest air laden with the perfume of a thousand wild flowers (erroneously supposed to have no scent), and listening to the melodious pipe of birds, incorrectly said to have no voice; but most of all regarding with curiosity the mysterious proceedings of certain toilers of the deep, whose fleet of fishing craft is spread out beneath us, as it were in a picture, upon the placid bosom of Kamaisha Bay.

What can they be after? They started on their cruise not after the manner of fishermen, begirt as to their swarthy foreheads with blue towels, but with huge round reed hats, such as landsmen working in the fields or coolies upon the roads affect, and for some half hour or so they have been assiduously waving them to and fro, posturing and bowing the while like mountebanks. They are under orders too, it would appear, as they seem to act in concert. "Hats off, gentlemen, and make a profound obeisance. A little lower still, I pray you," inspiring quickly at the moment with a hissing sound. "Ah! that was better. Two paces to the right, draw up your heels and favour me again. I thank you. A pace to the left and repeat the same manœuvre. A moment's rest, and we begin again. Now, ready, take your time from me." But see! what's that? A harpoon as I am alive, flashing through the air, followed by a whirlpool of foam upon the surface of the sea and the struggling of half a dozen strong fellows to retain within their heaving boat the rope to which their weapon fastened. There is a desperate encounter maintained for a little space between them and some invisible antagonist, but though the boat has been half under water several times and the sturdy fishermen swayed about like pine tops in a storm, they have now at last, and with a wild shout, hauled into their craft a glistening shark, the angry shudderings of whose body and flapping of whose tail grow gradually fainter and fainter as a knife is plunged into it here and there and its head finally dissevered.

But what of the strange foolery which preceded its capture? We almost despair of obtaining credence for the solution of the riddle, partly because it runs counter to the so oft declared belief of those who maintain that the human race is retrograding, since the complicated courtesy of the middle ages .that required an adversary to embrace you, before he cut your throat, has disappeared, and partly because it endows the family of sharks with a quality hitherto unrecognised by naturalists. To be brief then, the fishermen of Kamaishi have discovered,—by what process we have been unable to ascertain—that the shark in his heart of hearts is a fine gentleman, who would rather die than cut a friend. Salute him and he'll return your bow. Nay, he'll go out of his way to return your civility. He may he busy down below, but for all that he's ready to rise to the occasion. He's shy of ground bait but greedy of attentions. He's suspicious to a fault

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

of offered dainties, but a courtesy brings him to your feet. Hence the many bows, to acknowledge which he rises to the surface, undeterred by accumulated examples of how much treachery often lurks behind a smile.

But the day wanes. "Take your time from me, gentlemen, heels together" grows fainter and fainter as boat after boat returns to shore with a victim to duplicity, and the world does not seem a rush the better or worse after all, because civility reigns and is triumphant in Kamaishi bay. The world of Kamaishi, that is to say, for, "not to put too fine a point upon it," the inhabitants thereof are—all things fully considered—probably the most uncivil people in the world. We regret that in this matter language contains no stronger means of expressing a decided opinion than that which is involved in a superlative.

Law Reports.

IN H. B. M.'s COURT AT KANAGAWA.

Before H. S. WILKINSON, Esq., Acting Law Secretary.

Friday, June 8th, 1877.

THE HONGKONG AND SHANGHAI BANKING CORPORATION *v.* PETER GERHARD HANSEN.

Accused was charged with forging, uttering (and aiding and abetting in forging and uttering) with intent to defraud, a bank-note of the Hongkong and Shanghai Banking Corporation for $500; and with conspiring, with other persons, to forge and utter such bank note and thereby to defraud.

Mr Dickins appeared as solicitor for the prosecutors, the accused being defended by Mr G. P. Ness.

Gerhard Hansen was remanded for trial by Jury on Tuesday, the 20th day of February last.

The Registrar of the Court read at length the charge to the accused, who pleaded guilty to the third count, viz., the charge of aiding and abetting.

Mr Dickins, for the prosecution, then withdrew all the other counts of the indictment.

Mr Ness said that, by his advice, prisoner had pleaded guilty to aiding and abetting in the crime; and after making a few remarks upon prisoner's position, begged that, considering the circumstances of his having been imprisoned since February last and having only been a secondary person in the offence, the Court might mitigate his punishment when passing sentence.

Mr Dickins replied briefly to these remarks and pleaded that the costs be borne by the prisoner.

Mr Ness said this question might be considered afterwards; at present it was premature.

His Honour then addressed the prisoner, commenting severely upon the gravity of the charge. He did not consider prisoner had undergone any hardship by being confined since February, indeed, his incarceration had been at his own request and for his own convenience. Considering the sentence passed upon his accomplice, George Hansen, in another Court, His Honour thought it well to send the accused to prison for the same term, namely one year, with hard labour, to commence from to-day.

IN THE DANISH CONSULAR-GENERAL COURT.

Before H. S. WILKINSON, Esq., Acting Consul-General,

And

Messrs. KOLVIG and VAN TORP, Assessors.

Wednesday, June 6th, 1877.

UCHIDA WAKA *v.* E. DE BAVIER.

Plaintiff, a Japanese amah, claimed from defendant $250, the amount of return passage money from Europe, whence she had accompanied a Dr. Kauffman and his family at the request of defendant, on the understanding and under a guarantee from him that her return passage should be made good to her.

Defendant admitted the agreement but asked for proof positive that the passage money had *not* been paid.

In reply to the Court plaintiff said she had used her best endeavours to obtain the evidence ordered by the Court at the former hearing. She had written to the Saibansho but had been informed that Mr Watanabe could not himself appear. There was present in Court, however, an official who represented him per proxy and who was prepared to give all the necessary information.

Plaintiff, being cautioned, further stated:—I live at Soshiu, Kanagawa *ken*. I was in the service of Mr Douglas, at No. 42, when a person came from Mr Bavier saying that there was a doctor staying at his place whose wife wanted a nurse for her child, and that Mr Bavier was anxious to employ me to go along with the doctor's wife. It was represented to me at the time that a Japanese man servant was going as well, and in consideration of this fact and that it was Mr Bavier who requested me, I agreed to go. A great deal of delay occurred in obtaining my passport from the *Kencho* and as the time of the vessel's departure was close at hand, I was reluctant to go until the document was obtained, but Mr Bavier persuaded me to go, saying he would send the passport after me. On going on board I found that there was no man servant, whereupon I expostulated against going alone to Europe. But after a great deal of persuasion I was induced to go along with the doctor's family on the distinct understanding that I was only to accompany them to the end of the voyage and then be sent back to Japan. The *Kencho* official represented to me that it was very hazardous to go under the circumstances; that I had no kind of security for my return passage money; that I might be left destitute in Europe, and there thrown into disreputable company. I went straight to see Mr. de Bavier, and repeated this to him. He said he would go guarantee for my passage money, and thereupon made out a guarantee and stamped it. I took it to the *Kencho*. (Guarantee produced and admitted by defendant). I was told the passport should go after me, and in consideration of the sore distress in which the doctor's family would be left without my services, I went on board. We went to San Francisco and across the Continent by rail. I was subject to severe and cruel treatment from my master during the journey From New York we sailed to Hamburg where I made a firm demand to be sent back to Japan according to the understanding on which I left Japan. I was indifferent by what means I went so long as I did return. This occurred in the hotel at Hamburg. The doctor said I must stay till he bought a house. We then went to Kiel where his residence was. I again repeated my demand and was again refused. We next went to the hot-springs of Wiesbaden, where the doctor rented a house, I insisted almost every day on my demand but was kept waiting month after month, from October till May. The other lodgers took compassion upon me weeping and crying all the live long day to be sent back to my country. I was in great distress, when one day Prince Fushimi-no-miya passed through the place. As the upstairs lodger was on friendly terms with my master he did not like to interfere personally; but, seeing the arrival of the prince in the newspapers he told me it was an opportunity not to be lost. He went to the prince's hotel and made known my case there. The prince sent one of his attendants Mr. Tasada to speak to the doctor about the matter, who averred he was just on the point of returning me to Japan. I asked my friend to assure Mr Tasada that the doctor's promises were altogether unreliable, for though he had been promising all along to send me home he had never yet done so, and I suggested that the case might be brought under the cognisance of the municipal authorities. Mr Tasada replied that as there was a Japanese Legation established at Berlin the best thing to do would be for me to get my wages from my master and my travelling expenses to Berlin, go there, and obtain a passport to return home. I made this representation to Dr Kauffman saying that the expenses would be a more trifle as I could travel third class, or even fourth, and asked him for my wages. He refused, saying he was only half awake that morning and did not know what he might have said. His understanding when he left Yokohama with me was that I was to accompany him to Europe and to be sent back if opportunity offered; if any one going to Japan required my services and would give me a passage. My master was at that time packing up for departure, and I went and saw Mr Tasada and told him the state of affairs. So it was resolved that I should obtain all the wages I could and then go on to Berlin. The agreement made here with respect to wages was that at first I should receive $12 per month and afterwards $8; but when accounts came to be settled, master gave me $4.50 per month. Next day, Tasada saw me to the train, and telegraphed to Berlin, where I arrived in safety. I remained there about a month when Mr Shinagawa said there were no ladies to be attendant on and it was not right for me to stay longer. The wife of Mr Watanabe, the Secretary of Legation, and at that time in Vienna took me into her service, however, and consequently I proceeded to Vienna. I stayed in the service of that lady for about a year and three months till Mr Watanabe resolved to send me back here at his own expence. Mr Watanabe returned to Japan in October 1875, leaving Marseilles on the 4th of that month, and arriving on the 11th of November. I remained in Mr Watanabe's family up till January last year. I then made a claim against defendant for the balance of wages of which I had been defrauded and for travelling expenses. Representations were made repeatedly to defendant, who replied that nothing could be done till he had communicated with Dr. Kauffman.

Adjourned till 2 o'clock.

Plaintiff continued in the afternoon:—In my distress I applied to Mr Tsunakichi who was the first to employ me. He told me this guarantee was valid wherever I had been, whatever country I visited. I then drew up my statement of the case and such are the facts. I have nothing to add.

Cross-examined by defendant:—I did ask Dr Kauffman for my travelling expenses but he said he could not give me them. He had not promised to do so, he said, and was only to help me to return to Japan in case any one going there should take me. This proposition of Dr Kauffman's was not part of the agreement; there was positively no such stipulation.

To the Court:—I have paid part of my expenses back to Japan. My wages were retained on account of reimbursement. They amounted to about *yen* 84. That was from Mr Watanabe. From Dr Kauffman I received forty-five Dutch dollars which went to pay my expenses to and in Berlin. I was paid three months' wages due before I left here, at $12 per month. I left Dr Kauffman at Wiesbaden on account of his refusal to pay my wages or travelling expenses My agreement with Dr. Kauffman was only verbal.

Nagashima Tsunekichi, cautioned, stated:—Until a short time ago I was in Mr de Bavier's service. Dr. and Mrs. Kauffman who were going home were much in want of a wet nurse and Mr. Bavier asked me if I knew of one. As they expressly wished to have one who understood a little English I spoke to last witness. No special contract was made. She made agreement herself about wages. She was to receive eight *rios* per month. Mr. Bavier made no agreement.

Cross-examined by defendant:—I brought plaintiff to No. 76. I

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

think she must have made terms with your brother in the first instance because he knew Japanese well. He told me he wanted the nurse for Dr Kauffman.

Another Japanese, who had been in the employ of defendant's firm remembered the circumstance so far as last witness had stated.

Hori Hirosawa, an official, said:—I state what Mr. Watanabe told me. Personally I know nothing of the circumstances. When Mr Watanabe and his wife were about to return to Japan from Germany, Mr Shinagawa, the Ambassador to that Court, wrote to him saying that as they were about to go home he would be obliged if they would take into their service a Japanese woman quite destitute and anxious to return to Japan. Mr Watanabe employed the woman, but being delayed through many causes, they remained in Germany for over a year after that. I have brought no documents with me. Mr Watanabe was detained through press of business.

His Honour said witness' statements could not, under the circumstances, be accepted. Mr Watanabe ought to have attended personally, according to the Rules of the Court.

Plaintiff said she was unable to bring forward further evidence.

Ernest de Bavier, sworn, stated:—I am His Danish Majesty's Consul. This claim is based on the guarantee which we gave to the *Kencho* at their request. I was in Europe at the time and on my return in January last, my brother told me the circumstances of the case. Plaintiff lodged several petitions against the firm subsequent to the departure of my brother in March last year. She came to see me personally, and asked me to refund her travelling expenses to the amount of $150. I told her that my brother had explained the case to me and that according to the guarantee we could only be held responsible if her passage money had not been paid to her. And that as in the first instance Dr Kauffman was the person to whom she had to look for payment she ought to sue him, and if he should refuse without good cause to pay her passage, we as guarantors would do so. I told her that I could not take her mere word as a proof that Dr. Kauffman had not paid her, and that as it would be difficult for her to sue him, I would, in order to simplify matters, correspond with him on the subject. I have written to him repeatedly but as he is constantly travelling about, my letters appear to have missed him. I received a few months ago a letter from his wife dated Lübeck in which she informs me her husband has returned to Manila. I have written to a friend of mine in Manila to ascertain if he was there but I have got no reply. In the meantime plaintiff has been constantly pressing for a hearing of this case, so I told her that I would discontinue my endeavours to obtain Dr Kauffman's statement and have the case brought into Court as she wished. That is all.

The foregoing statement was now translated to plaintiff, who had no questions to put. She had received no account of expenses from Mr Watanabe whom she still owed about $150, which he pressed upon her to refund at once.

To Court:—Mrs Watanabe would not pay me any wages on board ship because she said I was not wanted. I did what service was necessary to her I think that if summoned by the *Kencho*, Mr Watanabe will come after a postponement of the case. I did apply to the *Kencho* but they said that as Watanabe was a very high *yakunin* they could not summon him. They advised me however, to send some one of influence to persuade him to come, so I sent Mr Bohm. I am anxious that he should appear, but have no power to compel him. Mr Watanabe compels me to stay in his service until I have paid the balance of the money which he spent in my passage. I got leave to come to Yokohama in order to have this case settled. I must serve him for 8 or 9 years if this case go against to me.

To the assessors:—I had no proof at hand whilst in Germany so that I could not institute legal proceedings against Dr. Kauffman there.

His Honour said he would adjourn the case in order to compel Mr Watanabe to appear, or ascertain if that gentleman was beyond all law.

Adjourned till Thursday next, the 14th instant, at 10 a m.

From Kioto we hear that since the opening of the railway the prosperity of Fushimi has departed and that ten thousand people who were interested directly or indirectly in the carrying trade between Kioto and Osaka have been thrown out of employment. We can easily believe the announcement that the Kioto Fu is anxious to find some employment for them. The silk weaving district has been dull for a long time, but the foreign looms which were purchased at the Vienna Exhibition appear to be doing well, and the Shokojo, which owns them, has pulled down the old manufactory in the Suminokura Yashiki and is erecting a finer building on the same site.—*Hiogo News.*

A Scheme for the reorganisation of the Yangtsze Insurance Association is to be presented shortly to the shareholders, the gist of which is to reduce the shareholders' capital from Tls. 600,000 to Tls. 420,000 and the cash divided from 15 to 12 per cent. The scheme is said to contain other features by virtue of which the policy-holders will be able to count on favourable returns with ample security, and extra dividends be paid to shareholders at least equal to the percentage existing hitherto. The prospectus will be ready in a week or ten days, and the project is to be discussed at the next meeting of shareholders to be held the first week in July.—*Shanghai Courier.*

POPULAR ART.—III. POTTERY AND PORCELAIN.

(The Spectator.)

In my last article on "Popular Art," I gave some few leading principles by which the choice of furniture and its arrangement should be guided; in this number I propose to try to estimate the place and value which ceramic manufactures should hold in the general decoration of a house, and also to say a few words as to the kinds of design which are best fitted for the ornamentation of such manufactures.

First, then, as to the special character of the design. Here, at the very outset of our subject, we are met by a difficulty, for if we think back over the various kinds of celebrated pottery and porcelain, from the vases of Greece to the match-pots of Minton, we find that nearly every possible subject and method of treatment has been employed in the embellishment of the clay. Thus we have, amongst many others, heroic subjects, contests of gladiator and athlete on the amphoras of Greece; scenes and portraits, religious or social, on the majolica of Italy; realistic landscape and satin-waistcoated figures on the works of Sevres and Dresden; and lastly, imitation of animal life produced with painstaking minuteness at Messrs. Minton's manufactory, so that now-a-days we can actually hang up a china parrot, the size of life, in our drawing-room, and enjoy its presence without hearing its voice. Now it will be easily seen by any one who thinks over the matter carefully that some of these latter forms of decoration are false and bad, either from misconception of the nature of the material, or because they attempt to reproduce exactly what is impossible of reproduction. For instance, take the parrot we have just mentioned. Say, the workman has succeeded, as, to do him justice, the workman does succeed, in reproducing exactly the colours and shape of the bird, and has hung it on a gilt hoop, and you have it in your drawing-room all complete. What more can you want? You want the impossible. You want the constant ruffling and preening of the feathers, you want the knowing turn of the head to right and left, you want even the shrill, inharmonious cry. And the more perfect the imitation of the outward form and colour are, the more you require the circumstances which you are accustomed to associate with them. It is out of all your range of experience, out of every one's range of experience, that a parrot should sit for ever mute and motionless; and this being so, the reason resents the misspent labour which has given with so much toil a deceptive reproduction of a bird which directly it ceases to be deceptive becomes incongruous.

Walking through one of the largest pottery galleries in London yesterday, I saw gigantic peacocks perched upon tree-trunks, with growth of ivy and grass about the trees, a marvel of skilled labour and successful work in the furnace, and yet the work was really wasted. The birds were not like peacocks when you came to look at them,—could not be, by the very nature of the case. The sheeny feathery mass of azure and burnished gold which forms the peacock's tail is absolutely impossible to reproduce in pottery, and that being so, the deceptiveness of other parts only heightened the incongruity. For similar reasons, all painting of natural landscape upon porcelain is really wasted skill. In working upon clay which has to be submitted to the furnace, the artist labours under disabilities which must for ever prevent his approaching the effect obtained upon canvas or paper, where the results are dependent only on the colour used, and not upon the colour plus the result of the fire. Then the nearer a representation of a scene upon a plate or a vase approaches to an imitation of what the same would be in an oil-painting, the more we perceive the inevitable shortcoming, and the less pleasure we receive from the work. I have not space enough to show how similar reasoning applies to the satin-waistcoated Sevres figures, but it is hardly necessary, as they scarcely profess to be more than ornaments, and by their size are exempt from any deceitfulness in the strict sense of the word. But what I want to get at is this, - that whenever you find pottery or china deceptively imitating natural substances, the nature of which is dissimilar to the meterial in which the imitation is made, then you you are to consider such imitation as bad art, because it is art which is attempting the impossible, and not working under the conditions by which it should be governed. It follows from the above that whenever we represent natural objects or scenes upon pottery, we should represent them conventionally, that is to say, we should not attempt to trespass upon the province of painting by showing the whole mass of facts connected with the natural object, but only seize such main points as may be effectively reproduced in our work; and if in such selection we choose them so well as to get the spirit of the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

thing represented, we have good conventionalism. Look, for an example of this, at Greek designs on pottery, and mark how strong in action and graceful in gesture are the figures, no matter how rudely they are drawn, and also how freely, and yet truly, the main points of the anatomy of the figure are shown. Thus we see that what is called "conventionalism" is not dependent upon treating any subject according to a fixed set of rules, not making its curves, angles, or its spheres squares, but getting at its essence, and sticking to that at any cost; and that, therefore, as we said in our first notice, true conventionalism is not the lowest form of art, but one of the highest forms, and can only be done by true artists. But there is another kind of conventional ornament, that which is dependent upon the function which the ornamented object will have to fulfil, and the material of which it is made. Of this we can only say here that the true rule is to admit as much beauty as is consistent with the conditions. For instance, if the place is to be subordinate, the simplicity of the ornament should be in proportion; and so if the office is lowly, should the ornament be plain and serviceable (*i.e.*, not easily damaged by use). For instance, it would not be advisable to put an elaborate design on the mouldings of a cornice or the border of a housemaid's pail. This comparative degradation of ornament is best accomplished, according to Mr. Ruskin, "by refusing more or less the introduction of natural form. The less of nature it contains, the more degraded is the ornament, and fitter for a humble place; but however far a great workman may go in refusing the higher organisms of nature, he always takes care to retain the magnificence of natural lines,—that is to say, of the infinite curves."

I must now pass to the second part of my subject, and assuming the pottery or porcelain to be decorated on the above principles, examine the question of its proper use in decoration. The first noticeable thing here is the great superiority of pottery to china, a superiority which has existed ever since the two manufactures existed. There are several reasons which might be alleged for this, but the true one seems to be that the pottery was, as a rule, more broadly and simply decorated, and therefore better fitted for a subordinate place. Something, also, is no doubt owing to the fact that the pottery had, as a rule, some actual function to fulfil. It is a curious fact in art, but it seems to be a nearly universally true one, that works done with no other aim than to be pretty objects generally miss all real artistic feeling. As an instance of this, take the multitude of gentlemen and lady-shepherdesses who have simpered upon Dresden and Sevres china for the last two hundred years. They are generally as pretty as they can possibly be, but not good art in any way. I think, then, the first rule for decorating as regards china is,—to let it alone. Don't have any china, but stick to pottery; it will save you much money, and you will, on the whole, gain rather than lose. The one exception to this rule I should make would be in the case of blue Nankin porcelain, which has a combined delicacy of tint and vigour of design which cannot be surpassed. It is worth noticing, however, that good Delft is nearly as fine in colour, frequently very rich in design, and always a quarter of the price. Then comes the crucial question whether you should have plates on the walls or not? Now, there is no doubt that a wall is not the proper place for a plate, and that strictly speaking, you have no business to have it there. But practically we have no business to do a great many things which we are almost compelled to do by circumstances, and here, as elsewhere, it is a question of comparative values. Few people can afford such pictures as would give the eyes as much pleasure as the rich hues of pottery, and I think the variety gained by the sparing use of plates and dishes is worthy of a slight sacrifice to consistency. But it should not be overdone, and it should be distinctly understood that it is only as a relief and a help to the general effect of the room that it is allowable. Above all, the plates should not be scattered about the room, or hung singly as if they were pictures, but should be disposed in rows above a doorway or mantel-shelf, or in vertical lines along the mouldings of a panel, or surround a picture or a looking-glass. It is always much preferable, where the arrangement of the room permits it, for the plates to stand than to be hung, and to this end a long wooden bracket may be placed above the door, made in the shape of a low, open wooden balustrade, behind the pillars of which the plates may be placed, the greater portion of the plate showing above. All combinations of several plates together in velvet frames are objectionable; there is something absurd in the notion of a plate requiring a frame at all. For this reason, the recent practice of framing single plates in black wood and gold is we think, unadvisable, and tends to take away from the character of the art,—to try and make the beholder think of it in the same way as he would of an ordinary painting.

Then, of course, one must have tiles everywhere—at least, that's the present fashion—and the consequence is that we have them in the most unsuitable places. For a climate like that of England, a tiled wall is an abomination for eight months in the year, if there were no other reason against it. But there is another very serious reason, and that is that tiles are utterly destructive of anything that is hung upon the same wall; as a matter of fact, they are only fitted to form the sole decoration of the place in which they are found. The one place where tiles are of real service is the hearth and fire-place, though even here it is better to confine them to the space about the fire, and not extend them to the mantel-piece. The reason for this is that the glow of the fire takes off any chilliness of colour there may be in the blue-and-white glaze, and also they are easily kept clean, and reflect the fire-light.

As a general rule, avoid having any vases or china ornaments about on tables, intermixed with the books, writing materials, &c. They always look out of place, and a multiplicity of such things is excessively fatiguing and tedious to the eye; it should be a maxim with you in decoration that everything which does not help your effect weakens it.—there can be no medium course. The places for your china are the mantel-piece, and generally the tops of any pieces of furniture except tables in common use, the only exception to this rule being when the vase is intended to hold flowers, in which case it should be anywhere where people can see and smell them, and should be as graceful in form and simple in colour as possible, plain white pottery being, perhaps, the most suitable of any. A horrible fashion has sprung up lately of placing imitation-animals underside-tables and in various corners, which cannot be too strongly reprobated, They are not beautiful, and they are perfectly useless, and generally in the way. And lastly, make your room your first object, and your china the second, for it is quite subsidiary in interest to pictures, at all events in most people's opinion, and only suffers from being forced into the foremost place. In my next and last article on the sucject of "Popular Art," I shall speak generally of ornamentation and colour.

REUTER'S TELEGRAMS.

London, May 23, 1877.

The Russians have captured Ardahan.

The Roumanian Chamber of Deputies has decided to declare Roumanian independence, and war against Turkey.

Turkey is aiding Circassia in her revolt.

The British Ironclad Squadron is now at Piræus.

London, May 24, 1877.

Several Turkish Ironclads are bombarding Russian towns on the Caucasus Coast.

The Emperor of Russia will go to Ployesti on the 22nd of June, when active operations on the Danube are expected.

Warlike preparations are being made in Servia, notwithstanding the dissuasion of Russia.

The intervention of Austria is probable should Servia move.

There is an agitation for war in Greece.

A Flood has carried away several bridges and parts of railways in Roumania.

London, 25th May.—The Russian troops in Roumania are moving westward. 85,000 men are concentrated about the Upper and Middle Danube, which will probably be impassable until the middle of June.

Prince Bismarck has returned to Berlin and has held a conference with the Emperor of Germany.

An active exchange of diplomatic communications is going on.

The German Ambassador to Italy has followed Prince Bismarck to Berlin.

The French semi-official journals have assumed a hostile tone towards the French Ministry.

Diplomatic relations between Germany and Italy are very intimate.

There has been a demonstration of the Softas at Constantinople to demand ministerial modifications.

London, 25th May, 1877.

Prince Bismarck has returned to Berlin.

The Prince conferred with the Emperor, and an active exchange of diplomatic communications with the German Ambassador in Italy followed.

,, No. 3 Ke-pak	... ...	...	,, ...	$8.00	to	$8.60

China No. 4 Kook-fah	... ...	...	per picul...	$7.50	to	$7.90
,, No. 5 Kong-fun	... ...	...	,, ...	$6.50	to	$7.20
,, No. 6 E-pak	... ...	...	,, ...	$5.50	to	$6.00
Swatow Brown	... ...	...	,, ...	None.		
Daitong	... ...	...	,, ...		$4.70	
Japan Rice	... ...	...	,, ...	$1.90	to	$2.05
Kerosene Oil	... ...	...	,, ...		$4.60	

Kerosene Oil.—Quotations remain about $4.60, stocks being still very small.

EXPORTS.

Silk.—A fair business has been done during the past week at somewhat easier rates. Good Hanks are in demand at quotations, whilst prices of medium and common qualities are not yet low enough to tempt buyers. Transactions in Oshius and Filatures have been small. Settlements are 90 bales of Hanks, 40 bales of Oshius and 20 bales of Filatures, in all 150 bales.

Arrivals have been very small, stocks being estimated at 900 bales.

		In London at 4s. 1½d.	*In Lyons at* 5.20.	
Hanks, Best No. 1 & 2	$600 to 620	22/2 to 22/10	61 to 63	
,, Good No. 2	$560 to 590	20/9 to 21/10	57 to 60	
,, Good all round No. 2½	$510 to 540	19/1 to 20/1	52½ to 55½	
,, Medium No 3	$480 to 500	18/ to 18/8	49½ to 51½	
,, Common to Inferior No. 4 & 5	$440 to 470	16/7 to 17/8	46 to 49	
Oshiu, Best	$560 to 580	20/9 to 21/6	57 to 59	
,, Good to Medium	$500 to 540	18/8 to 20/1	51½ to 55½	
Hamatski, Medium to Common	$420 to 450	15/11 to 17/	44 to 47	
Kakeda, Good	$580 to 620	21/6 to 22/10	59 to 63	Nominal.
,, Medium to Common	$530 to 560	19/9 to 20/9	54½ to 57	
Filature Silks	$650 to 750	23/10 to 27/3	66 to 76	

Tea.—Business in this staple continues brisk, settlements for the closing week amounting to nearly 5,000 piculs. Native holders seem anxious to realize lower grades, but really *Fine* parcels are held for full figures.

Prices close as under, and stocks being ample, holders are generally willing sellers.

Medium	... ...	...	$18.00	to	$20.00	
Good Medium	... ...	...	$21.00	to	$24.00	
Fine	... ...	...	$25.00	to	$27.00

In the U. S. Consular General Court at Kanagawa, Japan.

J. M. BATCHELDER,

Against

THE PROCEEDS OF THE SALE OF THE BARQUE

"CAYALTI."

TO THE FORMER OWNER OR OWNERS OF THE SAID BARQUE AND ALL OTHERS WHOM IT MAY CONCERN. GREETING.

WHEREAS an action has been brought in this Court by the above-named Plaintiff against the proceeds of the sale of the Barque *"CAYALTI,"* now in the hands of the UNITED STATES CONSUL-GENERAL for Japan, praying that the said proceeds may be paid to him on account of monies advanced and transportation and supplies furnished to the crew and coolies belonging to the said Barque *"CAYALTI."*

Now therefore take notice, that unless answer be filed therein within three months from the date hereof, judgment will be taken by the said Plaintiff according to the prayer of his Petition.

Given under my hand with the Seal of said Court affixed, this 28th day of May, A.D. 1877.

(Signed) THOS. B. VAN BUREN,
[Seal.] U. S. Consul-General.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of al kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a 'fowl and any quantity of peas, and the demand became so great 'that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World

May 17th, 1873. tf

THE BEST INVESTMENT OF THE DAY FOR A SMALL OUTLAY.

And where there is no previous knowledge of the business required, is a Lemonade, Ginger Beer, and Soda Water Machine, as the public taste is so much on the increase for Aerated Drinks. The book of 90 pages of illustrations and information forwarded free.

MISCELLANEOUS.

DYSENTERY, CHOLERA, FEVER, AGUE, COUGHS, COLDS, &C.

Dr. J. COLLIS BROWNE'S

CHLORODYNE

(Ex Army Med. Staff)

IS THE ORIGINAL AND ONLY GENUINE.

CAUTION.—Vice Chancellor Sir W. P. Wood stated that Dr Collis Browne was undoubtedly the Inventor of Chlorodyne; that the story of the Defendant, Freeman, being the Inventor was deliberately untrue, which he regretted had been sworn to. Eminent Hospital Physicians of London stated that Dr. Collis Browne was the discoverer of Chlorodyne; that they prescribe it largely, and mean no other than Dr. Browne's.—See "Times," July 12th, 1864.

The Public, therefore, are cautioned against using any other than

DR. J. COLLIS BROWNE'S CHLORODYNE

REMEDIAL USES AND ACTION

This INVALUABLE REMEDY produces quiet refeshing sleep, relieves pain, calms the system, restores the deranged functions and stimulates healthy action of the excretions of the body without creating any of those unpleasant results attending the use of opium. Old and young may take it at all hours and time when requisite Thousands of persons testify to its marvellous good effects and wonderful cures, while medical men extol its virtues most extensively, using it in great quantities in the following diseases:—

Diseases in which it is found eminently useful—Cholera, Dysentery, Diarrhœa, Cholics, Asthma, Rheumatism, Neuralgia, Whooping Cough, Cramp, Hysteria, &c.

EXTRACTS FROM MEDICAL OPINIONS.

The Right Hon. Earl Russell communicated to the College of Physicians and J. T. Davenport that he had received information to the effect that the only remedy of any service in Cholera was Chlorodyne.—See "Lancet," December 31st, 1864.

From A. Montgomery, Esq., late Inspector of Hospitals, Bombay:—"Cholorodyne is a most valuable remedy in Neuralgia, Asthma, and Dysentery. To it I fairly owe my restoration to health, after 18 months' severe suffering, and when other remedies had failed."

Dr. Lowe, Medical Missionary in India, reports (Dec. 1865) that n nearly every case of Cholera in which Dr. J. Collis Browne's Chlorodyne was administered the patient recovered.

Extract from "Medical Times," January 12th, 1866.—"Chlorodyne is prescribed by scores of orthodox medical practitioners. Of course it would not thus be singularly popular did it not supply a want and fill a place."

Extract from the General Board of Health, London, as to its efficacy in Cholera.—"So strongly are we convinced of the immense value af this remedy that we cannot too forcibly urge the necessity of odopting it in all ceases."

Beware of spurious and dangerous compounds sold as CHLORODYNE, from which frequent fatal results have followed.

See leading article. "Pharmaceutical Journal," August 1st, 1869, which states that Dr. J. Collis Browne was the inventor of Chlorodyne; that it is always right to use his preparation when Chlorodyne is ordered.

CAUTION.—None genuine without the word "Dr. J. Collis Browne" on the Government stamp. Overwhelming medical testimony accompanies each bottle.

The public are further cautioned, a forgery of the Government stamp having come to the knowledge of the Board of Inland Revenue.

SOLE MANUFACTURER—

J. T. DAVENPORT,

83, *Great Russell Street, Bloomsbury, London.*

Sold in bottle at 1s. 1½d., 2s. 9d. and 4s. 6d.

Yokohama, October 21, 1876. 6mos.

MISCELLANEOUS.

PROTECTED BY ROYAL LETTERS PATENT,

Dated October 11th, 1869.

Under Distinguished Patronage

DR. BRIGHT'S PHOSPHODYNE.

(OZONIC OXYGEN)

THE NEW CURATIVE AGENT, AND ONLY RELIABLE REMEDY FOR NERVOUS AND LIVER COMPLAINTS

This Phosphatic combination is pronounced by the most eminent members of the Medical Profession to be unequalled for its power in replenishing the vitality of the body, by its supplying all the essential constituents of the blood and nerve substance, and for developing all the powers and functions of the system to the highest degree.

It is agreeable to the palate, and innocent in its action, while retaining all its extraordinary properties; and as a specific, surpassing all the known therapeutic agents of the present day for the speedy and permanent cure of—

Nervous Prostration	Lassitude
Liver Complaints	Shortness of Breath
Palpitation of the Heart	Trembling of the hands and limbs
Dizziness	Impaired Nutrition
Noises in the Head and Ears	Mental and Physical Depression
Loss of Energy and Appetite	Consumption (in its first stages only)
Hypochondria	Timidity
Female Complaints	Eruptions of the Skin
General Debility	Impaired Sight and Memory
Indigestion	Nervous Fancies
Flatulence	Impoverished Blood
Incapacity for Study or Business	Nervous Debility in all its Stages
Sick Headache	PrematureDecline

and all morbid conditions of the system arising from whatever cause. The action of the Phosphodyne is twofold—on the one hand increasing the principle which constitutes nervous energy, and on the other the most powerful blood and flesh generating agent known; therefore, a marvellous medicine for renovating impaired and broken-down constitutions. It quickly improves the functions of assimilation to such a degree, that where for years an emaciated, anxious, cadaverous, and semi-vital condition has existed, the flesh will rapidly increase in quantity and firmness, and the whole system return to a state of robust health. The Phosphodyne acts electrically upon the organisation; for instance, it assists nature to generate that human electricity which renews and rebuilds the osseous muscular, nervous, membranous, and organic systems. It operates on the system without exciting care or thought upon the individual as to the process. It moves the lungs, liver, heart, kidneys, stomach, and intestines, with a harmony, vigour, yet mildness unparalleled in medicine.

The Phosphodyne gives back to the human structure, in a suitable form, the phosphoric or animating element of life, which has been wasted, and exerts an important influence directly on the spinal marrow and nervous system, of a nutritive, tonic, and invigorating character, maintaining that buoyant energy of the brain and muscular system which renders the mind cheerful, brilliant, and energetic, entirely overcoming that dull, inactive, and sluggish disposition which many persons experience in all their actions.

The beneficial effects of the Phosphodyne are frequently shown from the first day of its administration, by a remarkable increase of nervous power, with a feeling of vigour and comfort, to which the patient has long been unaccustomed. Digestion is improved; the appetite increases wonderfully; the bowels become regular; the eyes brighter; the skin clear and healthy; and the hair acquires strength, showing the importance of the action of the Phosphodyne on the organs of nutrition.

Finally, the Phosphodyne maintains a certain degree of activity in the previously debilitated nervous system; its use enables all debilitated organs to return to their sound state and perform their natural functions. Persons suffering from Nervous Debility, or any of the hundred symptoms which this distressing disease assumes, may rest assured of an effectual and even speedy cure by the judicious use of this most nvaluable remedy.

DR. BRIGHT'S PHOSPHODYNE

IS SOLD ONLY

In CASES at 10s. 6d. by all Chemists and Patent Medicine Vendors throughout the Globe.

Full Directions for Use, in the English, French, German, Italian and Dutch Languages, accompany each Case.

☞ *CAUTION.—The large and increasing demand for Dr. Bright's Phosphodyne has led to several imitations under somewhat similar names purchasers of this medicine should therefore be careful to observe that each case bears the English Government Stamp, with the words Dr. Bright's Phosphodyne engraved thereon, and that the same words are also blown in the bottle.*

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omissonto renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

Since the commencement of the civil war, there has been no time so utterly barren of intelligence, as to the progress of events in Kiushiu, as the past week. The native papers have either received no news, or are not permitted to publish what they do know. That the rigid censorship of the Press is by no means relaxed is proved by the entire suppression of the *Bummei Shinshi* (formerly the *Sômô Zasshi*) and the *Sômô Jijô*, which papers had a circulation of about 3,000 each, and the future publication of which was, on the 13th instant, prohibited by the Tôkiô *Fu*. From the little information that can be gleaned from various quarters, it would appear as though the Imperialist commanders are unwilling to risk any further engagements with their ubiquitous antagonists, until their forces are augmented by the arrival of fresh recruits. And if a very general report may be credited, from the presence of these new levies has arisen a most serious danger to the Imperialists. The Government, having exhausted nearly every available means of raising men to increase its rapidly decreasing strength, has endeavoured in several provinces, more especially in the North, to rouse a spirit of patriotism by giving a bonus of forty *yen* to every recruit. At the time of enlistment the men were told that they were required as policemen in Tôkiô, but on their arrival there, they found that they were to act as troops, and to be sent at once into the field. With small stomach or desire to fight against Saigo's veterans—the fleeting pleasures procurable with the forty *yen* having, moreover, been enjoyed to the fullest extent—they complained that they had been deceived. The discontent has resulted in wholesale desertion. So great has been the thinning of the ranks of these new recruits, that it has been considered necessary in Tôkiô and the suburbs to have covered *jinrikshas* stopped by police and their occupants examined. But this difficulty is small compared with the reported disaffection in the army in Kiushiu. The soldiers complain that those who have recently joined the army, and have as yet done nothing for the Imperial cause, received a far larger bonus and more liberal treatment than themselves, who have had to bear the burden and heat of the day. Doubtless, too, they commence to see the futility of continuing the struggle, as carried on at present, against the enthusiastic followers of Saigo and Kirino. They are commencing also to feel the effects of the heat of the southern climate, and the universal report runs that they are getting mutinous, sick and generally demoralized. The only action worth remarking has been the burning down of Saigo's palace, just outside Kagoshima. During the conflagration an attack was made by the Satsuma men, who forced the Government troops to retire with loss. Of Saigo's movements nothing is known, but it is safe to affirm that neither he nor his army are idle, or if so, that they are remaining idle to some purpose. Certainly it is not weakness in numbers that makes them avoid direct engagements, for we see that Kirino is in Hiuga with an army of 19,000 men. Saigo is not the man to sacrifice lives in useless conflict, when his aims can be better attained by delay that wearies and weakens his opponents far more seriously than indecisive engagements. Unfortunately every day adds to the weight of debt that is pressing so heavily on the suffering country; every day brings nearer the time of national bankruptcy. The people are powerless in the iron gasp of a corrupt and pitiless despotism, from which they can only be liberated by the unwearied efforts of men like Saigo. As peace seems unattainable by any other means, the sooner those efforts are crowned with success, the better will it be for the Nation at large.

No definite news has been received of what is transpiring in Tosa. It is said that the Government have seized, or forced to be given up, all the arms in the possession of the *samurai* of the province; also that there is great want of unity of opinion among the various societies in the *Ken*. Nothing is positively known, but it would seem that the Government has every cause to distrust their intentions and to have taken all possible measures to frustrate them. It is further said that many of the *samurai* have crossed over to Kiushiu and joined themselves to Saigo.

A notification has been issued by the *Gonrei* of Kanagawa *Ken*, to the effect that foreigners wishing to visit the Hot Springs of Hakone and Atami for the benefit of their health can obtain passports by direct application to the Kanagawa Kencho, without, as hitherto, having to apply through their respective Consuls or Ministers. The courteous intention of H. E. the Minister of Foreign Affairs in issuing this regulation will be understood and thoroughly appreciated. In certain cases, as, for instance, when a visitor has but a short time at his disposal and every hour is of consequence, or where an invalid requires immediate change, the delay of three or four days necessary to procure a passport under the old regulation has been extremely inconvenient. The present notification obviates any such delay. We cannot, however, refrain from expressing a fear that the *Gonrei* is incurring considerable risk in issuing passports to applicants without first ascertaining that

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

their applications are supported by their respective Consuls. In one quarter this danger has been foreseen and provided against, H. M.'s Consul, Russell Robertson, Esq., having issued a notification stating that all applications from British subjects for such passports are to be made through the British Consulate. Without such general provision be made, a door is opened for the exit of a class of foreigners who are a special curse to this country and a disgrace to their several nationalities. They are objectionable enough when confined to the area of treaty limits, and to some extent under the surveillance of their respective authorities. If this miserable—not to say dangerous—crew is allowed increased privileges, and is to be permitted to swarm out into the health-giving retreats of Hakone and Miyanoshita, not only will it become utterly impossible for decent people to avail themselves of the privilege they have hitherto enjoyed, of purchasing for themselves or their families the delightful relaxation to be found at those resorts, but the Japanese Authorities will incur very grave responsibilities. There will be nothing to prevent deserters from ships, roughs or indifferent characters of any class from obtaining a passport and going off to hide in the mountains. We fully appreciate the value of increased immunities and privileges, but under no circumstances whatever would we uphold a liberality which would result in giving a wider field and a freer license to the class we allude to. There can be no reason why any applicant for passport should not previous to his application at the Kanagawa Kencho first obtain a recommendation from his Consul. This would cause but little trouble or delay, while it would entirely do away with the grave objection to which the present notification of the *Gonrei* is open. In the general interest of foreigners, and as a most necessary precaution on their own part, it is to be hoped that the Consuls of all nationalities will see the necessity of issuing a similar notification to that of the British Consul.

In the *New York World* appears a notice of a collection of Japanese curios which has been placed on view at Messrs. Tiffany & Co.'s in that city, and which is said to be one of special rarity and interest. It is stated that the entire collection has been made by Dr. Christopher Dresser, of the South Kensington Museum. It will be remembered that this gentleman, who ranks very high as an authority on decorative design, recently came to Japan as the bearer of a singularly fine collection of works of keramic art, presented to H. M. the Mikado by the Museum. His visit had also the very important object of impressing upon the native artists the urgent necessity of preserving those distinctive features and excellencies which have caused their works to be so largely sought after and appreciated in Europe, and which there is only too good cause to fear are gradually being replaced by vulgar and tasteless imitations of foreign styles. There is little doubt, then, that the writer in the *World* is correct in saying that this collection is the finest yet shown in New York. We have seen various collections in that city, and have been equally vexed at the gullibility that eagerly bought up the rubbish offered for sale, as choice specimens of the best Japanese art, and at the unblushing impudence of the so-called collector in presenting such trash to a simple public. The collection may safely be left to the fine taste of Mr. Dresser, but we are convinced that he is in no way responsible for the description of the articles. We read that "one of the notable things of the collection is a screen in "cloisonné enamel, one of the four taken from the Emperor's "palace in the war with Japan which enriched so many art col-"lections. The screen is historical in its motive and is valued "at $4,000." This is news with a vengeance! We wonder where the other three screens are! Again, "objects of con-"suming envy are two lavender silk dressing gowns, lined and "trimmed with pink silk, and luxuriously embroidered, one of "which has been sold for $250." We trust Shobey will not hear of this, as in that case a dressing gown will probably become an utterly unattainable luxury by any dweller in Yokohama. Then follows the description of a fan valued at $300, which is ornamented by "a monkey sitting on a pillar watching with "glee what in police court circles would be called a 'clothes-line "fight' between two ladies." Also some "Japanese wine *saké* "made from rice, tasting like a mildly bitter sherry." We wonder how much a bottle is asked for this innocuous liquor! Altogether a collection of curios would seem to be about as good a speculation as a man with a little cash to spare could well indulge in.

With reference to the marriage of the Japanese Ambassador at Berlin to a German lady of title, which has recently been announced, the *Examiner* has the following remarks:—

The Japanese evidently not only believe in the advantages of a judicious infusion of European blood into Japanese veins, but are also admitting the superiority of the European method of "happy despatch" to their own. Thus we find that the uncle of the present Emperor of Japan, who left his country out of disappointment that his nephew was preferred to himself, wisely kept his *wakizashi* in its scabbard and performed *harakiri* by engaging himself last Christmas to Frau von Tettau *née* v. Bredow. The happy couple, whose engagement has caused great satisfaction in Berlin, intend to reside in South Germany after their marriage, which will soon take place. We are happy to hear that the Japanese Ambassador at Berlin, Mr. Siudzo Aoki, has followed the example, and has *harakirid* himself with Fraulein von Rhade Funkenhagen. Being an accomplished scholar and linguist, we presume that some of the popular phrases regarding the hymeneal altar first led him to perceive the analogy between wedlock and *harakiri*. The only puzzle about the matter is the fact that marriage is not unknown in Japan. It is possible that the two ceremonies are identical in that happy land. Intending *harakirists* will be glad of information on the point.

One of the most amusing articles that it has been our good fortune to read for many a long day, is a paper contributed to the North American Review for last month by a 'Japanese gentleman writing under the *nom-de-plume* of Sionara, and entitled "Political Reflexions by a Japanese Traveller." A notice of this essay, taken from the *New York World*, has already appeared in the *Daily Advertiser*. We regret that space will not permit us to reprint the "Reflexions" in their entirety, but a few extracts will suffice to show the innocent conceit of the writer. That the effusion is a genuine one no doubt can exist in the mind of any one who has met the Japanese student abroad, or, in some cases on his return to his native land; though in the latter case he rarely shows off to such advantage as under a foreign sky the tares of Japanese life, in the shape of easily attainable pleasures, and the enervating atmosphere of home quickly destroying the thinly planted and surface-rooted grains of knowledge, which but in few instances bear any crop worth reaping, though the promise at their sowing was so fair. We have all seen a dragon-fly, skimming in fitful flight the surface of many a deep pool, now and then lightly dart down and collect a few drops of water, scattering them, all glittering in the sunlight, as he rises again in his airy career. It is so with the mind of the average Japanese student. He skims the surface of many a deep pool of knowledge; he collects a few glittering drops which he is able to flash for a brief moment in the eyes of the world, only too ready to admire his easy graces of manner and his frequently brilliant aptitude, but he has no power, and generally no desire, to explore more deeply the wells of learning, and his course is as capricious and as aimless as the flight of the insect. He will, after a few months' study, suggest the advisability of adopting a universal system of orthography. He will proceed to point out the absurdities of all theological schemes. He will tell you—and let it be distinctly understood that this statement is no imaginary one—that he intends on his return to his native land to reorganise the whole judicial system, while at the same time it is his earnest purpose to establish a church, with himself as its episcopal head. We have no intention and no wish to ridicule this overweening desire to make a display of newly acquired knowledge, superficial as it is. It may often seem ludicrous and is always regrettable, but it arises from utter ignorance of the minds that have wrought through centuries to bring European learning to its present high standard, and from the self-complacency and extraordinary pride and reliance that are remarkable characteristics of this nation. The Japanese student considers himself in no way inferior to the citizens of any country, while he cannot but he aware that in good breeding and politeness he is often their superior. He is particularly apt in acquisition of fresh knowledge, and cannot comprehend the incessant toil and perseverance that are necessary to master a subject, when he finds the rudiments

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

are so readily learned. Like Don Quixote, he knows not the strength of the windmills that he attacks, or the power that moves them, and is sorely discomfited when he finds himself and his hobby discomfited and overthrown. He wants to build a structure of surpassing glory and strength, while he deems it unnecessary to prepare a solid foundation. He cannot understand the theory of general development; he believes that the capacities and experience of mighty minds can become his by book-learning pursued for a year or two, and then, like Mr. Sionara, he feels that he has a mission, and on his sorry nag, and in his insufficient and ill-fitting armour, he goes full tilt at such a giant as the American Constitution.

Mr. Sionara commences his "Reflexions" as follows (In no case have we altered the original text):—

It is now eleven years since I first left Japan. At that time it was not permitted to Japanese to leave the country for purposes of travel; nevertheless, I managed to escape, for I was anxious to study foreigners in their own countries. I remained three years away from Japan, staying principally in England and America. I had already read about those countries, and I desired much to see how Government was carried on. The impression made in Japan by foreigners, when they first came there, was so great, that Japanese thought that their wise men must be almost like Gods, and that their political institutions must be perfect, because inventions were so wounderful. Now many Japanese have become much wiser, because they have lived in foreign countries and studied them deeply. Certain foreign men had a very great fame amongst Japanese youth,—such, for instance, as George Washington, whose greatness became very soon celebrated amongst us. Therefore I was very anxious to come to America, principally on his account. Whilst in England and America I studied great deal, chiefly in science and language, and returned to Japan in 1868 when the war was going on. After the revolution, when Japanese began to introduce reform into the Government, I saw they were too ignorant in political matters to understand properly how to make new Constitution; then I determined once more to come abroad to study especially the political condition of various countries. For six years I have been engaged in travel in Europe and America, and now I venture to tell my friends in this country my conclusions. I beg they will forgive my frankness. When foreigners come to Japan they write quite freely what they think about it. Sometimes they write very foolish things, staying only short time, and telling results as if they had made deep studies.

This is perfectly true and deserved. Books on Japan have been written after a fortnight's stay in Yokohama, a piece of conceited folly and bad taste, that may well make foreigners blush before Japanese.

I will try and avoid this, but at the same time I will tell quite truly and sincerely my feeling, because sometimes the view of the foreigner is of great assistance to a people. Japanese people received great benefit from the frank opinions about them of foreigners, because they were so accustomed to their faults, they never remarked them, but they were quite plain to strangers. It is the same with individuals. They cannot see themselves exactly like others see them. It is true that there are plenty of European travellers who have written about America, but they are all Christians, and very often they write from jealousy and mean motives. Having same religion and same manners, they cannot write so impartially as a man who comes from a much older and different kind of civilization, and who has no religion, but who tries to look at things from more high and pure ground of philosophy, which is taught by the great Master Confucius. So I beg my kind readers will believe that I have no other motive but to try and help them, by pointing out their faults, in the same way that many of their good missionaries have tried to help Japanese—but I shall not remark much upon their moral condition, however, now—though on this subject there is a great deal to be said, which I shall write in a book for Japanese in their own language. At present I desire rather to discuss American political state, because I have now studied very carefully for many months the interesting questions connected with this Government, and I think it might be possible to tell something that might improve it—but to propose any plan by which the moral condition of a people can be improved is indeed most difficult.

This is all very nice and modest, and it is quite impossible for any people to accept, otherwise than in a friendly spirit, remarks that are prefaced by such good feeling, but one is not able to repress a smile at a picture of grand mother Columbia, aged one hundred, being taught the art of egg-suction by young Japan, *ætat.* six. How much time Mr. Sionara must have devoted to the study of the American Constitution the following extract will show.

When I left Japan six years ago, I determined to study Europe first—to begin with the country whose political condition was most backward, and to end with the country whose political condition was most forward. I decided therefore to land in Constantinople and to return to Japan by San Francisco. In Turkey I remained very short time. It chiefly interested me on account of the effect of religion upon the Government. I then went to Vienna, Berlin, Rome, Paris and London. I stayed nearly one year at each place. Finally I came here.

We wonder that the same mode of procedure has not occurred to some American legislator. Possibly some one will now take the hint, and although we can scarcely suppose that he will possess the acuteness of perception that Mr. Sionara enjoys, if he will consent to spend double the time in studying the political condition of foreign countries he may make for himself a name that shall eclipse that of Washington. Mr. Sionara goes on to say:

I will state my reasons why I think, of all countries I have been in, this country is most backward. It is because here there is no change. In every other country there is change. The times we live in are the most changeable times that have ever been known. Japan changes, China changes, even a little. Turkey changes also, only little, because of religion, all the other European countries change, only America in politics for a hundred years never changes. Always just the same Constitution—but since that Constitution was made, steamboats, railroads, telegraphs, many wonderful things have been invented, so the manner and customs of people have been changed, their opinions about every thing are quite different, liberty and freedom are being everywhere introduced, only in America the rights of the people have not been increased for one hundred years. In Europe the people will not allow this; they make revolutions, then comes more freedom.

* * * * * * * * * * * *

One hundred years ago this Government was most free of all Governments. Since that time all other Governments have moved on, pressed by the people, pressed by the people, always pressed; so they go forward quite rapidly in a free direction. Only this never moves. It is the same with that remarkable people, the Chinese. I remark much resemblance between Americans and Chinese. They are both afraid to move from old customs. This is in many respects a good thing. It is just opposite in Japan. Japanese go too fast; they think they know everything, when they know very little, and they go on rashly—but Americans are too slow in politics. Owing to their splendid country, and to steamboats and railroads, they are increasing more rapidly in numbers than any other people in the world. So they have not the same excuse as Chinese. They are not increasing—so they do not require to change political institutions—but how can a Constitution which was made for two millions of people a hundred years ago, be good for forty millions of people now, when all other countries have changed since then, and steam has altered every thing?

* * * * * * * * * * * *

What king can give so much without consulting the peoples' two Houses of Legislature as the President of the United States? Only he must consult the Senate, if he is obstinate man, they quarrel, then comes difficulty. If he is opposed in politics to Congress for four years, if they do not impeach him, they must veto his measures, if he won't yield. Then what? If he proposes measures and the Congress votes them, and they won't yield—Then what? All this is very bad—very good a hundred years ago—but very bad now. Then the people did not know their rights, now they do. They want the President to govern as they think right—not as he thinks right. This is called "popular government." They are now going to have that in Japan.

This looks very much as though Sionara approved of Saigo's actions and Tosa's demands. What a pity that he does not from safe ground urge his liberal views on the Japanese Administration. We should like to hear the writer's views on the present crisis in this country. What follows is delicious.

Suppose a negro is elected President, the Constitution permits him to have too much power. He should certainly be made responsible to the country. The only way to do this is to follow the example of more advanced countries of Europe, and oblige all the members of his Cabinet to be in the Congress. They would probably all be negroes, but if the country did not like them, and there was a majority against them, they would have to resign. In that way you could again get a white Cabinet, otherwise it is not possible. How can you go on with a Constitution that allows such dangers to exist? It has been proved, by what has just happened, that at any time they may occur again, but never again could you settle the question by eight to seven. I have conversed with many persons who say that never again will they agree to that. In Japan it would not be possible for those seven men to live, who have proposed this plan. After it failed they must commit *seppuku*, or the "self-despatch." Though I do not approve this practice, I think, until countries have arrived at an advanced political state, it is in some respects good. It makes men very careful in proposing political plans. The practice, in this country, by which political enemies kill each other with pistols, does not make them so careful, but perhaps it is necessary while the old Constitution lasts, but with the introduction of popular government and a responsible Cabinet it might be abolished. In Japan it is hoped in the same way to abolish "self-despatch," which I think is a better check upon political violence and bad language than duels. In Japan all editors of newspapers writing like those in this country would be obliged to perform this act, and even Mr. Tilden after he had got majority of nearly 300,000 votes could not survive his defeat with honor, but this is not because he has used bad language, but because he himself has been so much abused. For this reason he would have to commit *seppuku*. In my book which I am going to write in Japan upon the moral condition of this country, I will show how far the higher morality of Japan is due to *seppuku*, so that they may not abolish it rashly, or without providing some other check, by which all persons using violent language, slandering other persons, bribing other persons, being bribed, making false returns, frightening voters, or otherwise behaving badly, may be retained. None of these vices exist now in Japan. This is in consequence of former Government when such things were not possible. I believe they in this country entirely result from the hundred years old Constitution.

How is this? Surely times have greatly changed since Mr. Sionara went away. Six years ago was there no bribery, no false returns, no behaving badly, no political lying or crimes of any kind? Unhappy country! how has it degenerated in six short years! We say decidedly that *seppuku* should be insisted on to its fullest extent without an hour's delay, so that to-morrow might see a reign of peace, and a land from which all evil was for ever banished. Mr. Sionara says:

To make this Republic into a more free Government, there is no necessity to change the name. To take away power from President,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

there is no necessity to change his name. So I do not propose, because I want to see this Government more free, to change any names; the only thing to be done is, abolish the Constitution, then all is simple.

and again:

So when the House of Representatives decides that the President and the Cabinet are governing opposite to the will of the people, naturally they must be at once turned out. This is free government, —it is very simple.

Of course it is, delightfully so! It is like a conjuring trick after it has been explained to you; you wonder you never saw it before. But we cannot go on. This is a pudding which is all plums and we are tempted to linger unduly over it. We will conclude with Mr. Sionara's closing words, merely remarking that if, from the date of this article, American political morals do not improve, President Hayes is not the man we take him to be.

I think American politicians rather timid. Therefore, I am not writing for politicians, but for people—and already I have said enough. The American people are clever people. They do not require long explanations; only they require a hint. They are so busy making money they have not had time to examine this matter; therefore I have examined it for them. But what is the good of making money when you have to spend all in taxes? When government is cheap, people get rich much quicker. Therefore, stop a little from making money and think how you can most quickly abolish Constitution and make reforms to suit present time. Better to do this now than wait till some revolution comes and you will lose all money. If Supreme Court Judge had not decided quickly the other day, even now you might have been fighting, and your money would be soon flying away. Next time perhaps, you may not find a Judge so clever and quick. Remember how great danger you have escaped. Every time you will not be so fortunate. This is very serious warning. American people are too thoughtless. When they escape danger, immediately they forget it. In this matter they are not like Chinese, more like French people. Chinese take warnings, reflect a great deal, but don't change. French people never take warnings, do not reflect at all, but always change. Best plan is,—first, take warning, then reflect, and then change. Do not say this is only Japanese, and his English is still not good, therefore he knows nothing. I pray you not to despise this because I am a man of low degree and moderate understanding, for this is a wise saying, "a precious stone in the dirt is apparently worthless, but who discovers, polishes, and wears it, himself becomes of value."

From the *Osaka Nippô* we learn the following particulars of the lives of two of the principal Commanders of the Imperial forces in Satsuma, Lieutenant-Generals Miura Goro and Miyoshi.

Miura Goro, formerly called Isoho, comes of a family of *Saikunin* (a class peculiar to Chôshiu, who were in receipt of pensions but were not *samurai*). He was born in 1846, and is thus thirty-one years of age.

Naturally of a studious nature, he early became the pupil of a famous scholar named Tsuchiya, under whose tuition he studied Chinese literature and military science, in which he soon attained great proficiency. When he was twenty years of age the civil war broke out which terminated in the overthrow of the Shôgunate. Previous to the war of the Restoration the *samurai* of Chôshiu had become divided into two parties, one of which attached itself to the Throne, while the other upheld the cause of the Shôgun. The latter proved the stronger party, but Miura from the very first was a firm adherent of the Imperial power. When Yamagata, the present Minister of War, collected a body of troops composed of farmers and *rônin*, who were called *Kiheitai*, Miura with Toriwo (now Vice-Minister of War), Miyoshi (Lieut-General), Miyoshi (Major), Shigeno (Colonel), Nomura and Hori (since dead) were appointed its officers and became seven famous commanders. When the Chôshiu forces encountered those of the *Bakufu* at Kokura, Miura, with Yamagata, Takasugi and others achieved many brilliant successes. In the year following he fought against the troops of the *Bakufu* at Fushimi and advanced with his men to Yedo, where he was wounded. Though suffering greatly in body for some time, his patriotic spirit never flagged. When the Imperialists advanced into Oshiu, he had so far recovered that he was able to give his assistance, and he fought on to the end of the civil war.

At the time when the regiments of Imperial guards were recruited from the *samurai* of Satsuma, Chôshiu and Tosa, Okage and Gentaro with several more headed the *Kiheitai* in a rebellion which was put down by Miura, Miyoshi and others. For these services he was rewarded by the rank of Lieutenant General, and has since been appointed a member of the *Genrô-In* with the rank of *Sho-shi-i*. He was also in command of the Imperial troops who were engaged in the suppression of Mayebara's rebellion last year, and on the breaking out of the war in Satsuma was at once appointed one of the Commanders of the expedition.

Lieut. General Miyoshi, who was formerly called Gentaro, is a member of a good *samurai* family of Hagi in Chôshiu. He is several years older than his brother officer Miura, and is a man of more than ordinary mental and physical power.

At the time of the Restoration the defeat of the *Zokuron* party, who were firm upholders of the power of Tokugawa, and the coöperation of Chôshiu against the Shôgunate were due, in no slight measure, to the energy of Miyoshi. He was one of the seven famous commanders of the *Kiheitai*, and was considered the most dauntless among them.

During the struggle with the Shôgun, Miyoshi gained a number of victories, the most noticeable of which was the taking of the Castle of Nagaoka in Echigo. In this castle, which was surrounded on three sides by hills while a broad river guarded its front, the Shôgun's troops had shut themselves up, regarding it as most favourable for defence. Yamagata Kiosuke and Kuroda Riosuke, who were then the advisers of the Commander-in-Chief of the Imperial forces, were puzzled to know how so strong a position could be taken. Miyoshi, who was at that time in command of only a single regiment, came up and declared that he would undertake that very night to obtain possession of the castle, with the aid of the men of his own regiment alone. His brother officers pointed out the danger of the attempt, but Miyoshi paid no heed to their remonstrances, and with his men took an oath to make the attempt and succeed or die together. That night he with his men managed to cross the river unobserved, and discovered, as they had expected, that all in the castle were sunk in sleep. A sudden attack was immediately made, and the assaulting party effected an entrance into the castle. The besieged, who were taken entirely unawares, fled without offering any resistance, with the exception of a few of the bravest, who unsuccessfully opposed the entrance of Miyoshi's men. The night was pitch dark, which prevented the besieged from discovering the small number of the attacking force, and they were thus utterly routed. The result being made known, the action of Miyoshi and his followers was greatly praised by the Imperial Commanders Yamagata and Kuroda.

After the Restoration was completely effected, the immediate services of the *samurai* were no longer required, but as the *Kiheitai* were the strongest body of troops in Chôshiu, the principal supporters of the Mikado's Government in that province decided to send them to the capital and form them into the Imperial Body Guards. Dairoku, Sasaki Naitô and other members of the society, however, opposed the idea, saying that the *han* would be seriously weakened by the absence of these troops, and indignant that their commanders should show themselves willing to obey such an order, proposed to kill them. Kido and other prominent men of Chôshiu in vain endeavoured to appease the malcontents, so as a last resource it was arranged that the commanders of the *Kiheitai* should be sent to Kagoshima for safety. On hearing this Miyoshi was greatly enraged, and said, "When we have determined to carry out any certain proceeding, why should we be deterred from doing so by the threats of the *Kiheitai*? Such conduct is cowardly and unworthy of men." But the opposition of the members of the Society was too strong to be overcome, and smarting with resentment Miyoshi started for Chofu, in the south of Chôshiu, with the intention of raising a force from among the *samurai* of that district to oppose the *Kiheitai*. To further aid his design he communicated with Inoüye Kaworu (Inoüye Bunda), at that time in Yedo, who sent men to his assistance. When his plans were completed Miyoshi advanced against the *Kiheitai*, and after several engagements so thoroughly defeated them that the Society was completely and finally broken up.

Shortly afterwards Miyoshi was made a Colonel, and next promoted to the rank of Lieutenant General. At the outbreak of the present rebellion he was among the first of the Imperial Commanders sent South, where he has rendered effective service to the Government.

In the absence of any more important information, the following are fair specimens of the items of news with which the native journals enliven their columns :—

The *Chôya Shimbun* relates that when Saigo was retreating from Kumamoto to Yabô he expressed his doubts if the present rebellion would be eventually successful, and his determination to sacrifice his life by performing *seppuku*. By so doing he thought he might put a stop to a hopeless war, save thousands of valuable lives, and avoid bringing undeserved distress on the farmers and labourers of Kiushiu. It was only on account of Kirino's urgent entreaties that Saigo was induced to abandon his intention of self destruction, and to energetically prosecute the war.

According to the *Mainichi Shimbun*, a favourite device of the insurgents was to roll a barrel containing an armed man down a declivity into the Imperialist ranks, on reaching which the occupant left his means of locomotion and right and left attacked the astonished Government soldiers. During the late engagement at Onigatake, however, the insurgents changed their tactics with singular advantage to themselves. Down the hill, on which they were posted, rolled a number of barrels, which the Imperialists imagined contained armed men as before. Accordingly, allowing them to approach within a conveniently close range they directed a brisk fire into the circumvolving casks. But, alas! the contents were powder and shot, and the result of the volley was other than expected, as explosion followed explosion, carrying death and destruction into the Imperial ranks. *Credat Judæus Apella!*

Bad weather does not seem to have deterred our Swiss riflemen from continuing their shooting throughout the day. The rain, however, prevented the attendance of the band of the *Atalante*, and deprived the Club of the usual concourse of visitors to watch the progress of the competition.

From the "Japan Mail Daily Advertiser."

Monday, 11th.

In the *Japan Gazette* of Saturday appears a letter signed Fair-play, in a note to which it is stated that the specie belonging to the Mining Department, discharged by the *Meiji Maru*, and sunk by an accident to the cargo boat which was conveying it ashore, is of "the value of five or six million dollars." The editor of the *Gazette* has evidently been misinformed. The specie consisted of bars of gold and silver, mixed as produced at the mines—the gold not separated from the silver—and if it will take two ciphers off its valuation and divide the result by three, the *Gazette* will be very near the true value of the treasure. The Government of Japan might indeed rejoice if the Sado mines were as productive as this valuation would make them.

From the *Chôya Shimbun*.

A telegram despatched at 3.30 p.m. on the 8th instant (place not given) announces that the rebels were defending themselves in favourable positions at Matsuo and Onigatake, when the Imperialists attacked them and took fourteen of their stockades. The rebels then fled, pursued by the Imperialists, when another body of rebels took their opponents in flank and checked their advance for a time, but the rebels were eventually driven back. Several tens of the insurgent's stockades were taken during this engagement.

At least one half of the insurgent force opposed to the 3rd division of the Imperial Army under Lieut. General Miura, has been dispersed.

A telegram which arrived at 3.25 on the 9th instant states that Miura's troops successfully attacked the rebels of Kukino and then advanced as far as Osakai, on the Satsuma boundary. On the 8th instant the rebels were again attacked and compelled to retreat to Kai. The rebels were also compelled to flee from Ogawa to Oguchi, and have entrenched themselves favourable positions in the neighbourhood of that town. The Imperialists are at Ogawa and Mimura, and are preparing for an attack on Oguchi.

No fighting of note has taken place in Bungo.

Tuesday, 12th.

Tokugawa Kamenosuke, the adopted son of the last Shôgun, will leave for Europe to-morrow by the French mail. The young Prince is to be educated in England.

Another disgraceful public-house brawl took place on Thursday evening, the victim in this case suffering both in purse and person. It appears that among the company assembled at some delightful Homura den, called the "Star of our Union," were a quartermaster of the *Nagoya Maru* and several sailors of the *Tennessee*. The former had evidently been making too public a display of cash, and thus excited the cupidity of the latter, two of whom followed him when he left the house and knocked him down. One of his assailants then knelt on him and brandished a bowie knife before his eyes, while his companion dexterously cut out the pocket containing $13, both then making off. This took place under the very eyes of a native constable. A complaint was lodged in the U. S. Consulate, and after some enquiries the complainant was sent off to the *Tennessee* to identify his assailants. He at once pointed out one of them the man who had knocked him down and threatened his life—but failed to recognise the other. It is not yet announced whether the thief will be tried by a naval or civil court, the decision resting with the officers of the ship. Had he been arrested on shore he would have been tried at the U. S. Consulate.

The Postmaster General has issued a Table of the Rates of Postage under the new Postal Union, which came into force on the 10th instant. The Table is accompanied by the following circular :—

A Table of Rates of Postage, which will come into force on June 10th, is circulated herewith.

Attention is called to the slight increase in some rates, which results from the uniformity obtained under the Postal Union. Thus, the charge on letters to the Straits, by whatever opportunity, will be 12 cents per ½ oz., as also on letters for India, Ceylon, Aden, and Malta by British or Indian Mail Packet.

The same applies to letters from the Southern Ports of China for the United States viâ San Francisco, the Postage on which will be at the 12 cents rate.

Books will be charged at a uniform 2 oz. Tariff to all parts of the world. As to Circulars and Prices Current, there is perfect option to treat them either as newspapers or books. If as newspapers, they must be paid per copy ; if as books, at so much per 2 oz.

Printed matter, &c., for France and the Continent must now be prepaid by whatever packet, and may be Registered.

General Post office, Hongkong, March 22nd, 1877.

From the *Akebono Shimbun*.

A reporter of an English newspaper has requested the Government to grant him permission to go to Sakura-shima, in order to make notes about the present war.

A telegram despatched from Kiôto at 2.30 p.m. on the 8th instant announces that Fujiyoshi Shidzuka and Muramatsu Masakatsu, two messengers sent from Tosa, had an interview lately with Kirino in Hiuga, a fact which was discovered by some papers taken by Kawaji at Onigatake on the 5th instant.

From the *Hôchi Shimbun*.

A telegram despatched from Kiôto at 10.05 a.m. on the 10th instant announces that advices have been received from the Governor of Owake *ken*, to the effect that the Imperialists advanced by various roads towards Usuki on the 8th instant, and an engagement took place about one *ri* from that town. The result was in favour of the Imperialists. Further particulars will be given later on.

From the *Nichi Nichi Shimbun*.

The following Notification, issued from the head-quarters of the insurgents, was sent to the Miyazaki branch *Kencho*, in Hiuga, to assist the local authorities in obtaining recruits :—"We have now reached a crisis in the war. The 'deluding rebels'* have entered the province of Hiuga, and will doubtless cause great distress to the people who have hitherto been under our rule. Accordingly all, whether *samurai*, farmers or merchants who are of fitting age, should collect together and zealously defend their rights. Those who show any reluctance to follow this course we shall consider as our enemies, and treat them according to martial law. Therefore make this known to the *Kucho* and *Kocho* in such a manner that they may clearly understand our wants, and help us in enrolling recruits.

By Order,
Head-quarters."

[* This is rather a grim joke, being a play on the word '*kuwan*' which means both 'governmental' or 'official' and 'deluding,' and is a term used by the insurgents to denominate the Imperialists.—Ed. *J.M.D.A.*]

Many of the rebels at Kajiki and Gamô, in Osumi, wished to surrender to the Imperialists, at which their commander, Beppu, was incited to anger, and drawing his sword threatened those who refused to resist their opponents to the uttermost.

From the *Osaka Nippô*.

A telegram despatched by the Vice Governor of Kumamoto

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

ken at 2.50 a.m. on the 5th instant says that fifty *samurai* of Hitoyoshi surrendered themselves on the night of the 2nd instant.

The Court noble, Higashi-Kuze, advised, that Hitoyoshi having fallen, there was no longer any necessity for H. M. the Mikado to remain in Kiôto, but it has been decided that His Majesty shall remain in the western capital until the present rebellion in Kiushiu is entirely suppressed.

Wednesday, 13th.

The dance on board H. M. S. *Audacious*, which was to have taken place on Thursday afternoon, has been postponed in consequence of the sad death of Mr. Beatley, the carpenter. During the height of the gale on Monday night the vessel dragged her anchor, and came into collision with the Mitsu Bishi Co.'s steamer *Chihli*. Little damage seems to have been sustained by either vessel, but the unfortunate deceased was caught between an anchor and a gun, and so badly crushed that he died in about two hours. The officers of the *Audacious* had the highest regard and esteem for Mr. Beatley, who was the entire support of a bed ridden daughter and seven grandchildren. It is therefore proposed that the proceeds of the theatrical performance on Thursday be given to his family, and we trust that the appeal to the community will be ungrudgingly responded to.

The M. M. Co.'s steamer *Tibre*, with French Mails on board to the 5th May, left Hongkong yesterday evening at 6 o'clock.

Reinforcements from the North for the police force continue to arrive at Tôkiô, having been enlisted from the *samurai* of Yamagata (Uzen), Ishikawa (Kaga), and Niigata (Echigo) *ken*.

The telegraph line which has just been completed to Niigata, in Echigo, was tested on the 10th instant, and the working found to be satisfactory.

From the *Hôchi Shimbun*.

The Kagoshima *Kencho* is to be removed to Sakurashima, and will be guarded by one regiment of troops, one company of the Imperial Guards and a number of police.

H. I. H. Higashi-Fushimi-no-Miya will shortly proceed to the seat of war at the head of six hundred newly enrolled troops.

Soyejima, ex-*Sangi* and Minister of Foreign Affairs, who has for some time been in China, will return shortly to Japan, a telegram to that effect having been received by his family in Tôkiô the day before yesterday.

From the *Mainichi Shimbun*.

A telegram despatched from Midzumata at 8 p.m. on the 11th instant announces that on the night previous the troops were divided into three bodies, for the purpose of attacking Demidzu. The main body advanced by Hirose-bashi, the right wing by Takamiya and the left by way of Nabeno. The engagement commenced at 4 a.m. on the 11th instant, and continued for two hours. The Imperialists were victorious, capturing a large number of prisoners and arms.

A telegram from Kiôto says that after fighting on the 9th and 10th instant the Imperialists have succeeded in driving the rebels out of Usuki, in Bungo. The rebels have fled by the Saiki-kaidô.

Thursday, 14th.

We would remind our readers that the Amateur Dramatic Corps of H.M.S. *Audacious* give their performance this evening at the Gaiety Theatre, and that the proceeds will be given to the family of the late Mr. Beatley, who will sadly need assistance We trust therefore, that the attendance will be good, so that the receipts will be worthy of the charitable object to which they are to be devoted.

Mr. Beatley, the late carpenter of H. M. S. *Audacious*, was buried yesterday afternoon. The funeral procession consisting of the Captain and several of the officers of the ship, a firing party of marines and a number of blue jackets, headed by the band, passed from the English hatoba along the Bund to the cemetery, where Admiral Ryder and the Chaplain of the *Audacious* were waiting. The funeral service was read by the Chaplain, and after the coffin had been lowered into the grave, the usual three volleys were fired over it.

The transfer of the steamer *Candia* to the Mitsu Bishi Company was completed yesterday evening.

We republished, a short time ago some remarks from the *Japan Weekly Mail*, respecting the result of the speculation by the Japanese, in silk-worms' eggs. By last mail we have received letters from Italy, entirely confirming our contemporary's statements. Messrs. Mioschi and Mebara are left there with some sixty thousand cards still on their hands. Whilst the Italian *graineurs* had placed all their cards, some for cash, and others to be paid for at the *récolte*, the Japanese, who would only sell for cash, are unable to get rid of their stock. Cards for which *graineurs*, whilst here, offered $2 a piece, have since been offered to these very same *graineurs* in Italy for four and five francs each,—but in vain. When the native papers were congratulating Messrs. Shibusawa, Masuda, and Hara, on their promising speculation, we then pointed out the folly of the proceedings of the Japanese; but, impressed with the idea that European merchants were making their fortunes at the expense of the natives, they, not content with a good profit, wanted an exorbitant one, which they flattered themselves they could realise on their own account. The result is now plain to all. In place of realising $2 a piece for their cards, without risk, they will now be lucky if, supposing they get rid of them at all, they realise after paying expenses two or three *tempos*. We hope that this will be a warning to them in future, and teach them the folly of striving to force prices above the market value. Our correspondent, who writes from Alessandria on the 4th April, says that up to that time the season had been very favourable for the eggs, and that a good harvest was anticipated.—*Japan Herald.*

From the *Akébono Shimbun*.

On the 11th instant one regiment of Imperial Guards returned from Kiôto to the capital.

From the *Nichi Nichi Shimbun*.

There have been fifteen thousand men enlisted by the Bureau of Police in various *ken* for service in the south, of which three thousand have already arrived at the capital. These recruits will be formed into regiments of twelve hundred men each. Two regiments will shortly leave for Kiushiu, where they will be under the orders of the Army Department.

Yesterday thirty-four *samurai* of Ishikawa *ken*, sixty-two from Awomori *ken*, and forty-two from Akita *ken* arrived in Tôkiô, who have enlisted for military service in the South.

Friday, 15th.

GAIETY THEATRE.

Notwithstanding the wretched weather a large and appreciative audience assembled at the Gaiety Theatre yesterday evening to witness the performance of the Amateur Dramatic Corps of H. M. S. *Audacious*, and had the weather been more favourable there is little doubt but that the house would have been crammed. Sir Harry and Lady Parkes were present, and the Fleet was represented by Admiral Ryder and a large number of officers.

The performance commenced with the farce which was given on the former occasion, *A Dodge for a Dinner*, and went off with the commendable vivacity which was observable on its first representation, mainly owing to the able manner in which Sergeant Jones sustained the character of *Tom Hopkins*. This piece was followed by *The Area Belle*, given for the first time by these amateurs. The principal parts in the piece, *Pitcher* and *Tosser*, were taken by Sergeants Jones and Watling, who kept the house in roars of laughter by the difficulties they got into when paying their joint attentions to *Penelope*, and the curtain fell amidst shouts of well deserved applause. The entertainment concluded with Maddison Morton's farce of *To Paris and back for £5*, one and all of the actors engaged in it contributing to its successful representation. The assistance given by the excellent band of the *Audacious* added in no slight degree to the enjoyment of the evening.

The defendant in the suit, C. Braun v. Kojiro Shokitsu, has appealed against the judgment delivered on the 27th of May last in the Kanagawa Saibansho, which condemned him to pay the amount claimed, $10,093.75, and to take delivery of the goods contracted for.

From the *Mainichi Shimbun*.

The *Nisshin Kan* and *Asama Kan* have been stationed off Tensaki, in the province of Bungo, in order to prevent any of the rebels crossing over to Shikoku.

From the *Chôya Shimbun*.

Kirino is now at the headquarters of his division at Nobeoka in Hiuga, and is enlisting all the men of the province from the age of 18 to 40. Kirino is sanguine of collecting as many as twenty thousand recruits.

From the *Hôchi Shimbun*.

The *Bummei Shinshi* (formerly the *Sômô Zasshi*) and the *Sômô Jijo* were on the 13th instant suspended from publication by order of the Tôkiô *Fu*.

From the *Akébono Shimbun*.

From the 21st to the 25th of last month three hundred and fifty rebels surrendered themselves to the Imperialists at Kagoshima.

From the *Nichi Nichi Shimbun*.

Seventy *samurai* of Saitama *ken* (Musashi) and sixty-four from

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Awomori *ken* (Mutsu), who have recently enlisted in the army, arrived at Tôkiô on the 13th instant.

The new building for the Department of Public Works has been completed.

A fire broke out at Okechô, Tôkiô, at 2.50 a.m. on the 14th instant, which destroyed twenty houses.

From the *Osaka Nippo*.

There are now about seven hundred patients in the Imperial Army Hospital at Sakurashima, opposite Kagoshima.

Saturday, 16*th*.

The Swiss Rifle Club will hold their semi-annual meeting to-day on the Rifle Range, commencing at 9 o'clock. There will be, as usual, numerous prizes to be competed for, and visitors may join in the pool firing on the same terms as members of the Club. By kind permission of Admiral Veron, the band of the *Atalante* will be in attendance, but we are afraid that the gloomy weather to-day will somewhat spoil the meeting.

The *Amakusa Maru*, late the *Candia*, left this port at 7 o'clock on Thursday evening for Kobe, Captain Dunn having taken charge of her. At five minutes past midnight the steamer struck on a rock off Cape Diamond, a promontory nine miles on this side of Cape Idzu.

As far as we can at present ascertain the vessel does not appear to have hung on this rock, or was got off with very little delay, but the result of the accident was a large hole in her forward compartment, which was at once stopped, as far as possible, with a sail. Fortunately the steamer is built in water-tight compartments so that the accident did not imperil her safety, and Captain Dunn, after waiting for three-quarters of an hour to assure himself that the vessel was not making water to any dangerous extent, turned his vessel round and ran her close along the coast to Yokoska, where the *Amakusa Maru* will be docked and repaired. The weather appears to have been very thick and the steamer to have made a faster run than the Captain supposed, which may account for the accident. We presume that the light on Rock Island was not visible, or else it would be difficult to understood why the inside passage should have been taken on such a night, when it would have been far safer, under all the circumstances of the case, to have taken the outside course. The *Tokio Maru* lay to off Yokoska yesterday evening while the mails and passengers from the *Amakusa Maru* were transferred to her.

A telegram has been received from Nagasaki to the effect that the M. B. Co.'s steamer *Kiushiu Maru* has been got off the rocks on which she ran in the passage between Shimabara Gulf and Omoro Bay, and has been safely beached. It is expected that the steamer will arrive at Nagasaki on the 17th instant. All on board are well.

From the *Nichi Nichi Shimbun*.

One hundred and sixty-nine policemen from Takata in Niigata *ken* arrived at Tôkiô on the 13th instant.

From the *Hôchi Shimbun*.

About two hundred and fifty rebels at Hitoyoshi have surrendered themselves.

There are about one thousand policemen, recruited from among the *samurai* of Miyagi *ken* (Sendai), who are already at the seat of war, and they are said to be very brave. A further body of one thousand are now being enrolled.

A person who has just returned from Kagoshima says that the Imperial soldiers set fire to Saigo's residence, just outside of the town. While the building was in flames the insurgents made an attack on the Imperialists, and after an engagement in which several of the latter were killed and wounded, both sides retired.

A telegram, despatched from Kumamoto on the 14th June at 6 a.m., announces that the troops under the command of Lieut. General Yamada attacked Okama, Okoba and Tashiro on the morning of the 13th during a heavy rain storm. A desperate struggle ensued and eventually the Imperialists carried the above places on the morning of the 14th instant, and then pursued the fleeing rebels, taking also at the same time Yoshida, Kakutô and Iino. Another body of Imperialists advanced toward Oguchi on the 13th and were also victorious in their engagements with the enemy.

A proposal made by the Turkish Government that the crescent should be substituted for the red cross on the Ottoman ambulances has been laid before the Powers who signed the Geneva Convention All have approved the proposal except Russia and Austria, who suggest that a conference should be held on the subject.—*Pall Mall Gazette*.

THE NOBLES' BANK.

THE Japanese nobility have fallen upon evil days. If their ancestors for generations lived upon the fat of the land, and absorbed in unproductive luxury the first-fruits of the industry of the people, the day of reckoning and retribution has arrived, and the descendants have had to pay dearly for the privilege of the position bequeathed to them. And the bitterest drop in their cup is that their sufferings evoke no sympathy. Their despoilers are the very men who might have been supposed to be most attached to them by the ties of gratitude for bounties hereditarily bestowed. But the claims of feudal homage have succumbed to the duty of civil allegiance, and while the honours and privileges of the lord have been levelled in the dust, the horn of the retainer has been mightily exalted. It is a striking fact that of the half dozen or so of men who at present hold in their hands the power which is nominally the sovereign's, not one belongs to the ranks of the old territorial aristocracy. It was a profound remark of Comte's that revolutions are social in their origin, rather than political; and the recent movement in this country, which is known indifferently as the Revolution or the Restoration, is perhaps as striking a confirmation of the dictum as the great French Revolution itself.

First of all, the *Daimios* were shorn of their titular honours, while liberal terms were allowed them in respect of their revenues. When they were incorporated eight years ago along with the old Court dignitaries into the new order of nobility, *kwazoku*, a tenth of the assessment of their former fiefs was granted to each of them as private income. But the lapse of time has shown that this proportion was larger than the equities of the case demanded and more than the exigencies of the state could afford. The yearly charge entailed by it amounted to close upon a fourth of the whole revenue of the state. Some means had to be found of easing so heavy a burden, and a year ago the measure for the capitalization of their incomes was hurled like a destructive missile at their heads.

The lowest assessed revenue attached to the rank of *Daimio* under the old régime was ten thousand *koku*; the highest, that of the MAYEDA family of Kaga, amounted to over a million. These were the limits between which the revenues of the two hundred and seventy odd magnates ranged. It will be obvious that, for so poor a country as Japan, a tenth of these respective amounts constituted enormous private fortunes. Altered as their position was, the ex-*Daimios* still remained the richest order in the state. The measure of last year for the capitalization of these incomes was perhaps as drastic a remedy as was ever applied to a national financial malady. Beginning with the highest incomes of 70,000 *yen* or upwards, and descending to those of 1,000 *yen*, the Government compulsorily bought up these perpetual annuities at rates varying, in inverse proportion to the largeness of the amounts, from five to seven and a half years purchase, issuing in payment thereof not ready money, but bonds for the respective amounts bearing interest at five per cent., and redeemable at the pleasure of the Government within thirty years. The same system, with slight modifications of detail, was applied to the incomes of the *samurai*; but with these we

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

are not at present concerned. Simultaneously with the above measure there was promulgated an edict strictly prohibiting any transactions in these bonds as negotiable instruments, either by way of mortgage, pledge, or sale. The redemption of the bonds, by lot at the pleasure of the Finance Department, was not to begin till five years had elapsed, but the interest on them was to be payable from the present year.

It is necessary to bear these facts in mind in order to appreciate correctly the significance of the announcement, made the week before last in the native journals, of the establishment of a nobles' bank. As usual, nothing beyond the most meagre outline of the scheme is given, and the terms in which the semi-official organ, the *Nichi-Nichi Shimbun*, describes it are adroitly adapted to conceal its real character. A license, so the phrase runs, has been granted for opening the bank established by the nobles' club. The capital of the company is contributed by four hundred and eighty-seven shareholders—a number, be it remarked, which exactly corresponds with that of the noble families, and amounts to no less than 17,826,000 *yen*. The ex-lord of Chôshiu figures as president, and the ex-lord of Owari as vice-president of the board of directors, the three other members constituting that august body being the ex-lords of Chikuzen, Tosa and Bizen. These and other leading members of the old feudal nobility have, we are informed, appointed men of talent and ability from amongst their late retainers to control the transaction of business, and the names of these talented experts in bank management are duly chronicled. It is incidentally mentioned that out of the 17,826,000 *yen* constituting the capital, 15,000,000 are to be advanced to the Finance Department, bearing interest at the rate of 5 per cent per annum unsecured. As no mention is made of calls, we are to infer that all the shares have been fully paid up. And in conclusion we are gravely assured by the ministerial journalist that no Bank with such a large capital has yet been established in the East; that of the Oriental Bank being only about two-thirds of the above named amount.

Taking into account the relations between the parties, it requires no great amount of perspicacity to see that the so-called Nobles' Bank is neither more nor less than a piece of solemn fooling, got up in order to cloak with such show of decency as may be attainable the ugly fact that the Government has broken faith with the largest national creditors, the disestablished Daimios, and is, in its dire financial strait, helping itself to that which is not its own. It is attempted to disguise this act of spoliation under the hollow mask of a loan, and as there was no other feasible means of imparting an appearance of honesty to the transaction, the nobles' club has been metamorphosed into a bank to suit the exigency of the occasion.

The bank thus formed is the fifteenth of the institutions known as Japanese National Banks. They are the acknowledged progeny of the Finance Department, and are neither more nor less than an organization for distributing over the country the irredeemable paper currency of the Government. They were started about three years ago, after the muddling interference of the Government with the old Ono Bank had produced its usual blighting effect and brought that long established and beneficial institution to ruin. They are imitations pure and simple of the national banks established fourteen years ago in the heat of the civil war by the United States Treasury, for the dissemination and, with pleasure be it added, for the subsequent redemption of the famous green-back currency. They have, for so far, answered tolerably well the intentions of the Government in establishing them; but for all the higher uses of a sound banking system in attracting the savings of the people and facilitating the operations of commerce, they have as yet been far from an unqualified success. And above all things is their unnecessary multiplication to be deprecated; for each fresh addition to their number simply signifies a further gush of inconvertible paper, and a hastening of the flood-tide of bankruptcy which is so surely threatening the country.

But the fifteenth national bank differs in several important particulars from its fourteen elder brethren. As regards nominal capital the distinction of Benjamin's mess has been conferred upon it. Ostensibly, at least, its portion is greater than that of all the others. But the reason of the difference is not far to seek. Whereas the founders and shareholders of the other banks are required to deposit with the Government what are deemed to be sufficient guarantees for ultimate solvability, in the case of the Nobles' Bank the Government are already in possesssion of all the guarantees they could desire, in the shape of their own indebtedness to the nobility for the interest and principal of their capitalized state pensions.

The meaning, then, of the institution of the Noble's Bank is simply that the Government have determined to levy a forced loan, and have provided the victims with an elaborate apparatus for submitting with the best grace they can. As to the chances of the loan ever being repaid we are not bold enough to hazard an opinion, but our readers will be able to form their own conclusions. The whole transaction is one which could only be perpetrated in the throes of a revolution, and by men playing a desperate game for the stakes of power. The nobles will doubtless again, for the third time, make a virtue of necessity and submit; for what else can they do? They are the weakest and most defenceless order in the state, and there is not a man of first rate ability amongst them. Their education and habits have been such as to unfit them for the conduct of the most ordinary practical affairs of life, and there is a certain grim humour in the idea of forcing men of their antecedents and character to go through a masquerade in the capacity of bank shareholders and directors. Considered as a device for cloaking a great act of spoliation under the outward forms of respectability it is no doubt entitled to the praise of ingenuity, but it would be counting too much even upon human credulity and ignorance to expect that it will succeed in misleading either the home or foreign public.

METEOROLOGY.

WE have had an opportunity of examining the Meteorological Returns for the year ending December, 1876, prepared by MR. JOYNER, of the Imperial Meteorological Observatory, Tôkiô, which were refered to by DR. VEEDER in his interesting paper read at the last meeting of the Asiatic Society. In his introductory remarks MR. JOYNER gives detailed descriptions of the various instruments employed in the Observatory for the registration of the different natural phenomena, together with the dates at which the thermometer, etc., were verified, and an explanation of the signs used in the accompanying tables. The tables themselves are very full and complete, and give evidence of a care and an amount of labour in deducing the calculations that prove MR. JOYNER's office to be no sinecure.

On the first page of the tables are given the various means for each month in the year, while in the twelve succeeding pages is recorded the observations for each day in their order.

The only similar tables of observations taken in Japan which we have at hand wherewith to compare their results, are those furnished by DR. HEPBURN for the seven years 1863-9, and published in this journal on June 27th, 1874.

Comparing, then, the mean temperatures for the months of these seven years, we obtain the following results:—

	Means. 1876.		*Of Daily Means.* 1863-9.
January	35.5	.....	40.2
February	38.2	.....	41.2
March	46.2	.....	46.9
April	53.5	.....	56.0
May	62.0	.....	64.0
June	64.8	.....	69.6
July	75.1	.....	75.4
August	79.3	.....	78.6
September	72.6	.....	70.7
October	58.8	.....	61.7
November	48.7	.....	51.8
December	41.2	.....	43.6
Yearly average...	56.3		58.4

From this comparison we observe that notwithstanding some exceptionally hot weather in August last, when the maximum temperature was registered at 96°,—higher than it reached in any of the seven years for which DR. HEPBURN's tables are given—yet that on the whole the monthly means for 1876 are remarkably close to those given in DR. HEPBURN's tables. With reference to the rain-fall the results an still closer.

	Fall of Rain in Inches. 1876.	1863-9.		*No of days on which Rain fell.* 1876.	1863-9.
January	4.52	2.35	.....	6	4.4
February	4.56	3.01	.....	9	6.1
March	5.56	5.04	.....	10	8.4
April	4.78	6.59	.....	11	9.7
May	6.01	5.81	.....	10	8.4
June	10.87	8.19	.....	12	11.3
July	5.90	8.22	.....	11	10.0
August	2.57	6.71	.....	6	9.3
September	14.13	10.19	.....	17	11.9
October	6.20	6.92	.....	6	7.0
November	1.50	3.46	.....	6	6.6
December	2.56	3.82	.....	8	4.3
Total	69.16	70.33	.....	112	97.4

Both tables fairly agree in setting at rest the vexed question as to the rainy season by pointing out June and September as the rainy months *par excellence*. The average means of the number of inches of rain are also remarkably close together, that for 1876 being 69.16 inches, and the mean for the seven years being 70.33, or only 1.17 inch of difference.

There appears to have been no remarkable barometric disturbance during the year, the maximum, 30.568 inches, having occurred on the 14th of January, and the minimum, 29.071 inches, on the 17th of September. Fifty-three shocks of earthquakes were registered, April being specially favoured, as in that month no less than ten occurred. December and March come next with six shocks each.

These particulars are among the most interesting features of these carefully prepared tables, which will amply repay reference by those who are interested in meteorological returns or who desire to obtain more special information. The observations are all taken, we understand, strictly in accordance with the suggestions of the Vienna Congress, and will prove a most valuable addition to meteorological data. Great credit is certainly due both to the Japanese Government for having taken in hand so energetically a work of such scientific importance, and also to MR. JOYNER, by whom the observations were taken and the tables prepared, for the complete and painstaking way in which the work has been performed. We cordially agree with the hope expressed in his introductory remarks, that the electrometer may soon be in a position to add its quota of information to the great store of valuable information and statistics already obtained. In a country so subject to electric disturbances as Japan, the investigation of the phenomena connected with this subject, and terrestrial magnetism, must be of great value; and as it is more than probable that such disturbances are directly connected with the cause of earthquakes, a careful and continued observation of them is doubly imperative.

We wish MR. JOYNER every success in the prosecution of his work, and in overcoming the difficulties necessarily connected with the introduction of a branch of enquiry whose grave interest is not perhaps immediately apparent. The results already obtained give us the assurance that the work could be in no better hands.

The German papers report that the King of Bavaria has again devised for himself a rather singular amusement. Near his château of Hohenschwangau, in the Bavarian Alps, he has had constructed a reproduction of the cottage of Hiendig as it was represented at Bayreuth in the first act of the "Walküre." This first act is to be performed there during the starry summer nights to come. The singer Vogl and his wife will appear as Siegmund and Sieglinde, and the King, costumed as a warrior of the primitive ages of Germany, will traverse the near lake in a boat drawn by swans.—*Pall Mall Gazette.*

SPIRIT OF THE JAPANESE PRESS.

The Chiuritsusha of Tosa.

(From the Hochi Shimbun.)

The following statement drawn up by the *Chiuritsusha* (neutral society) of Tosa appears to have been circulated among its members in order to show what their motives are, and it is evident that if these are the opinions they hold, they cannot agree with the *Risshisha*.

"We see that the people of our province are criticising the present state of affairs in Kiushiu, some arguing that the insurgents are in the right while others maintain the contrary. Some say that the administration of the Government is too progressive to suit the condition of the people, and that it should continue to adhere, to some extent, to certain customs of the days of feudalism. Others urge that the time has now arrived when the people should be allowed to have a voice in the Government, and that whenever the affairs of the Nation are mismanaged the people should have the right of memorializing the Government in order that such wrongs may be adjusted.

"We must admit that such opinions are not altogether void of reason, but the whole of Tosa is not by any means agreed upon them. The present war in Kiushiu is like all other civil wars, and may be compared to a fire in a private house.

"Let us suppose that one member of a family wilfully or accidentally sets the house on fire. Immediately the whole family must unite in extinguishing it, and when this has been effected, it is time to investigate the causes of the outbreak and to see who is to blame for it. The guilty party must be treated in such a manner as to make all members of the family more careful of fire in the future. If we should, while the fire is gaining headway, begin to argue as to who is to blame for it, and thus let it burn down the house, without making an effort to extinguish it, no matter who the guilty party might be, the whole family would suffer.

"It is exactly the same with those who, at the present time, complain that the Government does not suit the people, and who are always wanting to memorialize the Government with regard to certain abuses.

"We hear that the nation is at present more disturbed about this island (Shikoku) than about Kiushiu. We at present possess such influence over the people of other *ken* that we can sway them whichever way we choose. But this influence has not been acquired to-day. It is because we have always been loyal to the Government, and ready to uphold any of its reasonable acts that we have achieved this influence, and caused the people of other *ken* to depend upon us for guidance. Having this power we must be careful not to permit ourselves to be misled, lest we mislead others, while if we do what is right the rest will follow our example. Truly the results of our actions are great. We must continue to follow steadily the path we have hitherto pursued, and not waste our time in useless discussion like discontented *samurai*. Our object in establishing the *Chiuritsusha* is to protect our own rights, and to defend the just acts of the Government; not to be led, in a moment's anger, to hasty conclusions, or to be put into a state of disquiet by idle rumours.

"An ancient writer has said intimacy should never exist by the sacrifice of propriety; remain neutral and incline to neither side.

"Let this then be our motto, and let this be the reason of our calling ourselves *Chiuritsusha*. Let us respect the Emperor; defend the just acts of the Government; point out the intention of the Government to the people; and thus show our loyalty and patriotism. We do not intend to gain honours by flattery, but only to pay to our country what we owe it; we have no wish to exalt ourselves and decry others. Every one is possessed of certain patriotism although opinions may differ. We mean to hold by all those who agree with us.

"'Those who wish to fish in the sea, mind not the trouble of making a net.' Because we say nothing that is daring or threatening we may be deemed cowards. But let people think what they will, we mean faithfully to follow the course we have marked out and call upon all our members to do the same."

The Japanese ambassador at Berlin has been married to Fraulein von Bade, the daughter of a Pomeranian nobleman. The civil ceremony was performed at Berlin, but none of the Evangelical clergy there would bestow the blessing of the Church on the union of a Christian with a Buddhist. The religious sanction was therefore sought at Bremen, and was given by Dr Manchot, minister of the church of St. Rembert in that city.—*Pall Mall Gazette.*

NOTIFICATION.

With reference to the Notification issued by the undersigned this day on the subject of the Rules of Procedure for Appeals in Japanese Courts, the undersigned has been directed by Her Majesty's Minister to publish for the information of British subjects the annexed copy of a Memorandum concerning Claims, which may be brought by British subjects in Japanese Local Courts as Courts of First Instance or in the Superior Courts either as Courts of First Instance or as Courts of Appeal. The recommendations contained therein having been approved by the Japanese Government and by Her Majesty's Minister will be followed in all cases in the Japanese Local and Superior Courts in which British subjects may be parties.

Her Majesty's Consuls have been provided with the necessary forms for giving effect to this Arrangement and will supply them to British subjects on application.

AUGUSTUS H. MOUNSEY,
H. B. M.'s Secretary of Legation.

Her Britannic Majesty's Legation.

Yedo, June 9, 1877.

MEMORANDUM.

The Undersigned, having, in pursuance of instructions from Her Majesty's Minister, discussed, between the 24th of November, 1875, and the 12th of April, 1876, with Mr. Nishi Shigenori, Acting Chief Judge of the Tôkiô Superior Court, the procedure of the Superior Court, in the appeals to which British subjects are parties, has the honour to make the following report.

I.—Preliminary Explanation.

The Acting Chief Judge gave the undersigned the following explanation of the rules relating to the jurisdiction and procedure of the Superior Courts in civil cases. He informed him:

1.—That all claims against the Japanese Government are heard and determined in the Superior Courts in the first instance.

2.—That other claims cannot be there heard in the first instance. That they must be heard in the *Fu* or *Ken* Courts, subject to the power vested in the Minister of Justice to transfer important cases between foreigners and Japanese from the *Fu* or *Ken* Courts to the Supreme Court.

3.—That there is an appeal to the Superior Courts from the *Fu* and *Ken* Courts in all cases, irrespective of the amount involved.

4.—That no leave to appeal is required. That all that is necessary is, to send the petition of appeal to the Superior Court, and to give notice to the *Fu* or *Ken* Court of first instance that it is being forwarded.

5.—That the time limited for sending in the appeal is not less than seven days, and not more than ninety days from the delivery of the judgment. But that in certain cases the petition may be presented before the lapse of seven days; and that one day over the ninety days is allowed for every eight *ri* the *Fu* or *Ken* Court is distant from the Superior Court.

6.—That cases heard in the Superior Court are for the most part heard in a public Court, both parties being present, and that in coming to a decision upon a petition of appeal the Court usually re-hears the whole evidence. But that this would not prevent any party to an appeal reading (subject to all just exceptions) the evidence given in the Court below by any witness whom the adverse party had an opportunity of examining or cross-examining, when it had been proved that the witness was dead or was absent through permanent illness, or by the procurement of the adverse party or had left Japan.

7.—That there is no appeal as of course from a decision of a Superior Court whether the case in which it is given be there heard in the first instance, or on appeal, but that

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

upon any of the three following grounds an appeal will lie to the Supreme Court from a Superior Court, namely,

I.—That the case was beyond the jurisdiction of the Court.

II.—That the case has been irregularly tried.

III.—That the decision is contrary to law.

8.—That when a Japanese who is a party to a suit in a Japanese Court does not attend at the hearing, or at any other proceeding of which he has received notice, he is punished for his non-attendance as for a substantive offence, after which another day is fixed for the hearing or other proceeding.

II.—Appeal by British Subjects.

Having regard to the rules of Japanese Courts and to the Treaty and customary relations between British subjects and Japanese, it appeared to the Acting Chief Judge and the Undersigned that the following course might, with advantage, be adopted in cases in which British subjects appeal to the Superior Courts against the decision of the *Fu* or *Ken* Courts.

1.—That the petition of appeal should be forwarded to the Court through Her Majesty's Consul, who should, at the same time, inform the Court of first instance that the appeal is being forwarded.

2.—That the petition of appeal should, so far as circumstances admit, be drawn up in the form and in accordance with the directions annexed, and should have appended to it the several documents named in the said directions.*

3.—That it should usually be accompanied by the documents which the plaintiff has in his possession, and intends to produce in support of his case, together with a list of the same.

4.—That after the Court has received the petition the plaintiff should, at any subsequent stage, be at liberty to apply to the Court direct, either in person or by attorney, and that he should be heard.

5.—That notice of any proceeding may be given to the plaintiff or his attorney when attending the Court..

6.—That, with the exception of notice of hearing, notice of any proceeding may also be sent to the plaintiff or his attorney by post to the address named in the petition, but so that it may be received by the plaintiff in sufficient time to attend on the day named.

7.—That notice of hearing may, in like manner, be sent by post when the plaintiff has applied to the Court direct to have the appeal heard on an early day.

8.—That when the case is ready for hearing, if the plaintiff has not, in the meantime, applied direct to the Court and received notice of hearing, the Court should inform the Consul by registered letter dated and posted ten days beforehand, of the day fixed for hearing, and the Consul should thereupon notify the plaintiff.

9.—That, when informing the Consul of the time fixed for the hearing, the Court should, as a general rule, forward to the Consul, for transmission to the plaintiff, a copy of the defendant's answer.

10.—That, if the plaintiff, having received due notice of hearing, fail to attend in person or by attorney at the time named, the case should be struck out, and the plaintiff should not be allowed to prosecute his claim, unless, within a reasonable time, he excuse his non-attendance to the satisfaction of the Court.

11.—That the Court should immediately inform the Consul of any failure of the plaintiff to attend.

12.—That when judgment is delivered the Court should give a copy of the judgment to the plaintiff, and should forward a copy to the Consul for his information.

III.—Appeals by Japanese Subjects.

As to cases in which a British subject obtains a judgment in the *Fu* or *Ken* Court and the defendant appeals, it appeared to the Acting Chief Judge and to the Undersigned that the following course might, with advantage, be adopted.

1.—That the Court should forward the petition of appeal to Her Majesty's Consul, for transmission to the respondent, for his answer within fifteen days from the date of service, and that the Consul having received the petition of appeal should cause it to be served on the respondent, and should forthwith inform the Court of the date of such service.

2.—That the answer should, so far as circumstances admit, be drawn up in accordance with the directions annexed.†

3.—That it should usually be accompanied by the documents which the respondent has in his possession, and intends to produce in support of his original claim and of the judgment of the Court below, together with a list of such documents.

4.—That, on the receipt of the petition, the respondent should be at liberty to apply to the Court direct, and that the same rules as to notices should be observed as in the case of appeals by British subjects.

5.—That the respondent, unless he has, in the meantime, applied to the Court direct and obtained an extension of time for answering, should, within the time limited, forward his answer through Her Majesty's Consul.

6.—That when the respondent applies to the Court direct, and obtains an extension of time for answering, he should forward his answer direct.

7.—That when the case is ready for hearing, if the respondent has not, in the meantime, applied direct to the Court and received notice of hearing, the Court should inform the Consul, by registered letter, dated and posted ten days beforehand, and the Consul should thereupon notify the respondent.

8.—That if the respondent, having received due notice of hearing, fail to attend, the Court may proceed with the hearing in his absence; or if the attendance of some person on his behalf is necessary for the due hearing of the appeal, may give him notice to that effect, and if he, having received such notice, fail to attend in person or by attorney the Court may give judgment in favour of the appellant, and the said judgment shall not be reopened, unless the respondent, within a reasonable time, excuse his non-attendance to the satisfaction of the Court.

9.—That the Court should immediately inform the Consul of any failure of the respondent to attend.

10.—That when judgment is delivered, the Court should give a copy of the judgment to the respondent, and should forward a copy to the Consul for his information.

IV.—Original Plaints against the Japanese Government.

The Acting Chief Judge and the Undersigned took advantage of the opportunity afforded by the discussion of the subject of appeals to consider the question of procedure in the case of claims brought by British subjects against the Japanese Government, and it appeared to them that the following course might, with advantage, be adopted.

1.—That the petition should be forwarded through Her Majesty's Consul.

2.—That the petition should, so far as circumstances admit, be drawn up in the form and in accordance with the directions annexed, ‡ and

3.—That the same course shall be observed as to documents, applications, notices, answer, hearing, attendance and judgment as in the case of petitions of appeal.

The Acting Chief Judge and the Undersigned consider that, if the Rules here suggested were adopted, they should be carried out without excessive regard to technicalities, and further that the adoption of them should not be constructed as interfering with the right of the Consul, if he deem it desirable to communicate with the Court at any stage of the proceedings, or of the Court to communicate with the Consul.

V.—Original Plaints against Japanese Subjects.

The Undersigned would beg in conclusion to suggest, that the procedure in appeals would be much facilitated, if the course recommended for original plaints against the Japanese Government brought in the Superior Courts, were adopted in the case of original plaints against Japanese subjects brought in the *Fu* or *Ken* Courts.

Appendix 1.

IN THE TÔKIÔ SUPERIOR COURT.

Petition of Appeal

Name and Surname, Nationality, Rank or Occupation, Residence. } British Subject. } Plaintiff and Appellant

Name and Surname, Rank or Occupation, Residence. } Defendant and Respondent.

The petition of the above named Plaintiff and Appellant against the above named Defendant and Respondent to this Honourable Court showeth as follows:—

1st on the day of 187 the Plaintiff forwarded through Her Britannic Majesty's Consul to the Judicial Court of the a petition against the said Defendant in respect to Praying that

2nd.—A copy of the said petition is annexed to this petition.

3rd.—A copy of the Defendant's answer is also annexed.

4th.—The Plaintiff attended at the said Court with reference to the said petition times, namely

5th.—The name of the judicial officer who had charge of the plaint is

6th.—On the day of 187 the judgment of the said Court was delivered, to the effect that

7th.—A copy of the said judgment is annexed to this petition

8th.—The Plaintiff dissents from the said judgment for the following reasons:—

The plaintiff therefore prays this Honourable Court

1.—That the said judgment may be set aside

2.—That

That the Plaintiff may have such further or other relief as the nature of the case may require.

Japan 187 . } } Plaintiff.

To

Esquire.

Chief Judge of the Tôkiô Superior Court.

Appendix 2.

DIRECTIONS FOR FRAMING THE PETITION OF APPEAL.

1.—The petition should be clear and definite, and care should be taken, while stating the matters on which the plaint is founded, not to make it ornate or verbose, and mere personal surmises should not be adduced.

2.—Every petition should be headed with the name and surname of the Plaintiff and Defendant, their address and addition, and at the end thereof should be affixed the date together with the signature of the Plaintiff.

3.—The signature at the end of the petition should be in the handwriting of the party himself. When this cannot be obtained the fact should be noted in an explanatory clause.

4.—The petition should be addressed to the Chief Judge of the Court.

5.—The petition should be sent in in original and duplicate.

[The foregoing directions are applicable to all petitions].

6.—The petition of appeal should be in the form annexed. It should contain after the names, addresses, and additions of the parties, a statement of the nature of the original petition, its date, the number of times the plaintiff was summoned to the Court below and the dates, so far as can be remembered, and the name of the Judicial Officer who had charge of the plaint, if known, after which should be written the date of delivery of the judgment of the Court below, and the purport of it, and the reasons of dissent from the decision.

7.—To the petition of appeal should be annexed a copy of the original petition and answer, and a copy of the original judgment.

Note.—When sending in the petition of appeal, the plaintiff should forward the documents in his possession which he intends to produce in support of his case, together with a list of the same.

The list should be headed in the same manner as the petition and signed in the same manner.

Appendix 3.

DIRECTIONS FOR FRAMING THE ANSWER IN APPEAL.

1.—The answer should be headed in the same manner as the petition of appeal.

2.—It should contain an exposition of the respondent's case as supported by the evidence, after which may be adduced any matter by way of argument against the appeal.

3.—It should conclude with a prayer that the appeal be dismissed and the judgment of the Court below enforced.

4.—It should be signed by the respondent. The signature should be in the hand-writing of the respondent himself.

When this cannot be obtained the fact should be noted in an explanatory clause.

5.—It should be sent in in original and duplicate.

Appendix 4.

IN THE TÔKIÔ SUPERIOR COURT.

Petition.

Name and Surname, Nationality, Rank or Occupation, Residence in Japan, } British Subject. } Plaintiff.

Name and Surname, Rank or Occupation, Residence, } Defendant.

The petition of the above named Plaintiff against the named defendant to this Honourable Court showeth as follows:

1.

The Plaintiff therefore prays this Honourable Court:

1.—That

And that the Plaintiff may have such further or other relief as the nature of the case may require.

Japan, 18 .

Plaintiff.

To

Esquire,

Chief Judge of the Tôkiô Superior Court.

Appendix.

DIRECTIONS FOR FRAMING THE PETITION.

The same as for framing the petition of appeal from No. 1 to No. 5.

6.—The petition should be in the form annexed.

After the names of the plaintiffs and defendants the origin and facts of the suit should be briefly stated. If the facts are complicated so as to require a long statement they should be set forth in separate paragraphs numbered 1, 2, 3, etc.

7.—The nature of the remedy sought should then be specified, and if it be payment of money the amount should be stated. This being clearly specified there should be added a prayer for such further or other relief as the nature of the case may require.

The Earl of Eglinton has declined to subscribe to the funds for the erection of a statue of Burns at Kilmarnock, on the ground that he has "the bad taste to appreciate neither Burns' character nor poems."—*Pall Mall Gazette.*

It is announced that fifty members of the Paris Municipal Council are coming to London to study the organization of the metropolitan railway lines. They will also make themselves acquainted with the organization of elementary schools, and the management of cemeteries, waterworks, gasworks, and other institutions.—*Pall Mall Gazette.*

The members of the Oxford University Boat Club have unanimously resolved to present gold medals to their representatives in the recent race in recognition of their gallant efforts on March 24.—*Pall Mall Gazette.*

REVIEW.*

Writers on China may be roughly divided into two classes, the dull Accurates, and the readable Incorrects. The author of the unpretending but admirable volume before us belongs to neither of these unsatisfactory categories. Mr. Balfour has writen a book distinguished by a painstaking desire to tell the truth, the whole truth, and nothing but the truth, and he has at the same time given us a volume of essays characterized by picturesque vividness and gracefulness of style. Of course the work labours under the disadvantage of having appeared piecemeal in the columns of a daily paper. It is, as the title page confesses, a series of "disconnected" essays on matters relating to China, but the subjects discussed are not hackneyed and the chapters almost always give us some information on the topic they treat of which is novel, important, and to the point. It is when we compare Mr. Balfour's "matterful" pages with the superficial and scrappy productions of many old residents, for instance with Mr. Medhurst's "Foreigner in Far Cathay," that we learn the value of a trained faculty of observation, and command of apt language and illustration. It is satisfactory to notice that the somewhat pronounced political and personal prejudices of the Shanghai *Courier* are not reproduced in these selections, indeed there is a studied fairness in the book, and a power of seeing both sides of a question which is particularly praiseworthy in a writer, who by the exigencies of his position is constantly tempted into taking a side.

We have no space to go through the volume in order but content ourselves with calling attention to the essays that have epecially attracted us. Amongst the more important is the careful collection of information about that difficult and interesting subject, the secret societies of China and their political significance. The resemblance between the mystic rites of these Oriental brotherhoods and the ceremonies of Freemasonry are noted, and cannot fail to strike the most careless reader. Mr. Balfour conceives that the political and revolutionary character of the Triad Society is of a recent and accidental nature, and that "the object of the cult was, primarily, the discovery of the Pure Light (Ming), or Truth;" and he quotes the cathecism regularly rehearsed at the opening of a Triad Lodge. It is a translation from one of the Society's books, quoted by Guster Schlegel, with a commentary:—

Q.—How high, brother, is the lodge?
A.—As high as one's eyes can reach.
Q.—How broad, brother?
A.—As broad as the two capitals and thirteen provinces (the whole Empire—the world).
Q.—Whence do you come?
A.—I come from the East.
Q.—At what time did you come hither?
A.—I went at sunrise when the East was light.

"The Lodge is square and perfectly oriented, as in ma-"sonry: while the East, as the source of light, is sacred. "On entering the Lodge the candidate is received at the "point of a sword, directed against his uncovered breast, "and is dressed in linen or cotton clothes of white." We next find some rather curious notes on the tail cutting panic which occasioned lately so much disturbance in the Middle Kingdom. It is said to be the work of the White Lily or White Lotus-flower sect which has lately changed its name to the Wu-wei-këaou or Do-nothings. The *modus operandi* of the agents of this society, and the object of their grotesque and mysterious activity are thus described:—"There are always two, and sometimes three persons "concerned in the operation; one, to attract the attention "of the doomed man: another generally, to sell him a "charm—which of course he does not yet need—and a third "to spin the tail off, or else to cut it so that it subsequently "drops. This done the principal operator disappears, "leaving his victim to buy the talisman—too late. This "is not always the exact routine, but the difference in "various instances is slight. Of course it is obvious that "the queue being essentially a Manchu appendage and "therefore a sign that the Chinese are a conquered race, its "abscission is intended as an intimation that the power of "the Manchu dynasty is doomed."

One of the finest and most conscientiously written papers is entitled "The Rival Evangelisers of China." We take exception to a single sentence wherein a trace of the *Daily Telegraph* style is perceptible, but as a whole this essay takes a high place. We will not mar it by extracts, but cordially recommend the perusal of the whole to the student who is interested in the grave subject which is here treated with a breadth and fairness by no means usual. It is most satisfactory to have the Missionary Question discussed by a man who is not holding a brief for Rome or Exeter Hall, and who yet has a thorough conviction that Christianity is after all the recreating power of the world. Another essay modestly called "A superficial view of Buddhism" contains many favourable specimens of Mr. Balfour's picturesque style. We give as an example, his description of a Buddhist monastery.

"It is not easy to forget the strange beauty of the scene "at Kushan on the river Min, as, winding upwards "through the luxuriant undergrowth and rich foliage of "the mountain, the path leads the traveller to where the "first faint strokes of the water-bell fall musically on his "ears. The marvellous quiet and loveliness which surround "the monstery hung, as it were, midway between earth and "sky,—the path above—the silent corridors—the monoto-"nous chant of the three hundred priests, as they gather "in their yellow robes in the 'sanctuary' of the building "twice in each four-and-twenty hours—all combine to "produce an impression on the mind of an European visitor "not easily shaken off. Some of the monks are, it is true, "heavy-looking, fat, and stupid; one or two have a decid-"edly bad expression, lending colour to report that a few "have previously led an infamous career, and only escaped "punishment by embracing a monastic life; but there "are others upon whose upturned faces are the marks of "intellect, culture, and devotion. The abbot of the monas-"tery we remember well, an aged, spare men with finely-cut "and almost handsome features, courtly in his manner and "generally prepossessing. Such a life is favourable to "reflection, and, as the nearest foretaste of Niwana, is "well adapted to the mystics who, under the name of "Phongies, embrace it with such eagerness."

But by far the ablest paper in our opinion is the one which concludes the volume, viz: the Chinese Theory of Creation. We have read pages of intricate and confused speculation on this subject, and grasp eagerly any theory which tends to disprove the doctrine that Chinese Physical Science is a farago of folly. As long as the Chinese word *Li* is translated by Fate and *Ch'i* by Air, we shall never be able to make sense out of the writings of Choostsze and his disciples, but if we take Mr. Balfour's rendering and make *Li* Mind and *Ch'i* Matter, we see a light break over the confused chaos and philosophic method produce something which deserves the name of a Kosmos.

We are well aware that since the immortal editor in the *Pickwick Papers* introduced an attack on the Blues or the Buffs (we forget which) under the subtle veil of an article on Chinese metaphysics the subject has become a sort of synonym for everything that is obscure and unintelligible, but we are assured that when a scientific mind approaches the subject of Chinese Philosophy something of true value will be discovered. There is real gold in the mine, and Huxley and Tyndall may find that their discoveries were strangely anticipated by the sage who pondered in the College of the White Deer Valley amidst the Lushan Hills. As our author says with singular insight,

"From *Ch'i* all things were evolved, and back to it may "they all be traced. And how much further have our own "philosophers brought us—those eagles of investigation, "who profess to gaze undazzled upon the splendour of Life's "Mystery? They, too, see in Matter the promise and po-"tency of all terrestrial life, the universal mother from whose "capacious womb all things are produced; while the force "or power which thus acts upon it, is by them only guess-"ed at, and, while its existence cannot be denied, it is to "them, confessedly, a quantity unknown."

Besides these essays from which we have made extracts, the book contains papers on what we may call the standard China topics, "The doctrine of previous rights," "Opium," "The armaments of China," etc., etc., and

* "Waifs and Strays from the Far East; being a series of disconnected essays on matters relating to China," by Frederic Henry Balfour, London, Trübner, 1876.

these have naturally formed the chief attraction of the volume to the reviewers at home. These papers are sufficiently well written, but the value of "Waifs and Strays" consists of the fact that the writer has not written on the stereotyped topics, but has sought in the by-ways of Chinese life and literature for new facts and new illustrations, and has made a co..scientious effort to pluck the heart out of the hitherto unintelligible mystery of Chinese Thought which the diplomatist, the man of science, the missionary, and the merchant are alike interested in penetrating.

ASIATIC SOCIETY.

The monthly meeting for Yokohama was held at the Grand Hotel on Wednesday the 13th June, the chair being taken by the President, Sir Harry S. Parkes, and an unusually large number of ladies being present.

The minutes of the monthly meeting held in Tôkiô on the 23rd May, which were published in the *Japan Mail* of the 23rd idem, having been taken as read, the President reminded the members present that the next meeting to be held that day fortnight would be the Annual Meeting, at which, among other business, is to take place the election of office-bearers for the ensuing year. A list of nominations, or as he would rather say, suggestions had been prepared at the last Council Meeting, and the Recording Secretary would now read it in order that the names might be before the Society for a fortnight before the day of election.

The list read was as follows:—

For President, Sir Harry S. Parkes.

For Vice-Presidents, Dr. Murray and Mr. J. J. Keswick.

For Corresponding Secretary, Mr. Ernest M. Satow.

For ten Councillors, five being resident in Yokohama and five in Tôkiô,

Revd. A. L. Amerman.
Mr. W. G. Aston.
Revd. G. Cochrane.
Mr. F. V. Dickins.
Dr. Eldridge.
Mr. J. C. Hall.
Dr. Hepburn.
H. E. M. de Struvé.
Revd. Dr. Syle.
Revd. Dr. Veeder.

For Treasurer, Mr. John Walter.

For Recording Secretaries,

For Tôkiô, Mr. T. P. Poate.

For Yokohama, Mr. C. H. Dallas.

It was stated, however, that since this list was drawn up Mr. Poate had expressed himself unwilling to stand for the office to which he was nominated.

The Revd. Dr. Syle, Senior Vice-President for the current year, then read his paper on "Primitive Music, especially that of Japan."

At its conclusion Dr. Geerts agreed with Dr. Syle that the great difficulty in the way of ascertaining the true nature of Japanese Music lay in the variety of the scales used by their musicians. There was undoubtedly much to confirm the theories put forward by Dr. Syle, but the only way of determining with exactitude the nature of the Japanese scales is the physical one of patiently registering the number of vibrations of each note separately, and by calculating the intervals, etc., from these experimental numbers. This is a task, however, that is not easily accomplished, and would require a great number of very accurate experiments with registering apparatus of extreme delicacy, such as König's Phonautograph, or other instruments of a similar nature. Though Dr. Syle had remarked that the students of Dr. Veeder and Professor Ayrton in their musical experiments have usually found what they had agreed to expect to find, it was yet a matter of great interest that these students had commenced to lay the foundation of the building by giving us the results of their difficult and painstaking experiments. When, however, in future years physical research shall have determined with precision the various Japanese scales, there will remain a question of no small interest for the philosophical mind to solve, which is, why Japanese music does not leave a better impression on the ears and minds of foreign musicians. Japanese music cannot be said to be "false," and is immensely superior to the horrible playing of the European beer-shop violinist, but it is no less a fact that it utterly fails to favourably impress the foreign ear, or to awake any noble or pleasurable emotions in the breast of the foreign listener.

In moving a vote of thanks to Dr. Syle for the paper, the President observed that he trusted that the subject of primitive music which had thus been introduced in an interesting form to the Society would continue to receive their attention, as it had an obvious bearing on primitive culture and ethnological research. He agreed with Dr. Syle that the nations of the far East offered a very favourable field for the enquiry, as although they had not succeeded in making their music agreeable to our ears they had reduced it to a written system at a very early date, and in China, in particular, it had been regarded, even in the remote period of Confucius, as worthy of an important place in State organisation. A Board of Music formed then, as it still does, a special Department of the Government. However highly the Chinese and Japanese might esteem their own systems, they had proved themselves apt pupils in the study of western melody and harmony, when they had opportunities of instruction; and while they could supply us with definite information as to their ancient methods, it was to be hoped that they might derive advantage from a knowledge of our modern ideas on the subject.

Correspondence.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Yokohama, 16th June, 1877.

SIR,—Some short time ago you reported the case of Escombe and others *v.* Mayeda Kenkichi, held at the Tôkiô *Saibansho* and also the *Jôtô Saibansho*, in which I appeared for the plaintiffs. The case has been three times called for hearing, but on each occasion the defendant has been conspicuous by his absence. At the last hearing, the Judge, Mr. Yamamoto, stated that Mayeda Kenkichi had been sent to occupy a Government position on the *West Coast*, and as the Court could not say when the Government would be pleased to recall him to Tôkiô, I was compelled to consent to an indefinite adjournment. I now learn, from an undoubted source, that Mayeda Kenkichi is, *and has been*, nearly ever since the outbreak of the rebellion, holding a position as Inspector to Government Hospitals, and is at present stationed at Nagasaki, where he is apparently making a "good thing" by leasing godowns from the foreigners and sub-letting them to the Goverment for Hospital purposes.

I was informed some time since of his intended departure from Tôkiô, and endeavored to have him stopped for for a hearing of the case, but was told this could not be done.

This is only one of the many instances of the Japanese shielding their officials from the grasp of the Law.

Your truly,

F. A. COPE.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton' Camomile Pills. I applied to your agent, Mr. Bell, Berkeley, for the above-named Pills, for wind in the stomach, from which I suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable Pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

January 13, 1877. 13ins.

Law Reports.

IN HER BRITANNIC MAJESTY'S COURT AT KANAGAWA.

Between ANDREW DUNCAN, Judgment creditor,
and
NESTOR NICOLAY NORDENSTEDT, Judgment-debtor,
CHARLES JOHN STROME, Garnishee.

JUDGMENT.

This is an application for the attachment of a debt. The applicant, who is a British subject and a practitioner of this Court having obtained a judgment against a Russian subject in the Russian Consular Court, applies for a judge's order to attach a debt due by a third person, a British subject, to the Russian judgment-debtor, and for an order for that third person to show cause why he should not pay the judgment-creditor the debt due from him or so much thereof as may be sufficient to satisfy the judgment-debt.

It appears to me that this application ought not to be granted. The application is made under the 17 and 18 Vict. c. 125—the Common Law Procedure Act, 1854. It ought to have been made under the Rules of Court under the Supreme Court of Judicature Act, 1875, but as those rules adopt the provisions of that Act without any change in the wording material to our present purpose, and as the Act has been the subject of judicial decisions to which I shall have occasion to refer, I shall consider the application in the first instance as if made under the Act. The sections of the Act which are relied on are the 60th and 61st, which provide that (*s.* 60) "It shall be lawful for any creditor who has obtained "a judgment in any of the Superior Courts to apply to the Court or "a judge for a rule or order that the judgment-debtor should be "orally examined as to any and what debts are owing to him "before a master of the Court, or such other person as the Court "or judge should appoint, and the Court or judge may make such "rule or order for the examination of such judgment-debtor and "for the production of any book or documents." And "It shall be "lawful for a judge, upon the *ex parte* application of such judg- "ment-creditor, either on or before or after such oral examination, "and upon affidavit by himself or his attorney stating that judg- "ment has been recovered, and that it is still unsatisfied, and to "what amount and that any other person is indebted to the judg- "ment-debtor and is within the jurisdiction, to order that all debts "owing or accruing from such third person (hereinafter called "the garnishee) to the judgment-debtor shall be attached to "answer the judgment-debt; and by the same or any subsequent "order it may be ordered that the garnishee shall appear be- "fore the judge, or a master of the Court, as such judge shall "appoint, to show cause why he should not pay to the judgment "creditor the debt due from him to the judgment-debtor, or so "much thereof as may be sufficient to satisfy the judgment-debt." These provisions may be considered as applicable to proceedings in this Court, and they have not infrequently been acted upon when a judgment has been obtained in this Court, and it is sought to enforce it. But, although I have caused the Registry to be searched for precedents, no cases can be found where they have been applied to enforce the judgment of a Foreign Court. There is, it is admitted, no precedent of their being so applied in the Courts at home But it is urged that in view of the peculiar nature of the jurisdiction of the several Foreign Courts in this country they ought to be auxiliary to each other in the execution of their decrees. But the question whether it would be desirable that these procedings should be extended to cases not originally contemplated, and whether the extension of them is justified by present legislation, must be kept distinct. I do not think that it is out of place for me to say that experience has shown that it would be a great convenience to suitors in the several Consular Courts if similar proceedings to these could be taken in each one of those Courts in aid of judgments rendered in the others, and so far as Her Majesty's Courts in China and Japan are concerned it has been suggested that the necessary provisions for this purpose should be inserted in the next Order in Council. But I am of opinion that at present there is no authority for applying these proceedings to the case to which it is now sought to have them applied. The judgment in the case of *Baynard v. Simmons* (24 L. J., Q. B., 253) are decisive on the point that the statute was only intended to apply to persons who have obtained a judgment within the meaning of the 60th section. In that case a creditor who had obtained a judgment had died, and it was decided that his executor who had taken no steps to revive the judgment, or to make himself a party to the suit, could not proceed under the Act to attach a debt to satisfy the judgment of his testator. Lord Campbell, C.J., said "This is a point without any difficulty. The enactments are, no "doubt, very useful, extending the remedy of judgment-creditors, "and we must see that they have a proper construction given to "them. In former acts, the power to take the judgment debtor's "property was much extended, and by 17 & 18 Vict c. 125 there "is a still further remedy given to the judgment-creditor. But the "proceeding is in the nature of execution, and must be governed "by analogy to executions. It is admitted that no writ of *fi. fa* could "be sued out until the executor had made himself a party to the "judgment, for which great facility is given by section 129. of the "Act 15 & 16 Vict. c. 129. Then, is the applicant a creditor who "has obtained judgment within the meaning of the 60th section? "His testator had obtained judgment, but he had not; and I think, "therefore, that he is not within the class of persons described in "that section; and all the other sections as to garnishment expressly "refer to the 60th section."

Now the party proceeding has not obtained a judgment within the meaning of section 60.

It is clear from the context and from the judgment just cited, that the judgment referred to in that section is a judgment in the same Court in which the proceedings against the garnishee are taken. And the party is, therefore, not entitled to the benefit of the provisions of the Act as "he"—to use the words of Compton, J., in delivering judgment in the same case "has not brought himself "within the enactment of the 60th section." This interpretation is confirmed by a reference to the practice under the Custom of Attachment as it prevails in the city of London. That Custom is much more favourable to the creditor than the practice under the Common Law Procedure Act as the preliminary step of having judgment recorded against the original debtor is little more than a form, but it was decided in the case of *De Haber v. The Queen of Portugal* (20 L. J. Q., B., 488) by the unanimous judgment of the Queen's Bench that "the process of foreign attachment can "only be duly resorted to where the cause of action arose within "the jurisdiction of the Court from which it issues." We are not left, however, in any doubt upon the subject. In *Price's* case (L. R., 4, C.P, 155) where the applicants had obtained an order in a Court of Equity for the payment of money, and sought in the Court of Common Pleas to obtain an order for the attachment of a debt due by a third person to the person so ordered by the Court of Equity to pay, the Court of Common Pleas refused the order; and the circumstances of that case had a further similarity to the circumstances of this case, that one of the grounds of the application was that the Court of Chancery whose order it was sought to enforce had not at that time the power itself to enforce its order by attaching a debt in the hands of a third party. The decision in this case has an important bearing upon the argument that this Court ought, on account of the peculiar circumstances of its own jurisdiction and of the jurisdiction of the Foreign Courts situated in the same district, to extend the provisions of the Act to the judgment of such Foreign Courts. If one of the Superior Courts of Law in England considered that it ought not to apply these proceedings to enforce an order of the Court of Chancery in England, although the Court of Chancery could not apply them itself, it seems to me it would be a strong step for this Court to disregard such a decision and apply the same proceedings to enforce the judgment of a Foreign Court. I am of opinion that the fullest comity is due from this Court to the other Courts in this country circumstanced similarly to itself. In many matters this Court requires their assistance, and that assistance when sought has been most cheerfully rendered, but it cannot scarcely be argued that there is a stronger reason why the judgments of those Courts are to be enforced in this Court than there was for the order of the Court of Chancery in the case referred to.

But even if I were of opinion that that case is not conclusive, it would be necessary, before making such an order, to consider the effect of it upon all the parties concerned. There is the judgment-creditor, the judgment-debtor and the garnishee; and the last of these, who is presumably willing to discharge his obligation, is certainly entitled to as much consideration as the other two. If the granting of the order were merely to result in substituting the judgment creditor for the judgment-debtor as the recipient of the money payable to the garnishee, no great inconvenience would be caused to the garnishee. He has to pay the money in any case, and it probably does not matter to him to whom he pays it, so that he does not pay it twice. The point then which it is essential to decide before making the garnishee pay the money to the judgment creditor, is whether such payment would be a bar to a suit brought hereafter by the judgment-debtor to recover the same money. It is important in considering this point to bear in mind that a voluntary payment by a debtor to any person but the creditor, or to a person authorised by a creditor to receive it—even although the person to whom the payment is made may be a creditor of the creditor—will not discharge the creditor in an action at the suit of the original creditor. It is also o be borne in mind that before the passing of the Common Law Procedure Act, the Superior Courts could not order the payment to the judgment-debtor. It became necessary, therefore, when that power was given to the Courts to make provision against the garnishee being held subsequently liable, and the 65th section act cordingly provided that "Payment made by, or execution levied "upon, the garnishee, under any such proceeding as aforesaid, shall "be a valid discharge to him as against the judgment-debtor, to the "amount paid or levied, although such proceeding may be set aside, "or the judgment reversed." The necessity for such a provision and the limitation to its effect are well illustrated by the case of *Turner v. Jones* (26 L. J., Exch., 262). In that case a judgment creditor had obtained such an order as is here sought, attaching the debt due from the garnishee to the judgment-debtor and ordering the latter to attend and show cause why he should not pay the debt to the judgment-creditor. The debt due by the garnishee was on a contract for the purchase of goods by which the garnishee had undertaken to give bills payable at a certain period not then elapsed. The garnishee without waiting for any further order gave the judgment-creditor his promissory note for the amount due payable by instalments, and paid one instalment accordingly, and it was held that such payment was no answer to an action by the assignees of the judgment-debtor against the garnishee, and he was compelled to pay them the money he had already paid the judgment-creditor and the remarks of Bramwell B. show that he would have been equally liable if the action had been brought by the judgment-debtor himself. The ground upon which the judgment was given was that his original contract with the judgment-debtor did not compel him to pay as he did, that he had no right to substitute a different liability to that which he had entered into with the

Original from UNIVERSITY OF CALIFORNIA

judgment-debtor, and that the statute would only protect him when he could show that the payment which he made was a payment which his original agreement with the judgment-debtor, *plus* the process of the court, compelled him to make. This case shows that a strict compliance by the garnishee with the terms of the Act is necessary in order to protect him against subsequent proceedings Whether the same strict compliance is necessary on the part of the Court has not been decided. In his judgment in that case, Bramwell, B., said "It might possibly be, that if the judge ordered him erro- "neously to do something that he was not bound to do, his acting "under the order would be a protection. Upon that I express no "decided opinion." The point upon which the learned judge declined to express a decided opinion has not since, so far as I can find, been the subject of judicial decision, and as it is a point which ought to be placed beyond all doubt before a garnishee would be safe in paying under an order of the Court in a case evidently not contemplated by the Act, this Court ought not to place the garnishee in the position of having either to submit to the order of the Court and run the risk of having to pay the same money again or be put to the expense of appealing against the order. For this reason, I should decline to issue the order even if *Price's* case did not stand in the way. No more than the learned judge do I express any decided opinion as to whether my order would or would not protect the garnishee. It is unnecessary for me to do so. The position of a garnishee is such that he ought not to be put to the risk of my opinion upon the point being wrong. He may be sued hereafter not only in this Court or in any other of Her Majesty's Courts in China or Japan, but in England or elsewhere, and I ought in giving such an order not only to have a decided opinion that the order would protect him in this Court, but to be convinced that it would protect him everywhere, and on this point I am not convinced. It has been urged that as it is only a preliminary order that is sought I ought not to refuse it, but leave the garnishee to show cause. As, however, the granting of an order under the Act is in any case discretionary I do not think it would be a proper exercise of my discretion to put the garnishee to the necessity of showing cause when I am satisfied that no final order ought to issue.

As already stated, I have treated the question as if the Common Law Procedure Act still governed the case. That has been altered. But no alteration in the views here expressed is required in consequence. The change which the adoption of the same provisions into the Supreme Court of Judicature Act has made in their application to Courts of Chancery does not in any way affect the reasons of this judgment, and it has been more convenient to refer to the provisions by their place in the Act, as they are so referred to in the decisions I have cited.

IN H. B. M.'s COURT AT KANAGAWA.

Before H. S. WILKINSON, Esq., Acting Law Secretary.

Friday, June 15th, 1877.

MALCOLM SCOTT *v.* FREDERICK CRITTENDEN

And

FREDERICK CRITTENDEN *v.* MALCOLM SCOTT.

Scott sued Crittenden for $24.75 on a promissory note, and Crittenden sued Scott for $18, a debt arising out of their former copartnership in the *Brooklyn Hotel*.

Frederick Crittenden, stated :—I live at No. 40. All I have to state is that Mr Scott owes me the money, and the I. O. U. is now in the hands of the Court.

Scott owned the validity of this document but said it had never been presented for payment. Crittenden maintained that it had been presented.

Defendant Scott ordered to pay $18 and $3 costs within ten days.

Malcolm Scott, sworn :—I live at No. 179. My counter claim is for $24.75. We had to dissolve partnership in the *Brooklyn Hotel* because we could not agree. I claim the balance of a bill partly collected by me and partly by Crittenden. I received $5 out of $40 and he got the balance.

Defendant denied having paid plaintiff this $5.

Case dismissed with $3 costs.

IN THE U. S. CONSULAR GENERAL COURT.

Before GEN. T. B. VAN BUREN, *Consul-General*.

MESSRS. H. O'HARA and J. L. MONTGOMERY } *Assessors*.

Thursday, June 15th, 1877.

Thomas Swift was charged on the information of George Bronson with feloniously threatening him with a knife and with knocking him down and forcibly stealing the sum of $13 on the evening of the 7th June, at a public house known as the "Star of our Union."

The prisoner pleaded not guilty.

The Consul General having drawn for assessors the names of two gentlemen were read over to the prisoner, and he having no objection to offer they were sent for; and on their arrival the case was proceeded with.

George Bronson, sworn, deposed :—I am the complainant in the present case and am residing at No. 136. On the seventh of this month, in the evening, about half-past nine o'clock, I was in No. 106. Three men from the *Tennessee* were there drinking together. There was a row and a man struck me and I went out the street, when two men followed me. I was standing knocking at the door of a house on the opposite side of the street, when these two men came up and knocked me down and one opened a knife and threatened to cut my throat, and he then cut the inside pocket out of my coat. It was a blue cloth coat that I had on (coat produced) There were thirteen Mexican dollars in the pocket, wrapped up in a white pocket-handkerchief. I saw the prisoner in No. 106. He was one of the three men referred to. I recognised one of the men who knocked me down, and that was the prisoner. It was he who took the money and ran. It was the other man who had the knife. I have been on board the *Tennessee* to see if I could identify the other man, but I failed to recognise him. I recognise a man in Court as one of the three men. (The man referred to was ordered by the Court to stand up, and gave his name as John Neil.) I recognise another man in Court to whom I related the affair. I had some drinks when I went to the "Star of Our Union," and when I paid for them I took the $13 out of my pocket in the presence of the men and tied them up in a handkerchief, which I got from Mr. Rappaport, who also saw me tie this money up. The prisoner was in the house about an hour before the robbery. I drank about three times in the house, and had nothing but beer which was taken out of a keg. I do not recollect what the other men drank. After my money was taken I reported the matter to the police. The police went back with me but could not find the men. We went back to the police station, after which I went on board the *Oregonian*. I am perfectly positive that the prisoner is the man who ran away with the money. I am a Norwegian and have been about four months on this coast. The money stolen was part of my pay.

Pauline Rappaport, sworn, stated :—I keep the public house No. 106. On the afternoon of the 7th about 4 o'clock the complainant came to my house and asked for a bottle of beer and then had another. He began to talk about Rappaport and I told him to be quiet. He then had another bottle of beer. The barkeeper was playing a concertina and the complainant, who was slightly intoxicated, was dancing. He must have been drinking in some other house before he came to mine. After drinking the three bottles he called for some lager beer. He gave a dollar and I gave him back the change, and he said the change was not correct and began to use bad language. I excused him seeing he was a little drunk. He then wanted to fight me. The "boys" from the *Tennessee* then came, and the prisoner was one of them. Complainant asked the "boys" to have a drink and they all drank together. He gave a dollar in payment and on receiving the change he again began to use bad language, when the "boys" began to interfere and I requested them to remain quiet, though not before they had thrown him down. He, complainant laid down for about half and hour, after which he got up and went away. The *Tennessee* men had a parting drink about ten minutes after that and then went away. Two of them had left before that. Some time after the complainant returned in company with a constable and said that he had been robbed. I had given him a handkerchief to tie up his money, as he said it made too much noise loose in his pocket. He had $13 at first but changed two dollars in my house. One of the *Tennessee's* "boys" spoke German, but he is not in Court now. After the four men left, one of them returned. There was no one in my house when the complainant returned with the policeman.

George Bronson, recalled :—It was a Japanese house I was knocking at when I was knocked down. It was about half-past nine when I left No. 106. The house was in an alley and it was quite dark when I was struck from behind and knocked down; and while I was down I was robbed. I saw the prisoner following me down the alley and after he took the money I ran after him. The reason why I know it was the prisoner who robbed me was because there were no others but the two following me. It was not dark outside of No. 106, and it was possible to discern any person. The men were close behind me and one said "Here he is" and then ran at me. I had had some beer in a Japanese store befor t went to No. 106. I was not drunk when I went down the alley and knew very well what I was doing. I probably had four or five drinks before the *Tennessee* men came into the house and I drank with them three times.

William Hazel, police constable, deposed :—I saw Bronson about ten o'clock on the night of the 7th and he lodged a complaint of having been robbed of $13 by some men from the *Tennessee*. I was sent by the sergeant to see if I could find out the names of the men. I went to 106 and asked Mrs Rappaport if she had seen them and she replied in the affirmative. No one was in the house at the time. I went with Bronson to the place where he was knocked down and a Japanese brought me the cap of complainant.

The prisoner called.

John Neil, who was sworn and stated :—I am a seaman and know the prisoner. I came on shore on the evening in question with the prisoner on special liberty. We went into McKenzie's and had a game of bagatelle and some beer. We then walked down the street and hearing a row in No. 106 we went in. The complainant was growling with the landlady of the house about some change. Some time after that I left the house and went to the "strawberry festival" and saw the prisoner there with some of his shipmates.

To the prisoner :—I remember asking you for a knife when I came on shore first to cut some tobacco with and you told me you had none.

William Butler, sworn :—I came on shore about half-past nine o'clock and went to the Temperance Hall and stopped there for a few moments, and then went to the Centennial hotel, where I saw the prisoner. He said he had no money or he would "treat" me. I don't know much about the prisoner,

The prisoner was sworn and gave evidence corroborative of what had been said relative to playing bagatelle, drinking beer &c, after which the Court took a recess till 1.30 p.m.

On the Court resuming its sitting the prisoner's examination was continued, and he stated that the first he heard of Bronson being robbed was the morning after the alleged robbery on board the ship. On the following Sunday the complainant went on board

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

the ship and recognised him as one of the men who had committed the robbery.

The prisoner was further examined by the Court relative to what money he had on his person that night, and stated that he had two dollars and sixty cents.

His Honour said there was no doubt but that Bronson had been robbed, and there were suspicious circumstances connected with the affair which tended to implicate the prisoner, but the law said that a prisoner was to have the benefit of any doubt, therefore, he, the prisoner, would be acquitted.

IN THE IMPERIAL GERMAN COURT.

Before Ed. Zappe, Esq., Consul,

And Messrs. Grosser and Schmid, Assessors.

Wednesday, June 13th, 1877.

Ohama Chiusaburo *v.* Schinne and Francke.

Plaintiff claimed $150 damages for non-delivery of 150 pieces *kameaya-goro* contracted for in February at $5.50 per piece, to be delivered in the course of a few days on arrival from Kobe. When plaintiff went to ascertain if the goods had come, defendants said there had been some mistake, for the Kobe people had sold all they had, and so were unable to fulfil the contract.

Plaintiff averred that he had already sold the goods and consequently would be a loser to the amount claimed, $150, or $1 per piece.

Defendant said the non-delivery had not been occasioned through any fault of theirs, and they did not consider plaintiff entitled to any such compensation as he demanded. They therefore prayed that the suit be dismissed.

The Court was of the opinion that plaintiff had not shown any valid proof of actual loss sustained by him through miscarriage of the contract, though defendants were liable to make good such damage when actually substantiated.

Plaintiff must bring forward the evidence necessary and a further hearing of the case would accordingly take place on a day to be appointed.

Defendants to pay costs.

IN THE DANISH CONSULAR-GENERAL COURT.

Before H. S. Wilkinson, Esq., *Acting Consul-General.*

Messrs. Kolvig and Van Torp, *Assessors.*

Thursday, June 14th, 1876.

Uchida Waka *versus* E. De Bavier.

The plaintiff claimed from the defendant the sum of $250, being the amount of passage money from Hamburg to Yokohama, and balance of wages due by her former master, Dr. Kauffman.

This case was adjourned on the 6th instant, in order to obtain the evidence of Mr Watanabe, who was present at this hearing.

Eugene Boneau stated:—I am in the employ of the Messageries Maritimes Co. The fare from Marseilles in 1875 was $400 first class, 2nd $330, 3rd $199. There is no reduction for a servant travelling with a European master to Europe. I think the reduction for servants returning third class from Europe after three months' stay there is 30 per cent. The rate has not changed since 1875.

Watanabe Hiramoto stated:—I live at Atagoshita, Tôkiô. In May 1874 I was secretary of Legation in Vienna, my wife being with me. She was in bad health and the climate of Vienna not agreeing with her, we went to Berlin. At Berlin I was advised to send my wife home, but on returning to Vienna I was recommended to wait a while and try the hot baths. Whilst at Vienna Mr Shinagawa, who knew of our intention of returning to Japan, wrote asking us to take charge of this woman Waka, who had been abandoned by a Dutch doctor. I purposed sending her home at the expense of the Legation, in the first instance advancing the money myself. My wife's return to Japan had meanwhile been indefinitely postponed so I sent a note to Mr Shinagawa to say so, and that another Japanese woman had turned up in Vienna. I received another letter from Shinagawa saying that this woman could work well, could sew and do a little cooking, and urged upon me to engage her. I replied that in that case I would take her and in the end of June she arrived at Vienna in charge of a German. She brought $400 from Shinagawa to pay her passage with. At this time I had three women in my employ and this made the fourth, so that there was little use for her. The exchange made the $400 equal to a little over 300 *yen*. I explained to her that if she accepted this money to pay her passage home she was bound to pay it back to the Government. She replied that being poor she was unable to refund such a large sum and begged that the money might not be used but that her wages should be retained for the purpose. She turned out to be a very poor servant; she could not work well and knew nothing of cooking; but after a while she learned to do a few little things. We took care that she should not have to spend any of her wages unnecessarily, and we gave her presents of clothing. In November 1875, 100 guilders, or *yen* 83.15 were to her credit. I went to Germany on the business of the exhibition and the M. M. Co. allowed me a reduction of 30 per cent. The passage money paid for plaintiff, with this reduction, was 863 *francs*, or *yen* 172.60, from Vienna to Tôkiô. I was ordered to return the $400 to the Berlin Legation. There were other miscellaneous expenses, and after deducting *yen* 83 there is still a balance of *yen* 126. I advanced the passage money out of my own pocket and expected plaintiff to receive the balance due to her from Dr Kauffman; but even if she did not obtain this I promised to overlook the obligation if she served me honestly and faithfully. As she had been a long time in Europe without having a single penny to finger I advanced to her out of the wages retained fifteen *yen*, for which I gave her a promissory note payable on demand and bearing three per *mille* per month or 36 per *mille* per annum.

Plaintiff continued to be in our service for some time on our return to Tôkiô and received her wages in the usual course; indeed they were overpaid. Plaintiff then went to Yokohama and did not return. A message then came from her demanding payment for my note for 15 *yen*. I gave ten out of fifteen. As she did not return I had to employ another woman in her place, and I have neither demanded a return of the money or service due from her. I do not know anything of her relations with Dr Kauffman beyond her own statements.

Plaintiff stated that witness had repeatedly ordered her to recover $250 from Mr Bavier, and she had asked how it was that when only $180 was due a larger sum was demanded.

Mr Watanabe said that besides passage money her incidental expenses had come to a good deal and altogether about $300 had been spent on her.

Plaintiff remarked that she had not spoken personally about this matter with witness, but Mrs Watanabe had reminded her of the circumstances very often, almost daily, telling her that she could recover the money due from Dr Kauffman from the German Consul if she would apply. She had gone to the Consul, but as the guarantee had been under Mr Bavier's seal he could not entertain the case.

Adjourned till 2 o'clock.

On the Court resuming in the afternoon the witness was

Cross-examined by defendant and stated:—It is not true that I told plaintiff that she must serve me for 18 years in order to repay the money spent on her. I understand from Waka that her passage money was to paid by Dr. Kauffman. She did not ask me to sue Dr. Kauffman, nor did she ask leave to come to Yokohama to press her claim. She did not show me the guarantee in Yokohama. I did not tell her she had a good claim on you on the strength of that document.

To Plaintiff:—I daresay you may have asked me to prosecute Dr. Kauffman, but I never entertaind the idea. You proposed that you should work on our return to Japan to make up for the service we did you, and I agreed to it.

To Court:—I paid plaintiff's passage from Vienna to Yokohama. It cost $172, but I deduct the $68 of her own on my own private account. The balance due to me is $104.62 without mentioning minor expenses. I heard from Mr Bavier that this case was coming on. I had also a visit from Mr Bohm, asking me to send a letter on the subject. I did not hear subsequently that this was insufficient.

Defendant said that this claim was founded upon a guarantee given by his brother. It depended upon the interpratation of the words of this document, which said that Waka's returning expenses from Europe if not paid by a third person would be made good by defendant. Now Mr Watanabe having paid these expenses defendant's liability ceases, and plaintiff if she can sue anyone should sue the principal, Dr Kauffman, whose conduct in this matter, if really such as described by plaintiff, has been quite in contradiction to his character as known by him, defendant. Plaintiff, defendant considered, was a woman of unusual ability, and had taken advice from several foreigners. But he could not see by what right she sued him; and the sum demanded was far in excess of her actual disbursements. Defendant went further and at some length into the evidence, and concluded by praying that if the Court thought fit to order him to pay any sum of money he might receive a guarantee warranting him to recover the money if, after inquiries of Dr Kauffman, it came out that the passage money had been paid. Dr Kauffman was about the Philippines.

Adjourned till 21st instant, at 10.30 a.m., when a written judgment will be given.

POPULAR ART.—IV. COLOUR AND ORNAMENT.

(The Spectator.)

A friend has observed to me that these scattered hints on decoration would be of more practical service if I gave an account of the different rooms in an ordinary house, and the various methods of decorating each, instead of making general remarks applicable to any kind of room. In this article I propose to follow my friend's suggestion, and give a short description of the points most to be observed in connection with special rooms. And as the chief function of the house is to afford places to eat, sleep, talk, and think in, I will take the rooms devoted to each purpose, and describe them separately. It will be evident to my readers that all I shall be able to do in a short article like the present will be to show briefly what the general character of the room should be, leaving all matters of detail to individual taste; and of course, according to this taste, the principal room in the house will be dining-room, drawing-room, or library. The object should be that the special service for which the room is designed, should be kept carefully in view throughout its arrangement, everything that assists it added, and everything that impedes it left out. As my remarks upon colour will be equally applicable to all the rooms in the house, I shall leave them to the last. First, then, as to the dining-room. Perhaps of all the rooms in an English house, this one is most uniformly the same. A dark paper and heavy curtains; an oblong table, highly polished; an oak or mahogany sideboard, with a claret-jug or a biscuit-box on it; a black slate mantelpiece, with a black marble or bronze clock and ornaments; and a few pictures, of which generally the most noticeable thing is the elaborate darkness of the painting, and heaviness of the frame; such articles, with a thick carpet and a row of chairs against the wall, constitute the main points of an ordinary well-off person's dining-room. Now, if you are bent upon giving large, mixed dinners, perhaps you can have nothing better for the purpose than this

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

oblong table, which practically fills up the room; but if so, you must quite give up the idea of making your guests really comfortable. Suppose we make a bold innovation, and instead of having a square table in the middle of the room, we have a round table at one end. You will lose, of course, in extent of accommodation, but just see what you would gain in comfort. First, you won't have the door opening upon two or three unfortunate persons, including the host, and interrupting their talk with the clatter of dishes and the whispered converse of the footman and maids, and none of your guests will have their spinal marrow wasted by sitting with their back to the fire. You will be able to talk to every one at your table with ease, and the conversation, instead of languishing in duets, may be made general,—no small advantage. Besides, the gain in comfort and cosiness is very considerable, and that should be one of your greatest aims in a dining-room. Another thing not generally understood, or at all events not generally attended to, is the lighting, and yet, perhaps, it is the most important of all details. The usual way is to have a large chandelier hung high up, and illuminating chiefly the pictures. It was such an arrangement, by the way, that inspired Sydney Smith's sarcasm, when he observed to his host that "above, all was light and beauty, and below, darkness and gnashing of teeth." Remember that however good your pictures are, you don't want people to look at them at dinner-time, and so concentrate your light upon the table itself. To this end, hang your light low, and surround it with a crimson shade, so that whatever light penetrates to the upper part of the room, may do so in a soft glow of colour, just sufficient to give an effect of warm obscurity. And if you have your sideboard, at the other end of the room, lighted, manage it in the same manner, whether it be with candles or a lamp, always keeping the actual flame invisible. And on your table, do not admit the vulgarity of one of those silvergilt epergnes, with looking-glass platforms and badly-cast flowers or camels, or something of that sort, supporting a basket, and hung round with crystal balls; don't have anything of that kind, but plain glass or pottery, made in the most graceful shapes you can meet with, and let your real ornaments be the flowers themselves. They're far more beautiful than anything Hunt and Roskell can make for you. And don't be afraid of having leaves and grass intermixed with your blossoms; took at the proportion in nature between blooms and leaves, and try to imitate that; and above all, let your light fall as strongly as possible on your flower-ornament,—focus that, as it were, and make everything else of less importance. As to what the room should be by daylight, apply to it the same principles which I gave in my second article, about furnishing in general, and make it a room of practical service, not a funeral-chamber.

Next, as to the library. Here you should endeavour to produce a dissimilar effect from the dining-room, for you do not want in it any effect of light or gloom; on the contrary, what is required is a gentle, equal glow over all parts of the room, in which there shall be nothing to attract the eye to one part more than another, and in which you shall be able to read clearly the title of the book on the highest of your shelves. The most interrupting thing I know of to reading is strong sunlight, and all such should be carefully excluded. Again, the chief thing in the room should be the books, and everything connected with them. Don't have large, imposing cases, with plate-glass doors,—nothing looks so foolishly out of place behind glass as books do. You want to be able to take them down in a moment for reference, and not have the worry of opening and shutting the doors every time; and have a short ladder to get to the top shelves, and a standing reading desk, and a great table standing frankly in the middle of the room, which you can load with folios, if necessary; and above all, have comfortable chairs and shaded lamps, and don't have any ornaments whatever, particularly marble busts on stone pedestals. Your books, in plain open wood cases round your room, and one picture above your mantle-piece, will furnish it quite enough; the curtains should be hung, and an especially thick portière over the door, to deaden the sounds of the house, and the whole appearance should be one of quiet and peace. No one who has not tried it knows the inestimable value of having one room in the house where quiet may be secured and thought reign undisturbed. Of the bed-rooms I shall not speak, save to say that there seems to be a great deal of unnecessary reserve in the way we English regard them, and that the French is really the more sensible plan. Why, for instance, in a large bed-room there should not be a comfortable table and chairs, where the husband and wife might have breakfast, or sit and chat, does not seem easily explicable; but the fact remains, and it is beyond my province to do more than notice it in passing.

As to the drawing-room, or rather, as it is more sensibly called the living-room, for the former name always seems to convey a somewhat pretentious, Cockney sort of idea, and is at the root of the reason why so many people make this room one for company, I wish I could drum into everybody's head that it is absurdity to furnish for any one but yourself and your family, but I have no time to dilate on this subject. I have spoken a good deal of this living-room in my former articles, but I must say a few words more about its ornaments. Most people when they marry are the unfortunate recipients of a vast quantity of what can only be described as ornamental rubbish, procured at a large cost from divers fashionable establishments, for the encouragement of bad taste and the waste of money. Surely there must be few of us who have not groaned in our time under this plague of ormolu, and being finally crushed by the arrival of a seventh blotting-book or a twentieth inkstand. For it is a strange thing that the purveyors of these articles apparently bound their imaginations by blotting-books, envelope-cases, and inkstands. Well, the only possible thing to do with such ormolu ornaments (except throw them away) is to crowd them all up together on a couple of side-tables, and try to make them tell as a mass of colour. In detail, they are sure to be horrible,—they always are; and why they continue to be manufactured and bought, when every one detests them, is one of those things which, as Lord Dundreary says, "no fellow can understand."

Another sore trial to most people is the chandelier. The ordinary designs for gas-illumination are so unutterably base and degraded, that it is much better to have a hanging lamp at once. Those double-wicked kerosine lamps give a capital light, and if you put a thick porcelain shade over and under it, you have as soft and diffused an illumination as you could wish. Of course you will not commit the extravagance, and also folly, of having a carpet extending as far as the walls of the room, and cut out to fit every angle or recess. It is far better, as well as cheaper, to have an oblong or square carpet (according to the shape of your room), and to let it extend to within about two feet of the wainscoting. If you have a good floor, it is best to stain the board for this space, but if not, the common bamboo matting, so much in use in Japan, is as good a thing as can be had, and it can be scrubbed clean almost like boards. And don't have the chairs and sofas covered with chintz,—it has always a nasty, glazy uncomfortable look. Choose rather any soft, dark-hued stuff, and try to make it lead up to your walls, so that they do not seem,—

"To stand alone,
Like Adam's recollection of his Fall."

Lastly, as to the colour of this room and the colour of the rooms and decorations generally, I find myself utterly at fault. I could tell you the colour I like myself, I could perhaps even go farther, and say, with little fear of contradiction, that green and crimson and gold form a beautiful chord of colour, or that black and amber or blue, and greyish green go well together, and still I should tell you nothing worth the telling. For the fact is that every really fine combination of colour is dependent upon subtle gradations of tint and arrangement which can only be felt, not expressed in words, and the only way I have ever discovered of gaining a notion of good colour is to seek it in lands where it is understood. It will perhaps seem a strange thing to many of my readers that I should talk about colour being understood, as if it were some branch of knowledge, and they would perhaps answer me with, "Have we not good artists, as good as any in the world at present? And can they not tell us all about colour, and show us how to manage it?" Well, this is exactly what they can't do. It is with colour as it is with any other form of art,—that it can only be produced by people who delight in it. Now, for some years we have taken most of our combinations of colour from France, and slavishly followed whatever was the prevailing fashion there, and the result has been that the majority of dresses and fashions have been made in neutral hues, and people have cried out, "What an improvement! No more nasty emerald-green or sky-blue, but soft shades of grey and brown and dull green." But as a matter of fact, we are really further off good colour than we were before, and we shall have to retrace our steps before there is a chance of our obtaining it. Formerly, England had, at all events, firmly grasped one idea about colour, and that was that bright colours were the prettiest the best, somehow, and so it tried to have as many of them as possible. After all, in the main, this was a true idea,—the error was only in the deduction made from it. Bright, pure colours are the best, really, and all real magnificence of hue must be based upon them. I could show, had I time, that the French have really no idea of the true beauty of colour; what they understand is the relative arrangement of tint, and all that can be done by such arrangement their exquisite taste enables them to do easily. But a taste for fine colour could not spring from a people as light and artificial as are the French at heart, and consequently, in spite of their many renowned artists, they have produced hardly one colourist. Colour in its utmost height can only spring from the deepest feeling; and it can be general in no nation till it has entered into the hearts of its people, and they have "basked in it, as if it were sunshine; danced with the delight of it, quarrelled for it, fought for it, starved for it,—done, in fact, precisely the opposite of what we want to do with it,—made it to keep, and not to sell." But it is possible to learn to know good colour when you see it, though scarcely in England, for here there are few days in the year when we really see the sun, as the Italians, for instance, see it. Never, till I saw dark cypresses against an Italian sky, did I gain an idea of the exquisite harmony of green and blue, nor did I know what crimson and gold really were till I saw them blazing under an Indian sun in the bazaars of Bombay. Before then, I had never understood in the least the difference between French prettiness of colour and real nobility, and I think unless each of my readers has passed through one such experience he will hardly understand what I mean. To see good colour in dress, as I understand it, you must go, at least, as far as Italy, and look, not at the imported French robes which you will see trailing by the Arno's side or loitering in the Corso, but at the scarf of the Venetian gondolier, and the handkerchief on the contadina's head. And if you turn your eyes from these to the mountain-sides, dark with cypress or hoary with olive, to the white houses amid the orange groves and the blue sky, you will understand how, in such a country, the love of colour springs up in the hearts of the people, by daily, hourly association, till it becomes part of their lives.

And so, after all, I can tell no more about colour than to show the conditions under which alone we can hope to obtain it, and these are constant sight and fervent love. How, then, in this grey England of ours, can we hope to reproduce the hue of an Italian summer? But it will be no mean victory if we can bring home to ourselves this truth,—that far beyond all neutral shades of grey and brown and green, beyond all beautiful things in this world, rises super-eminently the beauty of true colour; and if this truth once gladdens our hearts, once makes us rejoice in the emerald fields

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

and the sunset sky, we may be very sure that whatever colour we spread upon our floor, or paint our walls with, will be right, for it will spring, not from the elaborateness of man's rules, but the beauty of God's creation.

REUTER'S TELEGRAMS.

LONDON, 15th June, 1877.

WAR IN TURKEY IN ASIA.

Despatches have been received from Ahmed Mukhtar Pacha stating that the Russian troops are retreating between Kars and Erzeroum, and that the Turks had re-occupied Olti and Melilotos.

TURKISH MILITARY LEVY.

The Turkish Government has ordered a new Military Levy of two hundred and twenty thousand men to be raised.

AGITATION IN CANDIA.

A general rising is expected to take place in Candia.

A strong insurrectionary agitation prevails in Epirus and Thessaly.

LONDON, 13th June, 1877.

POSITION OF THE TURKISH ARMY.

The main army of Ahmed Mukhtar Pacha is encamped at Hassankale.

POSITION OF THE RUSSIAN ARMY.

The right wing of the Russian Army is encamped at Mariman and its left wing at Karaklissa and at the same time the Russians are massing troops opposite Rustchuck and Nicopoli.

TURKISH LOAN.

The Turkish Chamber of Deputies has approved of the issue of a forced loan.

LONDON, 9th June, 1877.

The Emperor of Russia has arrived at Ployesti.

London, 30th May, 1877.

The Russian Ambassadors at Berlin, Vienna and London have all left and gone to St. Petersburg.

A German Ironclad Squadron has gone to the Levant.

RESULT OF THE DERBY.

Silvio,... .... 1.
Glen Arthur, ... 2.
Rob Boy,..... 3.

TELEGRAPHIC SUMMARY.

(From our Indian Exchanges.)

Simla, 7th May.—The Persian troops are concentrating on Mohummira on the Karnoon river near Bussorah, apparently as a demonstration against Bagdad. A British gunboat has gone to Bussorah to watch British interests.

Allahabad, 8th May.—The discontent in eastern Cabul is increasing, and threatens an exodus into British territory. The Home despatch on the Fuller case is expected to be published shortly. The Viceroy keeps the Queen's Birthday on the 26th.

Bombay, 10th May.—The *Times'* Belgrade correspondent calculates the strength of the Turkish army at 300,000 men, viz., 100,000 for the Danube and Balkans, 80,000 for Asia Minor and the Greek frontier, 30,000 for Servia, Montenegro, and Austrian frontier, and 90,000 in reserve. The Russian *Invalide*, however, estimates the Turkish regulars at possibly 443,000 men. There is a great excitement in Montenegro, Greece and Crete. Mussulman risings against the Russians are reported from Central Asia.

Bombay, 10th May.—The *Athenæum* states that an important native paper is to be started in Calcutta under the auspices of Lord Lytton, to be called the *Empire*.

We are imformed that full and detailed instructions have come from the Home Government to the Government of India to send a force from this country to occupy Egypt in the event of certain contingencies are, it is not difficult to guess, and judging from Mr. Secretary Cross's speech in the House of Commons the other night, we may be nearer to them than is generally imagined. The army for Egypt would doubtless be made up from each of the Presidencies, and it is not unlikely that Sir Neville Chamberlain would be offered the command of the expedition.

Bombay, 11th May.—There were 876 deaths in Bombay last week or at the rate of 68 per mile per annum. 97 deaths were from cholera. At Tanna there were 100 cases of cholera.

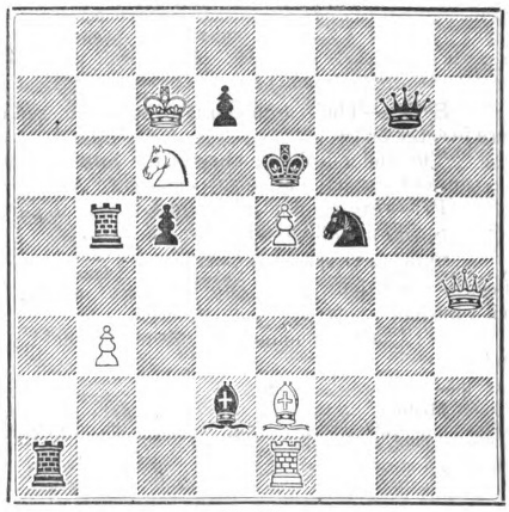
London, 15th May.—In the House of Commons, Mr. Bourke, replying to a question, said that neither Austria, France, Germany nor Italy, had answered the Russian circular justifying war.

Sir Stafford Northcote, in answer to a question, said that Egypt being a part of Turkey, Russia had a perfect right to blockade Egyptian ports and invade Egyptian territory.

A long debate followed, during which Sir S. Northcote said that the policy of the Government was strict neutrality, and that there was no reason why we should fight so long as our road to India remained untouched. The reply of Lord Derby to the Russian circular justifying war was, he said, neither insulting nor provoking, and he declared that the aim of the Government was to keep their hands free to promote the interests of England and the World.

Mr. Gladstone's Resolutions were eventually rejected by 354 against 223 votes, and the House agreed, without division, to Sir H. Wolff's amendment, declaring that "this House declines to entertain any resolution which may embarrass the action of the Government to maintaining peace and protecting British interests without indicating an alternative policy."

London, 15th May.—The Russian headquarters have been transferred to Ployesti, and their vanguard has entered Oltanitza. Constantinople advices state that the Russian division has crossed the Danube and entered the Dobrudscha, and that an engagement with the Turks is proceeding.



London, May 16th.—The British ironclad squadron has arrived at Port Said. The Turkish ironclad squadron has bombarded Soukoum Kaleh and landed troops there. The Russians are massing troops near Kars. No news from the seat of war in the Dobrudscha.

Ceylon, Nuwara Eliya, May 17, 10.55 a.m.—Fearful weather yesterday and all night. The Lord Chief Justice died at 3 a.m. at the Government rest-house.

,, No. 3 Ke-pak	,,	$7.80 to $8.10	Kerosene Oil $4.50 to $4.60

Kerosene Oil.—We have no sales to report, so that there is no change in quotations to note, and stocks remain unaltered. Price $4.50 to $4.60.

EXPORTS.

Silk.—The season can now be considered as nearly closed. A few bales of new Hanks are expected here in a day or two.

The undersirable quality of the Silk on offer, coupled with the rumours of a crisis in Lyons, has been the cause of a nearly entire suspension of business, rejections having, in fact, been equal to settlements.

Prices are nominal all round, a few small purchases only having been made at about last quotations.

Stocks are 800 to 900 bales.

Tea.—At the commencement of the current week native holders raised their demands, which caused a check to operations, but as supplies are coming in freely it is likely that prices will give way and result in a brisk business.

Settlements amount to 6,200 piculs, making stocks in first hands about 5,000 piculs. Quotations close as under:—

Medium	$18.00 to $20.00	Finest	$29.00 to $34.00
Good Medium	$21.00 to $24.00	Choice	$36.00 to $39.00 } Limited
Fine	$25.00 to $27.00	Choices	$42.00 & upwards. } supply.

EXCHANGE AND BULLION.

Exchange.—There has been but little doing during the past week, and rates have remained pretty steady.

Rates close as follows:—

In the U. S. Consular General Court at Kanagawa, Japan.

J. M. BATCHELDER,

Against

THE PROCEEDS OF THE SALE OF THE BARQUE

"CAYALTI."

TO THE FORMER OWNER OR OWNERS OF THE SAID BARQUE AND ALL OTHERS WHOM IT MAY CONCERN. GREETING.

WHEREAS an action has been brought in this Court by the above-named Plaintiff against the proceeds of the sale of the Barque *"CAYALTI,"* now in the hands of the UNITED STATES CONSUL-GENERAL for Japan, praying that the said proceeds may be paid to him on account of monies advanced and transportation and supplies furnished to the crew and coolies belonging to the said Barque *"CAYALTI."*

Now therefore take notice, that unless answer be filed therein within three months from the date hereof, judgment will be taken by the said Plaintiff according to the prayer of his Petition.

Given under my hand with the Seal of said Court affixed, this 28th day of May, A.D. 1877.

(Signed) THOS. B. VAN BUREN,
[Seal.] U. S. Consul-General.

PROTECTED BY ROYAL LETTERS PATENT,

Dated October 11th, 1869.

Under Distinguished Patronage

DR. BRIGHT'S PHOSPHODYNE.

(OZONIC OXYGEN)

THE NEW CURATIVE AGENT, AND ONLY RELIABLE REMEDY FOR NERVOUS AND LIVER COMPLAINTS

This Phosphatic combination is pronounced by the most eminent members of the Medical Profession to be unequalled for its power in replenishing the vitality of the body, by its supplying all the essential constituents of the blood and nerve substance, and for developing all the powers and functions of the system to the highest degree.

It is agreeable to the palate, and innocent in its action, while retaining all its extraordinary properties; and as a specific, surpassing all the known therapeutic agents of the present day for the speedy and permanent cure of—

Nervous Prostration	Lassitude
Liver Complaints	Shortness of Breath
Palpitation of the Heart	Trembling of the hands and limbs
Dizziness	Impaired Nutrition
Noises in the Head and Ears	Mental and Physical Depression
Loss of Energy and Appetite	Consumption (in its first stages only)
Hypochondria	Timidity
Female Complaints	Eruptions of the Skin
General Debility	Impaired Sight and Memory
Indigestion	Nervous Fancies
Flatulence	Impoverished Blood
Incapacity for Study or Business	Nervous Debility in all its Stages
Sick Headache	PrematureDecline

and all morbid conditions of the system arising from whatever cause. The action of the Phosphodyne is twofold—on the one hand increasing the principle which constitutes nervous energy, and on the other the most powerful blood and flesh generating agent known; therefore, a marvellous medicine for renovating impaired and broken-down constitutions. It quickly improves the functions of assimilation to such a degree, that where for years an emaciated, anxious, cadaverous, and semi-vital condition has existed, the flesh will rapidly increase in quantity and firmness, and the whole system return to a state of robust health. The Phosphodyne acts electrically upon the organisation; for instance, it assists nature to generate that human electricity which renews and rebuilds the osseous muscular, nervous, membranous, and organic systems. It operates on the system without exciting care or thought upon the individual as to the process. It moves the lungs, liver, heart, kidneys, stomach, and intestines, with a harmony, vigour yet mildness unparalleled in medicine.

The Phosphodyne gives back to the human structure, in a suitable form, the phosphoric or animating element of life, which has been wasted, and exerts an important influence directly on the spinal marrow and nervous system, of a nutritive, tonic, and invigorating character, maintaining that buoyant energy of the brain and muscular system which renders the mind cheerful, brilliant, and energetic, entirely overcoming that dull, inactive, and sluggish disposition which many persons experience in all their actions.

The beneficial effects of the Phosphodyne are frequently shown from the first day of its administration, by a remarkable increase of nervous power, with a feeling of vigour and comfort, to which the patient has long been unaccustomed. Digestion is improved; the appetite increases wonderfully; the bowels become regular; the eyes brighter; the skin clear and healthy; and the hair acquires strength, showing the importance of the action of the Phosphodyne on the organs of nutrition.

Finally, the Phosphodyne maintains a certain degree of activity in the previously debilitated nervous system; its use enables all debilitated organs to return to their sound state and perform their natural functions. Persons suffering from Nervous Debility, or any of the hundred symptoms which this distressing disease assumes, may rest assured of an effectual and even speedy cure by the judicious use of this most nvaluable remedy.

DR. BRIGHT'S PHOSPHODYNE

IS SOLD ONLY

In CASES at 10s. 6d. by all Chemists and Patent Medicine Vendors throughout the Globe.

Full Directions for Use, in the English, French, German, Italian and Dutch Languages, accompany each Case.

☞*CAUTION.—The large and increasing demand for Dr. Bright's Phosphodyne has led to several imitations under somewhat similar names purchasers of this medicine should therefore be careful to observe that each case bears the English Government Stamp, with the words Dr. Bright's Phosphodyne engraved thereon, and that the same words are also blown in the bottle.*

DYSENTERY, CHOLERA, FEVER, AGUE, COUGHS, COLDS, &C.

Dr. J. COLLIS BROWNE'S

CHLORODYNE

(Ex Army Med. Staff)

IS THE ORIGINAL AND ONLY GENUINE.

CAUTION.—Vice Chancellor Sir W. P. Wood stated that Dr Collis Browne was undoubtedly the Inventor of Chlorodyne; that the story of the Defendant, Freeman, being the Inventor was deliberately untrue, which he regretted had been sworn to. Eminent Hospital Physicians of London stated that Dr. Collis Browne was the discoverer of Chlorodyne; that they prescribe it largely, and mean no other than Dr. Browne's.—See "Times," July 12th, 1864.

The Public, therefore, are cautioned against using any other than

DR. J. COLLIS BROWNE'S CHLORODYNE

REMEDIAL USES AND ACTION

This INVALUABLE REMEDY produces quiet refeshing sleep, relieves pain, calms the system, restores the deranged functions and stimulates healthy action of the excretions of the body without creating any of those unpleasant results attending the use of opium. Old and young may take it at all hours and time when requisite Thousands of persons testify to its marvellous good effects and wonderful cures, while medical men extol its virtues most extensively, using it in great quantities in the following diseases:—

Diseases in which it is found eminently useful—Cholera, Dysentery, Diarrhœa, Cholics, Asthma, Rheumatism, Neuralgia, Whooping Cough, Cramp, Hysteria, &c.

EXTRACTS FROM MEDICAL OPINIONS.

The Right Hon. Earl Russell communicated to the College of Physicians and J. T. Davenport that he had received information to the effect that the only remedy of any service in Cholera was Chlorodyne.—See "Lancet," December 31st, 1864.

From A. Montgomery, Esq., late Inspector of Hospitals, Bombay:—"Cholorodyne is a most valuable remedy in Neuralgia, Asthma, and Dysentery. To it I fairly owe my restoration to health, after 18 months' severe suffering, and when other remedies had failed."

Dr. Lowe, Medical Missionary in India, reports (Dec. 1865) that n nearly every case of Cholera in which Dr. J. Collis Browne's Chlorodyne was administered the patient recovered.

Extract from "Medical Times," January 12th, 1866.—"Chlorodyne is prescribed by scores of orthodox medical practitioners. Of course it would not thus be singularly popular did it not supply a want and fill a place."

Extract from the General Board of Health, London, as to its efficacy in Cholera.—"So strongly are we convinced of the immense value af this remedy that we cannot too forcibly urge the necessity of odopting it in all ceases."

Beware of spurious and dangerous compounds sold as CHLORODYNE, from which frequent fatal results have followed.

See leading article. "Pharmaceutical Journal," August 1st, 1869, which states that Dr. J. Collis Browne was the inventor of Chlorodyne; that it is always right to use his preparation when Chlorodyne is ordered.

CAUTION.—None genuine without the word "Dr. J. Collis Browne" on the Government stamp. Overwhelming medical testimony accompanies each bottle.

The public are further cautioned, a forgery of the Government stamp having come to the knowledge of the Board of Inland Revenue.

SOLE MANUFACTURER—

J. T. DAVENPORT,

83, *Great Russell Street, Bloomsbury, London.*

Sold in bottle at 1s. 1½d., 2s. 9d. and 4s. 6d.

Yokohama, October 21, 1876. 6mos.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of al kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded.* This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omissonto renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

We have on several occasions pointed out the extreme impolicy—to use no harsher term—of the Government in its treatment of the *samurai*. That their extinction as a privileged class should finally take place; that the barriers which divided them from the mass of the people should gradually be broken down; that the extraordinary privileges and immunities enjoyed by them at the expense of the toiling millions could no longer be maintained after the feudal system had been swept away, was certainly to be expected and ardently to be desired. As long as so wide and vicious a division of classes was allowed to exist after the abolition of feudalism, it was impossible that the efforts of the nation to make stable and permanent progress could be crowned with success. It has been a most hopeful sign of the vigour of the newly born national spirit, that it has fearlessly spoken out against the exclusiveness, the insolence and the pride of the old order of *samurai*. The people have commenced to recognise that they are themselves the backbone of the nation, and are no longer willing to submit to the arrogance of a class which spent much of its time in riotous pleasures, and in disturbing the peace of those on whose labours it had for generations subsisted. It was right and just that such a state of things should come to an end. It was undoubtedly a matter in which urgent reform was needed; but it was also one that presented special difficulties, which could only be successfully vanquished by slow and gradual processes. It was not to be expected that the *samurai* should quietly acquiesce in measures which cut them off from all connection with the Government; that they should submit without a murmur to be cast out into the desert, to be made the scapegoats of all the mistakes and all the embarrassments of the Government, to be called idlers and vagabonds, and to be told—as in an article before us—that if they did not want to die of starvation they had better set to work as farm labourers or chair coolies. This was certainly not a politic way of treating a class, which, many as its vices were, had done good service to the Government by fighting and winning its battles. And had the Government been wise it would, from all this ready-made material, have formed an army in which thorough reliance could have been placed in such a war as the present, if indeed, as is most probable, such formation had not prevented its occurrence. The elements of strength were all there, traditional obedience, numbers, and unquenchable bravery. It may be urged that it would not have been safe to have left the sword in the hands of the *samurai*; that such a concession would have imperilled the existence of the Government, prevented progress, and possibly have brought about a return to feudal institutions. But had the Government set to work to win the affections of the people; had it shown them that it made their welfare its aim; had it done anything to compel their admiration and gratitude, it might with safety have left its protection to the loyalty and bravery of an army of *samurai*. It has chosen to act otherwise. Instead of endeavouring to consolidate the various forces, it has sought to destroy them all. To reduce them to weakness so that they may be safely crushed, instead of welding them together so that they might be irrefragable. This has been its sole policy, and now we witness the lamentable results. Shortly after the commencement of the Satsuma outbreak it was found that to oppose with any chance of success the well drilled troops of Saigo, the *heimin*, from whom the Government army was recruited were entirely inadequate. *Samurai* must be met by *samurai*; and to meet this want, large forces of policemen, who are almost exclusively composed of this class, have been constantly sent forward. A few days since the native journals stated that Iwakura called a special meeting of all the *kuazoku* of Tôkiô, and informed them that with the present means at its disposal there was no chance of the Government immediately quelling the insurrection in Kiushiu; it had been decided, moreover, not to call out any more reserves. There is no doubt that the utter inefficiency of these raw troops is recognised, and that sending them into the field is merely adding to the terrible list of killed, wounded and sick, without any benefit resulting to the Government. The *kuazoku* were then requested to raise 10,000 soldiers among the *samurai* of their former *han*. The assembled *kuazoku*, when they heard this appeal, remained for some time looking at each other, unable to say a word. No doubt they appreciated the humiliating confession of the Government, that it is unable to put down a war it has so largely provoked, without the assistance of the class it has so unhesitatingly despoiled, and whose just claims it has so unblushingly repudiated. In its hour of need it finds itself compelled to ask the *samurai* to take back and wield in its defence the sword it lately snatched from their hands. Poverty makes men hirelings, and a *bu* a day may purchase that amount of loyalty. There will doubtless be some who will respond to the appeal of the Government. But when the present strife is over; when the pittance is no longer obtainable; when the Government, no further requiring the sword, again demands its return, will it be readily restored? Will they, whose help has been acknowledged indispensable, consent without a murmur to be turned out, penniless and defenceless, into the cold, when their assistance is no longer thought needful? If it was not deemed safe to enrol them as disciplined troops and entrust to them the defence of

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

the nation when the army was formed, is it safe to appeal to them now, and placing arms in their hands, cry "Help us, or we are lost?"

The news from the South indicates but little change of position on the part of either insurgents or Imperialists. The taking of unimportant positions, engagements lasting from seven in the morning until five in the evening, with a result of of one man wounded, cannot be expected to yield very decisive results. The Government does not hesitate to confess that without largely increased forces it cannot hope to put an end to the War. H E. Iwakura in appealing to the *shizoku* states that "it is impossible to sit quietly and look on while the existence or destruction of the Government is pending." It is now openly admitted that Saigo's strength and resources are much greater than was at first announced. The Imperialists are exhausted by having been under arms for so long a time, and it is deemed necessary, now that the hot season has set in, to send new detachments to relieve them. The last news published states that little has been done at Kagoshima during the last month. Recently, however, the insurgents have been pouring a hot fire into the city from eighteen-pounder guns placed on Takayama and other commanding elevations. The Imperial headquarters, the *Kencho*, and the shipping, suffered most from the bombardment. The guns are supposed to have been manufactured at Saneyoshi, or to have been secretly supplied by foreigners.

The different Societies of Tosa have, it appears, presented their petitions to the Emperor. The following are the articles of the *Risshisha*:—

1st.—Although the Imperial decree was issued in the 8th year of Meiji promising the establishment of three great legislative bodies, this promise has not been carried into effect.
2nd.—That the Government has not acted properly in the treatment of the *samurai*.
3rd.—That the poll-taxes have not been properly settled.
4th.—Concerning reform of the land-taxes.
5th.—Concerning the Finances.
6th.—Concerning the revision of treaties with Foreign Powers, also the Corean and Formosan affairs and the exchange of the Kurile Islands.

Nothing can well be more moderate and legitimate than these demands, which, it is stated, the Government have rejected. In spite of repeated assertions that the province of Tosa is perfectly quiet, there is little doubt that an outbreak is only prevented by overwhelming force. The *Mainichi Shimbun* states that on the 17th instant Fujiyoshi Shidzuka and Muramatsu, two members of the *Risshisha* were arrested in Tosa, and sent to Osaka for having entered into secret communication with Kirino. They have since been sent to Kiôto. It is also reported that a number of Satsuma men have succeeded in crossing over to Shikoku.

The Nagasaki *Rising Sun* states that Mr. Oyama, the late *Kenrei* of Kagoshima *ken* has arrived at that port together with about sixty other prisoners. We echo the hope of our contemporary that the treatment this gentleman received on his return voyage was more considerate than on the occasion of his being brought to the capital. It is not easy to see how his trial can be conducted at Nagasaki, with greater show of legality that at Tôkiô. People will also naturally ask why the two principal judges came up from Nagasaki when Oyama went down?

By order of the Japanese Postmaster-General a notice was issued on the 20th instant to the effect that, on and after that date, mails would be received at the Imperial Japanese Post Office for despatch by P. & O. and M.M. steamers to Hongkong, Straits Settlements, India, Europe, etc. The Japanese Government may have made some arrangement with the French Postal Authorities by which a mail may be made up here for the M. M. steamers, but as regards any authority to forward mails by the P. & O. steamers the notice in question is either premature or out of order altogether. The Agent of the P. & O. Company has received no official intimation of this change, neither does the British Postmaster know anything at all about it. Indeed, in reply to a telegram sent to the Postmaster-General at Hongkong asking for instructions, the British Postmaster here has received distinct orders not to accept mails from the Japanese Post Office for despatch by P. & O. steamers. So the matter rests at present, and we are anxiously waiting to know who is to be blamed for a blunder which might have caused serious inconvenience and loss to the public.

In its issue of the 21st instant the *Herald* has the following paragraph:—

Ships of war, not being trading vessels, have up to now called, when occasion necessitated, at Japanese ports not open to trade, but a notice has just been issued by Admiral Ryder to the commanders of British men-of-war directing that this is in future to be discontinued. For what reason this order has been issued is not stated, but, we presume, it is at the request of the Japanese government.

We are opinion that the *Herald* has to some extent misunderstood the character of the Admiral's order. As far as we have been able to acquaint ourselves with the tenor of this notification, it applies only to visits for which no necessity can be shown, and we believe that the right of Her Majesty's ships to enter unopened ports whenever they have good and sufficient cause for doing so, is neither abridged by this order nor questioned by the Japanese Government. The latter, we trust, have no wish either to depart from the usage of all civilized nations in this respect, or to compare unfavourably with their own people in the hospitable and friendly feeling which the latter invariably show to ships of war arriving at any unopened port or anchorage at which they may require to call. By all accounts, it would seem that the people are delighted to have an opportunity of welcoming such chance visitors, crowds of natives with their wives and children making holiday on their arrival, and going on board to inspect the wonders. They are, moreover, glad to turn the occasion to account by supplying the ships with whatever they have at hand in the way of fresh provisions.

In our daily issue of the 20th instant we noticed the first arrivals of new crop silk, and expressed an opinion that we should see a reduction of the prices then asked by dealers, which has since been fully confirmed. Several small parcels of Mybash and Hatchoji hanks have been brought to market during the week, but the demands of holders have prevented business being done to any extent, as only one small lot was yesterday settled at \$500 = 18/6 and frs. 51. This morning about 120 native bales arrived from the country, none of which have yet been disposed of. Perhaps dealers may succeed in moving off 50 or 60 bales at the same rates as already realized, but to induce operations on a large scale a reduction of at least \$50 must be made here, though prices have advanced considerably in the interior. The first Mybash parcels which appeared in this market were purchased up country by dealers at the rate of 35 to 36 *mommé* for one *yen*, which would be equivalent to a laid down cost in Yokohama of \$475 to \$490, but opening prices here caused so much excitement and competition among native dealers, that they rapidly drove up rates, and purchases were made at 29 and 30 *mommé* per *yen*, so that the silk last arrived averages a cost of 31 *mommé*, or \$545. In France most of the silk manufactories are shut up or are only working a few hours each day, and all attempts to bring silks into fashion again have failed. A large portion of last year's silk is still in first hands, and the registers of the "Condition" house show that for several months past deliveries have been only one-half or one-third of those for a corresponding period last year. In London there are over 8,000 bales of Japans in stock, and deliveries do not exceed 200 bales per month. By telegrams, we learn that the European crop will not be smaller than that of last year. The crop in China it is now expected will be 60,000 instead of 50,000 bales as first stated, while the crop here is a good one. Taking all these circumstances into consideration, it remains to be seen if foreign buyers can afford to pay more than \$450 per picul for good medium hanks. Low prices will certainly induce native consumption, and therefore it is quite impossible to estimate

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the total export, but as we know that Japanese manufacturers chiefly use coarse silk, supplies of fine qualities are not likely to be short of the demand.

The remarks in the *Japan Gazette* on the Export of Rice seem likely to provoke some lively discussion. We have this week no space to devote to the consideration of the question, which is far too important to be dismissed in a few words. We publish elsewhere a letter from a correspondent on the subject, and shall reserve the full expression of our own views for a future occasion.

The *Daily Telegraph* is always great on Japanese and Chinese topics. Some time ago it mixed up in the most wonderful way the abolition of the feudal system and the Woosung Railroad, on which it founded certain conclusions to which the story of "the great Panjandrum with the little round button atop" is simplicity itself. Now it gravely informs the public that the most remarkable sign of progress displayed by the Japanese is their sitting at tables and drinking beer instead of squatting on the ground and smoking *saki*. The public will be smitten with awe at the wonderful research of their favourite paper, and any contradiction of the statement would cause vials of wrath to be poured out on the offender's head. Let any one venture to assert in England that black and green tea are the product of the same shrub, that any part of China is is not within a few hours walk of Yokohama, or that all girl-babies in Japan are not cast, at their birth, into baby towers, and he will forthwith register a vow to keep his superior knowledge to himself in the future.

Young Japan occasionally favours us with specimens of topsy-turvy English which are calculated to startle while they amuse. Signs become indeed wonders in their setting forth; municipal regulations express anything but what they are intended to convey, whilst liquors mask their poisonous properties in language entirely cabalistic. But the wildest efforts of the Japanese student are entirely thrown into the shade by the following circular, which we have received from Marseilles by the last mail:—

The nicest and Strongest aperitive liquor having not à single Wormwood's prejudacial principle.

Substance abstracted from

EUCALYPSINTHE

Invented by Doctor * * * *.

WARRANTED WITHOUT GOVERNMENT'S GUARANTY.—THE COUNTERFEITERS SHALL BE RIGOROUSBY PUNISHED

*Signature * * * is inscribed on the label*

A small quantity of EUCALYPSINTHE in a glass of water produces a milky liquor similar to wormwood of which it has not a single malefactory principle

CONSEQUENCES OF THIS BEVERAGE

It calms thirst, reanimates appetit, efacilitates digestion, revives intelligence and memory, producing a general wellbeing. A small glass mixed with the same quantity of water, at the first appearance of fever, stops it immediately. It must be given pure for algide cholora.

CONSEQUENCES OF WORMWOOD

It decreases appetite, troubles degestion, corrupts intelligence and reasoning, suppresses memory and conducts to the moral degradation exciting beyond measure all the nervous system.

INSTRUCTION ON THE EUCALYPSINTHE FOR HYGIEINE

Every diathisis is an acrity or a great agitation produced by a vicious elaboration of the glandulous system; dragged along by the circulation these bitter humours irritate human parties on which they stay; so the best purifying is the one which reestabilishes the functions of these organs, in preventing all fermentation and withdrawing from vital function every thing which is unuseful.

The strongest preparations which can be found to do so as we have said above are the Eucalyptus globulus and EUCALYPSINTHE *wich is the nicest preparation.*

This produce contains an antifeverish bitter and binding principle wich excited and contracts the vitality of ouv tissues, a resin which restrains every putrid fermentation, an antiputrid and essential oil of ouv humours and which acts with energy on the nervous system of which it revives the functions, so is explained the reason for which the boggy fever leaves and never more do evil to the persons who use every day of EUCALYPSINTHE.

By its using, phtisicals see consumption's fever amend by desinfection and progressive diminution of the expectoration which exhausts them.

It is by these principles that EUCALYPSINTHE must act vigourourously in the rhumatismal scorbutic and scrofulous deceases.

Every onr who uses day by day of that beverage feel so good that they continue to drink it by hygieine.

We fear the effects of this mysterious liquor must be frightfully intoxicating judging from the description. It is purchasable in Yokohama, the sender of the circular informing us that he has a "Deposit" here.

The fallacy of the arguments in favour of protection cannot be better exposed than by the facts contained in the following paragraph, which we take from the highest class paper in America, *The Nation*:—

The fifth annual report of the Silk Manufacturers' Association contains an interesting illustration of the logical methods of some protectionists. Two years ago we took occasion to refer to the silk manufacture as an "infant industry" that had been carried in arms about long enough, and that might safely by allowed to make an attempt to go alone. The "industry" was then exceedingly prosperous. Raw silk, admitted free of duty, was ruling lower than at any time for the previous twenty years; the wages of operatives had been lessened, and people had bought more largely of American silks than ever before. In view of these facts, and of the added fact that revenue frauds in silk goods had been for a long time notorious, we expressed our surprise that the Association had not improved the opportunity to let people know that their pet child was a very vigorous infant indeed, and that a heavy reduction in the tariff on silk goods might be made with safety to themselves, with profit to the Government, and with great saving to the pockets of the general public. This year, with raw silk still admitted free of duty but greatly increased in cost by a partial failure of the silk crop, silk manufacturers are making no money; but, strange to say, their logic brings them to a conclusion identical with that reached two years ago. No reduction of the tariff, they tell us, would diminish revenue frauds (by which on articles of silk alone Government annually loses Dols. 4,000,000), and on no account should a single cent be deducted from the existing sixty per cent. tariff on all silk goods; in other words, the silk industry was made prosperous by protection, therefore great is protection! The silk industry is now poor and needy, therefore it still needs protection. But some plain people are likely to ask, Why did not protection keep it from getting poor and needy?

Elihu Burritt, better known as the learned blacksmith, has written a somewhat remarkable letter to the *New York Daily Tribune* in which he urges, in powerful and eloquent language, that the balance of the Geneva Award, which remains after just individual claims have been settled, should be returned to Great Britain. After stating that the grand court of the Geneva tribunal was the "sublimest Court of Equity and Honor the world had ever seen" Mr. Burritt says

In every possible way by which our Government could acknowledge and assume the duty and office, it accepted the Geneva award solely in trust for the individual sufferers by the Confederate cruisers. By the obligations of this duty and office, it was to ascertain who were these sufferers, what were just and equitable claims, and to liquidate them fully and fairly from the money held in sacred trust for this sole purpose. And when every such just and honest claim is thus satisfied the whole of the intent and compass of the award is accomplished and realized. The trust is exhausted. The trustee has no right in law, equity, or honor to a farthing of the money remaining in his hands. Nothing could be more dishonorable on his part than the effort to trump up a pretended book account of his own against the trustee, and seize the balance left to satisfy that bogus claim. If our Government should put into its own treasury a single dollar of the Geneva award against "consequential claims," the act, by the clearest law of honor and equity, would be a downright theft or embezzlement. It would repudiate the most sacred obligation a nation could give before the world by holding the Geneva Tribunal in contempt, rejecting the basis of its award, and perverting it to a purpose which both parties agreed should be put out of court.

He concludes his appeal in the following terms:—

Shall our Government be the first to bring contempt or suspicion upon a tribunal which has done such large justice to us and which our new President, at the very outset of his administration, has so heartily commended to the confidence of all civilized Powers? Every American patriot who holds his country's honor as a priceless treasure should feel that he has a deep interest in the answer to be given to this question. That answer is soon to be discussed, just as if other than one alone could be given. There are givings out, now and then, here and there, of intimations how and for what the balance of the Geneva award may be retained and "covered" into the treasury of the trustee, to be appropriated to some national object. There is imminent danger that our Government may be tempted to find some plausible excuse for this sharp practice. To avert this danger, every man between the two oceans who has his country's honor at heart, and feels what course it should dictate, ought to "cry aloud and spare not," "Send back that money!"

The *jinrikisha* we hold to be Japan's best contribution to the inventive appliances which economize labour and facilitate the intercourse and business of life; and we therefore make no apology for devoting a few lines of this portion of our columns to the subject of an improvement in the mountings of that useful vehicle which, if introduced as extensively as we desire to see, will add immensely to its popularity during

Original from UNIVERSITY OF CALIFORNIA

this rainy period. In fine weather there is scarcely a single draw-back to the convenience and comfort of this dwarf conveyance, but on a rainy day the case is far otherwise. For the oil-paper hood, apart from its abominable smell, is furnished in front with an apron of the same material, *which hangs from the top outside*, so that the unlucky passenger has either to submit to be entirely enveloped, as in an inverted and vilely odorous paper bag, unable to see in front of him, or else, if he dispenses with the apron, he is sure to get wetted with the rain about his feet and legs. Now mark how a happy thought of some obscure and noble genius in Tôkiô has remedied all this. There in most *jinrikishas* the apron is now hung, not outside and from the top, but inside the hood and a short distance from the top, leaving space enough to allow the passenger the luxury of looking before him and yet amply protecting him from the rain. This brilliant invention—our gratitude to its originator whoever he may be demands that we should call it so—seems not yet to have spread to Yokohama, where unfortunately the old style as yet reigns in all its primitive rudeness and discomfort. But as surely as we believe in the ultimate elevation of our species and in the triumph of truth over error, so surely are we persuaded that the invention we here gratefully chronicle will supplant, and that right speedily, the uncouth and barbarous arrangement under which so many of us have often unresignedly suffered.

By the *City of Tokio* on the 18th instant the unwelcome intelligence was received of the loss of the P. M. S. Co. steamer *City of San Francisco*. The ill-fated vessel—the finest of the Company's fleet—was making her first trip to San Francisco from New York, when she struck on a sunken rock off the Mexican coast and became a total wreck, though fortunately all the passengers and mails were saved. Had the *City of San Francisco* not met with this accident she would have been despatched from San Francisco for this port on the 14th July next, taking the place of the *Alaska* on this line.

Now that the season for trips up country has come full upon us, and the *Gonrei* of Kanagawa has facilitated the obtaining of passes for the seven hot springs, the following information as to postal communication with some of the favourite resorts of foreigners may prove serviceable.

The post leaves for Odawara and Hakone at 2 15 p.m. and 10 p.m. every day, and from the former place letters are forwarded to Atami every other day. There is no fixed time for forwarding mail matter from Odawara to Miyanoshita, but letters for the latter place, we are informed, are allowed to accumulate for two or three days until a sufficiently large mail is collected to justify the despatch of a postman with them to the pleasant little watering place. This delightful uncertainty puts one in mind of the free and easy postal regulations which were in force in rural districts of England before Railways were; or the dubious means of delivery which Scott makes mention of in the Antiquary. Fortunately for those who wish to correspond with Miyanoshita an immediate delivery can be assured by an endorsement on the letter that it is to be forwarded by special messenger, for which a fee must be paid by the recipient at Miyanoshita, at the rate of 6 *sen* per *ri*. Letters for Subashiri are sent every other day from Numadzu, the post to the latter town leaving Yokohama at 10 p.m. daily

---

Is Yokohama reduced to such a frightful state of impecuniosity that it cannot afford to have a watering cart? We know that times are of adamantine hardness; that economy is looked upon as a thrifty virtue instead of being regarded, as in our years of plenty, as an avaricious vice; that tea bringeth vanity and vexation, and that silk leadeth to destruction; but it will avail nothing to sit down in the clouds of dust which every zephyr blows around our luckless heads, and to which we are compelled to submit for want of artificial spargefaction. We may as well be as happy as our circumstances permit. In "this blue unclouded weather" the cost of the extra libations that we are compelled to pour down throats, parched with the blazing whiteness of unsprinkled streets, would pay the cost of a watering cart several times over. We wear grit, eat grit, breathe grit, and all this discomfort because we cannot agree amongst ourselves to pay a subscription of a few cents. The times are past when we attempted to outshine one another in pomp and splendor. Our aim now is to make a living. But since "not to live at ease, is not to live," shade of Aquarius! let us put our pennies together and buy a watering cart!

The *Glasgow News* has a most graphic description of the capture of the veritable sea serpent at Oban. One cannot refrain from asking, as *Punch* once asked,

From what abyss of the unfathom 'd sea,
Turnest thou up, Great Serpent, now and then,
If we may venture to believe in thee,
And affidavits of sea-faring men?

What whirlpool gulf to thee affords a home!
Amid the unknown depths where thou dost dwell?
If—like the mermaid, with her glass and comb—
Thou art not what the vulgar call a Sell.
* * * * * * * * *

A flock of birds, a record—rather loose
Describes as hovering o'er thy lengthy hull,
Among them, doubtless, there was many a Goose,
And also several of the genus Gull.

The following outline of the life of Shimadzu Saburo is taken from a biography published in one of the native journals last year.

Satsuma Saburo Hisamitsu, the second son of Satsuma-no-kami Shimadzu Masaoki, and the father of Shigehisa, the ex-*daimio* of Satsuma, is a man of quiet and virtuous life, fond of studious pursuits, and proficient in most branches of Chinese and Japanese literature. He has always been an ardent upholder of the Imperial cause, and gave his full support in the struggle which ended with the Restoration. During the year 1860, Shimadzu's influence greatly increased by the enthusiasm with which he advocated the cause of *Sonnô-joi* (respect for the Emperor and expulsion of foreigners). In 1862 he went to Kiôto. Hearing of his arrival, great numbers of *samurai* who had enrolled themselves in this cause, collected together in the neighbourhood of Kiôto and Osaka, in the hope that Shimadzu would at once aid them in carrying their plans into effect. He insisted, however, on their abiding a favourable opportunity, cautioning them not to plunge recklessly into actions that might prove fatal to their cause. In June of the same year, Shimadzu put forward a proposition to the affect that Ohara Sayemon-no-kami should proceed to Yedo as special Envoy from the Mikado to the *Bakufu*, with a message commanding the Shôgun and all the *daimio* to come to Kiôto to pay their respects to the Emperor, and discuss the question of the expulsion of foreigners. To aid the success of his plans, Shimadzu himself accompanied Ohara to Yedo, to urge upon the *Bakufu* the necessity of complying with the order of the Emperor. The *Bakufu* gave its consent, and at Shimadzu's request appointed Hitotsubashi guardian of the Shôgun, and the Lord of Echizen, Minister of State. From this date changes in the Administration were gradually accomplished, all having for their object the restoration of the Imperial power, which began to wax greater. Having successfully carried out his intentions Shimadzu set out on his raturn to Kiôto with Ohara. When passing Namamugi (on the Tokaidô) some Englishmen attempted to ride through the procession, and were immediately cut down. The English then proceeded to station ships of war at Shinagawa, and demanded from the *Bakufu* payment of an indemnity, and the giving up of the person of Shimadzu. When this reached the ears of Shimadzu, he immediately despatched a *karô* of his House of Satsuma to the *Bakufu* with the following message; "We hear that the English de-"mand the person of Shimadzu Saburo. The Englishman "was cut down in consequence of his misbehaviour. The "English are, therefore, to blame for the deed, although they "accuse us of it. It is a case that can only be decided by war, "in which we are quite ready to engage." The *Bakufu* was requested to consider this message as final.

The matter was ultimately settled by the *Bakufu* paying the indemnity demanded. But the British were not satisfied.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

and in 1863 sent a naval force to Kagoshima, insisting that a further indemnity of thirty thousand pounds should be paid, or that Shimadzu should be given into their hands. Satsuma at once rejected these demands, and a fight ensued, which resulted in the British having to leave without accomplishing their wish, after having set fire to the town of Kagoshima. Shimadzu reported to the Emperor the result of the engagement and was greatly commended for his action.

In 1865, when the Shôgun's Government was meditating a second attack on Chôshiu, Shimadzu strongly opposed such a course, prophesying failure on the part of the *Bakufu*. His advice was rejected, and as he had foreseen, the *Bakufu* utterly failed to coerce Chôshiu.

In April, 1867, Shimadzu was appointed one of the councillors of the Mikado at Kiôto, where he devoted his most earnest efforts to the accomplishment of the restoration of the Imperial power. After this had been effected in 1869, the Mikado acknowledged Shimadzu's services in the following terms:—"For many years past you have been "the chief upholder of my cause. The defeat of the rebels at "Fushimi in 1868, which was the greatest blow to the Shô-"gun's power, and which caused a general change in the feel-"ing of the country, was mainly brought about by your troops. "You sent them also to the north-east, and, gaining one vic-"tory after another, you have conquered the insurgents and "brought about the present peace. It is owing to your efforts "that I am restored to my present position, and I regard "you as the pillar of our country. In acknowledgment of "your meritorious services, I reward you with an annual "pension of 100,000 *koku* of rice, and raise your rank."

In 1872, when the Mikado visited Kagoshima, Shimadzu Saburo presented to him a memorial consisting of thirteen articles. On the Emperor's return, Shimadzu was frequently summoned to the capital, but he always refused to obey the summons. Finally, in 1874, he came to Tôkiô, and was immediately invested with the office of *Sa-daijin*. In September of the year following he brought before the Administration certain reforms which he wished carried out. His colleagues, however, did not agree with him, and he consequently resigned his position, and returned to Kagoshima in March, 1876.

The following sketch of the life of Iwakura, *Udaijin*, also appeared about the same time as the above:—Iwakura is a type of man seldom to be found among the *kuge* (Court nobles). He is decisive in action, and is, moreover, endowed with great eloquence. At the age of twenty, he became personal attendant upon the Emperor. At this time the amount allowed by the *Bakufu* for the support of the Mikado and his Court was extremely small. On one occasion, after amusing himself by the composition of poetry, the Emperor directed some of his attendants to bring writing paper, as he wished to write down the verses. After fruitless search, his Majesty was informed that there was none in the palace. Iwakura was much concerned, and the same night he went over to the residence of the Governor of Kiôto and demanded an interview. His request was granted and in answer to the Governor's enquiries, Iwakura stated that the miserable pittance allowed by the *Bakufu* did not suffice for the wants of the Emperor; that he was unable to procure even the writing paper that he required. He further represented, that although he, the Governor, held his office under the *Bakufu* he was, nevertheless, a subject of the Mikado, and that if he recognised the duties of a subject to his Sovereign, he would lose no time in appealing to the *Bakufu*. The Governor, struck with Iwakura's address, promised to do so, and in the meantime sent the Mikado money from his own purse, in order that he might want for nothing. This was really running great risk at a time when the *Bakufu* was all-powerful. In consequence of Iwakura's representations the Governor became a warm adherent of the Imperial cause, and fell under the suspicion of the *Bakufu*.

In the spring of 1858, the Prince of Sakura, who was a *Gorojiu* of the Shogun's government, came to Kiôto, petitioning that permission might be granted for Japan to open trade with foreign countries. The petition was strongly opposed by Nakayama Dainagon, and eighty-eight other *kuge*, Iwakura among the rest. From this time dates the commencement of the troubles between the *Bakufu* and the Imperial Court.

An alliance of the House of Tokugawa with the Imperia family being desired, *Bakufu* requested that Princess Katsu-no-miya might be given in marriage of Tokugawa. Iwakura strongly approved of the match, which accordingly took place. The *Bakufu*, however, refused to close the ports that had been opened to foreign trade, and those who wished for the expulsion of foreigners maintained that the marriage should never have taken place. Some of the nobles who had favoured it were imprisoned, among them Iwakura, who was placed in close confinement. He was afterwards released and banished from Kiôto, being compelled to live at Iwakura-mura. As he had been instrumental in bringing about the marriage, he was deserted by most of the Court party, being suspected of siding with Tokugawa. He nevertheless always held to the hope of the restoration of the Imperial power.

Now, there were two men named Ohashi Shingo and Kagawa Keizo, who well knew that Iwakuara was a firm partisan of the Emperor, and who did him much service by conveying messages between him and such men as Saigo, Kido, Goto, Ishikawa and others. Keeping up constant communication with these, and other influential nobles, he proceeded, unknown to the *Bakufu*, to collect *samurai* from the various provinces that favoured the Imperial cause.

In 1867, the Administration was taken out of the hands of Tokugawa and restored to the Emperor, and the form of Government, urged by Iwakura, was adopted. All banished nobles were recalled and appointed to the office of *Sanyo* (same as present *Sangi*). In 1868 Iwakura was made *Gijo* (an office ranking superior to *Sanyo*), and in 1870, an annual hereditary pension of 5,000 *koku* was conferred.

In 1871 he was sent as envoy to Kagoshima and Yamaguchi, to urge upon the heads of the Houses of Shimadzu and Mori to come to Tôkiô. In 1872 (July) he was appointed Minister of Foreign Affairs, and in October of the same year he was made *Udaijin* and sent, in company with Kido and others, as ambassador to the various Foreign Powers.

On his return from Europe in consequence of his determined opposition to the proposed expedition against the Corea, an attempt was made on his life by some discontened *samurai*, principally Tosa men, on the night of the 14th January, 1874, while returning in his carriage from the Imperial Palace. He received severe injuries, but fortunately not of a dangerous nature. Since then he has unremittingly discharged the duties of *Udaijin*.

From the "Japan Mail Daily Advertiser."

Monday, 18*th*.

The following is the result of the competition at the Swiss Rifle Club's Meeting on Saturday last:—

PRIMES.

Morning, first bulls' eye	Mr.	Triulzi.
,, last ,,	,,	Mottu.
Afternoon, first ,,	,,	Beretta.
,, last ,,	,,	Brennwald.

CIBLE PATRIE.

PRIZES.

1.—Une Coupe, argent doré	Mr.	Perregaux.
2.—Un encrier Rubens, Bronze et Marbre	,,	Beretta.
3.—Une Coupe en argent	,,	Schinne.
4.—Une Jumelle 3 changements	,,	Brennwald.
5.—Un Cabaret cristal gravé	,,	Triulzi.
6.—Une Trousse maroquin	,,	Mottu.
7.—Un Couteau ivoire, 6 pièces	,,	Hagens.
8.—Un Portemine ivoire avec couteau	,,	J. Colomb.

CIBLE A POINTS.

PRIZES.

1.—Une Coupe en argent	74 pts.,	Mr.	Schinne.
2.—Un Seau à Champagne, cristal	54 ,,	,,	Triulzi.
3.—Un Album grand format	42 ,,	,,	Pardun.
4.—Une Pendule, Encrier et Boussole	32 ,,	,,	Perregaux.
5.—Un Cabaret cristal	31 ,,	,,	Colomb.
6.—Un Portemine argent	29 ,,	,,	Becker.

From the *Nichi Nichi Shimbun.*

A telegraph office has been opened at Yashiro in Higo, and private telegrams will soon be permitted to be sent.

From the *Akébono Shimbun.*

Four hundred policemen arrived in Tôkiô from Niigata on the 15th instant.

From the *Chôya Shimbun.*

A telegram despatched from Kiôto at 3 p.m. on the 14th instant announces that the third division of the Imperial army and the third division of the police force attacked Yamano on the 12th instant. The engagement commenced at 7 a.m. and in one hour's time all the insurgent batteries on Asahigatake were taken. Some of the Imperialist troops then made a *détour* and took the rebels in the rear, thus completing their discomfiture. The rebels fled by the Oguchi road.

From the *Mainichi Shimbun.*

A telegram despatched from Yashiro at 3.30 p.m. on the 15th instant announces that the rebels made an attack upon the Imperialists, advancing by various roads, on the 13th instant, but were repulsed. On that day the rebels set fire to the towns of Yoshida, Marekata and Kakuto, and then fled. The Imperial *Tonden-hei* (Yezo troops) made an attack upon Okoma-goi and took several rebel positions.

Tuesday, 19th.

From the *Nichi Nichi Shimbun.*

A telegram from Osaka, received in Tôkiô at 1.30 p.m. on the 15th instant, announces that the troops under the command of Colonels Nozaki and Horii took Saiki on the 13th instant, and subsequently posted themselves at Sodogaki-mura. These troops, after uniting with other Imperial forces, intend to march into Hiuga. The troops under the command of Colonel Nozawa intended to make an attack upon Shigeoka, but were, on the contrary, attacked themselves by some two hundred rebels from Mikune-tôge. This attack was repulsed by the Imperialist, who intended to continue their advance to Shigeoka at dawn on the 14th instant. No telegraphic news has since been received from this quarter.

As already stated, during the great rain storm on the 13th instant the troops under Lieut. General Yamada took possession of Kakuto-goi, which is a very difficult mountain pass. Now that the Imperialists have taken this pass they will encounter no other offering such natural difficulties during the rest of the campaign.

The views held by the *Risshi-sha*, the *Seiken-sha* and the *Chiuritsu-sha* of Tosa all differ.

The *Risshisha* is urging the People's Rights, Limited Monarchy, and such like questions.

The *Seiken-sha*, on the contrary, urge that the form of the Japanese Government should be despotic.

When the members of the *Seiken-sha* heard that the *Risshi-sha* had memorialized the Government, they said that their opinion must also be made known to the Government, and in consequence, decided to present a memorial. The *Chiuritsu sha* according to its denomination, is impartial. The society is conservative, and desires no change.

The question was asked of an influential man of Tosa, "Why, now that the Government is fully occupied in putting down the rebellion cannot the Societies wait until the war is over before presenting their memorials?" The influential person addressed answered, "The motives which sway the *samurai* of Tosa are not understood at Tôkiô. During the height of the discussion between the *Chiuritsu* and *Seiken-sha*, it was expected that they might have recourse to arms to settle their differences, and it is only owing to the interposition of influential friends of either party that the shedding of blood was avoided, so that the result of memorializing the Government may really be considered as a happy event. If there is no sound of guns heard in Tosa before the present rebellion is at an end, it will be owing to those who interposed in this quarrel. Were the three Societies to unite they would number among them nearly four thousand men, and in case of an outbreak against the Government, would thus put in the field a force five times as great as that of the Saga rebels, and one-seventh of that of the Satsuma rebels. The *samurai* of Tosa are rash, but it is now hoped that they will not create any serious disturbance."

From the *Mainichi Shimbun.*

The *samurai* of Tokushima in Awa, Shikoku, (now Kôchi *ken*) who held Government appointments at Osaka and elsewhere, are resigning their posts and returning home, in order to become members of the *Risshisha.*

It is rumoured that some agitation prevails in Tsuruga in Echizen, and half a regiment has been sent there from the Ôtsu garrison.

Wednesday, 20th.

Forty-eight Japanese bales of new Hank silk arrived here on Monday and were forthwith bought up at $550 to 570 per picul, or at 4/1, 20/2 to 20/11 per lb. in London, and at frs. 5.15=frs. 56 to 58 per kilo. in Lyons. We fear that these prices are much too high to be kept up for the next arrivals, which will, no doubt, be more extensive. The Japanese dealers are therefore sure to be losers eventually, though they have made a little money at the opening of the market. The few samples which have been shown indicate a trifling improvement on first arrivals of last season, as the colour is very fair, the size somewhat finer and the reeling more regular, but, as is always the case, the quality is not very good yet and there are lots of "cased' and foul skeins in the bundles.

From the *Mainichi Shimbun.*

As the heat at Kagoshima is getting excessive, reaching nearly one hundred degrees, the Imperialists are wishing to get through with their work of suppressing the rebellion as quickly as possible. The rebels, on the other hand, do not seem to be actuated by any great spirit as they seldom make a general attack, but only insignificant ones in the night or early in the morning. The Imperialists are so well prepared to receive the enemy that these attacks cause them little or no anxiety.

From the *Chôya Shimbun.*

A telegram despatched from Midzumata at 9.25 a.m. on the 18th instant announces that two companies of Imperialists who were at Demidzu marched along the Akune-kaidô on the morning of the 17th instant. At 10 o'clock they reached Okoreoka, situated at the Kakarashii mountain pass, where they were opposed by about two hundred rebels in an entrenched position, who immediately opened fire on the Imperialists with large and small guns. After the first discharge, however, the rebels fled, leaving the Imperialists to take possession of the battery, which contained one mortar, two field peices and a quantity of ammunition.

Itô Shirôzayemon, the commander of the rebels at Demidzu, has surrendered himself to the Imperialists.

From the *Hôchi Shimbun.*

A telegram despatched from Kumamoto at 8.20 p.m. on the 17th instant announces that the Imperialists had intended to advance along the Shigeoka-kaidô on the 14th instant, but during the afternoon of the day previous the rebels attacked the Imperialists at Shiroyama and Shimmei-dani, retreating, however, at dawn of the 14th instant. The Imperialists who were at Nakatsumure advanced to Okabata and those who were at the Mikuni-tôge advanced to Aso-yama, but by the time the Imperialists reached those places it was night-fall, so that no further engagement took place.

The Imperialists who were at Kudzuha attacked the rebels posted at the Kudzuha-goi from both front and rear and completely defeated them, many being killed or wounded.

On the 15th the Imperialists at Hatakayeshi and Mikuni-tôge advanced in two bodies, and after having taken possession of the rebel positions at Sakai-yama, entrenched themselves in batteries about five hundred yards distant from the enemy.

From the *Nichi Nichi Shimbun.*

Mr. Katsoka Kenkichi arrived at Kiôto as a representative of the *Risshi-sha* and presented the memorial of that society to the *Anzaisho* on the 14th of May last. This memorial was soon followed by one from the *Seiken-sha.* These memorials cannot be published until permission is first received from the Government, so we shall only give a brief outline of them, that their nature may be known. The *Risshisha* does not express any opinion about the Satsuma rebellion, but only touches on the question of administration. The memorial is divided into six articles, viz:—

1st.—Although the Imperial decree was issued in the 8th year of Meiji promising the establishment of three great legislative bodies, this promise has not been carried into effect.

2nd.—That the Government has not acted properly in the treatment of the *samurai.*

3rd.—That the poll-taxes have not been properly settled.

4th.—Concerns reform of the land-taxes.

5th.—Concerning the Finances.

6th.—Concerning the revision of treaties with Foreign Powers, also the Corean and Formosan affairs and the exchange of the Kurile Islands.

Original from UNIVERSITY OF CALIFORNIA

On the whole the *Risshi-sha* demand to have a Representative Assembly, which will be the means of forming a Consitution to guide the Government, to inspire a spirit of independence among the people, to promote the welfare of the country and the dignity of the Emperor.

The subject of the *Seiken-sha's* memorial is as follows:—The Emperor should gain the confidence of, and extend his influence over the people, or otherwise the country must be ruined. Such being the case, the internal affairs of the Empire must first be put in order, otherwise none can tell what great calamity may be forthcoming. Though Saigo Takamori has undoubtedly acted wrongly in rebelling against the Government, yet as he must have some object in thus taking up arms, the Government should at once endeavour to ascertain this object, and make the same known to the people in general throughout the country. In the opinion of the *Seiken-sha* Saigo would cease all opposition if enquiry were made into his reasons for rebelling, but should he not then do so, the *samurai* of Kochi *ken* would take to arms against the Satsuma rebels, and, powerful as they are, overthrow them in thirty days. If His Majesty should not listen to the memorial of the *Seiken-sha* but continue to carry on the war at the expense of the people, it is impossible to say whether the country will stand or fall.

The following number of patients were in the various military hospitals on the 4th instant:—

At Kumamoto 400, of whom 200 have been sent to the mineral baths; at Nagasaki Hospital 900, of whom 300 have been sent to the Naval Hospital; at Yashiro 150; at Kagoshima 18; at Osaka 3,500, of whom 2,800 are convalescent.

SECOND NATIONAL BANK.

(Dai-Ni Koku-ritsu Ginko.)

Statement for the week ending 16th June, 1877:—

Total Amount of notes (dollars) received by us from the *Shihei-rio*		Dols. 1,200,000
On hand	934,270	
In circulation	265,730	
	Dols. 1,200,000	
Reserve Fund		Dols. 265,730
In Foreign money:—		
In dollars	Dols. 119,216,020	
In Bank notes and cheques	505,080	
Deposited with Foreign Banks	50,008,900	
	169,730,000	
Do. in native currency	96,000,000	
	Dols. 265,730,000	

Thursday, 21st.

Shortly after nine o'clock last night dense smoke was observed arising from Messrs. Copeland and Wiegand's brewery building at No. 68, Bluff. On the alarm being given it was discovered that the fire was in the malting room, and it would appear that the Japanese servant in charge had neglected his duty, and that during his probable absence too great a draught caused a brisker fire in the furnace than was advisable, so that the malt above caught fire. The Japanese fire engines were on the spot soon after the alarm was given, and a party of sailors was quickly landed from H. M. S. *Audacious*, but at first the engines were of no use, as no water could be obtained. those to the malting house there is a large and deep well, but some too eager assistants had broken the pump, so that no water could be obtained from it. Eventually hose was laid to the pond adjoining Messrs. Copeland and Wiegand's Spring Valley Brewery, and pumped up by one engine, to another which was stationed near the burning building. The same plan was followed with the pond at the bottom of Hegt's Hill, so that in the end plenty of water was forthcoming. Luckily the fire was, in a great measure, confined to the malting house,—a two storied building, the lower story of which was constructed of stone and the upper of tiles and plaster. The firemen present, both foreign and Japanese, worked with a will, their efforts being principal'y directed to preventing the fire from extending to a large building and a shed which adjoined the malting house. In this they were fortunately successful, though the roof of the large building was on fire in several places. A quantity of machinery and iron which was stored within had been carried out, so that only the building itself suffered any damage. By 11 o'clock all danger was over.

From the *Nichi Nichi Shimbun.*

Below we give particulars of the number of police, enlisted from among the *samurai* of various *ken* by order of the Bureau of Police since the 15th May last, who have already arrived in Tôkiô:—

From Kanagawa *ken*	... ...	38
,, Fukushima ,,	... ...	685
,, Miyagi ,,	... ...	1,319
,, Niigata ,,	... ...	341
,, Ishikawa ,,	... ...	249
,, Yamagata ,,	... ...	751
,, Nagano ,,	... ...	60
,, Ibaragi ,,	... ...	83
,, Akita ,,	... ...	75
,, Tochigi ,,	... ...	146
,, Awomori ,,	... ...	64
,, Gumma ,,	... ...	4
,, Aichi ,,	... ...	88
,, Saitama ,,	... ...	75
,, Iwate ,,	... ...	109
,, Shidzuoka ,,	... ...	8
,, Tôkiô	... ...	632
Total	... ...	4,727

Upwards of 4,230 police have already been sent to the seat of war, so the total number enlisted will amount to 8,957.

The following are particulars of the number of houses that have been destroyed during the present war by fire:—

At Kumamoto, occupied by owners, ...	6,733
,, ,, tenants, ...	2,314
In the neighbouring towns and villages, Hitoyoshi and Sashiki, etc., being excepted, occupied by owners, ...	4970
,, tenants	182

Besides the above, 1,446 houses have been destroyed by shot or shell, or pulled down for strategical reasons.

In order that the authorities at the Fort at Kanagawa may receive timely warning of the arrival of any man-of-war, foreign or native, a line of telegraph is in course of erection between that point and a bluff just beyond Homoku. The intelligence has hitherto been conveyed by an orderly stationed at the English hatoba, who, on a vessel being signalled galloped off to the fort. The wire has the advantage of despatch in the transmission of the news, but surely some means might have been taken to avoid the serious inconvenience caused by the poles, which on the hill leading to the camp have been placed so as to seriously interfere with carriage traffic on a road already too narrow. We trust that some steps will be taken to remedy what is clearly an oversight on the part of some of the workmen. Indeed, so evident is the danger and so simple the remedy, that there can be little doubt that the authorities will, on the matter being represented to them, at once cause the posts to be placed further back from the road.

From the *Hôchi Shimbun.*

A telegram sent by Lieut. General Kawaji from Midzumata, and received at Tôkiô at 11.40 p.m. on the 18th instant, announces that he intends to remove his camp from Midzumata to the neighbourhood of Demidzu. The Imperial position at Midzumata will then be defended by the forces under Lieut. General Miyoshi.

From the *Mainichi Shimbun.*

On the 14th instant a force of 1,300 men of the Hiroshima garrison, and on the 15th instant 400 men of the Osaka garrison, were sent to Uwajima in the province of Iyo, Shikoku. The latter took with them 120,000 cartridges.

A telegram despatched from Midzumata on the 19th instant announces that at dawn of that day about three hundred rebels, who were at Dakouye on the Kagoshima-kaidô, met a force of Imperialists who were marching to that town. After fighting for three hours the rebels turned and fled. The Imperialists pursued them as far as the neighbourhood of Sukume, and it was only at 9 o'clock in the evening that the pursuit was relaxed.

Friday, 22nd.

It is intended to give an open air Concert in the Bluff Gardens some time next week, probably Thursday or Friday, but the uncertainty of the departure of the American Mail prevents, as yet, the day being definitely fixed.

The concert given yesterday evening at the Temperance Hall in aid of the funds of that institution deserved to have been better attended. All of the pieces given were loudly applauded, and Mr. Townley's two songs, "If Doughty Deeds," and "Jack Brown," and the Duet which opened the second part were deservedly encored.

The return cricket match "Settlement *v.* The Fleet" was played yesterday afternoon, and again resulted in the favour of the latter. The "Settlement" team was yesterday stronger than on the previous occasion, and with the accession of Mr. Hamilton,

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

who made the top score on his side, it was expected that they would have made a better stand aginst their opponents. The fielding of the "Settlement" was again far from perfect, they were unlucky in their batting, and wild in their bowling, of which latter fact the "Fleet" took full advantage. For the "Fleet" Parr played a steady and fortunate game, and was only disposed of by a ball from Wheeler caught by Moss at the very conclusion of the game. The high wind during the afternoon somewhat interfered with the play. The band of the *Audacious* was present and several ladies watched the game from the tent.

From the *Mainichi Shimbun.*

Kuroda will start for Kiôto on Government business of importance.

On the 5th instant H. I. H. Arisugawa-no-Miya received from His Majesty the Mikado the First Class decoration of the Order of Merit.

A telegram despatched from Owake *ken* announces that the rebel entrenchments at Inuishi were taken on the 17th instant at 2 a.m. by the van of the Imperialists. A general attack was then made which resulted in seventeen or eighteen of the rebel batteries being taken. The Imperialists then advanced to Onoitchi, when the rebels threw down their arms and fled toward Shigeoka.

Another body of the Imperialists were on that day about to attack Saiki, Moshimona and Oshimura, but the result is not yet known.

Our reporter at Osaka announces that the Yamagata (Yamaguchi?) *Kencho* has informed the various *Kencho* that some 300 Satsuma and Higo rebels have entered Shikoku.

From the *Nichi Nichi Shimbun.*

A nobleman in Kiôto is said to have written to Tôkiô to the effect that His Majesty the Mikado may return to the capital soon.

The Paper Money Department is now very busy in printing bank notes for the various National Banks. On the 20th instant fifty additional workmen for printing were engaged, and the work is kept up till 10 p.m. every night.

From the *Akébono Shimbun.*

The coast of Uwajima in Iyo, Shikoku, is now guarded by two regiments of troops. Fortifications are constructed at places of importance.

Major Kajiyama, with twelve hundred Tôkiô policemen, has arrived in Ehime *ken*, and will make Uwajima his head-quarters, with a station, also, at Osu.

From the *Chôya Shimbun.*

A telegram despatched from Osaka at 5 a.m. on the 19th says that on the 17th instant, at 2 a.m., two companies of troops attacked a rebel entrenchment on the Mikune-tôge and killed all the rebels, twelve in number, who were guarding the pass. Several other entrenchments were afterwards taken.

Another body of Imperialists took several rebel batteries at Hatakayeshi, and at 7 a.m. the Imperialists succeeded in entering Onoitchi. There were only two hundred engaged on the Imperial side, none of whom were killed.

The Imperialists wishing to advance on Shigeoka, sent out a reconnoitring party, who discovered that the rebels were established at Senzoku and Kawashiri. The Imperialists have therefore taken up their position on a hill distant only one *ri* from Shigeoka.

From the *Hôchi Shimbun.*

The officials in various *ken* belonging to Tokushima in the province in Awa, Shikoku, are resigning their appointments and joining the *Jijo-sha* (Self-help Society).

Saturday, 23rd.

The steamer *Glenorchy* left Singapore for Hongkong on the 14th instant.

From the *Chôya Shimbun.*

The following police recruits arrived at Tôkiô yesterday:—30 from Niigata *ken*, 50 from Gifu *ken*, 34 from Yamanashi *ken*. All these men are for service in Tôkiô.

From the *Akébono Shimbun.*

Over six hundred rebels of Demidzu have surrendered themselves to the Imperialists. The above has been telegraphed from Kiôto.

From the *Nichi Nichi Shimbun.*

A telegram despatched from Kumamoto at noon on the 21st instant announces that the Imperialists commenced an attack upon the rebel stronghold at Oguchi at dawn of the 20th instant, and after desperate fighting the place was captured. The Imperialists then advanced a mile beyond the town and there formed their line of defence.

The Imperialists at Oguchi and Demidzu are now but seventeen or eighteen *ri* from the town of Kagoshima.

The Imperialists at Demidzu have no strongholds to take now on their advance to the Sennai-gawa, nor is there any obstruction to the Imperialists now at Oguchi advancing to Kokubu and Kajiki, so that these forces will very soon open communication with the Imperialists at Kagoshima.

When this takes place the rebels will very likely station themselves at Kawa-nabe, further south of Kumamoto, for the rebels are said to have been collecting a quantity of provisions at that place. The rebels may here make a final struggle. At all events, as the Imperialists have to garrison every town and entrenched position that they take from the rebels, they cannot march with rapidity. So the Imperial force must be further increased in order to carry on the war.

From the *Hôchi Shimbun.*

A branch of the *Jijo-sha* (Self-help Society) is established at Sumoto in the province of Awaji, Shikoku. The members used to meet every second Saturday and discuss the question of the Peoples' Rights, but they now meet daily. The members of the Society consist of both *shizoku* and *heimin.*

Our readers will be glad to hear that the better news from the North continues. There have been fine, plentiful spring rains, and the crops are in a flourishing condition. It is some time, too, since we received any harrowing letters from the missionaries who have been labouring so indefatigably in the famine districts, and we are justified in hoping that the worst is over.—*Shanghai Courier.*

Private telegrams which have been industriously circulated to-day about the position of silk at home are of such an alarming nature that we think it probable the market may be opened in the course of a day or two at somewhat higher prices than were at first anticipated.—*Shanghai Courier.*

The *Glenartney* ran from Woosung to Singapore in seven days and nineteen hours. She left there at 2 a.m. on the morning of the 5th. The above time is only half an hour longer than that of the *Loudoun Castle.*—*Shanghai Courier.*

We hear that an active tea-business is going on at Foochow. Total settlements amount to 117,000 packages, and freights per steamer to London are quoted at £3.10.0.—*Shanghai Courier.*

It is reported that the str. *Chinkeang* has accepted a long charter to carry Chinese emigrants from the South of China to Australia. Her passengers will not be welcome, at least in Queensland, where there are said to be already twice as many Chinese as can find occupation; and where distress is said to exist, in consequence.

We hear that the opposition between the rival companies on the Yangtsze is growing keener. It is said that freight is being taken at a tael per ton, with 10 per cent. discount allowed, and that native passengers are travelling to Hankow for $2½.—*S. C. & C. Gazette.*

JURIDICAL IMPROVEMENTS.

THE notifications issuing from the British Legation which were published in our two preceding numbers respecting the constitution and rules of the new Japanese Courts and the mode of procedure to be followed in cases of appeals from local Courts, and of claims against the Japanese Government, seem to present to us an opportunity, of which we gladly avail ourselves, of pointing out the progress which this country is making in assimilating and adopting the juridical ideas and institutions of the west. The abolition of the extra-territorial clause of the treaties is, it is well known, one of the most cherished objects of the official mind; and it augurs well for the attainment of that ambition that some of the best intellect of the country has devoted itself to an investigation of the principles and procedure of foreign law, and that already a few of the leading ideas of western jurisprudence have been apprehended and practically applied. If the study of this new branch of science continues to be prosecuted with the same ardour as is now being displayed by the first labourers in the field, the next generation of Japanese statesmen may hope to see the invidious privilege at present necessarily enjoyed by foreign residents in this country done away with.

For, great as is the distance which now separates Japan from ourselves in respect of the administration of justice, if we consider how far back was the starting point at which the race for improvement was begun, it will be seen that the progress already made is considerable. In the first place, the educated portion of the nation may be said to have attained to correct views of the nature and functions of Government. The Japanese of this, as of preceding generations, were brought up in the belief that the first duty of the Sovereign and the main function of Government consisted in the ceremonial worship of the national gods. Within the last few years this conception has begun to disappear in presence of the foreign division of the functions of Government into Legislative, Executive, and Judicial. Strangely enough it was not through the direct study of law or of political science that the Japanese public were made acquainted with that elementary common-place of western politics. From the first, geography was, and still is, the favourite among the branches of knowledge that have been rendered accessible, through the medium of translations, to the general reader in Japan, and it was from the summaries of political information given in all the ordinary geographical class-books that the doctrine of the tripartite functions of Government was first introduced; and it very soon assumed to itself in the native mind the character of a law of nature of co-ordinate importance—and in some indefinable way connected—with the other great geographical doctrine of the five continents. It is now firmly rooted in the understanding of all but the very ignorant, and within the last four or five years a variety of schemes have been propounded by politicians and journalists for effectively separating in practice these three departments of Governmental work.

Aided by the pressure of external circumstances, the Judicial branch was the first to disengage itself from the Executive and to receive an independent shape and standing of its own. When foreign commerce began to flourish, and still more when at times it languished, breaches of contract on the part of the Japanese merchants were of very frequent occurrence, and in a very few years the investigation and settlement of complaints of this nature became a serious and embarrassing addition to the duties of the executive authorities at the open ports. The adjudication of civil disputes between their own people had never hitherto constituted any very large fraction of the duties of either the central or provincial authorities The village elders and the ward meetings were the time-honoured tribunals before which most of the disputes of every day life were submitted and arranged. It was only in extreme cases and when all other means proved ineffectual that the parties to a controversy would undergo the hardship of laying their case before the public authorities for adjudication; and in the view of the official mind in this country such troublesome litigants were only a shade less culpable than parties accused of crime. The foreign merchant had none of this wholesome dread of the majesty of officialdom, and when he conceived himself to be wronged he rushed incontinently before the magistrate, seconded by his Consul, clamouring for redress. The magistrate was, as a general rule, utterly unacquainted with business affairs, for a contempt for commerce was one of the strongest prejudices of his caste; and his notions of equity were of the crudest, for there was no such thing as a known body of legal principles to guide him. The existing executive machinery was found to be altogether inadequate to the strain of the new judicial work, and six years ago the administrative authorities were relieved of the duty of entertaining suits; a separate Judicial Office being organized for the purpose, completely independent of the Local Governments. To these new Courts was assigned the cognizance not only of foreign claims against Japanese subjects, but of all complaints and controversies civil and criminal, between their own people. Thus was accomplished the first step towards a separate judicial organization.

It is, then, directly to foreign intercourse that Japan stands indebted for the establishment of Courts of Justice. An office for the punishment of criminals was, it is true, among the earliest of the institutions borrowed from that copious fountain of Eastern civilization, the empire of China; and during the middle ages, after the royal authority had fallen to pieces, a rude sort of penal justice was dispensed, till within the present decade, by the feudal lords, each of whom was practically a sovereign inside his own fief. But in the sense in which foreigners understand the term, a Court of Justice in Japan is just as much an innovation of yesterday as is a police force, a post-office, or a bank.

The experiment thus begun in the open ports was found to work well, and two years ago it was extended to all the provincial districts. And the same causes which had led to the first institution of the system contributed to its further improvement. On the one hand there was increased theoretical knowledge of the legal establishments of the West; on the other there was a constant pressure brought to bear, as before, principally by the requirements of the insistent foreigner, for the immediate application of that knowledge to practice. As often perhaps as not, the foreign plaintiff dissented from the judgment of the new tribunals, and with unabashed audacity, claimed to have his suit brought

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

before some higher Court as a matter of right. The question of appeals thus soon assumed a disagreeable prominence, and the coincidence of another troublesome class of cases led to the establishment of Superior Courts. When the Government abolished the feudal system and appropriated the domains, it necessarily assumed responsibility for the debts of the *daimios*. The latter had dabbled eagerly in foreign commerce, and the claims of merchants of various nationalities against them were neither few nor small. At first these *han* claims as they were called, formed the subject of diplomatic negotiation with one or other of the departments of state. But the result was not satisfactory, and there was an ill-concealed jealousy between two of the departments as to which should have the management of such negotiations. The Foreign office considered the work as peculiarly within its own province. The Finance department thought otherwise, and as usual got the best of the dispute. But in the course of the negotiations, it became abundantly evident that in future a Judicial sifting of the merits of such claims was in the highest degree desirable; and, as it would not comport with the dignity of the Government to allow itself to be sued in the local Courts, it was determined that the new Superior Courts to be constituted should, besides entertaining appeal from the local Courts, be also Courts of first instance for suits against the Government or its Departments. And by the the same Imperial Decree which constituted these Superior Courts, there was also established a highest Court of all, the apex of the juridical pyramid, to which lay the right of final appeal.

Many years must elapse before the working of these new-fangled institutions can be adequately tested, but every friend of this country and every believer in progress must heartily wish them success. The requirements of foreign intercourse have in large measure contributed to their establishment, but the benefits they are calculated to confer will become the heritage of the Japanese people for after generations. Of the law which will be administered in these Courts it would be premature yet to speak; but we may rest assured its principles will be borrowed with more or less completeness from the freedom-guarding codes of the West. And in proportion as the Judges of the new tribunals draw from that store house of the wisdom and experience of the higher races, they will become the advocates and promoters of the next great organic change for which their country is fast ripening, the separation of the legislative from the executive power.

A new idea is about to be put in practice (the *Army and Navy Gazette* says) with regard to the colour of the British men-of-war when ordered to hot climates, the regulation whitewash and blacking being superseded, as far as the exterior of the ship is concerned, by the substitution of a delicate light tint. The first ship for the West Coast of Africa which is to be painted a light colour is the *Swallow*, orders having been given for her to have a coat of the same tint as that supplied for the Indian troopships.

The 81-ton gun underwent a further trial at Shoeburyness on Friday. A blind Palliser shell, weighing 1,700lb., was fired with a charge of 425lb. powder against a target built of four plates of iron, each 8 inches thick, with 5 inches of teak between each plate. At a distance of 120 yards the shell perforated, but did not pass through, the massive target. —*The Mail.*

Later intelligence from the Cape of Good Hope states that the annexation of the Transvaal would probably be effected without any violent opposition.—*The Mail.*

SPIRIT OF THE JAPANESE PRESS.

The Rebellion in the South.

("Nichi Nichi Shimbun," June 18th, 1877.)

According to the telegrams received from the seat of war, the forces of the Government engaged in the suppression. of the rebellion have again reaped important successes in the battles of the 13th, and seem to have forced the rebels to confine themselves to their last resource, namely retreating and standing on the defensive. As these telegrams contain only the most condensed reports, we shall not be able to understand the military operations completely until we receive letters from the seat of war, but the following appears to have been the course of events. On the 13th Major-General Yamada's brigade left the vicinity of Hitoyoshi, and attacked Makoba and Tashiro in different divisions. These places were captured at dawn on the 14th, and after pursuing the rebels for some distance, the centre occupied Kakutô, his right wing Yoshida, his left wing Iino. The distance from Hitoyoshi to Kakutô is about twenty-one miles, and the road which connects the two places is one which has lately been repaired by the Government for the transport of rice between the provinces of Higo and Hiuga, but as it crosses the two passes of Sasago and Kunimi, which form a natural boundary dividing the two provinces, it is very different from a level road which offers no obstacle to the march of an army. That he should have crossed this without a check calls upon our admiration for the rapidity of his march. The brigades of Major-Generals Kawaji and Miura, keeping up a zigzag communication with each other, and so forming two wings, took advantage of the early morning of the 13th to commence operations, and after capturing the position of Asahitake, they fell upon the rebel rear at Okoji, and the two brigades combining, pursued the rebels some distance along the Okuchi road, taking a considerable number of their earthworks at the same time. We may conclude, therefore, that the rebel position will be abandoned by them in a few days.

With the capture of Kakutô and Okuchi the rebels will be entirely deprived of their footing north of the Sendai river between these two places, and the rebel forces at Ogune and Idzumi, being unable to hold out by themselves, will be obliged to retreat. This will change the aspect of affairs immensely and add greatly to the embarrassment of the rebel army, bringing them to the end of their defensive resources. The picked rebel troops who lately made an inroad into Bungo have been attacked by the Government forces, and retreated from Usuki to Saeki, whence the fugitives can only escape to Hiuga, so that in a few days the Bungo rebels will be annihilated, and be confined within the boundaries of Satsuma, Hiuga and Ôsumi.

But these three provinces constitute a large extent of territory, the width from the west coast of Satsuma to the east coast of Hiuga being a few tens of *ri* (leagues). Kagoshima, which would have formed a base of operations for the rebels, has already been occupied by the Government forces, and in all three provinces, including Miyakonojô, Sadowara and Obi there is no place, which, for the advantages of position which it presents, would have from the first been chosen as a base of operations. Their movements will have to depend on the distribution of the Government forces, and they will be free to appear and disappear at every point. The point in which the Satsuma rebels most excel and most have practised, is passing rapidly among hills and valleys, and their movements will become so much the more rapid as they are reduced to greater straits. It will be just the same as in the Russian wars in the Caucasus, and in the wars of Americans with the Indians, whose troops were exposed to the trouble of moving about constantly in consequence of the uncertain movements of the enemy whom they had to pursue. Seeing therefore that the Satsuma soldiers now exhibit the appearance of rebels reduced to great straits, we must adopt the plan of increasing the number of our soldiers in the field, and so outnumbering them. Although they are but the disheartened remnants of a rebel army, many of whom have been into the conflict, there must still be nearly twenty thousand of them and the Government forces at the seat of war do not exceed forty thousand. These have to be divided into numerous detachments, which have to keep up communications extending over several tens of leagues, maintain their own positions, repel the sudden sallies of the rebel troops, hold the city of Kagoshima, and with the small remaining number surround the earthworks of the rebels at many different points, so that it is impossible to avoid having various-sized bodies available for defence or offence in various places. So that we cannot expect to outnumber them on every occasion.

Some who are ignorant of these figures; hearing that the Government forces amount to as many as fifty thousand men (of which ten thousand have, however, been killed or wounded) say, why not make a general advance at once with this large force? Why not, after hav-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ing taken Kakutô and Okuchi, at once advance into Satsuma and Hiuga with crushing impetus? Some say that the march of the expedition is dilatory, or again, that if the rebel den be not at once swept out, hindered by the rainy season and the great heat, the opportunity of attacking the rebels will be lost, and breathing space be given to them. Thus they go on, with their criticisms. But to expect the Government forces, which are suffering from insufficiency of men to carry out the "outnumbering" tactics, is to demand the impossible. On the contrary, when we see that the commanders of the expedition turn their attention to preparing for marching on and capturing positions, and do not seek to distinguish themselves by raids at a distance from their base, we say that they are thoroughly versed in the military art.

Reference to past history shows that when Hideyoshi attacked the Shimadzu, he assembled the troops of thirty seven provinces west of Echizen and Owari at Osaka to the number of 150,000, and collected at Kokura a year's supplies for 300,000 men and fodder for 20,000 horses. He had estimated the Satsuma troops at 50,000, and calculated that to effect their conquest he should require three times the number. The van left Osaka in the 2nd month, 1587, the centre on the 1st of the 3rd month, and after the battle of M'magatake on the 28th of that month, his advance was irresistable. Wherever he turned he met with submission, and after taking Kawashi and Yatsushiro, he drove the Satsuma troops back to the Higo frontier, all in the space of two months. He then crossed the Yashiro river and established his headquarters at Taiheiji, whence, after receiving the submission of large numbers, he sent the van on ahead by land and sea, and detached two divisions of 50,000 each to attack Hiuga and Ôsumi, having at that time 250,000 men in the field. Having with this immense force outnumbered the Satsuma army, half a year was needed to make valiant Yoshihisa shave his head, don the priest's garb, and surrender in person to his conqueror. Putting aside all comparisons between Hideyoshi's strategy and that of the present day, are the Government forces employed in the expedition three times as numerous as the Satsuma troops? Though they are not in want of provisions or baggage, still have they a whole year's supply beforehand? Are there any who resemble the Tachibana, Ôtomo, Takahashi, Itô, Riuzôji and others of those days, in Hizen, Higo, Buzen, Bungo, Chikuzen and Chikugo, who hated the Satsuma men, and vied with each other in joining the Government army, and placing themselves at its service? And finally, is the army, at the moment of its arrival on the frontier of Satsuma, Hiuga and Ôsumi five times as numerous as the rebels? Four months have only passed since our army marched westward, and we cannot be called unreasonable if we say that to have driven back the rebels within those provinces is sufficient work for the time. We can only eagerly await now the news of the military positions which the telegrams of the next few days will bring us.

NOTES ON THE CRANIA OF THE BOTANS OF FORMOSA.

By Stuart Eldridge, M. D.

Read before the Asiatic Society of Japan, on the 14th March, 1877.

The subject proper of my paper this evening is so uninteresting, save to the few who are engaged in the study of comparative ethnology, that in hope of somewhat redeeming its dry detail I have resolved to preface it with a short sketch of craniology in general, showing very briefly what this science is, what its objects are, and the methods of research employed. Craniology is one of numerous sciences, as physiology, general anatomy, archæology, and philology, which together form the great science of ethnology, or the study of the relation of individual men to races, of races to each other, and of both individuals and races to surrounding nature.

Although men are all formed upon the same general plan, yet there are no two individuals exactly alike either in internal or external structure, and this applies as well to the bony brain case as to other parts. Of any given number of skulls no two will be found perfectly to correspond, but an examination of many crania has shown that the forms of the head are susceptible of arrangement into a comparatively small number of groups, which will agree in their general characteristics, however much they may differ from each other individually.

All skulls may be classed either as short-heads or long-heads, brachykephali or dolichokephali, the short-heads including those which approach most closely to spherical form, while the long-heads are those deviating from the sphere to the greatest extent, both being considered with reference to the relation between their transverse and antero-posterior diameters. A mathematical rule has been laid down for the determination of the place of any given skull as long or short. Skulls of which the longest diameter from front to back bears a proportion to the greatest diameter from side to side of 100 to 80 or above, are classed as short or brachykephalic; those in which these proportions are as 100 to less than 80 are classed as long, or dolichokephalic. Now of the skulls of any well defined race so large a proportion will be found to belong to the same class, that all known races of men may be relegated to one or the other of these two classes of short-heads and long-heads. Thus, to the short heads belong among others Slavs, Finns, Persians and Turks, the various Mongolian races, and some of the American tribes. To the long heads belong most European races, as Gauls, Kelts, Britons and Teutons, the negro races, Australians and some other Pacific Islanders, classed as nigritos, and some of the American peoples.

A comparison of short heads and long heads in their respective classes will show, however, that while they agree more or less closely as respects their proportionate diameters, they differ widely in other respects. Thus, compare the skull of an average Englishman with that of any Australian, both classed as long-heads. The difference in every other point is so great that it seems a mistake to classify them together. Notice more especially the retreating and low forehead with projecting muzzle of the Australian, the profile as well as the front view are so unlike, that a child could scarcely mistake the one for the other. Similar differences, though of less extent, will be found on comparing the skulls of the short-head races. Accordingly both brachykephali and dolichokephali are divided into sub-classes, the prominent jawed or prognathous, and straight jawed or orthognathous. Of these classes the Australian is a type of the prognathous and the average European of the orthognathous. For the determination of the extent of prognathism or the contrary, the so called facial angle is sometimes made use of. The examination is made by measuring the angle formed by two straight lines, one extending from the middle of the opening of the ear to the floor of the nose, the other drawn from the most prominent part of the forehead to the front of the upper jaw. The angle thus taken varies between 70 and 80 degrees, sometimes exceeding these limits. Other things being equal, the greater the facial angle the more intellectual the appearance of the man. The ancients in some of their most admired statues exaggerated the angle to nearly 100 degrees. But there are other and important points of difference, in skulls, of which no note is taken in the classifications above mentioned, as, for instance, the height and contour of the superior surface, and the proportion between the facial part of the skull and the brain case proper. Compare the front view of the Mongolian, European and Australian skulls; notice the beautiful oval outline of the European; the low, depressed and square contour of the Australian; and the broad base and pointed top of the Mongolian. These differences in structure are equally visible when the skulls are viewed from below. From these distinctions arises another classification which is perhaps more generally useful than any other, viz, that of oval, pyramidal and prognathous, the latter class including only these skulls of which prognathism is the chief characteristic, as in the Australian or Negro. Now considering skulls as belonging to one of these three classes, the oval, pyramidal, and prognathous, it is found that the skull form bears a constant relation to the habits and surroundings of the race to which its possessor belonged. The prognathous skull is chiefly found among savage tribes, existing by the chase, or by the accidental yield of the earth, and, even where this form of skull exists in a race the majority of whose crania belong to a higher type, it will generally be found that the individual or his ancestors not far back, have lived under circumstances of special poverty or degradation. The pyramidal is the typical form of skull among nomad races, herdsmen and plain dwellers, or northern tribes living by fishing and the reindeer. Certainly some of the possessors of pyramidal skulls are no longer nomads, but there is much evidence

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

in favour of the theory that these tribes, now located and possessing a higher civilization, are descended from nomadic tribes who at some early day wandered over the great plains of Asia, as the Red Indians of America do to-day between the Mississippi river and the Rocky Mountains.

The oval form of skull, of which the European, or, as it was formerly termed, the Caucasian, is the best type, is separated from the preceding forms by the absence of their distinguishing characteristics, rather than by the possession of any very distinctive traits of its own. It is found among races posssessing the highest civilization; men existing by systematic agriculture and the use of arts demanding intellectual culture.

There is no doubt that a change in the habits of any people will, in the course of ages, modify the prevailing cranial form of the race. Thus the Turks are no doubt descended from the same stock as the still nomadic pyramidal skulled tribes of Central Asia, yet centuries of civilization and residence in one locality have modified their skull form into a close resemblance to the ordinary European type. On the other hand there is evidence that, reversing the circumstances, a retrogressive change may take place. Degrade a people into slavery, break up their civilization, transform them from city dwellers into nomads, and, in course of time, their skulls will exhibit a change toward prognathisms or pyramidalism in proportion to the alteration or degradation of their circumstances.

In measuring or otherwise examining unknown forms of skull, the possibility of artificial distortion should always be born in mind. Many tribes, both ancient and modern, have been in the habit of greatly modifying the form of their childrens' skulls by long continued pressure, sometimes with very curious results. This treatment, however, generally leaves such traces as to prevent the confounding of natural and artificial departures from the normal type.

But, in addition to the study of the proportions of the external parts of the skull, craniology includes the estimation of the volume of the contained brain, and, other things being equal, there is no doubt that the volume of the brain affords to a great extent a measure of intellectual capacity, though there are exceptions to this rule as to most others. The measurement of the brain case is taken either by filling the cranial cavity with shot of a uniform diameter, from the weight of which the cubic contents can easily be determined, or by taking a cast of the interior of the skull in plaster or wax. It is found by repeated observations of this character that a constant relation exists between the size of the brain and the status of the race from which the skull is derived.

Thus of 38 skulls of continental Europeans, English and Anglo-Americans, taken indiscriminately, the mean cubic contents were 93.5 inches.

Of 38 Chinese, Malay, Esquimaux and Finns (pyramidal form) the mean was 86 inches.

Of 164 skulls of North American Indians the mean was 84 inches.

Of 64 native Africans the mean was 83.7.

Of 8 Australians the mean was 75.

Individual cases exceed these limits widely.

Now I shall not attempt to determine with certainty the place of the Botan, according to any classification. To do so requires opportunity for extensive comparison, together with special experience and training for the work, which I have no claim to possess. My impression, however, is that the Botan race is a mixed one, probably a hybrid between a nigrito race and a Mongolian people. I think, comparing the Botan skull with other forms, that it approximates to the type of both these races without closely resembling either. All that I have attempted in the following note is such a study and measurement of the skulls in my possession as shall furnish data to some expert craniologist, by which he may compare and locate the specimens. Measurements to be of value for purposes of comparison must include such and so many as almost to enable the student to erect from the data given a model of the cranium measured. It appears to me that the scheme of Huxley is the best yet brought forward for systematic measurement, and I have accordingly adopted it.

It is hardly necessary to remind residents of Japan that the Botans or Motans are one of the so-called aboriginal and savage tribes of southern Formosa; nor, that they were, within a short time, chastised by the Japanese for the murder of certain Liu Kiu castaways. Little is known of these people; all that I have been able to gather concerning them may be briefly summarized as follows:—

They are a race of rather fine physical development, of medium height, courageous, frank, and impressible like most savages; straight haired, complexion very various but always of a brown tint, never black; having some knowledge of agriculture, cultivating tobacco, root crops and rice; possessing, as domesticated animals, buffaloes, pigs, dogs and poultry; living under a patriarchal organization; fond of the chase; having some slight knowledge of certain arts, and a rude form of religion the cultus of which is, at least to some extent, in the hands of priestesses, who are highly reverenced.

The skulls upon which this paper is founded are four in number, of which only one is perfect, the other three having apparently served for experiments as to the hardness and sharpness of Japanese swords. I have numbered the skulls 1, 2, 3 and 4.

No. 1 is perfect.

No. 2 has lost the left zygoma, a portion of the frontal, a portion of the temporal, the body of the ethmoid and nearly half of the facial bones.

No. 3 has lost about half of the frontal bone and is extensively fractured.

No. 4 has had the upper margin of both parietals beaten in, and has lost all of the facial bones.

These are no signs of artificial distortion in any of the skulls.

In all the skulls, when held at arm's length, the malar bones are visible upon either side.

All are dolichokephalic.

No. 1 is slightly prognathous in form. Nos. 2 and 3 are decidedly orthognathous, and the prognathism of No. 1 seems due rather to alveolar projection only, than to general prognathism. In all the skulls the facial bones are largely developed, more especially the malars. This development of the face is more marked in Nos. 2 and 3 than in No. 1, and these skulls accordingly approach more closely to the pyramidal form, than does No. 1. In all, the upper edges of the zygomata are somewhat convex.

In all, the temporal ridges are strongly marked.

The orbits of Nos. 1 and 3 are somewhat square in outline, while in No. 2 the orbit is elliptical, the axis directed downward and outward. The various processes for attachment of ligaments and muscles are strongly developed in all. The tubercle for the attachment of the ligamentum nuchæ is in No. 1 exceedingly prominent. The mastoid processes are in all of about average development.

The axes of the glenoid fossæ of No. 1, if prolonged inward, would intersect at the anterior margins of the occipital foramen. Those of No. 2 would intersect about .50 of an inch in front of a like point. These of No. 3 and 4 would meet about .38 of an inch in front of the foramen occipitum.

The occipital foramina of Nos. 1 and 4 are rather more oval than common, these of Nos. 2 and 3 are of about normal shape.

The external auditory foramina of all are oval. Those of No. 1 are of average size. Those of Nos. 2, 3 and 4 are exceedingly large as compared with European skulls.

The arch of the palate is in all, low and flat.

The external opening of the nose is large in all; in Nos. 1 and 2 the nasal arch is low and flattened; in No. 2 it is higher but by no means prominent.

The sutures in Nos. 1, 2 and 4 are distinct and un-united; in No. 3 all sutures, save the squamosal and a part of the lambdoidal, are obliterated.

The frontal sinuses are small in all, while in all the ethmoidal ridge of the frontal is large and prominent.

The following measurements are taken as correctly as possible in hundredths of an inch:—

	1	2	3	4
1. Extreme length.....	700	695	715	702
2. Extreme breadth	545	535	538	528
3. Height from posterior extremity of basi-cranial axis to junction of the coronal and sagittal sutures	530	527	552	526

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

4. Longitudinal arc of the parietals	525	530	500	530
5. Transverse arc from one auditory foramen to the other.	1275	1275	1280	1300
6. Width of frontals immediately behind external orbital processes (least frontal measurement,)	370	*	343	362
7. Width of frontals on temporal ridges just above the external orbital processes.	383	*	367	367
8. Greatest frontal width where the temporal ridges cut the coronal suture	442	420	*	410
9. The longitudinal arc of the frontal	500	475	*	464
10. The longitudinal arc of the occipital	425	420	450	520
11. Transverse arc of the occipital, from the junction of the lambdoidal suture and its additamentum on one side horizontally over the occiput to the other side	515	490	525	500
12. The greatest transverse diameter of the occipital bone from one occipito-mastoid suture to the other	416	392	422	430
13. Between the points of the alispheno-squamosal sutures, which are cut by the transverse ridge on the alisphenoid	315	364	350	305

JAPANESE TALES.

WHAT THE FOX DID AND WHY HE DID IT.

Many and diverse are said to be the doings of the fox in this pleasant Empire of Japan. Great is his power for good or evil, and complicated his character. Notwithstanding what his other qualities may be, however, he is oftenest credited with a levity of behaviour and a turn for practical joking which encourages elderly gentlemen out late "on business," to lay it to the fox's account—when excusing themselves to lecturing wives—that they have spent their nights in a ditch, or come home in the small hours, with the evidences of good cheer upon them. Timid lads, too, and nervous lasses,—who lose their courage after sundown and fail to execute their errands or fling away the parcels they have been sent to fetch, in their haste to regain the security of their homes when startled by a night-owl's melancholy cry, or the barking of a houseless dog, or some such noise as would be altogether disregarded in the light of day—find ready and sympathising listeners, if they proclaim themselves victims of the crafty fox. For reasons such as these, the fox's reputation has suffered, and the many good acts which his agency has brought about, are obscured by the shadow thus flung around him. He is in fact gibbeted, unfairly, like the dog whom misfortune has ticketed with an evil name. Inasmuch, therefore, as the following recital exhibits him in a more favourable light, it is confidently expected that it will be perused with pleasure, more particularly as it is solemnly guaranteed and affirmed that it is absolutely as true as—such stories generally are.

In a certain hamlet in the province of Bungo,—which, for the reason that some of the descendants of the parties interested may yet be in possession of the farm where the events to be related took place, and might object to their private history being thus laid bare before the public, we have decided shall be nameless—there lived a farmer, of so kind and benevolent a disposition, that his many charities had gained him the respect and affection of all the neighbours round about. As often happens in this world, however, whilst instrumental in rendering others happy he was overwhelmed with troubles of his own, at home. For his faithful wife, who had hardly reached her fortieth year at the period of which we write, lay sick unto death in the house which she had hitherto brightened and made joyous by her presence. For many months back she had been a martyr to hysteria, and her state, which until now had admitted of varying hopes and fears being entertained of her recovery, had lately become so much worse, that the doctors began to shake their learned heads and pull wise faces, and wonderful to relate, even agree among themselves, that there was reason to fear that things were becoming serious. And whatever may be said or thought to the prejudice of the faculty, it soon became apparent that they were in the right, for their patient gave from day to day such evident signs of approaching dissolution, that even an uninstructed layman would have found little difficulty in believing, that she stood knee deep in that black and silent river which runs round all the world.

The good man who dearly loved his wife was beside himself with grief. She was sinking before his eyes and he was powerless to sustain her. Things were in this unhappy condition, when one day the Mayor of a neighbouring village, laying aside his magisterial dignity and assuming the character of a simple individual—wherefrom we may assume that in those days even Mayors were at bottom but men—presented himself at the farmer's door to make friendly enquires as to the state of the invalid. Soon satisfied by the answers he received that Hope had turned her gracious face away and left the sorrowing household, and that science was unable to lead her in again, he bethought him of recommending the farmer, as a last resource, to seek counsel and consolation from a learned fox, called Matsu, which resided near his village and was held in great esteem by the people there.

It required but scant persuasion to induce the afflicted husband—anxious to seize hold of any straw of comfort—to adopt the suggestion, and so at dawn next morning he set forth, accompanied by a single servant, to lay his case before the fox medium, and request his best attention thereunto.

Nor was his application disregarded, for the latter received him kindly and listened to his story with sympathising interest. After which he prayed before the altar in his house, and having communed with the fox a little space, declared himself ready to speak definitely upon the matter.

And trifling after all, was the comfort which he was able to afford, for the gist of his communication was, that the farmer's wife would surely die, within two days.

Upon hearing this dread sentence the farmer, completely overcome by grief, seized hold upon his arm and besought him with frantic demonstrations of despair, to try and think of some plan by which her precious life might be preserved to him.

To this appeal he received for answer, that although it was not in the power of even foxes to prolong her life, yet that a plan might be devised, by which his wife's body might be reanimated and restored to him, to all intents and purposes, in no way differing from what it was before she had been smitten, with the disorder that was to take her from him.

"At the moment that her spirit is departing from her" he continued, "and if the project meets with your approval, we can replace it by that of a fox in such a way that she will, as I have said before, speak and act precisely as has been her wont, and no one be a bit the wiser."

To this proposal the farmer readily assented. Better a fox wife, thought he, than no wife at all.

"Very well then," replied the other, "my grandson shall lend you his spirit, and do you, for your part, warn your wife's attendants not to be alarmed at what may happen, and leave the rest to me."

Home as upon the wings of the wind sped the delighted farmer, and informed his friends and relatives of what was about to happen. Never a doubt had entered into his mind of the result of his mission, and the even fully justified his confidence. For upon the day appointed sure enough as had been foretold, at about two of the clock the sick woman appeared to have an exacerbation of her symptoms, so severe as to result in her apparent death, a moment after which she opened her eyes again, and looking round the room, got up and told her attendants that she would not require their ministrations any further, as she had perfectly recovered.

After this she took a bath, and then going to her wardrobe, brought out her customary articles of dress, and put them on as she had always been in the habit of doing, speaking and acting all the while in her usual manner, so that nobody who was not in the secret, could perceive the smallest difference in her.

Notwithstanding her apparent recovery, however, as her soul had really departed from her, it was decided that her funeral rites should be performed, and her husband accordingly gave private instructions to that effect to the priest of the temple which they habitually frequented, and had the customary ceremonies carried out, even to the performance of seven days' masses.

Meantime the object of all this interest, and on whom the eyes of friends and neighbours were fixed, conducted herself, to the great joy of everybody concerned, after the manner of the former tenant of the woman's body. One only point of difference, however, developed itself as time rolled on. Twice a year she sent out for large supplies of fish and wine, saying that she expected company in the

evening and wished to prepare a feast for their delectation. On such occasions, having laid out everything herself, when night came on she always extinguished the lights, and having drawn screens all round the room and forbidden anybody to enter, went in, and seemed soon after to be engaged in entertaining some half score of guests, who were heard to laugh, and sing, and keep it up right jovially, but who talked an utterly incomprehensible gibberish. When supper was over, and everything had become quiet once more, she usually came out again, and lighted the lamps as before, saying that the guests had taken their departure. Another remarkable circumstance connected with these suppers was, that the remains of the viands showed that the revellers had consumed their food in a very barbarous fashion, devouring the fish even to the bones.

Saving and excepting these instances to the contrary, there was absolutely no difference in the woman's behaviour. She continued to live happily with her husband for some five or six years, when he was taken ill and died. On the same day that he gave up the ghost, and at the selfsame hour, she fell down at the kitchen door and expired likewise, and it is stated that her corpse in no way differed from that of any other individual who has died suddenly, but it is not related whether there was performed at her burial the same funeral obsequies as had been carried through at her previous decease.

Correspondence

THE EXPORTATION OF RICE.

To the Editor of the "Japan Weekly Mail."

Yokohama, 23rd June, 1877.

Dear Sir.—I have read with considerable amusement two leading articles upon above subject which have recently appeared in the *Japan Gazette*; and I am scarcely able to decide whether to be more amused at the audacity and impertinence with which the Foreign Ministers are urged, in the interests of the foreign merchants, to assault the Japanese Government and endeavour to intimidate it to relinquish the exercise of its sovereign rights as an independent government; or at the unction with which the writer in the *Gazette* takes credit to himself for having "pointed out a public abuse, the further toleration of "which is scarcely possible," and for having seized the opportunity afforded him by the Chamber of Commerce, "to be of real service to this community, by exposing the "facts of the Export of Rice."

In the first instance neither the *Gazette* nor any other paper ought, in my opinion, to talk of "tolerating" certain independent actions on the part of the Government, which purely concerns the Government alone, and does not in any way infringe upon the public or private rights of any person, nor, as far as I can see, contravene any clauses of the treaties with foreign powers.

As to the chuckle over the dilatoriness of the Chamber of Commerce, I presume the Chamber did not conceive it necessary to make a solemn announcement of what was very well known all over Japan.

What are the facts of the case, Mr. Editor? They are, I take it, simply as follows:—The Government of Japan originally prohibited the export of rice (whether wisely or not is beside the present question), under the impression that by permitting its free exportation, a famine might occur in case of a bad crop following large exportations; or the price be so much enhanced by exportation as to seriously embarrass the poor inhabitants, although enabling the Government perhaps to sell off its tax rice at a high price, at the expense of its own people; the only persons who would have benefitted besides, being a few native and foreign merchants.

The next view of the subject is in the contemplation of the fact that the Government receives a large portion of its taxes in kind, or in other words, rice, which it disposes of as circumstances recommend. If rice is scarce and prices are likely to run high, the rice is retained for home consumption, and sold out to the native merchants, the Government realizing sufficiently, and the people continuing to obtain this staff of life at a reasonable figure. If on the other hand, the rice is plenty, and prices likely to rule easy, there is no necessity to retain it for home consumption; and the Government is at perfect liberty to dispose of the rice which it has become possessed of under the circumstances related, in any manner, and through any agent, or agents, at any price it sees fit, treaties notwithstanding. If the Government had been assuming the rôle of a merchant, and interfering with the course of trade, had purchased up a quantity of rice to hold and sell out afterwards at a high price, which it was enabled to command by reason of having taken advantage of its position to make large purchases, and thus had created a monopoly, there might be room for complaint, *on the part of the Japanese public*, but not even then, as far as I can see, by foreign merchants. But the Government has not done this, and only seeks to dispose of the rice in a manner most advantageous to itself. If it proceeded in the manner suggested by the *Gazette* and put the rice up to auction without any upset price what would be the result? The price of rice would fall at once, the foreign merchants, and perhaps a few native ones, would purchase all at the sales, which would be exported, giving a slight profit to the foreign merchants, a very low price to the Government, and making no difference whatever to the native consumer. If, as is asserted by the *Gazette*, the Government has lost largely by its system of sale of the tax rice, the foreign merchants ought to be greatly obliged to the Government for saving them from losses, which they would have experienced had they bought and exported. As to Government monopolies, at which the *Gazette* is indignant, they are not confined to Japan. There is a cigar monopoly in Manila, and a tobacco monopoly in France, without saying anything about the opium in India, which has very much the character of a Government monopoly.

With respect to the appeal of the *Gazette* to the Foreign Ministers, and the citation of precedents in the cases of the action of Messrs. Winchester and Adams, I can only say, that two wrongs do not make one right, and if at the times alluded to Messrs. Winchester and Adams were able to convince the Japanese Government by force of argument, it is no reason why the right of might should be exerted again, even upon the plea of the mischief which the present system is inflicting upon the country, and the foreign merchants "whose number, and whose *(sic)* "capital, or means of capital are so vastly beyond the re-"quirements of the trade of the place," while the entire "system is harrassing their (the foreign merchants') legi-"timate trade."

If there are too many foreign merchants, let them take their capital and trade elsewhere; that is the true remedy, and not the rising of *ad misericordiam* cries for the Japanese Government to toss them a feed of rice; and as for the solicitude of the writer in the *Gazette* for the welfare and prosperity of the country, and the implication that the foreign merchants have come here with their enormous capital from philanthropic motives is too simple a statement for credence. The foreign merchants come here solely to benefit themselves as do other foreigners who come in other capacities, and although their presence may be of real benefit to Japan, that is not the object with which foreigners come here. The merchants do not care, nor are they expected to care, a fig about the prosperity of Japan, only so far as their own is involved in it.

It saves much trouble to speak the truth at once, and dispense with absurd colouring.

I remain, Dear Sir,
Your faithfully,

LEX.

The New York papers of the 5th inst. publish intelligence from Columbia announcing that the Columbian army has completely suppressed the insurrection at Antioquia. The Archbishop of Quito is stated to have been poisoned on Good Friday, while celebrating mass, by the admixture of strychnine with the sacramental wine.—*Pall Mall Gazette.*

The members of the Chinese Legation visited Sir Joseph Whitworth at Thomas' Hotel, Berkeley-square, on Wednesday, to inspect his collection of models and fire-arms. They afterwards went to South Kensington, where one of the buildings which had been suggested as suitable for the proposed Polytechnic Exhibition in China attracted special attention. The members of the Legation were accompanied by Dr. Macartney, Sir Walter Medhurst, Mr. Bourne, and other gentlemen—*Pall Mall Gazette.*

Law Reports.

IN THE DANISH CONSULAR-GENERAL COURT.

Before H. S. WILKINSON, Esq., *Acting Consul-General.*
Messrs. KOLVIG AND VAN TORP, *Assessors.*

Thursday, June 21st, 1877.

UCHIDA WAKA *versus* BAVIER & Co.

JUDGMENT.

In this case the plaintiff sues the defendants for the sum of $250 for her passage money from Vienna to Yokohama upon the following written guarantee being given by the defendants:

"The undersigned testify that they are responsible for the pay-
"ment of the passage money from Europe to Japan of the woman
"Waka, engaged as ama for a journey to Europe.

"BAVIER & Co.

"Yokohama, 5th July, 1873."

It is admitted that the plaintiff was engaged by Dr Kaufmann a German subject, as a nurse to accompany him and his family to Europe, and that it was part of the agreement that he should provide her with a passage back to Japan or with employment with some person returning to Japan. It is admitted that the plaintiff accompanied Dr Kaufmann and his family to Europe in pursuance of that engagement; and it is also admitted that the guarantee in question was given by the defendants at the suggestion, or by the intervention, of the Japanese local authorities, who made the giving of the guarantee a condition of the grant of the passport to the plaintiff. The defence set up by the defendants either as preliminary to the trial or by way of argument on the evidence, may be summarized as follows:—

1st.—That Dr. Kaufmann is primarily liable, and that he ought to be sued first before the defendants can be rendered liable.

2nd.—That there is no proof of Dr. Kaufmann's failure to pay the passage money.

3rd.—That the plaintiff released Dr. Kaufmann from his engagement to pay the passage money, and that the defendants as sureties are therefore no longer liable.

4th.—That the guarantee was given to the Japanese local authorities, to indemnify the Japanese Government for any expenses which might be incurred by that Government in sending the plaintiff back to Japan, and that it was not intended to indemnify the plaintiff for any expenses which she might incur herself.

5th.—That Dr. Kaufmann was only liable to provide her with employment back to Japan and that she actually obtained that employment with Mrs Watanabe, and that Dr Kaufmann is consequently not liable for her passage money, and the defendants are therefore not liable.

6th.—That even if the defendants are liable the sum claimed is too much.

The defendants in this case are subject to Danish Law. But they are unable to refer me to any Danish law on the subject; and it has been agreed that the case should be decided either according to English law or according to French law. Now, in English law, the first defence raised by the defendants is not sustainable. The surety in the absence of any stipulation to the contrary, is liable to be sued first, and he can no way resist the claim on the ground that the principal has not yet been sued. The French law is more favourable to sureties, but the defendants under the circumstances of the present case are unable to avail themselves of its stipulation.

The provisions of the French law which apply to the case are Article 2021 and Article 2023 of the Code Civil, which are as follows:—

"2021.—La caution n'est obligée envers le créancier à le payer
"qu'à défaut de débiteur, qui doit être préalablement discuté
"dans ces biens, à moins que la caution n'aie renoncée au bénéfice
"de discussion, ou à moins qu'elle ne se soit obligée solidairement
"avec le débiteur: auquel cas l'effet de son engagement se règle par
"les principes qui ont été établis pour les dettes solidaires."

"2023.—La caution qui requiert la discussion, doit indiquer au
"créancier les biens du débiteur principal, et avancer les deniers
"suffisants pour faire la discussion. Elle ne doit indiquer ni des
"biens du débiteur principal situés hors de l'arrondissement de
"la cour impériale de lieu ou le payement doit être fait, ni des
"biens litigieux, ni ceux hypothéqués à la dette qui ne sont plus
"en la possession du débiteur."

A preliminary question upon the provision of Article 2021, whether the intention of the document signed by the defendant is that the defendants should be primarily liable or liable only as sureties. But as it has been treated on both sides as a guarantee, I shall consider it in that light. The defendants cannot comply with the conditions imposed by Article 2023. They can point out no property of the principal within the jurisdiction upon which the debt could be levied and, failing that, the first defence falls to the ground.

As to the second defence, I find as a fact that Dr Kaufmann did not pay the passage money. It is true there is only the direct evidence of the plaintiff herself. But there is nothing to contradict it. On the contrary all the circumstance of the case go to confirm her evidence on the point. There is moreover the statement of Mr Ernest Bavier that, having written to Dr Kaufmann he received a reply from Mrs Kaufmann and there is no suggestion of any allegation on her part that the passage had been paid by her husband, and, if it had been so paid, she would almost certainly have known it, and would as certainly have mentioned the fact. Such an allegation it is true could not be received in evidence on the trial, but it would have been a very material fact in support of the application for an adjournment for the purpose of procuring evidence to which I shall presently refer.

As to the third defence, I find on the evidence that the plaintiff did not release Dr Kaufmann. There is nothing to show that she did. The reason of her not sueing him is satisfactorily explained by the absence of any written agreement to support such a suit.

As to the fourth defence that the guarantee was a guarantee to indemnify the Japanese Government, and not to indemnify the plaintiff, it is to be observed that the document itself is silent upon the point. It is therefore necessary to have recourse to intrinsic evidence to explain it. The plaintiff says: "The Kencho officials
"represented to me that it was a very hazardous undertaking for
"me to go under the circumstances: that I had no guarantee for my
"return passage money: that I might be abandoned and destitute
"when I got to Europe, and be thrown on the world as a woman
"of bad character. On receiving this admonition from the Ken-
"cho I went straight to No. 76, to Mr Bavier and reported to him.
"Mr Bavier replied, 'I will give you a guarantee against all
"'that. I will go guarantee for your passage money." He
"then wrote out a guarantee and stamped it, and I took it to
"the Kencho."

Mr Bavier's absence prevents the accuracy of this statement being tested by the evidence upon it. But it is confirmed incidentally by Mr Ernest Bavier who has stated in his defence:—"I
"was in Europe at that time, and upon my return last January I
"heard the circumstances from my brother. The only thing
"I know is subsequent to the departure of my brother in March
"last year, when Waka put in several petitions. She came to see
"me personally, stating to me the circumstances of her claim, and
"asking me to refund her travelling expenses to the amount of
"$250. I told her that my brother had explained to me his case,
"and that, as according to the guarantee which she showed
"me he could only be held responsible if her passage money had
"not been paid to her, and as in the first instance Dr Kaufmann was
"the person to whom she had to look for payment, she ought to sue
"him, and that, if he should refuse without any good cause to pay
"her passage, we, as guarantees, should do so."

It is evident from this that when the plaintiff applied to Mr Ernest Bavier the statement of the case which he had received from his brother did not suggest to him that he had the defence which is now got up, and the conclusion I come to upon the evidence of the plaintiff and of Mr Ernest Bavier, is that the document is a memorandum in writing intended to be given by the defendants to the plaintiff. It is in this view, moreover, that it has evidently been looked upon by the *Kenrei* who has forwarded the document to this Court in support of the plaintiff's petition, which has also been forwarded through him. Upon this construction defendants are liable upon this guarantee at the suit of the plaintiff.

The fifth defence it appears to me cannot be sustained. It is not supported by the evidence. There is nothing to show that Dr Kaufmann ever offered the plaintiff the opportunity of employment with any person returning to Japan. The plaintiff herself says that he did not. She states that there was a distinct understanding before leaving Yokohama that she was only to accompany Dr Kaufmann and family to the end of the voyage and that on their arrival in Europe she was to be sent straight to Japan, but that he kept putting her off from time to time, so that she was kept from the month of October till the following May without any prospect of being sent home even then. It is clear also from the evidence of the plaintiff and of Mr Watanabe that the plaintiff did not obtain employment (in the sense of working her passage) with any one returning to Japan. Whether it is true—as the plaintiff's allegations go to show—that Mr Watanabe made a hard bargain with her is not material to the present case. Whether she rendered any services or not to Mrs Watanabe on the voyage, it was agreed that she should receive nothing whatever in consideration of them.

The sixth defence, which goes, however, to only part of the claim, has been made out. The expenses for which the defendants are liable do not amount to $250, but I find on the evidence of Mr Watanabe that they amount to 172 *yen* 60 *sen*. The plaintiff is entitled to sue for this latter sum, for she has paid 68 *yen* on account of it and is endebted to Mr Watanabe for the balance. The judgment of the Court will therefore be for the plaintiff for the sum of 172 *yen* 60 *sen*.

There is no doubt that the defendants' case is a hard one. They are placed at this disadvantage that they have not received any communication from Dr Kaufmann, and do not know what defence he might set up. It was on this account that they applied for a postponement of the trial. This application was not urged very strongly. But in any case I am of opinion that no further postponement could have been properly granted. So far back as the 20th of March of last year, the defendant stated in reply to a communication from the *Kenrei* forwarding the plaintiff's claim, that they required to write to Germany to Dr Kaufmann before they could do anything in the matter. It appears from Mr Bavier's statement that he wrote to Germany and found that Dr Kaufmann had gone to Manila; that he wrote to him and wrote also to a friend to make enquiries, and that, although a sufficient time has elapsed for receiving an answer, no answer has been received. Now, by the Further Rules for the proper and speedy administration of Justice (Law, 16th January, 1828) after providing that the grounds alleged for the applications for adjournment shall be carefully tested by the Court, it is provided (§2) that "It shall likewise be very strictly observed, that it is not enough that the act, with regard to which adjournment is demanded, is in itself a proper means to further the proceedings, but it is also requisite,

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

that the interested person has not already had a sufficient time to do this same act. And a new adjournment shall therefore not be granted him to do what ought already to have been done." Now it appears there has been sufficient time to communicate with Dr Kaufmann and to get his answer if he had been minded to answer, and the plaintiff ought not to suffer by reason of his default.

ORDER.

That the defendant do pay to the plaintiff the sum of 172 *yen* 60 *sen* within fifteen days from this.

IN H. B. M.'s COURT AT KANAGAWA.

Before H. S. WILKINSON, Esq, *Acting Law-Secretary.*

Tuesday, June 19th, 1877.

J. J. CARGAN *v.* J. J. JARMAIN.

Plaintiff claimed $29.21, balance of account. Defendant in no way disputed the claim, but stated his inability to pay the whole sum at once.

Plaintiff did not appear, but the Court ordered that the sum should be paid in four instalments. Costs $3.

J. W. SUTHERLAND *v.* J. CRIPPS.

This was a claim for $17, carriage hire.

Defendant disputed $5 of the bill.

J. W. Sutherland, sworn:—I remember every occasion on which defendant hired traps from me. I saw the carriage go out of the gate each time.

Defendant stated he had hired one carriage and pair, one waggon and a single horse trap. On one occasion a trap was ordered by some friends of his who were to take him for a drive, but he was ordered to Shinbashi and another of the party fell sick so that the trap was not used. He did not order it.

To plaintiff:—I do not remember seeing you on the 3rd of June.

Mr Rose recollected ordering the trap on the 3rd of June by request of Mr Cripps. He stated it was for Mr Cripps. Mr Cripps sent a chit just when the trap came to say that he could not go. The trap was used.

Defendant in answer to the Court said he had authorised Mr Rose to order the trap.

Ordered to pay to the plaintiff $17, and $3 costs forthwith.

ROSE AND BUDGE *v.* J. CRIPPS.

Claim for $61.70 for refreshments supplied.

Mr Rose, sworn:—I supplied these refreshments to defendant.

Defendant did not dispute the claim, but said he was quite unable to pay a cent of the amount.

$61.70 ordered to be paid forthwith.

ENGLAND'S POSITION.

(The World.)

The shadow of a great European war eclipses all subjects of purely domestic or social importance. The ambitious agitators, the provincial patriots, the aspiring champions of crotchets and leaders of cliques, the after-dinner rhetoricians and the patrons of the *al-fresco* stump, are condemned to pale their ineffectual fires before the fierce blaze which the Turk and Russian strife has lighted up. In England there reigns at the present moment a profound calm, ominous, it may be, of the coming storm; and the stillness has been but feebly broken in the last few days by the Home Rule wrangle; by the discussion of Burials Bill which removes no grievance, and satisfies no party; by the personal quarrel which a couple of ill-conditioned Irishmen have managed to pick in the lobby of the House of Commons, and the particulars of which their partisans have trumpeted forth to the ends of the earth; by the proclamation of the hopeless split between the English Liberalism and Hibernian disaffection; or by the pert prattle of a Conservative member of Parliament, so voluble of tongue and so barren of ideas as Mr. Henry Chaplin, at Willis' Rooms. The 'great heart of the nation' is as unmoved by any of these things as by the memory of Dr. Kenealy's speeches, or the vision of Dr. Kenealy's umbrella. Notoriety hunters of all kinds in and out of Parliament, members of the House of Commons who have mastered the greatest problems of Bumbledom, philosophic hobbyists, and indignant Philistines must resign themselves for a period to the wholesome lot of comparative extinction. Two empires are at war. Only up to a certain point, which may be reached at any moment, can England remain an unconcerned spectator; and, whether they acknowledge it fully or not, men's minds are so prepossessed by the contingencies of the future that they can find no place for the consideration of subjects as attractive even as Nonconformist grievances or the incidence of taxation.

A fuller, wider, and livelier sense of the life and responsibilities of a great nation, a contagious sentiment of martial restlessness and semi-brutal fervour, as well as a shrinking horror of battle and carnage in every form, are among the feelings which the declaration of a great war generates. In the closing stanzas of *Maud*, the most powerful lines perhaps that he ever wrote, Mr. Tennyson has very finely interpreted some of those influences which assert themselves when the cannon-bullet ceases to 'rust on a slothful shore'—impulses not only of sympathy with the oppressed, but of admiration for the mere shedding of blood, and of the opportunities which such bloodshedding brings with it:

> 'For the peace that I deem'd no peace is over and done,
> And now, by the side of the Black and Baltic deep
> And deathful-grinning mouths of the fortress, flames
> The blood-red blossom of war with a heart of fire.'

In these verses and their context it is quite as much the lust of warlike energy as the 'wrath wreak'd on a giant liar,' not less the unreasoning thirst for battle, as being the most intense mode of human activity, than hatred of Russia, which finds utterance. Whatever the cause and origin of the strife, however remote or however near its connection with England, there will always be a war-party in this country. If there be a prospect of England's becoming involved in the struggle, the cry of that party will be more distinctly audible. The 'fighting interest' has become powerful in England in proportion as the army has become representative of our national life in a degree never before witnessed. The sentiment that a little periodical blood-letting is good for the world's system; the vague idea that war, if it means misery for millions, means also 'the sudden making of splendid names,'—thus conspires with a sentiment of a more practical and interested character. The flame once kindled, however small, is quickly fanned, and material to feed it is never wanting. Russia as well as Turkey has her enemies in the poets, pamphleteers, and journalists of the English press. These gentlemen have long since made the cause of Turkey their own, and have for months past invoked the thunderbolts of fiery retribution against the perfidious policy of the C'zar. Indeed, with few exceptions, the newspapers have done all in their power to rouse the English nation to so full a sense of Muscovite machinations and insolence, that the demand for their violent chastisement may be expected naturally to follow.

On all sides, whether with those who have been urging that England should apply military coercion to the Porte, and if necessary destroy its fleet in the interests of the oppressed Christians, or with the advocates of a literal fidelity to existing treaties, even although at the cost of certain war with Russia, there is the conviction that unless the hostilities which have broken out are put down immediately by the exercise of some special providence, they must, sooner or later, compel the interference of England. In other words, it is universally believed that the strife cannot be 'localised.' The English public is dominated by the idea that at any moment this country may be called upon to take arms if it wishes to hold its own. The reception which awaits this belief is sufficiently varied. To the mass of mankind war is an evil of so horrible a character and such incalculable magnitude, that its presence seems fitly described in language which would indicate that the curses of hell had been let loose upon the earth. A powerful and picturesque writer has already conveyed this view of the struggle commenced between Russia and Turkey in a paragraph which has been widely quoted. The horrors of war are, in reality, the assertion in its extreme and most repulsive form of the existence of that principle of evil which has puzzled so many generations of philosophers. They must be faced just as other forms of evil must be faced; and, hideous as the 'arbitrament of the sword' is, it must remain the last resort so long as the peoples of the world agree to postpone a regard for personal life and interests to national life and interests. The purely emotional standpoint is only one of many from which war and its works may be regarded. Philosophers of history see in war not so much the clash of swords and the deaths of men, as the collision of ideas and the triumph of principles. To the City man of the minor kind a declaration of war only means the looming of the war ninepence on the horizon. The newspaper proprietor principally discerns in a coming campaign a colossal circulation indefinitely multiplied. The author of cant appeals in high-flown strains to the patriotism and nobility of his countrymen, magniloquently informs the women and children, who are about to be left widows and orphans, that there is nothing like war for purifying the atmosphere, and that if there had been no war in Europe Lord Byron's finest poems would not have been written.

With the Government of the country it rests to harmonise and to elicit a practical unity from these conflicting views. And there is much at the present time to diminish the difficulties of a necessarily difficult task. The English people are amenable to, and are anxious for, such guidance as a Government ought to be able to exercise. If there does not exist now the same developed enthusiasm as possessed the national mind

Original from UNIVERSITY OF CALIFORNIA

before the commencement of the Crimean War, the prevailing sentiment is not likely to be less useful to a Government which is able skilfully to employ it. The Turk may be generally believed to be incurable, and there is certainly little enough of active solicitude for his welfare. But those who recall the successive episodes and phases of the Crimean struggle will find that after the operations on the Danube in 1854 the Turk marvellously receded into the background. Certainly it was no concern for the Mussulman which caused the English public to await with such profound anxiety the intelligence which each mail brought from the Black Sea during 1854 and 1855. England was fighting against the Power which the popular mind regarded as her natural enemy in the East. The forces of English resistance and Russian aggression were as much pitted against each other as if the Turkish element had never been there at all. There is no doubt whatever that the suspicion and distrust with which Russia and Russian designs were regarded by England twenty-three years ago exist among us still. Zeal for the Ottoman cause, pure and simple, may be slight indeed, and in proportion as it is absurdly contended that the Porte, which from the first has steadily refused to make any concessions, would, if gently handled, have done everything which Europe originally asked is probably destined to vanish altogether. But this implies nothing whatever of that latent sympathy with Russia which could interfere with the patriotic policy of so anti-Russian a Cabinet as Lord Beaconsfield's. The Government, indeed, have a brilliant opportunity before them, and they have but to use it aright to scatter all opposition to the winds, and to convince the nation that as they will not lightly be called upon to take up arms, so the power and prestige of England are absolutely guaranteed against all aggression. But if this is to be done some portion of the tactics of the Government and of its supporters in the press must be renounced. Nothing can be more frivolous than the plea which Lord Derby has insinuated—and which the *Daily Telegraph*, which has taken upon itself to address to its erewhile idol 'a stern and true word,' has thought fit to emphasise—that Mr. Gladstone is responsible for the failure of the Ministerial policy to preserve peace. The pressure, it is said, which Mr. Gladstone has exercised upon the Government has been that of an 'irresponsible dictator,' and has been 'mischievous and fatal.' If the Ministerial majority were narrow or undisciplined, this argument might be entitled to some consideration; but when a Government as powerful as the present seeks to excuse any blunders of its own on the ground of the importunity of its opponents, it may be dismissed as unworthy and absurd.

Since the entire subsidence of the Bulgarian agitation the Government have had no difficulties to contend with except those which have been exclusively of their own manufacture. Of late Mr. Gladstone and the Duke of Argyll have preserved a comparative silence. Since the outbreak of war Lord Hartington has declined to challenge the tactics of the Government. The attempt to bring the question, as between the Administration and the Opposition, to a distinct issue has been abandoned. Every threatened demonstration ends in a collapse. The supremacy of Lord Beaconsfield and Lord Derby is unquestioned. The English people are thoroughly alive to, if they are not fanatically apprehensive of, the Russian hereditary policy of aggression and encroachment. Because there are no frothy demonstrations held, the national conviction on each one of these points is not the less intense. The national temper is one of which a Government that claims the national confidence is for every reason bound to take advantage. The Atrocities agitation of the autumn was only rendered possible because of the contemptuous reticence, the lamentable want of frankness, of the Government. Is the same mistake, or anything analogous to it, to be repeated now? Are the people of England to be permitted to think that the Government is as little able to decide upon a definite policy as the Opposition? Each day as it passes without some Ministerial declaration on the subject of the responsibilities and duties of England is calculated to produce such an impression, and *pro tanto* to alienate from the Government the sympathies of the people. When the national sentiment, at such a moment as the present, is of the kind which we described, there is a real danger lest, if it be not directed to, and expended on, some definite object, it should run to waste, and be destroyed. What is now needed is to economise what will prove a growing force; and if this is to be done in the interests of the Government, it will be because the people are no longer left in doubt as to the end towards which the country is being led.

We learn that the Shanghai tea market was opened this morning and a sale of 120 half-chests of Ningchow effected at Tls. 25 per picul.—*Shanghai Courier.*

REUTER'S TELEGRAMS.

LONDON, June 8th, 1877.

Three Russian frigates from America have arrived at Brest.

LONDON, June 11th, 1877.

Unofficial despatches state that the Russians attempted the passage of the River Danube at Uikopoli, and were repulsed.

The Russian press is indignant at the notion that Russia would be satisfied with peace without solid guarantees.

LONDON, 8th June, 1877.

Three Russian frigates have arrived at Brest from America.

The right wing of the Russian troops in Asia Minor has arrived at Nariman beyond Olti; and the left wing has penetrated to Kara Klissa, unopposed.

London, 7th June, 1877.

The Turks have attacked the insurgent troops in Montenegro and completely defeated them.

The Turks are bombarding Giurgevo.

A Turkish Governor has been appointed to Sukhum Khaleh.

London, 6th June, 1877.

The Insurgents in Circassia have been defeated by the Russians with great loss.

The Russian Army finds great difficulty in obtaining supplies.

London, 6th June, 1877.

Lord Derby, in reply to a proposition from Russia that the Suez Canal should be considered neutralized, has refused to accede to the arrangement, and has informed the Russian Ambassador in London that the Porte, the Khedive, and England are firmly determined to disallow any warlike operations on the Canal.

London, 31st May, 1877.

There are vague rumours of peace negociations being opened through the mediation of Germany.

Alsace and Lorraine are being reinforced.

ARRIVAL OF THE ENGLISH MAIL.

(From the Straits Times Extra.)

Bombay, May 21st, 1877.—The Rev. Mr. Barker, S. P. G. Missionary at Ahmednugger, has been suspended from his clerical functions for three months for administering the Holy Communion to a corpse.

Bombay, May 24th.—Next Monday Admiral Corbett assumes the command of the Navy in the East Indies.

The *Undaunted* proceeds to Trincomalee, but may go to Aden, if required. The *Gazette* says that Government enquiries have been made as to the amount of tonnage that would be required for the shipment of 15,000 men to stations on the Persian Gulf.

Constantinople, May 24.—Constantinople has been placed in a state of siege. The demonstration of the Softas only numbered 2,000. A deputation of five of them was admitted to the Turkish Chamber of Deputies and they demanded certain ministerial modifications. A Court Martial has been ordered on the Governor of Ardahan fortress with reference to the retreat of the Turkish forces from that place before the enemy. The Russian troops are moving towards the West, and 85,000 men are already concentrated on the upper and middle Danube. The river has settled down, but it is not probable that the passage can be made before the middle of June.

Berlin, May 25.—The Berlin semi-official journals have assumed a hostile tone towards the French Ministry.

Diplomatic relations between Germany and Italy are very intimate.

London, May 26.—Latest advice from the seat of war in Asia Minor state that Russian troops are making rapid marches towards Erzeroum, and that their vanguard has already reached Olti, whilst the left wing is marching towards Diabeker and the centre has commenced bombarding the outworks of Kars. The position of the Turks in the Asiatic Provinces of Turkey, consequent on these movements of the enemy, is, therefore, considered critical.

London, May 27.—The Persian minister at Constanti-

Digitized by Google

nople has presented a Note to the Porte containing most pacific assurances from the Shah.

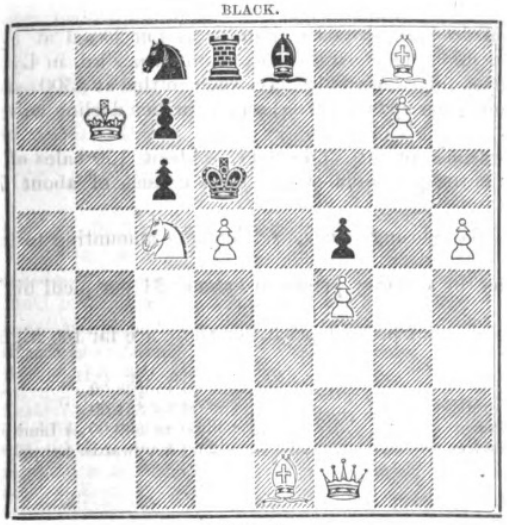
The latest advices from the seat of war state that the head-quarters of the Russian Army Corps of the Caucasus have been transferred to Alexandropol, and that the left wing has reached Van. A Turkish ironclad has been sunk at Ibraila by a torpedo vessel.

London, May 28.—The rivers Danube, Aluta and Sereth have overflowed. Advices from the seat of war in Asia Minor state that the Russian troops from Ardahan have joined the main body of the army before Kars. Fighting is going on near Soukhoum Kaleh, to which place the Russians are sending reinforcements.

Paris, May 28.—Marshal Macmahon has made a pacific speech, in which he said that France would take no part in the present European complications.

Constantinople, May 26.—The Roumanian army is concentrated in Little Wallachia and remains on the defensive. The arrests of Softas continue, and several have been banished. A demonstration has been made at Athens having for its objects the urging of the election of a ministry and the necessity for military preparations.

London, May 28.—The German ironclad squadron has gone to the Levant. No further news from the seat of war before Kars. The capture of Ardahan by the Turks is entirely unconfirmed. The Russian troops have evacuated the Abassian (? Circassian) littoral of the Black Sea, but are guarding the mountain passes in the interior. Continued cannonade between Widdin and Kalafat is going on.



Brussels, May 30.—*Le Nord* states that the Russian Government is anxious to reassure England that Russia will not assail her interests, as defined in the speech made by Mr. Cross in the House of Commons on the 7th May, wherein he said that England's interests were to protect the Suez Canal and guard Egypt, and permit no interference with the freedom of the passage of the Dardanelles and Bosphorus.

London, May 31.—Prince Gortschakoff is announced to accompany the Czar to Polyesti. This has given rise to vague rumours at Bucharest that peace negotiations between Russia and Turkey are about to be opened up through the mediation of Germany.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—A fair business has been done; prices are firm and in some instances slightly dearer. *Yarns* continue saleable at current quotations. In 9 lbs. *Shirtings* fair transactions are reported at improving rates, while other weights and qualities move in moderate lots at former values. There have been small sales of *Velvets*; *T. Cloths* are neglected, and *Drills* are lower.

Grey Shirtings:—					White Shirtings:—		
7 lbs.	38½ yds.	39 in.	per pce.	$1.47½ to $1.77½	60 to 64 reed 40 yds.	35 in.	per pce. 2.20 to 2.40
8 lbs.	38½ yds.	44 in.	,,	1.65 to 2.25	Turkey Reds 24 yds.	30 in.	2—3 lb. per lb. 0.67½ to 0.80
8 lbs. 4 to 8½ lbs.	38½ ,,	39 in.	,,	1.65 to 2.35	Black Velvets		7.00 to 8.25
9 lbs.	38½ ,,	44 in.	,,	2.00 to 2.60	English Drills 14/15 lbs.	40 yds,	30 in. 2.40 to 2.65
T. Cloth 7lbs.	24 ,,	32 in.	,,	1.40 to 1.60	Taffachelass	13 yds,	43 in. 1.70 to 2.15
,, 6lbs.	24 ,,	32 in.	,,	1.10 to 1.25			

Yarns.—

No. 16 to 24	per picul...	$29 00 to 32.50	No. 38 to 42 per picul... $34.00 to 38.00
No. 28 to 32	per picul...	$31.50 to 34.75	Reverse Twist 16-24 ,, —

Woollens.—There is no great change to report in this staple, with the exception of some demand for plain *Mousselines de Laine* at prices which shows a further decline. *Blankets* continue to be enquired for, but stock are nearly exhausted.

Plain Orleans	40—42 yds.	32 in.	5 50 to 7.00	Figured Mousselines de Laine ...30 yds. 30 in... 0.24 to 0.28
Figured Orleans	29—30 yds.	31 in.	4 25 to 5.25	Multicolored ,, ...30 yds. 30 in... 0.28 to 0.36
Shimagoro	30 yds.	30 in.	4.00 to 5.25	Cloth, all wool plain or fancy .. 48 in. to 52 in... 0.80 to 1.20
Italian Cloth	—30 yds.	32 in.	0 24 to 0.31	Presidents ...54 in. to 56 in... 0.60 to 0.65
Camlet Cords	29—30 yds.	32 in.	5.75 to 6.00	Pilots ...54 in. to 56 in... 0.45 to 0.55
Camlets Asstd.	56—58 yds.	31 in.	16 50 to 17.50	Union ...54 in. to 56 in... 0.60 to 0.75
Lastings, Japan	22—30 yds.	32 in.	12.00 to 13.00	Blankets, scarlet & green 6 to 8 lbs....per lb 0.40 to 0.48
Plain Mousselines de Laine	—30 yds.	30 in.	0.16¾ to 0.17¾	

Sugar.—The market has been firmer during the week, and while rates for *Formosa* are unchanged, White Sugars have advanced 15 cents per picul.

Sugar:—Takao in bag	per picul	$5.00	China No. 4 Kook-fah ... per picul... $7.35 to $7.65
,, in basket	,,	$4.85	,, No. 5 Kong-fun ,, ...$6.65 to $7.15
Taiwanfoo in bag	,,	$4.90	,, No. 6 E-pak ,, ...$5.95 to $6.45
do. in basket	,,	$4.80	Swatow Brown ,, ... None.
China No 1 Ping-fah	,,	None	Daitong ,, $4.50
,, No. 2 Ching-pak	,,	$8.55 to $8.95	Japan Rice ,, ...$2.00 to $2.30
,, No. 3 Ke-pak	,,	$7.95 to $8.25	Kerosene Oil ,, $4.50

Kerosene Oil.—There is no change to report in prices, as no transactions have taken place, and consequently remain nominal at $4.50.

EXPORTS.

Silk.—On the 18th instant about 30 Bales of new Mybash Hanks arrived and were purchased at $500 to $570 per picul, or @ 4/1=20/2 to 20/11 per lb. in London and @ frs. 5.15=56 to 58 per kil. in Lyons. Since then several several parcels have come to the market but only a few bales have been settled at $500=18/6 and frs. 51.—This shows already a drop of 50 to 70 dollars on opening rates, and a further decline will, no doubt, take place before a general business is possible.

The first arrivals compare favourably with last season's in size and colour.—About 150 bales of old coarse Silk have gone into native consumption. Prices are entirely nominal while stocks consist of about 700 bales of old Silk and 20 bales new Hanks.

Tea.—A brisk business has been done during the closing week, settlements amounting to fully 6,000 piculs.

The anticipated decline has thus been checked, and on the contrary prices are about $1 per picul higher on all grades from Good Medium downward.

Some amount of low grade Teas have changed hands, but present prices for these are far too high to leave any margin on home quotations.

Common	$14.00 to $15.00	Fine	$25.00 to $28.00
Good Common	$16.00 to $18.00	Finest	$29.00 to $34.00
Medium	$19.00 to $21.00	Choice	$36.00 to $39.00 } Limited
Good Medium	$22.00 to $24.00	Choices	$42.00 & upwards. } supply.

EXCHANGE AND BULLION.

Exchange.—Sterling rates have remained pretty steady throughout the past week, but close slightly easier, with a scarcity of Private Paper.

Rates close as follows:—

Sterling—Bank 6 months' sight	4s. 0⅛d.	On Shanghai—Bank sight	75
,, Bank Bills on demand	3s. 11⅞d.	,, Private 10 days sight	76
,, Private 6 months' sight	4s. 1⅛d.	On New York—Bank Bills on demand	96½
On Paris—Bank Sight	5.00	,, 30 days sight Private	98½
Bank 6 months' sight	5.07½	On San Francisco—Bank Bills on demand	97
,, Private 6 ms. sight	5.17½	,, 30 days sight Private	99
On Hongkong—Bank sight	⅜ % dis.	Kinsatz	412½
,, Private 10 days' sight	⅝ ,,	Gold Yen	402

In the U. S. Consular General Court at Kanagawa, Japan.

J. M. BATCHELDER,

Against

THE PROCEEDS OF THE SALE OF THE BARQUE

"CAYALTI."

TO THE FORMER OWNER OR OWNERS OF THE SAID BARQUE AND ALL OTHERS WHOM IT MAY CONCERN. GREETING.

WHEREAS an action has been brought in this Court by the above-named Plaintiff against the proceeds of the sale of the Barque *"CAYALTI,"* now in the hands of the UNITED STATES CONSUL-GENERAL for Japan, praying that the said proceeds may be paid to him on account of monies advanced and transportation and supplies furnished to the crew and coolies belonging to the said Barque *"CAYALTI."*

Now therefore take notice, that unless answer be filed therein within three months from the date hereof, judgment will be taken by the said Plaintiff according to the prayer of his Petition.

Given under my hand with the Seal of said Court affixed, this 28th day of May, A.D. 1877.

(Signed) THOS. B. VAN BUREN,
[Seal.] U. S. Consul-General.

INSURE YOUR HEALTH

BY TAKING

HOCKIN'S

IMPROVED SEIDLITZ POWDER.

IT differs from the Seidlitz Powders usually sold in having all the ingredients in one bottle, is quite tasteless, and may be taken by persons of all ages as a *Cooling Beverage, Mild Aperient* or *Brisk Purgative* according to dose. Its extensive use during nearly HALF A CENTURY proves its valuable qualities as a Purgative Saline, and the fact that the powder retains its qualities for any number of years renders it a most reliable and efficient Domestic Medicine. It will be found invaluable to Families, Travellers, or Emigrants, as a preventive or remedy in all cases of **Sickness, Headache, Bilious Attacks, Fevers,** and the other ordinary **ailments** of life.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of al kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

PROTECTED BY ROYAL LETTERS PATENT,

Dated October 11th, 1869.

Under Distinguished Patronage

DR. BRIGHT'S PHOSPHODYNE.

(OZONIC OXYGEN)

THE NEW CURATIVE AGENT, AND ONLY RELIABLE REMEDY FOR NERVOUS AND LIVER COMPLAINTS

This Phosphatic combination is pronounced by the most eminent members of the Medical Profession to be unequalled for its power in replenishing the vitality of the body, by its supplying all the essential constituents of the blood and nerve substance, and for developing all the powers and functions of the system to the highest degree.

It is agreeable to the palate, and innocent in its action, while retaining all its extraordinary properties; and as a specific, surpassing all the known therapeutic agents of the present day for the speedy and permanent cure of—

Nervous Prostration	Lassitude
Liver Complaints	Shortness of Breath
Palpitation of the Heart	Trembling of the hands and limbs
Dizziness	Impaired Nutrition
Noises in the Head and Ears	Mental and Physical Depression
Loss of Energy and Appetite	Consumption (in its first stages only)
Hypochondria	Tumidity
Female Complaints	Eruptions of the Skin
General Debility	Impaired Sight and Memory
Indigestion	Nervous Fancies
Flatulence	Impoverished Blood
Incapacity for Study or Business	Nervous Debility in all its Stages
Sick Headache	PrematureDecline

and all morbid conditions of the system arising from whatever cause. The action of the Phosphodyne is twofold—on the one hand increasing the principle which constitutes nervous energy, and on the other the most powerful blood and flesh generating agent known; therefore, a marvellous medicine for renovating impaired and broken-down constitutions. It quickly improves the functions of assimilation to such a degree, that where for years an emaciated, anxious, cadaverous, and semi-vital condition has existed, the flesh will rapidly increase in quantity and firmness, and the whole system return to a state of robust health. The Phosphodyne acts electrically upon the organisation; for instance, it assists nature to generate that human electricity which renews and rebuilds the osseous muscular, nervous, membranous, and organic systems. It operates on the system without exciting care or thought upon the individual as to the process. It moves the lungs, liver, heart, kidneys, stomach, and intestines, with a harmony, vigour yet mildness unparalleled in medicine.

The Phosphodyne gives back to the human structure, in a suitable form, the phosphoric or animating element of life, which has been wasted, and exerts an important influence directly on the spinal marrow and nervous system, of a nutritive, tonic, and invigorating character, maintaining that buoyant energy of the brain and muscular system which renders the mind cheerful, brilliant, and energetic, entirely overcoming that dull, inactive, and sluggish disposition which many persons experience in all their actions.

The beneficial effects of the Phosphodyne are frequently shown from the first day of its administration, by a remarkable increase of nervous power, with a feeling of vigour and comfort, to which the patient has long been unaccustomed. Digestion is improved; the appetite increases wonderfully; the bowels become regular; the eyes brighter; the skin clear and healthy; and the hair acquires strength, showing the importance of the action of the Phosphodyne on the organs of nutrition.

Finally, the Phosphodyne maintains a certain degree of activity in the previously debilitated nervous system; its use enables all debilitated organs to return to their sound state and perform their natural functions. Persons suffering from Nervous Debility, or any of the hundred symptoms which this distressing disease assumes, may rest assured of an effectual and even speedy cure by the judicious use of this most invaluable remedy.

DR. BRIGHT'S PHOSPHODYNE

IS SOLD ONLY

In CASES at 10s. 6d. by all Chemists and Patent Medicine Vendors throughout the Globe.

Full Directions for Use, in the English, French, German, Italian and Dutch Languages, accompany each Case.

☞ *CAUTION.—The large and increasing demand for Dr. Bright's Phosphodyne has led to several imitations under somewhat similar names purchasers of this medicine should therefore be careful to observe that each case bears the English Government Stamp, with the words Dr. Bright's Phosphodyne engraved thereon, and that the same words are also blown in the bottle.*

DYSENTERY, CHOLERA, FEVER, AGUE, COUGHS, COLDS, &C.

Dr. J. COLLIS BROWNE'S

CHLORODYNE

(Ex Army Med. Staff)

IS THE ORIGINAL AND ONLY GENUINE.

CAUTION.—Vice Chancellor Sir W. P. Wood stated that Dr Collis Browne was undoubtedly the Inventor of Chlorodyne; that the story of the Defendant, Freeman, being the Inventor was deliberately untrue, which he regretted had been sworn to. Eminent Hospital Physicians of London stated that Dr. Collis Browne was the discoverer of Chlorodyne; that they prescribe it largely, and mean no other than Dr. Browne's.—See "Times," July 12th, 1864.

The Public, therefore, are cautioned against using any other than

DR. J. COLLIS BROWNE'S CHLORODYNE

REMEDIAL USES AND ACTION

This INVALUABLE REMEDY produces quiet refeshing sleep, relieves pain, calms the system, restores the deranged functions and stimulates healthy action of the excretions of the body without creating any of those unpleasant results attending the use of opium. Old and young may take it at all hours and time when requisite Thousands of persons testify to its marvellous good effects and wonderful cures, while medical men extol its virtues most extensively, using it in great quantities in the following diseases:—

Diseases in which it is found eminently useful—Cholera, Dysentery, Diarrhœa, Cholics, Asthma, Rheumatism, Neuralgia, Whooping Cough, Cramp, Hysteria, &c.

EXTRACTS FROM MEDICAL OPINIONS.

The Right Hon. Earl Russell communicated to the College of Physicians and J. T. Davenport that he had received information to the effect that the only remedy of any service in Cholera was Chlorodyne.—See "Lancet," December 31st, 1864.

From A. Montgomery, Esq., late Inspector of Hospitals, Bombay:—"Cholorodyne is a most valuable remedy in Neuralgia, Asthma, and Dysentery. To it I fairly owe my restoration to health, after 18 months' severe suffering, and when other remedies had failed."

Dr. Lowe, Medical Missionary in India, reports (Dec. 1865) that n nearly every case of Cholera in which Dr. J. Collis Browne's Chlorodyne was administered the patient recovered.

Extract from "Medical Times," January 12th, 1866.—"Chlorodyne is prescribed by scores of orthodox medical practitioners. Of course it would not thus be singularly popular did it not supply a want and fill a place."

Extract from the General Board of Health, London, as to its efficacy in Cholera.—"So strongly are we convinced of the immense value af this remedy that we cannot too forcibly urge the necessity of odopting it in all ceases."

Beware of spurious and dangerous compounds sold as CHLORODYNE, from which frequent fatal results have followed.

See leading article. "Pharmaceutical Journal," August 1st, 1869, which states that Dr. J. Collis Browne was the inventor of Chlorodyne; that it is always right to use his preparation when Chlorodyne is ordered.

CAUTION.—None genuine without the word "Dr. J. Collis Browne" on the Government stamp. Overwhelming medical testimony accompanies each bottle.

The public are further cautioned, a forgery of the Government stamp having come to the knowledge of the Board of Inland Revenue.

SOLE MANUFACTURER—

J. T. DAVENPORT,

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omissonto renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person bv whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

The most important news received this week from the South is to the effect that certain forces under General Kawaji have succeeded in effecting a junction with the Government forces in Kagoshima. The latest telegrams despatched from Kiôto announce that a report had been received from Kawaji that the 5th battalion, after marching for eight *ri* on the Kagoshima-kaido, arrived at Kodan, in the rear of Kagoshima on the 25th instant. From this point an attack was made upon the rear of the Satsuma forces, who were forced to retire. The Imperialists captured a number of batteries, and finally entered Kagoshima. The insurgents, making their way round by mountain passes, made a furious attack on the rear of Kawaji's forces, and were with great difficulty repulsed. The batteries taken from the insurgents were handed over to the 4th Division of the Imperial Army, and Kawaji with the remainder of his men, entered Kagoshima. The Imperialists lost only some thirty-four in killed and wounded, so that it would not appear that any serious attempt was made to prevent them from getting into the town. Troops are posted between Miya-no-jô and Niuki, to prevent the communication from being interrupted.

From private sources we learn that the condition of affairs in Kagoshima is frightful. The insurgents and their families, before they left the city, did all they could to render its occupation as uncomfortable as possible for their assailants, by closing up wells, or poisoning the water in others by throwing into them every kind of filth. The heat is excessive, and there is an almost entire absence of any sanitary precautions. The effects of these combined causes among the troops are epidemic diseases of the worst type, which are killing off and disabling more than many engagements.

Last February we took occasion, on the part of the community, to tender our grateful thanks to Mr. Nomura, the Governor of Kanagawa, for entering into arrangements for ridding the settlement of stray dogs. There was for a short time an absence of the wretched starving curs, which make day painful by the sight of their misery, and night hideous by their howls of suffering. But the carrying out of the order seems recently to have been neglected, and again the settlement is overrun with the wretched, homeless and ownerless animals. To a nervous or tender-hearted person, a ride in a carriage or *jinrikisha* is simply torture. There must recently have been some extraordinary increase and multiplication, for the roads literally swarm with helpless, starving and mangy puppies. The poor little wretches lie about the streets, and in spite of the kind-hearted care usually exercised by the *jinrikisha* men, every hour in the day are heard the cries of some unfortunate that is run over or trodden on, and left to crawl away and die a death of lingering misery. We feel sure that it is only necessary to call the attention of the Governor to the present non-observance of his orders, to induce him at once to take measures for having them strictly carried into effect.

When complaints of hard times and depressed trade are so continuous and universal, it is somewhat a relief to find the council of the Asiatic Society congratulating the members on the prosperity of the institution, and that too, with good reason, judging from the Annual Report which we publish elsewhere. Not only can the Society boast of an unusual accession of members during the past year, but upwards of seventeen papers have been read, all of which were interesting, and many of them of singular excellence, so that in the volume of Transactions which will represent the Society's proceedings for the year past, members will secure a most valuable addition to their libraries. We regret to say that interest in the Society has apparently somewhat fallen off in Yokohama, as shown by the fact that twelve of the seventeen papers of which the Society can boast were read in Tôkiô. This may be accounted for by the fact that the headquarters of the Society are now at Tôkiô, but we trust that during the year to come, Yokohama members may prove, by a succession of well sustained meetings, that they are desirous of according deserved support to the Asiatic Society of Japan.

The following is a portion of the evidence brought out during cross-examination of the plaintiff in the action brought against Captain Colomb of H. M. S. *Audacious*:—

Witness continued:—I used to ply steamers hither and thither in my own name, when the Government gave me several steamers and I formed the Mitsu Bishi Company. I paid nothing for them, and have never been asked to pay cost of them to the Government. Counting large and small I think there are eighteen steamers, but I do not remember. The last one was handed over to me about three years ago. I pay all expenses of passage for vessels in the Government service. The earnings belong to the Mitsu Bishi Co.; speaking accurately, they go into my hand.

This puts us in mind of an anecdote which is related of Handel. The wonderful master had an appetite as colossal as his genius, the healthy body requiring a vast amount of nourishment to support that healthy mind which produced the healthiest music that has ever been given to the world. The solid

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

fare of England was especially suited to his tastes, but it was sometimes difficult for him, at an entertainment, to eat all he wished without laying himself open to the charge of greediness. On one occasion, wishing to give himself a treat after some gigantic effort, he went to a favorite restaurant and ordered dinner for some half dozen persons. When all was prepared he requested it might be served forthwith. "Yes, sir," said the waiter, "but where is the company?" "I am ze company!" replied the Master.

We cannot refrain from making a few remarks on a shameful letter—we are sorry we can use no milder term—that has been written by some one signing himself Monto Sakibo, and has found its way—we feel sure by inadvertency—into the columns of the *Gazette*. The writer assumes to be a Japanese, and under cover of his mask, and pretended ignorance of the English language, sees fit to attack the *Herald* in terms that would not be tolerated for a moment in an English or American writer. The probability is that not knowing how to put together two words of English correctly, he has had recourse to the miserable subterfuge of disguise, and thus takes his unenviable position among the harpy crowd of writers who can be spiteful though not grammatical, venomous though unable to spell. The complaint of this Eurasian correspondent is that the *Herald* publishes and circulates "rumours" relating to the war in the south. The *Gazette* in its issue of last night publishes a spirited letter from "Perspicax" in which the writer points out in severe, though moderate terms, the wrong the *Gazette* did itself, in allowing such communications as the one signed "Monto Sakibo" to appear in its columns. The writer very justly states that all, or nearly all, the accounts of the war in Kiushiu are taken from the native papers, who daily publish the most incredible statements. From these statements, and from such information as he may derive from private sources open to him, the foreign journalist has to pick and choose, and present to his readers what he may consider most reliable, and best borne out by what he sees passing around him. "Rumours" are generally all that he can get, and when they are given for what they are worth, the reader can draw as clear a conclusion as the journalist. "Rumours" acknowleged to be so, are less harmful than falsehoods stated as facts. As we have remarked, there is no doubt that the insertion of the letter in the *Gazette* was an oversight, and in the note attached to the letter of Perspicax it makes an *amende honorable*. On this point we have nothing to say. We only wish to expose one of the dirty tricks which are constantly being played off on conductors of newspapers, and to which, as in the present case, they sometimes fall victims.

We must remind the community that the first of a series of Promenade Concerts, given by the Amateur Dramatic Corps, takes place in the Bluff Gardens on Tuesday evening, if the weather prove favourable. The fine band of the *Atalante* has kindly been placed at the disposal of the Committee by Admiral Véron. The weather is far too hot to admit of either the preparation or performance of any piece at the theatre, while a couple of hours in the evening can scarcely be passed more pleasantly than at these concerts, as those who remember the successful series given two years ago can testify.

There are some men so excellently constituted by nature, that they manage to extract comfort from the most unlikely circumstances. Such are generally found among scientific men, who—to their glory be it said—are always willing to undergo any amount of pains and penalties, if only they can add one tiny ray to the light of knowledge. One would think it as hard to extract consolation from earthquakes as blood from the proverbial stone. Yet witness the following remarks made at the Asiatic Society.

"Mr. Knipping hoped that the authors of the paper would soon be able to execute their proposed instrument and have it tried in earthquakes. Living in Tôkiô, we were on an unusually favourable spot of the Globe, having on an average one earthquake in a week, so that we never need wait very long to try earthquake instruments. In 1876, the Yamato Yashiki instruments recorded 53 shocks."

But alas! a nervous and unscientific public, while they admire, cannot join in Mr. Knipping's enthusiasm.

The half-yearly meeting of the Yokohama Race Club, held at the Grand Hotel yesterday afternoon, was not so well attended as it ought to have been, there being only twenty members present. The Committee submitted to the consideration of the members the new rules they had drawn up, which were accepted with trifling alteration. As one of the Committee said,

"There was no doubt that the new Title Deed, when issued, would be of a very cosmopolitan character, and it was therefore necessary to frame the Rules of the Club accordingly. With this view the Committee had, after mature consideration, brought forward the amendments which would now be submitted to the meeting."

It is a deplorable fact, that notwithstanding the Club have framed a series of rules specially to meet the reform demanded, and that with but very few exceptions every member of this community desires an amalgamation of the Race Club and Racing Association, and the discontinuance of the absurdity of two rival meetings each Spring and Autumn within a few days of each other, such desirable and necessary amalgamation cannot be effected. In explanation of the failure of the Club Committee to bring about the union the Hon. Secretary said:—

A word may be said regarding your Committee's plan. It provides virtually for the dissolution of the two old societies, and for their formation into a new one, untrammelled by any rules, and it adopts the principle that all members of the foreign community are free to use the the course under the Club Regulations. On the other hand, the Association makes it a *sine quâ non* that the new Club should adopt their Rules, which is tantamount to the absorption of our body into theirs under the disguise of a new name. They provided also for the admission of Japanese to the Club, to which your Committee object *in toto*, the course having been granted by the Japanese Government for the exclusive use of the foreign community.

Rightly considered, there should be no insuperable difficulty in doing away with the anomaly of a divided racing community in a small place like this, but if the elements of a private quarrel are imported into Club matters, and narrow views usurp the broad and liberal ones which should govern a Racing Club, we are afraid that it will not only be hard to heal the unhappy division which at present exists, but that the breach will become wider still, to the detriment of all good sport.

We cannot, even at this late hour, allow the article on "Public Men and the Press" in this evening's *Gazette* to pass without stating our warmest concurrence in all that is therein said with regard to the uprightness and ability with which General Van Buren has always filled the position of American Consul-General at this port, and the universal high esteem in which he is held by members of every nationality. No man has ever striven more earnestly than he to deserve well of this community, to which he has rendered many a good service. It is not his fault that the filthy Honmura dens have not before this been cleared out, while it is certainly due to him that the loafers who come under his jurisdiction have had their dangerous powers rendered as small as possible. Were we to judge of the tone of the American press by the one miserable example that unfortunately exists among us, we could well understand how any kind of mis-representation or mendacity could find its way to publication, but it is hard to imagine how decent journals can prostitute their columns to such outrageous libels and scandals as the *Gazette* points out, and from which, in spite of their falsity, General Van Buren must have suffered keenly. For the more honest in motive the man, the more is he pained by such shameless accusations.

A reception is to be given by Admiral Reynolds, Captain Young, and Officers of the U.S. Flagship *Tennessee* on the 4th July, in commemoration of Independence Day, and a scratch regatta has also been arranged to take place during the day.

Some of our readers may remember the celebrated political squib that went far to make the reputation of the then young artist, George Cruikshank;—we are speaking of between fifty and sixty years ago. It must be borne in mind that it was penned at a time when a violent effort was being made on the part of the Government to muzzle a press that was attacking and satirising its vicious courses; an effort, which thanks to the fearlessness and ability of a somewhat obscure, but upright and incorruptible man, was utterly defeated. The "Thing" referred to, which the "Public Informer" would put down, is the press. The meaning is of course greatly intensified by Mr. Cruikshank's admirable illustrations.

"These are the people all tattered and torn,
Who curse the day wherein they were born,
On account of taxation, too great to be borne,
And pray for relief from night till morn;
Who in vain petition in every form.
Who, peaceably meeting to ask for Reform,
Were sabred by Yeomanry cavalry, who,
Were thanked by the man all shaven and shorn,
All covered with orders and all forlorn—
* * * * *
Who took to his counsels in evil hour
The friends to the Reasons of Lawless power;
That back the Public Informer—Who
Would put down the Thing that, in spite of new Acts
And attempts to restrain it by soldiers or tax,
Will poison the vermin that plunder the wealth
That lay in the House that Jack built."

Its application under the present circumstances will be plain to everyone.

We publish elsewhere a copy of the *London Gazette* Extraordinary, containing Her Majesty's Proclamation of Neutrality in the war between Turkey and Russia.

The *Chôya Shimbun* states that, from the 1st proximo, the whole of the accountant's work of the Supreme Court (*Daishin In*) will be transferred to the Department of Justice.

From the *Nichi Nichi Shimbun* we learn that H. E. Mori Arinori, will shortly return to Peking to resume his duties as Japanese Minister at that Court.

From the "Japan Mail Daily Advertiser."

Monday, 25th.

Among the items of Australian news published in the *Gazette* of Saturday was the following:—

The barque *Paimema*, bound from China to Melbourne, with rice, put in here to-day, having struck on Indispensable Reef, to the northward. The crew were kept pumping about twenty-eight days.

This is probably meant for the British barque *Parmenio*, despatched from Kobe on the 16th March last by Messrs. Walsh Hall & Co., with a cargo of rice for Melbourne.

From the *Akébono Shimbun*.

A telegram from Kawaji at Midzumata despatched at 7 a.m. on the 22nd instant announces that the town of Akune was taken by the Imperialists, after which they advanced one *ri* beyond the town. Two rebels were captured, about ten killed, and two large guns and a number of small-arms taken.

From the *Chôya Shimbun*.

The rebels at Kagoshima are surrounding the Imperialists in two bodies.

Those on the western side have their head-quarters at Ishiki, their lines extending toward Tagami. These men, in number about 1,200, are those who retreated from Higo, and about eight hundred *gôshi* (lower class of *samurai*) are also with them. The other body have their head-quarters at Yoshino. Their number is unknown, but it is thought to be greater than those at Ishiki. Their commander is supposed to be Kirino.

A telegram from Lieut. General Kawaji, dispatched at 11 p.m. on the 22nd instant, announces that the Imperialists took possession of Miya-no-jo on the 21st instant. Kawaji intends to remove his camp to Miya-no-jo on the 23rd instant.

A telegram despatched from Osaka at 10.25 a.m. on the 23rd instant says:—The Imperialists intended to make an attack upon Shigeoka in Bungo on the 21st instant, but it was discovered that the rebels had already commenced to retreat on the night of the 20th instant. Thus the Imperialists quietly took possession of the evacuated town of Shigeoka. The rebels retreated toward Nobeoka and Kumada.

From the *Osaka Nippo*.

Oyama Tsunayoshi, ex-Governor of Kagoshima *ken*, is now in gaol at Nagasaki.

Tuesday, 26th.

The M. M. steamer *Volga*, with French mails on board to the 20th May, will leave Hongkong to-day at noon.

A Norwegian named George Bronson was charged yesterday morning before his Consul, W. C. van Oordt, Esq., with creating a disturbance in a house belonging to John Roberts at No. 188. Roberts said Bronson had come in at breakfast time and demanded money for drinks, and being refused, capsized the breakfast table and struck him over the head with a chair. Bronson was ordered to be imprisoned for twenty-four hours.

Saigo is said to be in the neighbourhood of Miyako-no-jô, in Hiuga, with three regiments of troops.

From the *Akébono Shimbun*.

A person just arrived from Shonai says, that when the rebels of Kiushiu were carrying all before them the *samurai* of Shonai showed a disposition to rebel, but since news has constantly been received that the Satsuma men were being worsted, all agitation has ceased to exist. The Government has bought up about ten thousand *yen* worth of fire arms that were in possession of the *samurai* of this province and sent them to the Sendai garrison.

Lieut. General Yamada has become famous for his bravery, and is considered to be the Kirino of the Imperialists.

From the *Nichi Nichi Shimbun*.

The report that some two or three hundred of the rebels of Satsuma and Higo had crossed over into Shikoku is false.

From the *Hôchi Shimbun*.

The remainder of the Hagi rebels are still hiding themselves on the borders of the provinces of Chôshiu and Suwo. The latter province is well guarded by police and *shizoku* against any attack which these rebels might project.

From the *Chôya Shimbun*.

The following police recruits arrived at Tôkiô on the 23rd instant:—From Yamagata *ken* 31; from Shiga *ken* 100; from Miyagi *ken* 43; from Miye *ken* 16. Besides these 20 men have been enrolled within the district of the Tôkiô *Fu*.

According to the *Osaka Nippo*, Iwamura, the recently appointed Governor of Kagoshima *ken*, addressed a letter to Saigo Takamori last month, pointing out that the ability of the latter to successfully oppose the Imperial forces has now ceased, and although he (Saigo) may continue to attract a few followers to his standard, further persistence in rebellion can only have the effect of bringing misery on the people of Kiushiu. The Governor goes on to say that it can surely afford no pleasure to Saigo to witness the misery of the people, and therefore urges him to repent of the errors of his ways, and without further delay surrender himself, on behalf of his followers, to the Imperialists. The Governor adds that such a course of action on Saigo's part will make amends, to some extent, for his crime in rebelling against the Imperial authority, and concludes by stating that he has been induced to write in this way to Saigo solely on account of his commiseration for the wretched people whom he has lately been appointed to govern, and therefore hopes Saigo will give his letter due consideration.

The *Osaka Nippo* does not say if Saigo thought fit to send any reply to Iwamura.

Wednesday, 27th.

The second decision in the suits C. Braun *v.* Kojiro Shokitsu, namely, that in reference to the 9 lbs. Shirtings contract, will be delivered, we believe, on Monday morning in the Kanagawa Saibansho, which has lately been removed to the old French Legation, Benten.

The P. M. Co.'s steamer *Alaska* left for San Francisco this morning, taking 39 bales of Silk, and the following cargo of Tea:—

From the *Nichi Nichi Shimbun.*

As stated already, Fujiyoshi and Muramatsu of Tosa were arrested and sent to Kiôto for carrying on secret communication with the rebels. They were tried on the 18th and the 19th instant. Having confessed that Kataoka Kenkichi (the presenter of the memorial on behalf of the *Risshisha*) had lent them a sum of one hundred *yen* for carrying out their designs, Kataoka has likewise been arrested.

The *Risshisha* is said to have printed one thousand volumes of the memorial presented to the Government, and sent them to various parties.

Yesterday 55 police recruits arrived at Tôkiô from Yamagata *ken*, and 63 from Fukushima *ken*, all of whom are intended for duty at the capital.

From the *Chôya Shimbun.*

A telegram, despatched from Owaka *ken* at 0.25 p.m. on the 23rd instant announces that the rebels who were at Shigeoka fled towards Ishidzuka and Hiuga on the 20th instant. The Imperialists in Bungo established their head-quarters at Shigeoka on the 21st instant. Peace has now been restored to this province.

A telegram sent by our reporter at Kumamoto at 3.20 p.m. on the 23rd instant, announces that the rebels have retreated from Shigeoka. The Imperialists are now preparing for an attack upon Nobeoka.

A telegram from Kawaji, who is at Miya-no-jô, despatched at 1.57 p.m. on the 25th instant, announces that on the morning of the 24th instant the Imperialists succeeded in taking possession of Ikiri and Sanodani.

Another body of Imperialists have taken Hainoyama. These places are but five and a half *ri* from Kagoshima, whence the town is easily discernible. Miya-no-jô is a very inconvenient place to provision, but 1,800 bags of the rebels' rice were captured at that place.

One regiment of troops of the Tôkiô garrison stationed at Osaka were sent to Iyo, in Shikoku, on the 20th instant.

One hundred policemen, who were enlisted in Shiga *ken*, will also be sent to Shikoku.

A force of eight hundred men has been enrolled at Fukuyama and Ezashi in Yesso, and will shortly be sent to Kiushiu under the command of Kuroda.

Thursday, 28th.

It is proposed by the Amateur Dramatic Corps to give a series of Promenade Concerts in the Bluff Gardens during the summer months, the first of which will take place early next week. The fine band of the *Atalante* has been kindly lent for the occasion by Admiral Véron, and there will be glee and chorus singing by members of the Corps. Fuller particulars will be announced as soon as possible. It is to be hoped that the success which attended similar entertainments two years ago will be repeated this year, not only to the enjoyment of the public, but also to the benefit of funds of the Dramatic Corps.

H. E. Kuroda left by the *Hiroshima Maru* yesterday for Kobe, *en route* for Kiôto.

Yesterday, a seaman on board the British barque *Glammis* lying at Shinagawa, while occupied in cleaning or painting the ship's side, fell from the stage on which he was working and was drowned. The deceased never rose to the surface after he fell into the water.

From the *Hôchi Shimbun.*

The rumours that Itagaki had been summoned by order of the Emperor to Kiôto, and that Kataoka Kenkichi had been arrested in Kiôto are false, as both of them are now in Tosa.

The members of the *Risshisha* are at present in an excited state of mind, and are only restrained by the efforts of Itagaki, Kataoka and others. Should the Government send troops to the province and threaten the Society, a rising will probably take place.

There is a party in Tosa called the *Kinnô-gumi* (Band of Loyalists) numbering about 2,000, who held a meeting a few days ago at a place called Kuma, one *ri* from Kôchi.

From the *Akebono Shimbun.*

Since the fall of Hitoyoshi the rebels seem to have lost much of their spirit, and many are surrendering. There are, it is said, upwards of two thousand men who have deserted from the rebel army.

One Ebihara, who surrendered himself, confessed that the rebel commander Fuchibé was severely wounded on the 30th of May, and that he had since died from the effects of his wound.

Kirino is still somewhere on the borders of Bungo.

From the *Nichi Nichi Shimbun.*

A general reform of the various public departments took place in January last, the Department of Imperial Household alone being excepted as the Mikado was absent. As this absence still continues and the time for His Majesty's return is indefinite, it has been ordered the projected reform in this Department shall be made without further delay.

From the *Chôya Shimbun.*

A telegram, despatched from Kawaji at Miya-no-jô at 1.35 p.m. on the 26th instant, announces that the Imperial camp at Miya-no-jô was removed to Iriki on the 25th instant.

Three thousand Snider rifles have been purchased from certain German merchants at the headquarters of the Imperialists.

Friday, 29th.

The *Mainichi Shimbun* of 28th instant contains the following:—"Although a notification was issued by the Commander-in-Chief of the Imperial Forces, to the effect that all those who had been compelled, against their will, to join the insurgents, would be pardoned provided they surrendered, it is stated the Fukuoka rebels who laid down their arms have been punished; still more, that the Government authorities have gone so far as to subject certain of the prisoners to torture while undergoing examination."

The notification referred to ran as follows:—"Were any among them (the insurgents) to repent their opposition to the Imperial authority, and submit themselves to the same they would be pardoned. So all such had better surrender themselves without losing a moment, and free themselves from the odium of rebellion." If after this, as the *Mainichi* states, the Government punishes those, who, believing its promises, have given themselves up, it is guilty of an act that is not likely to bear good fruit. It is shocking to think that the poor wretches referred to are not only the victims of bad faith, but have also had to undergo torture as well during examination. If the statement made by the *Mainichi* is reliable at all, no excuse can be made this time as to the proper translation of the term used, which is "*gô-mon*," meaning "examination by torture," and quite different to the term "*Kikumon semetsuke*" which the editor of the *Nichi Nichi Shimbun* was at such trouble to explain in his letter to the *Herald* of the 11th instant. The *Mainichi* makes some sarcastic remarks as to the necessity of torturing those under examination, and suggests that it is owing to the anxiety of the Government to ascertain beyond doubt whether the poor wretches joined the rebellion under compulsion or of their own free will.

From the *Hôchi Shimbun.*

The rebels are now collecting a force of three thousand men in Hiuga.

The thermometer in Kagoshima now rises to ninety-five degrees at noon.

The number of coolies in the employ of the Imperial Army in Kiushiu is upwards of thirty-seven thousand, four thousand of whom come from Chôshiu.

On the 16th of this month all the troops hitherto at Yashiro were marched to Hitoyoshi. Thus the Imperialists are gradually moving southwards.

From the *Nichi Nichi Shimbun.*

Upwards of 995 police recruits arrived in Tôkiô from the 17th to the 23rd instant.

From the *Akebono Shimbun.*

The twelve hundred policemen who embarked for Kiôto in the *Amakusa Maru* under the command of Inspector Arima, have been ordered to proceed to Uwajima in Shikoku. Quiet prevails in Uwajima, but the coasts of Tosa are strongly guarded, and it therefore seems as though peace does not reign in Tosa.

Saturday, 30th.

From the *Hôchi Shimbun.*

On the 22nd a body of troops advanced from Shigeoka and attacked the rebel intrenchments at Isoyama. On the 24th the rebels were driven out of Takemura. On the 25th a battalion of General Kawaji's troops reached Kagoshima. The force of the rebels seems exhausted here, and the police force arrived safely. On the 26th the police of this garrison, two battalions strong, were sent to Kawaji at Miyano-jô.

On the 26th it was intended to attack Nobeoka, when we had got as far as Okusu, and Miyanudzu the state of the roads owing

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

to the heavy rains prevented our advancing as we hoped. The rebels are not as sparing of their ammunition as heretofore.

A telegram despatched from Kokura at 9 p.m. on the 27th instant announces that after the rebels in Bungo were defeated, the Imperialists advanced their camp to Shigeoka, and were engaged in closely watching the frontier. But on the 24th instant at 6 p.m. a determined attack was made by the rebels who advanced by various roads. The Imperialists were much surprised and at first were hard pushed, but by six p.m. they succeeded in repulsing the rebels. Many were killed and wounded on both sides.

From the *Chôya Shimbun*.

On account of a general reform taking place, all the officials of the Judicial Department were dismissed on the 28th instant. The *Sônin* (officials appointed by the *Daijokuan*) were immediately re-appointed, but the *Hannin* (these appointed by the Ministers) are to be only re-appointed gradually.

From the *Akébono Shimbun*.

H. E. Okubo was present at the time of the examination of Fujiyoshi and Muramatsu of Tosa, who were recently arrested.

The following are the shipments of Tea per O. & O.S. S. *Belgic*, which sailed yesterday morning:—

JOURNALISTIC MISREPRESENTATION.

IT is rarely that we allow ourselves to waste our own space or the time of our readers in taking any notice of the scurrilous attacks on this journal with which, in the absence of any news or information of the least value or importance about Japanese affairs, the *Tokio Times* is wont to pad out its meagre columns. We have hitherto had sufficient charity to believe that in delivering itself of its weekly burden of abuse against the Yokohama press, it was endeavouring to justify the fact of its own existence by adopting the device of the lawyer who, conscious of the hopelessness of the case he is committed to, is reduced to the pitiable expedient of abusing the counsel for the other side. And indeed, for ought we know or care, it may still be true that its loud-toned denunciations of other foreign journals in this country may have no deeper basis of hostility than the feeling of envious despair produced by the contemplation of its own approaching dissolution. But there are limits even to the contemptuous silence which journals, as individuals, may maintain, under persistent vilification of their motives and unscrupulous misrepresentation of their opinions and expressions. These limits seem to be overstepped in the number of the above-named journal which appeared this morning, charging this journal with making a wanton attack on the Japanese Post Office; with seeking to throw discredit on that promising department of the Government; with positive mis-statements; and with suppressing postal notifications which duly appeared in other papers. The article winds up with an insinuation of interested designs as underlying the alleged hostility to the Japanese Post Office, and with one of those wholesale aspersions of the motives and conduct of certain of the foreign authorities in this country without which no number of that trucuculent print would be complete.

The whole matter admits of very simple statement. Japan, we rejoice to say, has been admitted to the international postal union. Certain formalities and matters of detail have to be gone through before countries beyond the seas, joining the union, can be put in full enjoyment of all the advantages attaching to its membership. On the 20th instant a notice was issued from the Japanese Post Office which, in view of the existing rules of the union, necessarily implied that those formalities and arrangements had been made. Having excellent opportunities for informing ourselves as to incorrectness of the implication in question, we characterized the Post-master's notice as either premature or altogether out of order. This position, the truth of which we adhere to, remains absolutely unshaken by the storm of misrepresentation and abuse with which it has been sought to assail it. The merits of the case will appear much more clearly from a detailed statement of particulars.

The Post-master's notice of the 20th June stated that mails would be received at the Japanese post office for despatch by steamers of the P. & O. S. N. Co. to all countries of Europe and elsewhere, beyond Alexandria, and by the steamers of the Messageries Maritimes Co. to all countries to which mails may be delivered by the French service, or by the combined service of France and other countries. Now on seeing this notice, we felt sure that the consent of the British Postmaster General, or some other competent authority, was necessary before foreign mails

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

could be carried in British packets, and we were not aware that such consent had yet been given. That on both these points we were perfectly in the right is amply proved by the letter of the Company's Agent which we publish in another column, and by the following clause in the contract, for the conveyance of British mails, subsisting between the Company and the British Government.

"The Company shall not, nor shall any of the Masters "of any of the vessels employed or to be employed under "this agreement, receive or permit to be received on board "any of the vessels employed under this agreement any "letters for conveyance other than those duly in charge "of the said naval officer or other person authorized to "have charge of the said mails, or which are or may be "privileged by law, nor any mails for conveyance on be-"half of any colony or foreign country without the consent "of the Postmaster General, and in case of any such de-"fault respectively the Company shall be liable to be "proceeded against for breach of Agreement."

In the face of the fact, then, that the British Postmaster had received no authorization to accept such mails, and that the Company's agent protested against their being sent on board without such authorization, we were not only justified, but in duty bound, to caution the public against the possible inconvenience and loss that might have been occasioned by a too hasty reliance on the Japanese Postmaster's notification.

Indeed had we in the slightest degree been animated by any such feeling of hostility to the Japanese Post Office as has been so wantonly and groundlessly charged against us, we might have used much stronger terms and have animadverted on the questionable propriety of the Japanese Postmaster's action in notifying that mails could be made up at his office for transmission by the British Company's packets, without having distinctly ascertained whatever the British authorities acquiesced in such a notice. In the absence of any information explanatory of such a breach of international courtesy, we would even have been justified in expressing doubt as to the fact of the notice in question having been issued with the sanction of the Japanese Postmaster General. And it is only in consequence of the provocation so recklessly flung at us that we even now permit ourselves to remark that it would have been easy, as it was becoming, for the Japanes Postal authorities to have conferred with the British Representative, or even in the first instance with the British Consul before issuing so precipitate a notice.

So questionable do we consider the expedient to which the Japanese Postal authorities have thought proper to resort in order to dispense with the requisite authorization, that we entertain the strongest doubts even yet as to its ultimate success. If mails made up at the Japanese Post Office are to be conveyed to Europe by the British packets, as we confidently anticipate they will be, the direct and straightforward course is surely that they should be recognized and received on board at once in their proper character and not as it were smuggled on board under the guise of being French Mails. If a direct application in this sense were made to the proper quarter, it would, we venture to assert, be found that the enmity to the Japanese Post Office so virulently declaimed against, has no more substantial existence than is to be discovered in the diseased imagination of an ill-informed and vituperative journalist.

As a specimen of the accuracy displayed by a journal whose chief occupation, were it not that of unscrupulously vilifying the motives of its contemporaries, would seem to be to gloat over any minor inaccuracies into which they may at any time inadvertently fall, we may take the following sentence. Speaking of this journal it says :—

"In addition to its positive mis-statements, already "quoted, it further essayed to cast discredit upon the "postal announcements by suppressing notifications re-"specting the outgoing mail of Tuesday which duly "appeared in other papers."

The alleged fact and the motive ascribed to it stand on exactly the same footing as regards credibility. They are simply and gratuitously untrue. So far from suppressing the notification referred to, it was prominently published in the usual form at the very head of the Postal notices in our *Advertiser* issue of that morning, as a reference would have shown, and also in the daily despatch slip by which we are wont to give all possible publicity to the movements of the mails.

As a rule we prefer leaving misrepresentations of this character to the refutation of their own inherent falsity and of the course of subsequent events. If we have departed from that rule on the present occasion it has not been because the stereotyped aspersions are more destitute of foundation or less characterized by decency than usual. Our object has been for once to expose the perversity of judgement and the recklessness of assertion habitually displayed by the pharisaical print whose weekly task it is to poison, so far as its feeble powers and limited circulation will permit, the minds of the people of this country against external intercourse, by unceasing vilification of the foreign representatives, the foreign communities, and the foreign press. So long as it confines its misguided efforts to the congenial work of foisting on the Japanese public the antiquated nostrums of protection, it may be right that it should be left alone in undisturbed obscurity ; but when its grotesque performances in other fields of misrepresentation invite so easy an exposure as the present, it would seem a pity to have allowed the opportunity to pass.

SPIRIT OF THE JAPANESE PRESS.

A sly Hint.

(Akébono Shimbun.)

The local officials throughout the country seem strangely apathetic, and disinclined to take any steps that might tend to the future improvement of the Administration. They appear to think that their duties consist only in receiving orders from the Central Government, entirely ignoring those they owe to the people in placing them on the right road to progress. The officials of one *ken* contend with those of another in carrying out what they take to be "civilization," and it is on this matter that we wish to say a few words.

No one can dispute that it is quite right for the officials of the various *ken* to receive orders from the Central Government, but they ought at the same time to direct all their energies to promoting what shall be most beneficial to the prosperity of the *ken* which they govern and of the nation at large Let us suppose, for instance, that a measure had been introduced in a *ken* which is extremely advantageous to the well-being of the people. The officials of neighbouring *ken*, having received no orders from the Central Government, take no means to have it carried out in their jurisdictions. Now would this be right conduct on their part? Yet such is a fair sample of their inaction.

The public may blame us for speaking in this way, calling us rash, and saying that we have no right to call our learned officials inactive, and the like. We know that it is not the custom of the press, at the present time, to speak thus openly, but in discussing such matters, there is no alternative but to be perfectly

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

candid, so that our meaning may be made clear to our readers. We could, if we wished, say a great deal more about the wrong doings of local authorities during several years past, but at the present time we do not care to disclose them.

In several *ken* the people and the authorities, by their joint exertions, have established *ken* assemblies, or meetings of members elected by the people, to discuss the affairs of the *ken*. Yet in the very next *ken*, the officials, though they see how excellently such institutions work, in no way bestir themselves, but let the affairs of their *ken* run on in its old condition.

Since first the idea of rights and liberties for the people was brought into this country, their minds have changed and their views are now very different to what they were in former days. It is only within the last few years that "rights and liberties" have ever been talked of by any other class than the literati, or found atterance in the newspapers. Now the idea is found everywhere among the people. The power that it is exercising over the affairs of the country, is shown in the present civil war. There are numbers of men in the country, who though discontented, have no treasonable intentions, and who hold that Saigo's conduct is wrong, as his attitude is not that which a subject should assume towards a ruler. Moreover they believe that the measures he has taken are antagonistic to the welfare of the people. Certain discontented *samurai* of one of the former *Han* are now urging upon the Government to grant to the people their "rights and liberties." Although the obtaining of these is not the real object of their demand, yet it proves that they are aware how great a hold the idea of popular rights has gained upon the mind of the people, and thus use it a pretext to gain their own ends. Not yet do the people hold their "rights and liberties" in their own hands, but for this the *ken* officials are responsible, for not having instituted *ken* assemblies when the time for doing so arrived. As an excuse for their inactivity, they may, however, allege that the Central Government has not yet established a Representative Assembly to improve its administration.

ON PRIMITIVE MUSIC; ESPECIALLY THAT OF JAPAN.

By the Revd. Dr. SYLE.

Read before the Asiatic Society of Japan, on the 13th June, 1877.

Among the records of Antiquity, we read of such wonderful effects ascribed to the power of music, that one is naturally led to ask, What was the character of that early system—if system it was—which possessed such potency? Was it Vocal only? or, Instrumental? or, both? Did it consist of Melody alone? or, had it also Harmony? Had it a notation, so that it could be read and learned by book? or, was it entirely traditional—learned by ear; remembered as nearly as might be; and transmitted continuously in the same manner? These questions present so large a field of enquiry that we cannot attempt, in the present paper, to do more than sketch the outline of a method whereby our study of the subject may be conducted with more prospect of valuable results than any heretofore attained.

What we should aim at is the ascertainment, if possible, of that style of music which prevailed among the early tribes of mankind, or the supposition of their having had a common origin. Whatever kind of music they had prior to, and at the time of, their dispersion—that they must have carried with them in their several wanderings; and if this music is still to be found anywhere, it must be among the tribes which we call aboriginal—those vestiges of the earliest migrations, prior to which we find no traces of anything that can be called historic. Now, where shall we look for these? Where, but in the extremities of the earth? In those remote and inaccessible regions to which the primitive peoples have been driven by the successive migrations of mankind, all issuing from Central Asia, and spreading themselves, wave after wave, outward in all directions.

Accordingly it is in such localities as North Wales, the Hebrides, the West of Ireland, the Basque Provinces, Finland, Southern Arabia, Ceylon, Siam and South-western China, Corea and Japan, that we should expect to find what we are seeking for—if, indeed it is to be found anywhere, after the lapse of so many ages, and in the midst of so great a diversity of circumstances.

Our present amount of musical knowledge concerning the earliest occupants of the African and American continents does not warrant the attempt to include them in the comparison we propose to make; though it may be remarked, in passing, that whatever facts we have observed, or gathered, concerning the music of the Red Indians of North America, of the Pacific Islanders, and of the African tribes, goes to confirm the conclusions arrived at by considering the data furnished by the better known countries of Asia and Europe which have been already mentioned.

One of those conclusions is that in the primitive music of all those far removed and widely differing people there is formed a marked peculiarity arising from the use of only six tones in the compass of what we call the octave. In the Chinese, Siamese, Hindoo and Arabic Music there is found this characteristic as well as in the Scotch, Irish, Welsh, Basque and Finnish. A partial exception (to be explained hereafter) should be made in the case of *Northern* China, with which Corea* and Japan are to be classed as having derived their music from that region.

The explanation of this peculiarity would involve us in a discussion of the nature and derivation of the gamut. In what sense, and on what ground is our diatonic scale to be considered *natural?* Is it to be gathered from the song of birds? Not easily. Is it deduced from the vibrations of strings, divided by regular measurements? In part; not altogether. Does it arise from the harmonics produced by the striking of a bell? Not with any directness. Fuller answers to these questions are heard from Germany, Italy and England in the Treatises of Helmholtz, Baserna and Sir Frederick Gore-Ouseley; but the matter has been of late thoroughly re-opened by some who claim that our present scale is all wrong, and that we shall never have music worth cultivating until fourteen intervals, instead of twelve, have room made for them in our accustomed octave: this is to furnish the true music of the Future. We are engaged, however, at the present time, is considering the music of the Past; and one of the difficulties we find in appreciating it, and in making a comparison between specimens gathered from different places, is that it refuses to express exactly in our notation, a scale performed accurately on any of our keyed instruments. It is owing to this fact, perhaps, that much discussion has arisen as to whether Oriental music is in the major or the minor mode; whereas (if our suggestion is correct) it is in neither; but in a kind of half-minor, having a peculiar distribution of the semi-tones; or, more correctly speaking, having intervals which are neither full tones nor true half-tones. It may seem presumptuous to hazard this statement, after such an authority as Fétis (Histoire Générale de la musique) has said—"La musique Chinoise n'a qu'un seul mode, lequel est majeur," (Vol. I. p. 60): and after another well-esteemed authority, Dr. Rimbault, has written—"Mr. Macgregor's *oriental music* has helped to confirm our opinion that the *major* scale is more common in ancient music than the *minor*. The universally prevalent opinion of the minor scale being the basis of the music of ancient nations is certainly erroneous." (Art in *Leisure Hour* for April, 1875, p. 214). We adhere, however, to our impression, and would venture the following explanation. When an amateur on hearing an oriental melody attempts to write it down, what notation does he use? Certainly the current European notation, making it represent *as nearly as possible* the sounds that fall upon his ear, though he is distinctly conscious that there is something out of tune somewhere. He notes down, we will suppose, an air in E flat (the most convenient key for the purpose) and he feels that his D and G are both of them a trifle too sharp, but not enough to justify him in writing D flat and G flat; so he just goes on and writes D natural and G natural, and when he has written it so, so he plays it, and he says to himself that he has "caught the tune *pretty nearly*." Of course, what is thus written in the major mode, will reappear in the major mode when played; and the musical *savant* in Europe who studies anxiously over these

* The performances of the band of the Corean Ambassador, on his visit to Yedo in June 1876, sufficed to establish the identity of the Corean with the Chinese Music, while it also shewed the skill and energy of the performers. They were good specimens of their class.

transcriptions will be led to such conclusions as those above expressed. By falling back upon the Pythagorean scale (as suggested in the text) a much nearer approximation would be made, in my opinion. Even the Gregorian Tones (so-called) we suppose to be virtually misrepresented by their being written according to our present scale. And hence arises one of the great drawbacks to the effectiveness of all this music: it lacks the vigor and sprightliness and majesty of our major mode; it lacks also the wailing tenderness and plaintive sadness of our minor mode; and it loses the great effects which arise from the alternations of the two. Add to this, that all is in common time, that no triple measures are used, and the well-known monotonous effect is accounted for. In point of effectiveness, therefore, it will bear no comparison with our modern music, from which it is distinguished also by the absence of harmony, except in the very occasional use of a fundamental note on certain stringed instruments, and of some meagre harmonies—a third, a more frequently a bad fourth on the *Sung* (Chinese) or *Sho* (Japanese). On one occasion I heard, at Shanghai, two performers simultaneously carry through the same air on two guitars, tuned at a distance of a fourth apart—one we will say on C and the other on F. The effect was bad, but not *so* bad as it would have been on one of our instruments, because of the difference of scale. These three instruments here exhibited—a Wood-harmonican, a Series of Steel Bars and a Set of Tuning Reeds enclosed in a small cylinder—will shew the diversity of scale, and the difficulty of determining what the Japanese gamut may be, and also whether or not they have more scales than one.

My obliging friend, the Rev. Dr. Veeder, has taken the pains of testing by the Siren what are the ratios of vibration between the twelve notes of a standard series of bamboo pipes, kindly lent me by Mr. Machida, one of the Members of our Society, and believed to be of great antiquity (some 500 years old) and to represent the Japanese chromatic scale.

I should despair of making the delicate difference of these scales intelligible by any explanations of my own on this occasion, and must therefore leave them for private study when printed; meanwhile tendering to Dr. Veeder our best thanks on behalf of all lovers of the Science of Harmony, and giving to him and his assistants the entire credit of the great pains they have taken in verifying the vibrations and tabulating the interesting results.

We have to acknowledge another contribution from two Japanese students of the Imperial College of Engineering, under the instruction of Professor Ayrton. To our great regret, it is only a fragment, and owing to the continued illness of one of the students, will probably remain so; but the results, so far as reached, are both interesting and valuable: interesting as the work of a native of one of those lands where Primitive Music still lingers; and valuable, as testifying to the prevalence of the six-tone scale, and to the extreme difficulty of certifying ourselves of the data upon which satisfactory conclusions can be based.

As in the case of Dr. Veeder's contribution, so with this—the entire credit for the love-labor bestowed on the subject must be given to Professor Ayrton and his promising pupils.

It will be observed that among the scales compared in Dr. Veeder's Tables is the Pythagorean—and this, we are inclined to believe, is the magic key that unlocks our difficulty. Who so likely to give us the *facts* on such a subject as the Sage of Crotona—a man who thought so much and travelled so far and observed so carefully; and who, moreover, esteemed this particular subject so highly that his ideas of astronomy were attuned to the Music of the Spheres, and his principles of Government were arranged as elements of Harmony. The ideas of Confucius on this subject and his tribute to the importance and the profound Mysteriousness of Music, furnish an interesting parallel, and are worthy of more than a passing notice. Speaking of the three strings of an ancient form of the *King* (a kind of guitar) he named one The Ruler, one The Minister and one The People, and added that whoever could harmonize these three could rule the Empire.

It ought not to be forgotten, also, that Plato in his Republic makes Socrates sum up all forms of culture in these two—Music and Gymnastics—in which case, of course, *Music* includes all that belongs to the Sacred Nine; but it is significant that they should all be named *Muses*. His cotemporary Heraclitus says of him that he had made more inquiries than any other man; and that he had acquired wisdom, knowledge and mischievous refinement—which last remark is apt to be repeated in our own day concerning those who occupy themselves with measuring musical vibrations, and giving to their value a logarithmic expression.

Be that as it may; a thinker who was the disciple of Thales and Anaximander, and whose system was recognized as "scientific doctrine" by Aristotle—such a one was not likely to give us anything, but what he had learned with care and verified with patience; and therefore it is that we consider he has given us the true primitive musical scale; the one used at first unconsciously perhaps; but, as soon as it became the subject of mathematical scrutiny, accepted and adhered to by the cultured musicians of classic times; and now corroborated, or rather exemplified by what is still found among those remote and widely scattered tribes of mankind who have retained what is most primitive in the world of music.

A few remarks must suffice for the application of our theory to the case of Japan. Corea might be added, and both be referred to China, whence, without any question, their musical system was derived. Among the Chinese then we find the old six-tone scale, as above indicated; but we find *also* an eight-tone scale; and the former is called the Southern, while the latter bears the name of Northern—which is the very reverse of what we should have expected. In the ruder regions of the North we should be apt to look for the simpler forms of song, while to the softer South we might expect more perfect and more finished melodies: but we find this order reversed.

And here we reach the point where our subject touches Ethnology, and contributes (as Fétis has well shewn) to solve some of its problems, especially those connected with the distribution of the Aryan and Turanian races. The apparently anomalous case of China will receive some elucidation, if we bear in mind that the point at which a conquering race has entered a country may almost always be determined by taking the region into which the aborigines have been driven and drawing from it, as from a base, a perpendicular in the opposite direction—that will indicate the line of progress of the invading hordes. A single glance at the map will show a line drawn from Wales will point to Kent; one from the Aino country to Kiushiu, etc., etc. Now in the case of China, the *Miaou-tse*—the true aborigines—are found in the extreme southern parts of Kwang-tong and Kwang-si, especially the latter; and accordingly, it is here that the simpler, ruder, six-tone scale of music is found, while the invading Mongols brought with them the more complete gamut, which fills up the two gaps and gives us an eight-tone scale,—a true octave. Arguing from the nature of the case, we should expect that this latter would not supercede what had already overspread the country, but would be found there, as an addition—an hypothesis which quite corresponds with the facts of the case. And now we must content ourselves on the present occasion, with alluding to only one more topic—namely, the early *subjects* of music; its close connection with the dance at festivities, and with wailing and processions of mourners at funeral ceremonies.

With regard to the former, no one can watch the sports of children without seeing that in the infancy of our race, the exuberance of animal spirits must have found vent in the song-dance; and also (to take the opposite extreme) no one, with the habit of reflecting on such subjects, can have tried to analyze the movements of a modern ball-room (where conventionalism and artificiality reach their highest point) without seeing the vestiges of what was once the war-dance and the love-chase: this is the only theory we know which makes intelligible the mazy movements of the reel, the waltz, the contre-dance and the quadrille; and the music is adapted to the movement—highly rhythmical, lively or languid, marked and energetic.

So, on the other hand; the sorrowful wail of the mourner at funerals, the mild unmeasured undulations such as are still heard (after having been traditionally hand-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ed down for centuries), when the Jews recite annually the Lamentations of Jeremiah outside the walls of Jerusalem,—these strains have as their characteristics, the absence of rhythm, the irregular interruptions of voice after voice, without regard to tune or time or key, all blending, in combinations more or less discordant, and yet preserving some kind of unity, as evidenced by their arriving at a simultaneous close. One very noteworthy peculiarity in the performance of Buddhist chants is that, while all the performers use the same words and follow the same cadences (with greatly resemble the Ambrosian and Early Gregorian Tones), yet each singer chants the strain in the key which best suits the pitch of his own voice; in this, resembling the manner in which, among ourselves, a whole congregation is accustomed to read the Psalter. We ourselves have listened at the house of a Japanese amateur to a performance of this kind, which lasted about twenty minutes, and we were perplexed during its continuance as to what its meaning might be. At the conclusion, our friend enlightened us by explaining that it expressed the wailings of a company of women lamenting over a recent battle-field. Had this idea been suggested at the commencement of the concert, we should have listened with better appreciation, and might have found the music quite as descriptive and suggestive as some of the compositions in which the mannerisms, even of our great masters overwhelm all fitness, *e. g.* certain portions of "Sampson" especially those given to Delilah.

But the crowning glory of Japanese music is that which is performed by the Imperial Band and which we have had the opportunity of hearing on two occasions—at the Opening of the Railroad and at the Inauguration of the University—both of which were honored with the Mikado's personal presence. Without some suggestive friend at hand to indicate the intention of the composition I think no one—no stranger, we mean—could form any definite opinion of its merits. The only thought that suggested itself was that an imitation of the Œolean harp was intended, or perhaps, the sighing of the winds through the trees of the forest; and our impression is that if the specimen which has been given us, by the labors of Dr. Muller,* were performed with suitable instruments, and with a reference to this leading idea, we should find something to admire in these performances, and not hastily dismiss them, as some are apt to do, with the dictum that they are utterly barbarous and unimproveable.

If there is a universal language in the world, it is Music; and according to our views, its development may be seen in three successive stages, which we might call its Dialects.—First, in the imperfect utterances of the three or four or six-tone scale—simple, expressive yet inadequate; next in the ill-defined yet fuller utterance of the eight-tone gamut,—marred by monotony both of time and tune; and refusing to yield to any attempts at producing pleasing harmonious combinations; and lastly, in the finished form of the tempered scale, which with alternating modes and varied measures, gives us such forms and facilities of musical expression as, if not absolutely perfect, yet even now vindicate the pre-eminent claim of Music to be considered the Divine Art.

* See Journal of the German Asiatic Society for March, 1876, p. 31.

King John of Abyssinia has declined all propositions for peace, on the plea that Egypt has declared war against him by violating his frontier. He rejects the cession of Massowa, and threatens to take it by force. He has refused to accept of any presents, and has commanded his troops to resume hostilities.—*L. & C. Express.*

We understand that up to the present no appointment of Counsul at Shanghai has been made in succession to Sir Walter Medhurst. It is believed that some re-arrangement of the Consulate staff and its duties, is under consideration at the Foreign office, in connection with the proposed new rules of the Supreme Court, and with a view to effecting a further economy in the working of the two establishments.—*L. & C. Express.*

An attempt is to be made to bring frozen meat from Australia. A trial shipment will be sent from Sydney very soon in the ship *Northam*. Mr. Mort, the promoter of the scheme in Australia, has purchased 500 head of cattle, and engaged 7,000 cubic feet of space on board the vessel, which will be specially fitted up for the purpose.—*L. & C. Express.*

ASIATIC SOCIETY OF JAPAN.

The Annual Meeting of the Society was held in the Society's Library, Tôkiô Dai Gakko, on Wednesday, the 27th June, 1877, Sir Harry S. Parkes, the President, in the chair. The following members were present: Messrs. Aston, Atkinson, Ayrton, Cawley, Chaplin, Conder, Dallas, Faulds, Grigsby, Hattori, Marshall, McClatchie, Milnes, Mondy, Mori, Murray, Parson, Perry, Smith, Soper, Syle, Veeder, Whitney.

The minutes of the last General Meeting held in Tôkiô on the 30th ultimo, also those of the last General Meeting held in Yokohama on the 13th instant, were read and approved.

The Library Committee reported receipt of some journals and the presentation of some books to the Society by Professor Morse of the Essex Institute, Mass, U.S.A.

The annual report of the Council, which contained the Treasurer's report, was thereafter read by the Corresponding Secretary. Professor Atkinson moved that the report he adopted. This was seconded by Professor Parson, and carried.

Dr. Murray moved that the thanks of the Society be tendered to the Director and Officers of the Tôkiô Dai Gakko for the use of the room which served as the Society's library, and for other rooms of the College. The President added his own expression of appreciation. The motion was seconded by Dr. Syle and unanimously carried. It was moved by Mr. Dallas that the Council be requested to ascertain what building suitable for the purposes of the Society could be obtained in Tôkiô, and what would be the total outlay as well for rent as for contingent expenses, and further that the Council be requested to ascertain what would be the funds available for the purpose, and to report on both these heads at the next General Meeting. This motion was seconded by Mr. Aston, and carried.

The election of officers for the ensuing year by ballot was then proceeded with, and the following gentlemen were found to be elected:—

President.—Sir Harry S. Parkes, K C.B.

Vice-President.—For Tôkiô: Dr. Murray. For Yokohama: J. J. Keswick, Esq.

Corresponding Secretary.—E. M. Satow, Esq.

Councillors.—For Tôkiô:—W. G. Aston, Esq., Rev. Dr. Veeder, Rev. J. Cochran, Rev. Dr. Syle, H. Dyer, Esq. For Yokohama: J. C. Hall, Esq., Rev. Dr. Hepburn, Dr. Eldridge, F. V. Dickins, Esq., Dr. Wheeler.

Recording Secretary.—For Tôkiô: Prof. Atkinson. For Yokohama: C. H. Dallas, Esq.

Treasurer.—Prof. W. E. Ayrton.

A vote of thanks was then accorded to the Chairman and the meeting closed.

REPORT OF THE COUNCIL OF THE ASIATIC SOCIETY OF JAPAN FOR THE YEAR ENDING JULY, 1877.

The Council congratulates the Members on the advance made by the Society during the past session both in the increased number of Members and of General Meetings.

Since October of last year thirty-four new Members have been elected, being more than double the number elected last session; of these twenty-five are resident in Tôkiô. Ten General Meetings including one Extraordinary Meeting have been held in Tôkiô and five in Yokohama.

The number of papers that have been read have been seventeen, six more than during the previous session. Those read in Tôkiô were,

1.—On Japanese Heraldry, by T. R. H. McClatchie, Esq.

2.—Modern Shintô Burial Ceremonies, by W. G. Aston, Esq.

3.—On the Mission to Rome in 1615 of an envoy from the Prince of Sendai, by Sir Harry S. Parkes, K.C.B.

4.—A Japanese Account of the Island of Hachijo, translated by J. H. Longford, Esq.

5.—On the Japanese New-Year Celebrations, by Mrs. Chaplin-Ayrton.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

6.—On the use of Pillow-words and Plays upon Words in Japanese Poetry, by B. H. Chamberlain, Esq.
7.—A Summary of the Japanese Penal Code, by J. H. Longford, Esq.
8.—On the Modes of Fishing in Japan, by G. Elliott Gregory, Esq.
9.—On the Specific Inductive Capacity of Gases, by Professors J. Perry and W. E. Ayrton.
10.—Some Meteorological Observations in Japan, by the Rev. Dr. Veeder.
11.—The importance of a General System of Simultaneous Observations of Atmospheric Electricity, by Professors W. E. Ayrton and John Perry.
12.—On a Neglected Principle that may be employed in Earthquake Measurements, by Professors J. Perry and W. E. Ayrton.

And in Yokohama,

13.—Useful Minerals and Metallurgy of the Japanese, by Dr. Geerts, Paper F.—Arsenic.
14.—On the Caroline Islands, by an anonymous author.
15.—On the early study of Dutch in Japan, by Mr. K. Mitsukuri.
16.—On the Crania of the Botans, by Dr. Stuart Eldridge.
17.—On Primitive Music, especially that of Japan, by the Revd. Dr. Syle.

The Library Committee reports that the following books etc., have been added to the Library and Museum during the past year.

A Collection of Flint Arrow-heads, presented by Herr Von Siebold.
Ground-plans of the Chief Castles in Japan, 5 vols.
2 Picture-scrolls of Ainos' Customs.
Descriptive Report of Railways in Japan.
Outline History of Japanese Education, by Hon. F. Tanaka.
Livre de Marco Polo, by Pauthier.
Art Ceramique, by Ninagawa Noritané.
Asiatic Researches, vols. 1 to 6, 4to.
Daily Bulletin of Weather Reports for 1873, Washington, 13 vols.
Report of Smithsonian Institution for 1876.
Dr. Geerts' Introduction to his larger work.
Elementary Treatise on Steam, by Professor J. Perry.
The works of Professor E. S. Morse, consisting of :—
First Book of Zoology.
The Oviducts and Embryology of Terebratulina.
Address as Vice-President of the American Association for the Advancement of Science.
Tarsus and Carpus of Birds.
Systematic Position of Brachiopoda.
Embryology of Terebratulina Septentrionalis.
Observations of the Terrestrial Pulmonifera of Maine.

In Exchange for the Society's Journal the following Journals, Transactions, etc., have been received from England, France, Germany, Italy, Spain, India, China, The United States and Tasmania.

The Royal Asiatic Society.—Proceedings.
The Royal Geographical Society.—Proceedings.
The Royal Society.—Proceedings.
The Philological Society.—Transactions.
The Anthropological Institute of Great Britain and Ireland.—Journal.
La Société de la Géographie.—Bulletin.
La Société d' Acclimatation.—Bulletin Mensuel.
Le Congres d' Orientalistes.—Notices.
La Société des Etudes Japonaises.—Annuaire.
Monatsschrift für den Orient.—Wien.
Mittheilungen der Deustchen Gesellschaft.—Yokohama.
Cosmos: from Guido Cora.
Bollettino Italiano degli Studii Orientali, Fiorence.
La Sociedad Geographica de Madrid.—Boletin.
The Royal Asiatic Society, Bombay Branch.—Proceedings.
The Royal Asiatic Society, Ceylon Branch.—Proceedings.
The Asiatic Society of Bengal.—Proceedings and Journal.
The Royal Asiatic Society, North China Branch.—Proceedings.
The China Review.
The American Philosophical Society.—Proceedings.
The American Geographical Society.—Proceedings.
The American Oriental Society.—Proceedings.
The American Philological Society.—Proceedings.
The Boston Society of Natural History.—Proceedings.
The Royal Society of Tasmania.—Transactions.

The Council beg to tender their thanks to the Director of the Kaisei Gakko for the continued use of their room for the Library, and for the offer of the Hall for large meetings should the Society desire it.

The Library Committee, however, suggest that it is desirable that some steps should be taken to provide the Society with a permanent building of their own. A conveniently situated Hall, suitable for meetings and lectures, and also available as a Library, Museum and Reading-room, would be of great service in consolidating the interests, and promoting the usefulness of the Society.

The present stock of the Transactions in the Society's Library is

Vol. I.....	45	copies.
Vol. II.....	7	„
Vol. III, Part 1.....	8	„
Vol. III, Part 2.....112		„
Vol. IV.	74	„

The Committee would be glad to buy back copies of Vol. II and Vol. III, Part 1, from any who may be willing to part with them.

The following is the Treasurer's Report:

THE ASIATIC SOCIETY OF JAPAN, IN ACCOUNT WITH MR. J. WALTER.

July 1st 1876, to June 20th, 1877.

Dr.

To Printing Transactions	$278.37
„ Advertising	58.00
„ Stationery, Postage, and Freight of Transactions to Europe, America and China.....	58.32
„ Purchase of book-cases for the Library.....	40.50
„ Purchase of books, newspapers, maps and pictures,.....	29.00
„ The Librarian's wages.....	35.00
„ Insurance on $500.....	15.00
„ Expenses in connection with the meetings in Tôkiô and Yokohama.....	13.00
„ Balance to credit of Society	342.33
	$869.52

Cr.

1876.	
By Balance from last year.....	$207.75
„ Subscriptions for 1896.....	10.00
1877.	
By Subscriptions for 1877 :	
116 { 63 collected in Yokohama.....	319.77
116 { 38 „ „ Tokio	188.08
116 { 11 „ „ Hiogo	55.00
116 { 4 „ „ Nagasaki.....	20.00
By sale of Transactions through Messrs. Wetmore	51.92
„ „ „ the Secretaries...	17.00
	$869.52

Signed JOHN WALTER,
Hon. Treasurer.

We have compared the above accounts with the Vouchers and the Bank Pass Book, and find them to be correct, leaving a balance in the hands of the Treasurer of three hundred and forty-two dollars and thirty-three cents.

HARRY S. PARKES, } *Auditors.*
W. E. AYRTON, }

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley, for the abovenamed Pills, for wind in the stomach, from which I suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable Pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

ASIATIC SOCIETY OF JAPAN.

An adjourned meeting was held in the Society's room, Tôkiô Dai Gakko on the 30th May, 1877, Rev. Dr. Veeder in the chair.

The further discussion on Professors Perry and Ayrton's paper "On a neglected principle that may be employed in Earthquake measurements" was carried on.

Professor Smith asked the authors to repeat in a few words what their principle was.

Professor Ayrton then read the following passage from the paper which contained a statement of the principle: "Believing this to be the case, and seeing how important it is to the whole science of terrestrial physics that the earthquake message should be read, we have been lead to investigate mathematically the motion during an earthquake of a body attached to the earth by springs. And we have come to the conclusion that the centre of mass of a body fastened by means of springs inside a metal box rigidly attached to the earth, has *in certain cases* motions with respect to the box itself which in miniature, with great exactitude, represent the motions of a point of the box during the earthquake." Professor Marshall agreed with Professor Smith in thinking that the corrections arising from the tilting of the instrument proposed by the authors was by no means an element to be neglected and thought the authors were premature in calling the principle a neglected one inasmuch as they had not proved by constructing an instrument that the principle would answer in practice.

Mr. Knipping observed that with regard to the more simple instruments which are proposed for the observation of earthquakes, he had found neither the bowl with molasses nor the tub with water, the inside of which is rubbed with chalk, nor the wooden cylinders, answer in our usual shocks here. In one case, particularly, he had noticed a 9-inch pendulum in an upper room in his house swing with an amplitude of about 15 degrees, and was surprized to find no indications given by the above-mentioned instruments. In the most sensitive cylinder Mr. Mallet proposed, the proportion of diameter to height was 1.9, while, he (Mr. Knipping) found that a proportion of 1.20 for the same magnitudes was not sufficient here. It might be that not only the proportion but also the absolute dimensions had to be taken into account, and he intended to continue his experiments in that direction as also with other proposed instruments. Von Seebach added to the cylinders a ball put on the top of a firm column tapered at the top; the throwing down of the ball giving the angle of emersion at the station. The same author also recommended exact time observations at different stations, and shewed that they alone would be sufficient to determine the principal features of an earthquake, viz., the position of the centre or focus, the velocity, and the direction of the wave. A simpler method than the observation of the time of the shock at any station could not be well imagined, but as it was not easy to find the exact time by astronomical observations within a few seconds (an error in longitude of 1 minute causing an error in time of 4 seconds), if very good instruments were not at hand, the time observations at stations connected by electric telegraph would undoubtedly give the most reliable results. If the gentlemen in the Telegraph Department, who had clocks and the telegraph wire at their disposal, would take the matter in hand, and have the clocks at fifteen or twenty properly selected telegraph stations daily compared, while each clock could be stopped by a cheap self acting arrangement, the exact difference of time might easily be found at all the stations. Even if the clocks had no second-hands, as was the case with those between Yedo and Yokohama, the time could easily be read to $\frac{1}{10}$ of a minute, and this would be sufficiently exact to investigate the more essential features of most of the earthquakes here. The expense would be trifling and the trouble of comparing twenty clocks once daily not worth mentioning after a few days practice. He hoped that the authors of the paper would soon be able to execute their proposed instrument and have it tried in earthquakes. Living in Tôkiô we were on an unusually favourable spot of the globe, having on an average one earthquake in a week, so that we never need wait very long to try earthquake instruments In 1876 the Yamato Yashiki instruments recorded 53 shocks.

The discussion was further entered into by the Chairman and Messrs. Cawley, Perry, and Smith.

Prof. Smith closing it with a critical examination of some of the physical principles and mathematical formulas presented in the paper.

The Minutes of the last meeting were then read, and at a later hour than usual the meeting was adjourned.

THE QUEEN OF ENGLAND'S PROCLAMATION OF NEUTRALITY.

By the QUEEN.

A PROCLAMATION.

VICTORIA, R.

Whereas We are happily at Peace with all Sovereigns, Powers, and States:

And whereas, notwithstanding Our utmost Exertions to preserve Peace between all Sovereign Powers and States, a State of War unhappily exists between His Majesty the Emperor of all the *Russias* and His Majesty the Emperor of the *Ottomans*, and between their respective subjects and others inhabiting within their Countries, Territories, or Dominions:

And whereas We are on Terms of Friendship and amicable Intercourse with each of these Sovereigns, and with their several Subjects and others inhabiting within their Countries, Territories, or Dominions:

And whereas great numbers of Our loyal subjects reside and carry on Commerce, and possess Property and Establishments, and enjoy various Rights and Privileges, within the Dominions of each of the aforesaid Sovereigns, protected by the Faith of Treaties between Us and each of the aforesaid Sovereigns:

And whereas We, being desirous of preserving to Our Subjects the Blessings of Peace, which they now happily enjoy, are firmly purposed and determined to maintain a strict and impartial Neutrality in the said State of War unhappily existing between the aforesaid Sovereigns:

We, therefore, have thought fit, by and with the Advice of Our Privy Council, to issue this Our Royal Proclamation:

And We do hereby strictly charge and command all Our loving subjects to govern themselves accordingly, and to observe a strict Neutrality in and during the aforesaid War, and to abstain from violating or contravening either the Laws and Statutes of the Realm in this Behalf, or the Law of Nations in relation thereto, as they will answer to the contrary at their Peril:

And whereas in and by a certain Statute made and passed in a Session of Parliament holden in the 33rd and 34th year of Our Reign, intituled "An Act to regulate the Conduct of of Her Majesty's Subjects during the Existence of Hostilities between Foreign States with which Her Majesty is at Peace," it is, amongst other things, declared and enacted as follows:—

"*Illegal Enlistment.*"

"If any person, without the Licence of Her Majesty, being a British Subject, within or without Her Majesty's Dominions, accepts or agrees to accept any Commission or Engagement in the Military or Naval Service of any Foreign State at War with any Foreign State at Peace with Her Majesty, and in this Act referred to as a friendly State, or whether a British Subject or not within Her Majesty's Dominions, induces any other Person to accept or agree to accept any Commission or Engagement in the Military or Naval Service of any such Foreign State as aforesaid,—

> "He shall be guilty of an Offence against this Act, and shall be punishable by Fine and Imprisonment, or either of such Punishments, at the Discretion of the Court before which the Offender is convicted; and Imprisonment, if awarded, may be either with or without Hard Labour.

"If any Person, without the Licence of Her Majesty, being a British Subject, quits or goes on board any Ship with a view of quitting Her Majesty's Dominions, which intent to accept any Commission or Engagement in the Military or Naval Service of any Foreign State at War with a friendly State, or, whether a British Subject or not, within Her Majesty's Dominions, induces any other Person to quit or to go on board any Ship with a view of quitting Her Majesty's Dominions with the like Intent,—

> "He shall be guilty of an Offence against this Act, and shall be punishable by Fine and Imprisoment, or either of such Punishments, at the Discretion of the Court before which the Offender is convicted; and Imprisoment, if awarded, may be either with or without Hard Labour.

"If any Person induces any other Person to quit Her Majesty's Dominions or to embark on any Ship within Her Majesty's Dominions under a Misrepresentation or false Representation of the Service in which such Person is to be engaged,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

with the Intent or in order that such Person may accept or agree to accept any Commission or Engagement in the Military or Naval Service of any Foreign State at War with a friendly State,—

"He shall be guilty of an Offence against this Act, and and shall be punishable by Fine and Imprisonment, or either of such Punishments, at the Discretion of the Court before which the Offender is convicted; and Imprisonment, if awarded, may be either with or without Hard Labour.

"If the Master or Owner of any Ship, without the Licence of Her Majesty, knowingly either takes on board, or engages to take on board, or has on board such Ship within Her Majesty's Dominions any of the following Persons, in this Act referred to as illegally enlisted Persons; that is to say,

"(1.) Any Person who, being a British Subject within or without the Dominions of Her Majesty, has, without the Licence of Her Majesty, accepted or agree to accept any Commission or Engagement in the Military or Naval Service of any Foreign State at War with any friendly State:

"(2.) Any Person, being a British Subject, who, without the Licence of Her Majesty, is about to quit Her Majesty's Dominions with intent to accept any Commission or Engagement in the Military or Naval Service of any Foreign State at war with a friendly State:

"(3.) Any Person who has been induced to embark under a Misrepresentation or false Representation of the Service in which such Person is to be engaged, with the Intent or in order that such Person may accept or agree to accept any Commission or Engagement in the Military or the Naval Service of any Foreign State at War with a friendly State:

"Such Master or Owner shall be guilty of an Offence against this Act, and the following Consequences shall ensue; that is to say,

"(1.) The Offender shall be punishable by Fine and Imprisonment, or either of such Punishments, at the Discretion of the Court before which the Offender is convicted; and Imprisonment, if awarded, may be either with or without Hard Labour; and

"(2.) Such Ship shall be detained until the Trial and Conviction or Acquittal of the Master or Owner, and until all Penalties inflicted on the Master or Owner have been paid, or the Master or Owner has given Security for the Payment of such Penalties to the Satisfaction of Two Justices of the Peace, or other Magistrate or Magistrates having the Authority of Two Justices of the Peace: and

"(3.) All illegally enlisted Persons shall, immediately on the Discovery of the Offence, be taken on Shore, and shall not be allowed to return to the Ship.

"*Illegal Shipbuilding and Illegal Expeditions.*

"If any Person within Her Majesty's Dominions, without the License of Her Majesty, does any of the following Acts; that is to say,—

"(1.) Builds or agrees to build, or causes to be built any Ship with Intent or Knowledge, or having reasonable cause to believe that the same shall or will be employed in the Military or Naval Service of any Foreign State at War with any friendly State: or

"(2.) Issues or delivers any Commission for any ship with Intent or Knowledge, or having reasonable cause to believe that the same shall or will be employed in the Military or Naval Service of any Foreign State at War with any friendly State: or

"(3.) Equips any Ship with Intent or Knowledge, or having reasonable cause to believe that the same shall or will be employed in the Military or Naval Service of any Foreign State at War with any friendly State: or

"(4.) Dispatches, or causes or allows to be dispatched, any Ship with Intent or Knowledge, or having reasonable cause to believe that the same shall or will be employed in the Military or Naval Service of any Foreign State at War with any friendly State:

"Such person shall be deemed to have committed an offence against this Act, and the following consequences shall ensue:

"(1.) The Offender shall be punishable by Fine and Imprisonment, or either of such Punishments, at the Discretion of the Court before which the Offender is convicted; and Imprisonment, if awarded, may be either with or without Hard Labour.

"(2.) The Ship in respect of which any such Offence is committed, and her Equipment, shall be forfeited to Her Majesty:

"Provided that a Person building, causing to be built, or equipping a Ship in any of the cases aforesaid, in pursuance of a Contract made before the commencement of such War as aforesaid shall not be liable to any of the Penalties imposed by this Section in respect of such building or equipping if he satisfies the Conditions following; (that is to say,)

"(1.) If forthwith upon a Proclamation of Neutrality being issued by Her Majesty he gives notice to the Secretary of State that he is so building, causing to be built, or equipping such Ship, and furnishes such Particulars of the Contract and of any Matters relating to, or done, or to be done under the Contract as may be required by the Secretary of State:

"(2.) If he gives such Security, and takes and permits to be taken such other Measures, if any, as the Secretary of State may prescribe for ensuring that such Ship shall not be despatched, delivered, or removed without the Licence of Her Majesty until the termination of such War as aforesaid.

"Where any Ship is built by Order of or on behalf of any Foreign State when at War with a friendly State, or is delivered to or to the Order of such Foreign State, or any Person who to the Knowledge of the Person building is an Agent of such Foreign State, or is paid for by Foreign State or such Agent, and is employed in the Military or Naval Service of such Foreign State, such Ship shall, until the contrary is proved, be deemed to have been built with a view to being so employed, and the Burden shall lie on the Builder of such Ship of proving that he did not know that the Ship was intended to be so employed in the Military or Naval Service of such Foreign State.

"If any Person within the Dominions of Her Majesty, and without the Licence of Her Majesty,—

"By adding to the number of the Guns, or by changing those on board for other Guns, or by the addition of any Equipment for War, increases or augments, or procures to be increased or augmented, or is knowingly concerned in increasing or augmenting the warlike Force of any Ship which at the time of her being within the Dominions of Her Majesty was a Ship in the Military or Naval Service of any Foreign State at War with any friendly State,—

"Such Person shall be guilty of an Offence against this Act, and shall be punishable by Fine and Imprisonment, or either of such Punishments, at the discretion of the Court before which the Offender is convicted; and Imprisonment, if awarded, may be either with or without Hard Labour.

"If any Person within the limits of Her Majesty's Dominions, and without the Licence of Her Majesty,—

"Prepares or fits out any Naval or Military Expedition to proceed against the Dominions of any friendly State, the following consequences shall ensue:—

"(1.) Every Person engaged in such Preparation or fitting out, or assisting therein, or employed in any Capacity in such Expedition, shall be guilty of an Offence against this Act, and shall be punishable by Fine and Imprisonment, or either of such Punishments, at the Discretion of the Court before which the Offender is convicted; and Imprisonment, if awarded, may be either with or without Hard Labour.

"(2.) All Ships and their Equipments, and all Arms and Munitions of War used in or forming Part of such Expedition, shall be forfeited to Her Majesty.

"Any Person who aids, abets, counsels, or procures the Commission of any Offence against this Act shall be liable to be tried and punished as a principal Offender."

And whereas by the said Act it is further provided that Ships built, commissioned, equipped, or despatched in contravention of the Act, may be condemned and forfeited by Judgment of the Court of Admiralty; and that if the Secretary of State or Chief Executive Authority is satisfied that there is a reasonable and probable cause for believing that a ship within Our Dominions has been, or is being built, commissioned, or equipped, contrary to the said Act, and is about to be taken beyond the Limits of such Dominions, or that a Ship is about to be despatched contrary to the Act, such Secretary of State, or Chief Executive Authority, shall have Power to issue a Warrant authorizing the Seizure and Search of such Ship and her Detention until she has been either condemned or released by Process of Law. And whereas certain Powers of Seizure and Detention are conferred by the said Act on certain Local Authorities:

Now, in order that none of Our Subjects may unwarily render themselves liable to the Penalties imposed by the said Statute, We do hereby strictly command, that no Person or Persons whatsoever do commit any Act, Matter, or Thing whatsoever contrary to the Provisions of the said Statute, upon pain of the several penalties by the said Statute imposed, and of Our high Displeasure.

And We do hereby further warn and admonish all Our loving Subjects, and all Persons whatsoever entitled to Our Protection, to observe towards each of the aforesaid Sovereigns, their Subjects and territories, and towards all Belligerent Rights which We and our Royal Predecessors have always claimed to exercise.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

And We hereby further warn all Our loving Subjects, and all persons whatsoever entitled to Our Protection, that if any of them shall presume, in contempt of this Our Royal Proclamation and of Our high Displeasure, to do any Acts in derogation of their Duty as Subjects of a Neutral Sovereign in a War between other Sovereigns, or in a violation or contravention of the Law of Nations in that Behalf, as more especially by breaking, or endeavouring to break, any Blockade lawfully and actually established by or on behalf of either of the said Sovereigns, or by carrying Officers, Soldiers, Despatches, Arms, Ammunition, Military Stores or Materials, or any Article or Articles considered and deemed to be Contraband of War according to the Law or modern Usages of Nations, for the Use or Service of either of the said Sovereign, that all Persons, so offending, together with their Ships and Goods, will rightfully incur and be justly liable to hostile Capture, and to the Penalties denounced by the Law of Nations in that Behalf.

And We do hereby give Notice that all Our Subjects and persons entitled to Our Protection who may misconduct themselves in the Premises will do so at their Peril, and of their own wrong; and that they will in nowise obtain any Protection from Us against such Capture, or such Penalties as aforesaid, but will, on the contrary, incur Our high Displeasure by such Misconduct.

Given at Our Court at *Windsor*, this thirtieth day of *April*, in the year of Our Lord one thousand eight hundred and seventy-seven, in the fortieth year of Our reign.

GOD save the QUEEN.

THE Earl of Derby to the Lords Commissioners of the Admiralty.*

Foreign Office,
April 30, 1877.

My Lords,

HER Majesty being fully determined to observe the duties of neutrality during the existing state of war between the Emperor of all the Russias and the Emperor of the Ottomans, and being moreover resolved to prevent, as far as possible, the use of Her Majesty's harbours, ports, and coasts, and the waters within Her Majesty's territorial jurisdiction, in aid of the warlike purposes of either belligerent, has commanded me to communicate to your Lordships, for your guidance, the following rules, which are to be treated and enforced as Her Majesty's orders and directions:—

Her Majesty is pleased further to command that these rules shall be put in force in the United Kingdom, the Isle of Man, and the Channel Islands, on and after the 5th of May instant, and in Her Majesty's territories and possessions beyond the seas, six days after the day when the Governor, or other chief authority of each of such territories or possessions respectively, shall have notified and published the same; stating in such Notification that the said rules are to be obeyed by all persons within the same territories and possessions.

1. During the continuance of the present state of war, all ships of war of either belligerent are prohibited from making use of any port or any roadstead in the United Kingdom, the Isle of Man, or the Channel Islands, or in any of Her Majesty's Colonies or foreign possessions or dependencies, or of any waters subject to the territorial jurisdiction of the British Crown, as a station, or place of resort, for any warlike purpose, or for the purpose of obtaining any facilities of warlike equipment; and no ship of war of either belligerent shall hereafter be permitted to sail out of or leave any port, roadstead, or waters subject to British jurisdiction, from which any vessel of the other belligerent (whether the same shall be a ship of war or a merchant ship) shall have previously departed, until after the expiration of, at least, twenty-four hours from the departure of such last-mentioned vessel beyond the territorial jurisdiction of Her Majesty.

2. If any ship of war of either belligerent shall, after the time when this Order shall be first notified and put in force in the United Kingdom, the Isle of Man, and the Channel Islands, and in the several Colonies and foreign possessions and dependencies of Her Majesty respectively, enter any ports, roadstead, or waters belonging to Her Majesty, either in the United Kingdom, the Isle of Man, or the Channel Islands, or in any of Her Majesty's Colonies or foreign possessions or dependencies, such vessel shall be required to depart and to put to sea within twenty-four hours after her entrance into such port, roadstead, or waters, except in case of stress of weather, or of her requiring provisions or things necessary for the subsistence of her crew, or repairs; in either of which cases the authorities of the port, or of the nearest port (as the case may be), shall require her to put to sea as soon as possible after the expiration of such period of twenty-four hours, without permitting her to take in supplies beyond what may be necessary for her immediate use; and no such vessel which may have been allowed to remain within British waters for the purpose of repair shall continue in any such port, roadstead, or waters, for a longer period than twenty-four hours after her necessary repairs shall have been completed. Provided, nevertheless, that in all cases in which there shall be any vessel (whether ships of war or merchant ships) of the said belligerent parties in the same port, roadstead, or waters within the territorial jurisdiction of Her Majesty, there shall be an interval of not less than twenty-four hours between the departure therefrom of any such vessel (whether a ship of war or merchant ship) of one belligerent, and the subsequent departure therefrom of any ship of war of the other belligerent; and the time hereby limited for the departure of of such ships of war respectively shall always, in case of necessity, be extended so far as may be requisite for giving effect to this proviso, but no further or otherwise.

3. No ship of war of either belligerent shall hereafter be permitted, while in any port, roadstead, or waters subject to the territorial jurisdiction of Her Majesty, to take in any supplies, except provisions and such other things as may be requisite for the subsistance of her crew, and except so much coal only as may be sufficient to carry such vessel to the nearest port of her own country, or to some nearer destination, and no coal shall again be supplied to any such ship of war in the same or any other port, roadstead, or waters subject to the territorial jurisdiction of Her Majesty, without special permission, until after the expiration of three months from the time when such coal may have been last supplied to her within British waters as aforesaid.

4. Armed ships of either party are interdicted from carrying prizes made by them into ports, harbours, roadsteads, or waters of the United Kingdom, the Isle of Man, the Channel Islands, or any of Her Majesty's Colonies or possessions abroad.

I have, &c,
(Signed) DERBY.

Correspondence

To the Editor of the "Japan Weekly Mail."

P. & O. S. N. Company,
Yokohama, 30th June, 1877.

Dear Sir,—Referring to a conversation on the subject of the notice issued from the Imperial Japanese Post Office that mails will be made up for transmission by this Company's steamers, I beg to inform you that when the notice appeared in the local papers, I called on the British Postmaster to ascertain if these mails would be sent on board the British contract packets through him or by his consent, and was informed that he had no authority to receive such mails, and that his instructions were not to do so. I also called on Mr. Farr, and learned that it was his intention to send these mails through the French Post Office with the closed French mails.

As it is distinctly stated in the Company's contract with Her Majesty's Government that no mails are to be received on board the contract packets for "conveyance on "behalf of any Colony or foreign country without the "consent of the Post Master General, and in case of such "default the company shall be liable to be proceeded "against for breach of this agreement," it was my duty in the protection of the Company, to protest against mails being sent on board without the sanction and approval of the British Postmaster, and to call his attention to the notice.

I am, Dear Sir,
Yours faithfully,
J. RICKETT, Jr.
Agent.

Vaccination and Smallpox.—The statements of anti-vaccinators notwithstanding, it cannot be too generally known that the average mortality from smallpox in England and Wales since 1853, when vaccination became compulsory, is less than half what it was during the whole period of civil registration which preceded the passing of the Compulsory Vaccination Act.—*Sanitary Record.*

The ribbon weavers of Warwickshire are suffering immensely from the depression in trade. At Bedworth and Coventry many hundreds of operatives are under notices for reductions in wages to the extent of from 15 to 20 per cent., the masters intimating that the mills must be closed if the reduction is not acceded to. It is feared that some of the mills in the district will be unable to continue working.—*L. & C. Express.*

Law Reports.

IN H. B. M.'s COURT AT KANAGAWA.

Before H. S. WILKINSON, Esq., Acting Law Secretary.

Tuesday, June 26th, 1877.

IWASAKI YATARO *v.* H. COLOMB, R N.

A petition had been filed by the plaintiff against the defendant, by which he claimed $1,400 for repairs rendered necessary to the steamship *Chiri Maru* through a collision with H. M. S. *Audacious*, during a gale on the night of the 11th instant. $6,000 demurrage was also claimed.

In defendant's answer to the petition the jurisdiction of the Court in the present case was disputed, and a motion to that effect was filed by the counsel for the defendant, and this the Court now took under consideration.

H. E. Sir Harry S. Parkes and Admiral Ryder being present, were accomodated with a seat on the bench.

Mr Ness appeared for the plaintiff, Mr Dickins for the defendant.

Mr Dickins opened his argument by pointing out the vagueness of the wording in the petition. It was impossible to understand what was intended to be defined. The 4th paragraph in particular was faulty, defendant being accused of negligence. It did not say in which of the two collisions the defendant was responsible through negligence. In the 8th paragraph a charge of mismanagement was made, but in what act of the defendant's the mismanagement lay was not specified, and the definite information required by the defendant was not given. Under these circumstances, the learned counsel demurred against the petition.

As to the jurisdiction of the Court, Mr Dickins contended that the Court had already over-stepped its jurisdiction by serving the summons. The Court had no authority to serve a summons on board one of Her Majesty's ships, or to order such execution. The Court had no jurisdiction over any act of negligence of such nature as was alleged in the petition. It was far from the wish of the defendant to avoid his responsibility as a private individual, but being an officer on board a British man-of-war he felt bound to take the advantage the law afforded him. It was unnecessary to point out the inconvenience which would arise from a Court in China or Japan having jurisdiction over the decks of Her Majesty's ships of war, which by International Law were considered as British territory.

Mr Ness in reply said that he accepted his learned friends' statement that he objected to the petition as a whole. In the petition there was everything to sustain the cause of action. The first question is—Is it necessary for the plaintiff in a petition such as this to know by what acts of negligence a collision causing damage occurs? Mr Ness contended it was not. How were the crew of the *Chiri Maru* to see, during a heavy gale and on a dark night, what was occurring on board the *Audacious!* A vessel under weigh was bound to keep clear of a vessel at anchor, and Mr Ness showed this point by reference to authorities. As to the insufficiency of the petition alleged by the defendant's Counsel, full particulars of the damage sustainedby the *Chiri Maru* had been given in a report of Lloyd s Surveyor attached to the petition.

Mr Ness now spoke of the merits of the objection to the jurisdiction of the Court in this case. Mr Ness contended that by clauses in the Order in Council for China and Japan, Her Majesty extended the same rights to the Courts in China and Japan as were enjoyed by the Courts of Westminster and London. Defendant claimed immunity on the ground that he was a naval officer. Now, the suit was not against him as an officer, individually or representing the crown, but as a private individual. Captains of Her Majesty's ships have been sued in Civil Courts and damages obtained from them. Mr Ness cited precedents, on this and another point, viz.: the right of trying this case in the Local Courts here, and of the non-necessity of taking the case to Hongkong or England. In conclusion Mr Ness spoke of Captain Colomb's claim of immunity as a naval officer. In the present case he was not asked to become amenable to the laws of a foreign Court, but to Courts of his own country extended to Japanese territory by an Order in Council. Captain Colomb was by no means a representative of the Crown, and Mr Ness failed to follow his learned friend's allegation that the defendant should make all possible objections to the jurisdiction of the Court.

Mr Dickins very briefly replied to Mr Ness' argument.

His Honour said judgment in this motion would be delivered on Thursday morning at 10 o'clock, the hearing of the case (set down for this morning, Wednesday) to be postponed till the same day and hour.

Thursday, June 28th, 1877.

IWASAKI YATARO *v.* CAPTAIN P. H. COLOMB, R N.

JUDGMENT.

This is a demurrer to a petition in a cause in which a Japanese subject is plaintiff and the Captain of H.M.S. *Audacious* is defendant, and which has been instituted to recover damages for a collision between the plaintiff's ship, the *Chiri Maru*, and Her Majesty's Ship of which the defendant is commander. The grounds of demurrer assigned are two: first, that the petition does not specify any particular act or acts of negligence or mismanagement: and, second, that this Court has not jurisdiction over the defendant in respect of the matters alleged in the petition.

Two other grounds of demurrer were alleged in hearing as being of the same nature as the first cause assigned. The first of these is that there are two collisions alleged in the petition and there is no clear statement as to which of these collisions the *Audacious* is responsible for, and the second, that there is no clear statement as to what the damage was that rendered the *Chiri Maru* unfit to proceed to sea. There was a further objection that the term mismanagement used in the petition did not necessarily imply any negligence or carelessness for which the defendant is responsible.

It is not necessary to consider the question raised by counsel for the plaintiff as to whether demurrer is the proper way of taking exception to vagueness in a petition, as I think the objections taken under this head, however brought, cannot be sustained. I should observe, however, that the course which prevailed in the High Court of Admiralty and followed in the case of the "West of England" (L. R. 1, Adm., 308) of bringing objections to the pleadings by way of motion is most in consonance with the rules of this Court.

First,—As to the word "mismanagement." I can find no case—and I should be surprised if I did—in which the sufficiency of the word has been expressly decided. I do find a case in which it has been used and no objection has been taken to it. I am of opinion that the term is sufficient to express a breach of the duty of a commander of a ship, which if it were the cause of a collision would render the commander liable. I find in the case of the *Otter* (L. R. 4, Adm., 203) that the collision in that case alleged to be "wholly attributable to neglect, default, or mismanagement of the *Otter* or those on board of her." Here the words neglect, default, or mismanagement are used disjunctively, and if any one of them were insufficient to attach liability to the defendants, it might have been objected to. Then as to the sufficiency of a general allegation of mismanagement, I am of opinion that the rule laid down in the case of the *Bothnia* (1 Lushington, 52) cited by the counsel for the plaintiff applies to the present case. In that case Dr Lushington says:—"The vessel proceeding was run down when at "anchor, and the rule of the Court is that that fact, if proved, puts "the burden of proof on the other vessel to make out her defence." The plaintiff, therefore, was not bound to assign any particular cause of blame to the defendant's vessel. Counsel for the defendant referred to the case of the *Marpesia* (L. R. 4 P. C. 212) as showing that the onus of proof lay on the plaintiff. But the cases are clearly distinguishable. In the case of the *Marpesia* both of the vessels which came into collision were under sail, neither of them was at anchor, and the rule as to vessels at anchor was therefore not before their Lordships. The question before them was as to a practice which prevailed in the Court of Admiralty for the defendant to begin in all cases where the defence ofinevitable accident was set up, by which the onus of proof was from the first thrown upon the defendant. The Privy Council ignored such a practice and referred to the case of the *Bolina* (3 notes of cases 210) in which Dr Lushington says:—"With regard "to inevitable accident the onus lies on those who bring a complaint "against a vessel and seek to be indemnified,—on them is the onus "of proving that the blame does attach upon the vessel proceeded "against; the onus of proving inevitable accident does not necessarily attach to that vessel; it is only necessary when you show a "*primâ facie* case of negligence and want of due seamanship." There is nothing in this dictum in any way disagreeing with the dictum of the same learned judge in the case of the *Bothnia*. In the one case he says it is necessary to show a *primâ facie* case of negligence, and in the other he says that in effect that if the plaintiff proves that his vessel was at anchor and that the vessel proceeded against ran into her he has shown a *primâ facie* cause of negligence. It is right to observe that in the case of the *Bothnia* the vessel with which she came into collision was at anchor, and that the *Bolina* was absolved from blame; and it would appear from the summary of the case in Pritchard's Admiralty Digest that she was absolved on the ground that there was no proof that the collision occurred through want of due care. I regret that I have not the original report to refer to. But any inference which might be drawn against the correctnees of the doctrine laid down in the case of the *Bothnia* is removed by the consideration that the case of the *Bothnia* is subsequent to that of the *Bolina*, and the doctrine referred to has been since repeatedly affirmed. In the case of the *Annapolis* (5 I. J., N. S., 326) Dr, Lushington says:—"In "causes of damage, "when a vessel in motion and one at anchor have been in collision, "it lies upon the vessel in motion to excuse herself by showing "inevitable accident or a like defence." And in the case of the *Kepler* (L. 2. P. D.) which was decided subsequently to the case of the *Marpesia*, Dr. Phillimore lays down the same principle. He says:—"The only defence set up by the *Kepler* is that the collision "was caused by "inevitable accident." It is the duty of those "who "set up the defence to sustain it by "dequate evidence" The conclusion I arrive at is, to use the words of Dr. Lushington, that the plaintiff "was not bound to assign any particular cause of blame "to the defendant's vessel." It follows from the doctrine referred to that no allegation is necessary as to which of the collisions it is sought to make the *Audacious* responsible for. For it is sufficiently alleged in the petition that the *Chiri Maru* was at anchor ,and the allegation in each case that the *Audacious* came into collision with her under those circumstances is a sufficient allegation of *primâ facie* responsibility on the part of the *Audacious* for each of the collisions. The remaining objection to the sufficiency of the petition, namely, that there is no statement of what the damage was that rendered the *Chiri Maru* unfit to proceed to sea, is scarcely intelligible. If it means that there is no statement of the damage caused by the collision, then it is only necessary to refer to the detailed particulars annexed to the petition. If it means that the petition ought to have stated how much of it could be left unrepaired and yet the ship be fit to go to sea, I have no doubt that it is not necessary that the petition should state anything of the kind.

Before leaving this part of the case, I think it right to say that I quite agree with what the counsel for the defendant has said that the petition and all the pleadings in these courts are intended

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

fairly to disclose the case of the party pleading, and that this is to be done not by the bare allegations of the old Common Law pleadings but by disclosing the facts upon which the party pleading relies. This mode of pleading is intended to simplify proceedings. But the advantages of such a system would be lost if the practice of objecting to the pleadings were to become frequent. I think the observations of Dr Lushington on this point in the case of the *Hebe* (2 W. Rob. 147) are deserving of very great attention. He says :—"In proceeding to consider the objections which have been "taken to the admission of this plea, I would in the first instance "observe that, although under the authority of the *Ville de Varsovie* it is clearly competent to the parties in a suit to take "objections of this kind, yet these objections should not be "raised without grave and substantial reasons in support "of them. Cases may unquestionably occur, like the case decided "by Lord Stowell, in which it may be right and proper to bring "them before the Court, especially where the preliminary discussion "might prevent the introduction of much irrelevant matter, which, "if admitted, would lead to the accumulation of unnecessary evi-"dence. Where, however, no such consequence is likely to result "from the admission of the plea, the Court will be disposed to "discontinue the discussion as tending to defeat the objects for "which the summary form of proceeding was introduced into the "practice of the Court, viz., expedition and avoidance of expense "to the suitors."

There remains the more important question as to whether this Court has jurisdiction in the cause. I consider that this question has been decided in the case of *Hart v Gumpach* ( ) which I shall refer to presently, but before doing so I shall consider, as well as I have been able to apprehend them, the grounds assigned by Counsel for the defendant in support of the demurrer. In order, however, more clearly to appreciate the objections which have been taken to the jurisdiction of this Court, it appears to me desirable that I should state the view which I take of the jurisdiction of the Courts in these countries. To do so it is necessary to consider the jurisdiction of Her Majesty from whom the jurisdiction of these Courts is derived.

That jurisdiction as regards Japan is, it appears to me, exercisable only in accordance with the provisions of the Foreign jurisdiction Acts 1843 to 1875, and as regards China, in accordance with the provisions of those Acts and of the Act 6 & 7 Vict. C. 80.

The Foreign jurisdiction Act 1843, was passed to remove doubts as to how far the jurisdiction of Her Majesty in exterritorial places was controlled by, and depended on, and, in removing those doubts, it expressly defines what Her Majesty's jurisdiction shall be. It says that "it shall be lawful for Her Majesty to hold exercise "and enjoy any power or jurisdiction which Her Majesty now hath "or may at any time hereafter have within any country or place out "of Her Majesty's dominions, in the same and as ample a manner "if Her Majesty had acquired such power or jurisdiction by the "cession or conquest of territory." That is to say, that Her Majesty shall have so far as the treaties confer it, or the authorities of the country assent to its exercise, the same power and jurisdiction over British subjects within those places, as she would have if those places were Crown Colonies.

Now, as to Crown Colonies, it is laid down in Colvin's case (as cited in Stephen's Blackstone's Commentaries, 7th edition, vol. I. p. 102) "that any colony which has been acquired by conquest or "cession is subject to such laws as the sovereign in Council may "impose." That there are, however, certain limits to the force of such laws has been declared by Act of Parliament. The 28 & 29 Vict., C. 63, instituted "an act to remove doubts as to the validity "of Colonial laws," which, after enacting (S.1) that "the term "'Colonial law' shall include laws made for any Colony * * * "by Her Majesty in Council," goes on to provide (S. 2) that "any "Colonial law which is or shall be in any respect repugnant to the "provisions of any Act of Parliament extending to the Colony to "which such law may relate, or repugnant to any order or regulation "made under authority of such Act of Parliament, or having in the "Colony the force and effect of such Act, shall be read subject to "such Act, order, or regulation, and shall to the extent of such "repugnancy, but not otherwise, be and remain absolutely void and "inoperative. And it is declared (S.1) that an Act of Parliament "or any provisions thereof, shall in construing this Act be said "to extend to any colony when it is made applicable to such "colony by the express words or necessary intendments of any "Act of Parliament."

That it is the intention of the Foreign Jurisdiction Act that Her Majesty's power of legislation over British subjects in extra-territorial places should be subject to the same restrictions as it is in the case of the Colonies, will be seen from the wording of the Act which it repeals, the section 6 and 7 Will. 4. C. 78. intituted an Act to enable His Majesty to make Regulations for the better defining and establishing the Powers and Jurisdictions of His Majesty's Consuls in the Ottoman Empire.

By the last mentioned Act, His Majesty was empowered by Order in Council to make any Regulations touching the Juri-diction to be exercised over British subjects in the Ottoman Dominions and certain other places by his Majesty's Ambassadors, Consuls, &c., and to impose penalties forfeitures or imprisonments for the breach of any such regulations, and his Majesty's Ambassadors, Consuls, &c., were required to enforce them, and they were to be binding on all British subjects within the countries named.

Here there was no limit placed by Parliament on the power of the King in Council to bind British subjects in those places, and it is clear that it was part of the object of the Foreign Jurisdiction Act, in repealing that Act, and making the provisions we have referred to, to place those limits on that power which Parliament had before omitted to lay down.

This view is confirmed by the Act 6 and 7 Vict. C. 80, above referred to, intituled an Act for the better Government of Her Majesty's subjects resorting to China.

This Act, which was passed only two days before the Foreign Jurisdiction Act 1843, also repeals the provisions of a prior Act (3 and 4 Will. IV, C. 93) in which power without any limit assigned was given to the Sovereign in Council to make regulations to be exercised over British subjects, and it declares the limit within which in future that power will be exercised. In the third Section it enacts that "it shall * * be lawful for Her Majesty by any Order or Orders made with the advice of Her Majesty's Privy Council, to ordain, for the Government of Her Majesty's subjects being within the Dominions of the Emperor of China, or being within any ship or vessel at a distance of not more than one hundred miles from the Coast of China, any Law or Ordinance which to Her Majesty in Council may seem meet, as fully and effectually as any such law or ordinance could be made by Her Majesty in Council for the Government of Her Majesty's subjects being within the said Island of Hongkong.

But while it appears to me that H. M.'s jurisdiction over H. M.'s Subjects in these places is subject to the same restrictions as in the case of Crown Colonies, I am of opinion that so far as British law is concerned it is not subject to any other restriction. What jurisdiction then would Her Majesty have in a Crown Colony over persons on board H. M.'s ships in the harbour of such Colony? I know of no Act of Parliament limiting her power in this respect, and in the absence of any such enactment I take it to be clear that Her Majesty could, by an Order in Council constituting a Court in a Crown Colony, give to such Court jurisdiction over every one on board H. M.'s Ships lying in the harbours of the Colony, and I conceive that general words conferring jurisdiction over every one within the limits of the Colony would include persons serving on board H. M.'s Ships lying in such harbours. At least no rule of construction has been brought to my notice by Counsel, and I know of none, whereby H. M.'s Officers are not included in any general provision relating to H. M.'s subjects. In like manner I conceive that Her Majesty can by Order in Council constitute in these Countries and can give them jurisdiction over persons serving on board H. M.'s Ships lying in the harbours of these Countries and, I conceive that general words giving jurisdiction over all Her Majesty's subjects in these Countries would include Her Majesty's subjects serving on board Her Majesty's Ships while so lying in harbour. It appears to me at any rate that it is incumbent on any British subject claiming exemption from such jurisdiction clearly to set out the grounds for such exemption.

The Counsel for the defendant has set up a ground of exemption drawn from the principle of the law in "Coriters on International Law" that all men of war coming into the ports of a foreign country are exempt from civil suits, and argued that a British man-of-war is to be considered as part of English territory, and therefore, although actually lying in this port, is to be considered as if it were a part of England and therefore outside of this jurisdiction.

But I think this contention cannot be sustained. It is true it is laid down in Phillimore's International Law (Vol. I. CCCXLIV) cited by the Counsel for the defendant that "long usage and uni-"versal custom entitle every such ship to be considered as a part "of the state to which she belongs and to be exempt from any "other jurisdiction." But this is a fiction which, however it may hold between authorities of a foreign country and a ship-of-war of another power in the ports of that country, cannot be sustained as between the ship and the authorities of her own country. This becomes very clear when we come to consider the reasons given for the exemption. Sir R. Phillimore in his judgment in the case of the *Charkieh* (L. R., 4. Adm. 59) says (No. 88) referring to the exemption of foreign Governors and foreign Ambassadors :—

"Upon what grounds is this exemption allowed? Not upon the "possession on behalf of the Sovereign of any absolute right in "virtue of his sovereignty to this exemption; such a right on his "part would be incompatible with the right of the territorial sov-"ereign and not as is sometimes carelessly said upon the ground "that he and his property are to be considered as still remaining "in his own territory. This is indeed the fiction of law expressed "in the term "exterritoriality" by which the nature of the im-"munity is illustrated; but it is illogical and inaccurate to con-"sider it as the ground of that immunity." I shall refer to a passage in Wheaton's International Law which follows a passage cited by counsel for the defendant. Referring to the exemption of ships-of-war Wheaton says ( ). The whole reasoning, upon which such exemption had been implied in the case of a sovereign or his minister, applies with full force to the exemption of ships-of-war in the case in question :—

"It is impossible to conceive, said Vattel, that a prince who "sends an ambassador, or any other minister can have any "intention of subjecting him to the authority of a foreign "power; and this consideration furnishes an additional argument "which completely establishes the independence of a public "minister. If it cannot be reasonably presumed that his sovereign "means to subject him to the authority of the prince to whom he "is sent, the latter, in receiving the minister consents to admit "him on the footing of independence; and thus there exists "between the two princes a tacit convention, which gives a new "force to the natural obligation.

"Equally impossible was it to conceive, that a prince who "stipulates a passage for his troops, or an asylum for his ships of "war in distress, should mean to subject his army or his navy to "the jurisdiction of a foreign sovereign."

The ground of exemption is that the navy may not be subject to the jurisdiction of a foreign sovereign. But in the case of Her Majesty's courts in these countries the jurisdiction ex-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ercised is not the jurisdiction of a foreign sovereign. It is, to use the words of the order of the Queen in Council "Her Majesty's jurisdiction exerciseable in China or Japan." And on the principle *cessante ratione cessat lex*, the exemption from civil process in the ports of a foreign country ceases when that process is no longer the process of a foreign sovereign. It is strange that this question should only now come to be mooted. This is the first time, so far as I am aware of, in which during all the time these courts have been established it has been sought to set up the exemption as against their jurisdiction. That jurisdiction, as the counsel for the plaintiffs has pointed out, has been exercised in the case of inquests. It has been frequently exercised in other cases too. It is to be observed, moreover, that it was constantly exercised in the case of H. M.'s troops when stationed in his country, and they were by International Law, independently of the treaty, equally with navy exempt from all jurisdiction of the native courts. Yet it was never sought to question the jurisdiction of this court. If it could have been questioned doubtless it would have been when the colonel of one of H. M.'s regiments on the day on which his regiment was embarked stood at the bar of this court upon his deliverance upon a charge of assault on the day on which his regiment embarked. I have not heard that because he was a Queen's officer he considered it incumbent upon him to dispute the jurisdiction of H. M.'s court. It has been contended that because the plaintiff is a Japanese therefore the court has no jurisdiction. So far as I have able to comprehend the argument upon which this contention is based, it is this:—The treaty was intended to abridge the rights of the Japanese. But if a Japanese plaintiff can sue the commander of Her Majesty's ship at Yokohama, he has a privilege which he would not have had if the treaty had not been made. It is therefore contrary to the spirit of the treaty to allow him to sue. But from this reasoning I most emphatically dissent. The intent of the Treaty was that Her Majesty's subjects should, contrary to the rule in most European countries, remain while in this country subject to her jurisdiction, and should not become amenable to the jurisdiction of the native authorities, and no doubt this necessarily abridged the rights which the authorities of this country would otherwise have over British subjects. But it is entirely incorrect to say this abridgment of Japanese rights was the object or intent of the Treaty. It became necessary, in order to secure what the true intent was, and the attainment of the object of the Treaty is quite consistent with the acquisition by the Japanese of benefits which they would not have but for the Treaty. It has been argued that it is against public policy that a Japanese subject should have the power indirectly to stop her Majesty's ships by taking an action against her commander. And if I apprehend the argument aright it has been therefore inferred that Her Majesty's Court has not jurisdiction, the exercise of which might have this effect. But I think I shall best meet the argument from the supposition of inconvenient consequences, by referring to the judgment of Lord Brougham in the judgment in the case of *Hill v. Bigge* (3 Moore's P.C, 465). He there says:—

"Suppose all these alleged consequences had been accurately "stated, they could not neeecsarily decide the question; many "cases might be put of as great incovenience and even of as "great violence done to public feeling, and as great mischief to "to the public service by the execution of legal process, as any "in the cases that have been put. Yet in none of these circum-"stances can it for a moment be pretended that the law is not to "take its course. The inconvenience which would result from a "general officer or an ambassador being taken in execution, on "the eve of his departure for service abroad, or the mischiefs that "would ensue to the administration of justice from a judge being "taken in execution almost at any time, are quite undeniable; "but equally certain it is, that the inconveniences offer no argu-"ment whatever against the unquestionable liability of all those "functionaries to undergo, like the rest of the King's subjects, "the process of the law."

But the argument from inconvenience, however strong it might be, falls to the ground when it is shown that the inconvenience is not a necessary consequence of the jurisdiction objected to. The jurisdiction which these Courts have in suits on the part of foreigners against British subjects is provided for in section 117 of the Order in Council, 1865, which provides: "Where a foreigner "desires to institute or take any suit or proceeding of a civil nature "against a British subject, the Supreme or other Court according to "its jurisdiction may entertain the same, and where any suit or "proceeding is entertained shall hear and determine it according to "the provisions of this order and of the Rules made under it appli-"cable to the case." Now this makes it discretionary on the part of the court to hear any suit which a foreigner may seek to bring against any British subject within its jurisdiction. Such discretionary power is exercised in certain cases by the Court of Admiralty, and in the case of *The Nina* (L. R. 2 P. C.), in which the exercise of that discretion was upheld, the principles upon which it is to be exercised are laid down. Lord Romilly says: "By discretion is meant, to use the words of Lord Eldon in "White *v.* Damon, not an arbitrary capricious discretion, but "one that is regulated upon grounds that will make it judicial." And the meaning of this is illustrated by what precedes. The question was as to the exercise of jurisdiction in a cause of wages instituted by a British subject, a seaman on board a Portuguese vessel, the consul having lodged a protest on the ground that the dispute ought to be referred to him, and on this point the judge says: "With respect to the third question their Lordships "are of opinion that the protest of the foreign consul does not *ipso* "*facto* operate as a bar to the prosecution of the suit. The foreign "consul has not the power to put a veto on the exercise of its "jurisdiction by the Court of Admiralty. It is well observed by Dr. "Lushington in the case of *The Goludchick* that the jurisdiction of "the Court of Admiralty cannot depend upon the will of a foreign "consul; that as he cannot confer the jurisdiction so be cannot take "it away. If the consul protests, but advances no reason the suit "will proceed. If he advances reasons for staying the suit the plaintiff "must be a liberty to dispute the facts and answer the reasons put "forward by the consul and then the judge of the Court of Admiralty "is to exercise his discretion and determine whether having regard "to those reasons with the answers thereto it is fit and proper that "the suit should proceed or be stayed." Upon the same principles this court will hear any reason assigned why it should not entertain a suit brought by a foreigner against a British subject. But I ought to say that there appears nothing upon the face of this case which would lead me to refuse to entertain this suit. I am quite satisfied that counsel for the defendant accurately expressed the defendant's sentiments when he said the defendant did not wish to shrink from any responsibility which his act may have cast upon him. And I know no place where the claim against him can be better adjudicated upon than at the place where the act complained of is alleged to have been done. As to the tribunal he will have the benefit of a jury of his own countrymen.

The conclusion I have arrived at has not been shaken by the arguments of defendant's Counsel, but it is right that I should notice them before concluding. I have been in doubt in some cases whether I may not have misunderstood some of those arguments, as they appeared to me to be such as could scarcely be seriously advanced. I endeavoured during the argument fully to ascertain this meaning and shall state them as clearly as I can. Counsel referred to Coote's Admiralty Practice in suit against the Queen's Ships, in which it is laid down (2nd ed. p. 31) that: "Where "a Queen's vessel has inflicted damage upon a vessel belonging to a "private person no warrant can be granted in a cause of damage "instituted against the former. The Court of Admiralty in such a "case will direct the register to write to the Lords of the Admiralty "requesting that an appearance be given on behalf of the Crown by "the Admiralty proctor and the proceeding will go on as usual "with the exception only that no bail is taken." And correctly assuming that proceedings could not be taken in this Court against the ship herself, he argued that proceedings that cannot be taken against a ship cannot be served on board that ship. But this proposition, it appears to me, is contradicted by facts. There is no Court in England in which any proceedings can be taken against a Queen's ship so as to affect the ship herself. Proceedings could, with the assent of the Lords of the Admiralty, have been taken to the High Court of Admiralty, but in the Courts of Common Law no such proceedings could have been taken even nominally against the ship; but in both the Admiralty Court and the Courts of Common Law, proceedings could always have been taken against the officers of such ship in a case of collision, and I apprehend that the commander would feel bound by the instructions contained in Chapter XII. (Art. 25, 26, and 27) of the Queen's Regulations and the Admiralty Instructions to allow the writ or other process of those Courts to be served on board. The proposition therefore (if I have rightly apprehended it), not being correct, the argument based on it falls to the ground.

The Counsel for the Defendant also argued from the construction of the Order in Council that jurisdiction in such a case as the present was not conferred by it. He argued that the preamble professed to make provision for the Government of Her Majesty's subjects being within any ship or vessel at a distance of not more than 100 miles from the Coast of China, which he assumed would mean within 100 miles from the coast of Japan also, and that as in the Interpretation clause there was a definition of "British vessel" as a vessel being a British ship within the meaning of the Merchant Shipping Act or any of the Acts of Parliament for the time being in force for the regulation of Merchant Shipping, the Order in Council was intended to confer jurisdiction only over merchant vessels, and that men-of-war and those on board of them were intended to be exempt from all jurisdiction of Her Majesty's Courts in these countries. And when I asked him whether he considered that by ships mentioned as being within 100 miles of the Coast of China were meant all ships in Chinese or Japanese ports he said he did. Such a view is founded on a misapprehension of the provisions as to the 100 miles. The 100 mile limit first appeared in the Act 3 and 4, Will. 4, c. 93, in the 6th section of which it is enacted that "it shall and may be lawful "for His Majesty, by any such order as to His Majesty in Council "shall appear expedient, to create a Court of Justice with criminal "and Admiralty jurisdiction for the trial of offences committed by H. "M.'s subjects within the same dominions, and the ports and havens "thereof, and on the high seas within 100 miles of the coast of China." The portion meant to be included in the 100 miles limit was here expressly stated to be on the high seas. The Act 6 and 7, Vict., c. 80, repealing that portion of the Act, and providing that H. M. might make Orders in Council for the government of H. M.'s subjects being within the dominions of the Emperor of China, or being within any ship or vessel at a distance of not more than 100 miles from the coast of China, makes no alteration in this respect. For the dominions of the Emperor of China include all ports and havens in China. The 100 mile limit has moreover no reference to Japan. No act has conferred power on H. M. in Council to make special laws for British subjects being within 100 miles or any other distance outside of the territorial limits of Japan. It is to be observed, moreover, that the definition of a British vessel, in the interpretation clause of the Order in Council, does not necessarily extend to the Act of Parliament cited in the preamble. Whatever meaning the words "ship or vessel" may have in the Act, the meaning is not determinable by a definition in the Order in Council of the words "British vessels." There is an argument, however, which might possibly be drawn from that portion of the Order in Council which makes provision for the exercise of authority within 100 miles of the coast of China. Section 101 provides for the case of British

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

subjects charged with having committed a crime or offence within a British vessel at a distance of not more than 100 miles from the coast of China. Here the only British ships that are contemplated are "British vessels" which, by the interpretation clause, are shown to mean only merchant vessels. It might be argued that as no jurisdiction is given over persons in ships of war on the high seas within the 100 miles limit it is to be inferred that it was not intended to give jurisdiction when they were in port. But it appears to me that this argument could not be sustained. It has not been raised by the counsel for the defendant, probably because he felt it cannot be sustained.

The counsel for the defendant argued that a judgement rendered by this Court against the defendant would be futile. I think it would not be futile. But I shall not proceed to consider a question founded upon an assumption that the defendant will in any way seek to evade the liability which he declared he has no desire to evade.

The conclusion that it is not Japanese jurisdiction that I am exercising has saved me considering the point which was raised in the *Prince Frederick* and left undecided by Lord Stowell, and again in the *Charkieh* and left undecided by Sir Robert Phillimore.

Having come to the conclusion that this Court has jurisdiction over British subjects on board H. M.'s ships lying within the local jurisdiction of the Court, it is unnecessary to dwell upon some of the other arguments in the case. This is a personal action against the defendant in respect of a cause of action which is transitory, and whether the ship were to be considered part of England or not, the action is triable anywhere the defendant may happen to be. And if the petition were served upon the defendant at any rate while on shore, he would become subject to the jurisdiction of the Court in the action. The conclusion I have arrived at obviates the necessity of considering the consequences which would follow from service on shore being valid while invalid if made on board. That conclusion is borne out, it appears to me, by the judgment of the Privy Council in the case of "Hart *v.* Von Gumpach" (C. R. 4, P. C. 439). In that case an objection to the jurisdiction by reason of the nature of the cause of action was raised, but was held that such objection could not be sustained. The judgment also lays down that "By the law of England, "actions for libel, and other personal wrongs arising in foreign "countries may be brought in an English Court; and any spe- "cial circumstances which preclude the Court from entertaining "them should be shown." Afterwards it proceeds to consider the objection. It says, "It was then insisted that if the "Queen's Courts in England might entertain the action, it would "still be contrary to the spirit of the treaty of Tientsin which "authorised the Queen to establish Courts of Justice in China, "that her Court so established should take cognizance of it. "Their Lordships are unable to find in the Treaty sufficient "grounds for this contention.

"By Article XV., all questions in regard to rights, whether of "property or persons, arising between British subjects, shall be "subject to the jurisdiction of the British authorities; and the "effect of the Order of the Queen in Council establishing the "Supreme Court, and declaring its powers and jurisdiction, is, that "the law of England, as between British subjects, shall be admi- "nistered in it. Their Lordships, therefore, are unable to declare "that the same principles of law shall not be applied to the decision "of the action in the Court below, which would have governed it, "if brought in the Queen's Courts in England; especially when no "act of the Chinese Government is impugned, and no law or "custom of China is, for anything which appears, violated."

I am of opinion that on this point the same reasoning applies to the Treaty with Japan as to the Treaty with China, and to the Provincial Courts as to the Supreme Court.

Demurrer overruled, with costs.

After Judgment in the demurrer had been delivered, the Jury were called. Objections were raised against Messrs. J. J. Keswick, Charles Wirgman, A. J. Clode and Clark, all of which were accepted by the Court with the exception of the last named, Mr Dickins believing him to be in the service of the Mitsu Bishi Co. while he himself gave evidence that he was not. Mr Ness' objection to Mr Wirgman was that that gentleman was of too sportive a turn of mind to be able to entertain a question of such paramount inportance as the one at issue. His Honour said this objection was null at law, and Mr Ness had to substitute another for it, which was accepted.

The case was then tried before

H. S. Wilkinson, Esq., Acting Law Secretary,

And

Messrs. Butland, J. J. Gray, Levi Lichtenstein, Edgar Abbott, and Alex. Clark, as Jurors.

Mr Ness said that before proceeding further he had to propose a modification of the petition, which would not take the other side by surprise because he had written to Mr Dickins about it. Mr Ness had acted under telegraphic instructions and the amount of demurrage had been overrated. $300 damages per day should have been only $150 per day. Mr Dickins having no objections to this modification in the petition, Mr Ness then addressed the jury before calling evidence, briefly relating the circumstances of the collision which occasioned this suit. The *Chiri Maru* claimed the recovery of the disbursement in repairs necessitated by the collision, and the recovery of the profit which the *Chiri Maru* would have made had this accident and the consequent delay not occurred. Mr Ness impressed upon the jury the fact that by the law it was incumbent upon the other side to prove by evidence that what was done on board the *Audacious* during the gale was all that could have been done, in order to avoid the collision.

Mr Ness then called his witness,

Iwasaki Yataro, who stated:—I am the plaintiff in this action, and am owner of the *Chiri Maru*. That is the certificate of Registry of that vessel (shown). It is in the name of the Mitsu Bishi Co. I, Iwasaki Yataro, constitute that Company. It was the intention to despatch the *Chiri Maru* to Nagasaki and thence to the seat of war, in the service of the Government. The negotiations commenced towards the end of last month, and came to a conclusion at the beginning of the present month. They were between an official of the Post Office and myself.

That is the memorandum drawn up (produced) bearing on the one side my seal and on the other that of the Post Office. I was to receive 150 *yen* per day in accordance with this contract, and this profit has been entirely lost through the collision. I was to receive it from the day on which the steamer left Yokohama. She would have sailed on the 14th instant but for that accident. I was to receive the 150 *yen* till her return here after there was no need of her services in the South. It is hard to say how long she would have been required. She was wanted for the war and I cannot say when it will be ended. I thought of taking means to reduce the loss but I have been unable to do so. Mr Krebs, who is engineer to the Company, was caused to make an estimate of the damage, and I am informed that they would amount to 1,400 *yen*.

I have no wish for money. I only wish the *Chiri Maru* reinstated. This $150 is sufficient to re-instate her in addition to repairs.

Adjourned till half past one o'clock.

Resumed in the afternoon.

Mr Ness read the translation of a letter which comprehended the charter party between the *Chiri Maru* and the Post Office Department.

Iwasaki Yataro, cross-examined by Mr Dickins:—The Mitsu Bishi Company has been mine since its institution. There never have been any shareholders. I do not know of any law of Japan establishing the Company of which I am the owner. I know nothing about law. I am the proprietor of the whole of the Mitsu Bishi vessels.

Mr Dickins asked:—By what means did you become the sole proprietor of the Mitsu Bishi Company's vessels?

Mr Ness objected to this question because it departed from the present issue, but after some argument this was temporarily withdrawn, and Mr Dickins pressed the question.

Witness continued:—I used to ply steamers hither and thither in my own name, when the Government gave me several steamers and I formed the Mitsu Bishi Company. I paid nothing for them, and have never been asked to pay cost of them to the Government. Counting large and small I think there are eighteen steamers, but I do not remember. The last one was handed over to me about three years ago. I pay all expenses of passage for vessels in the Government service. The earnings belong to the Mitsu Bishi Co.; speaking accurately, they go into my hand. I did not buy the *Chiri Maru*, it was one of those given by the Government. I don't know from whom it was bought originally. There was an agreement between the Government and myself when these steamers were handed over to me. I have not brought that agreement. I remember its general purport. I received ten or more vessels which I was to lend to the Government at such times as they were required; freight to be paid by the Government in such case, working expenses by me. If the *Chiri Maru* had proceeded to the seat of war I should have had to pay its working expenses. The charter bears the seal of the Post Office Department. I do not know whether the person who affixed that seal had a right to put it, though I feel assured he had.

Mr Dickins:—Were the Pacific Mail Co.'s steamers paid for by you?

Mr Ness objected to this question because it did not bear upon the present case,

Mr Dickins:—I will put another question first. Do these vessels belong to you?

Witness:—They are entirely my property. I paid for them.

Mr Dickins:—With your own funds or those of the Government?

Mr Ness again objected to the question. Mr Dickins said that it was quite fair and proper. Part of this case was to show that witness was not the owner of this or any of the vessels of the Mitsu Bishi Co. and therefore had no right to bring forward this suit. Mr Ness said that it was only put to annoy the witness and show up his private affairs, because he had brought the suit into Court. Mr Dickins denied the insinuation, and after some argument on the point, His Honour overruled the objection.

The question was again put, and witness replied:—I borrowed the money on interest from the Government to buy these steamers. They are my property, not the Government's. They were transferred in my name. I do not know for what the *Chiri Maru* was originally built. I cannot read the petition, but I know what is in it. I approve and endorse everything in it, I mean to say that I told Mr Krebs what to claim; Mr Krebs told Mr Ness what to write and therefore on all questions relative to the document I beg you to address Mr Ness. (Laughter). I believe that what is in the petition is all true and just, but although I have received a translation I have been unable to understand any part of it. (Mr Dickins remarked that he, also, had been unable to comprehend any of it.) There is nothing in it untrue. It is stated that the collision occurred through negligence on board the *Audacious*.

It is my opinion that the *Audacious* began to drift because the captain did not pay proper attention, because of all the ships in the harbour it was the only one to drift. I speak from what was told me by the Captain of the *Chiri Maru*. Personally I cannot say what the negligence was. The Captain said

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the *Audacious* was altogether in the wrong. He did not say in what way. The *Amakusa Maru* was to tow the *Chiri Maru* south. The former sailed alone on account of this accident but met with a misfortune also and returned again. It was important for the *Chiri Maru* to go south. There are about 30 or 40 vessels belonging to me. I do not accurately remember. Mitsu Bishi Steamers sail every few days. I cannot give an average per month of departures from Yokohama. The *Chiri Maru* was to be employed till the end of the war—an indefinite period. I would have been perfectly satisfied if the repairs had been done. Mr E. B. Jones is in my employ. I think a Mr Devine is in my employ, also, but I can scarcely remember the names of all foreigners. I am interested in the Mitsu Bishi Iron Works, but to what extent I cannot at present exactly say; my younger brother attends to these affairs. I do not know who else have an interest in the Iron Works. In the contract or charter party the date of departure from Yokohama was not given, because it was not known when there would be a steamer to tow her down.

Re-examined by Mr Ness :—The Government handed over the ships I mentioned with an object. The agreement was a written one.

Mr Ness :—What were the obligations you came under when the Government handed over these ships?

Mr Dickins objected to this question, and a lengthy argument ensued upon the point.

Finally His Honour overruled the objection.

Mr Dickins asked that his objections should be noted.

His Honour said this was unnecessary. The objection was overruled.

Witness :—Whenever the Government had need of a ship, all private business was cast aside. They were to be kept in those intervals at my expense. The war is still going on. I had no dealings with the Captain of the *Audacious* directly. An offer of was made through Mr Krebs to repair the ship. I do not know what it was.

To the Jury :—I do not know what the damages were the *Chiri Maru* sustained, but all matters were left to Mr Krebs and I say what he told me.

Adjourned till 9 o'clock next morning.

Friday, June 29th, 1877.

Hashimoto cautioned, stated :—I am clerk of the 2nd grade in the Post Office Department. The Post Office seal is attached to that document (produced), which is a letter from the Mitsu Bishi Co. to, and an answer from the Post Office Department. I managed the affairs, and the document is perfectly right.

Cross-examined by Mr Dickins :—I have no document from the Government authorising me to make the contract. I received the instructions from the Director of the Post Office Department.

Shikiyama Shineru, attaché of the 8th grade in the Post Office, cautioned :—I have seen these documents before. I saw them drawn up by last witness according to instructions received from the Chief. I saw the seal affixed.

Cross-examined by Mr Dickins :—The contract is drawn up between the Mitsu Bishi Co. and the Post Office. I do not know how many shareholders there are in the Company.

Maics, sworn, stated :—I live on board the *Chiri Maru*, of which I am master. I hold a master's certificate, from the Boston Nautical College, the Japanese Government and the United States Naval Volunteers (produced). I have been master fifteen years. I have been at sea thirty-two years to-morrow. I was in command of the *Chiri Maru* on the night of the 11th instant. The *Audacious* bore from us S. by W. I lay on the northern shore off the harbour moored by two anchors, about 220 fathoms or about a quarter of a mile from the *Audacious*. The weather was bad with a steady and rapidly falling barometer. I watched the barometer from eight in the morning, every hour in the day. It was squally, and blowing quite hard. I moored at 6.30 p.m., being secured before that by one anchor and chain. I put out the second anchor as a necessary precaution. Any ship master would have done so in such squally weather. The *Chiri Maru* carried the usual harbour lights. It was dark. I have seen darker nights, but it was very dark. The lights in the harbour could be distinctly seen. After dinner, about seven o'clock, I said to the second officer that we must keep watch ourselves because we could not trust the Japanese. The first officer and myself were in the wheel-house, when he said he thought the *Audacious* was drifting. I looked and saw all the lights on her port side, and then concluded that she was adrift, by her position. We called all hands, to clear away the chain. We veered away chain as quickly as possible. The *Audacious* then was quite near us. Being to windward of us we were becalmed and my ship could take no more chain. The *Audacious* struck us about eight or nine o'clock, when we had 75 fathoms chain on our port anchor and about 45 on the starboard. Having so much chain out the *Audacious* struck as on our stem by her fore quarter, gradually sliding down our starboard side and doing us damage all the way. When we were together a number of officers and men from the *Audacious* clambered on board and assisted in hauling in the remainder of our chain. We then fell apart, but the *Audacious* again dragged on us a second time, taking us on the port side and damaging us on that side. Our chain parted. Some one from the *Audacious* asked me to set my lower top-sail, and this was done. It was blown away in trying to separate the vessels. We lay together for some time, all the while doing damage. By some means or other the heavy wind separated us and the *Audacious* after a time dropped astern.

Mr Ness asked witness to relate what conversation passed between him and the men of the *Audacious* who boarded him. Mr Dickins objected to this as hearsay evidence. The action was against Captain Colomb and not against the *Audacious*. His Honour listened to the argument upon this point on the part of both Counsel, His Honour deciding that Mr Dickins' argument (that Captain Colomb was not master of these men, had nothing to do in their appointment, and that nothing they might say could affect him in any way) was incontestible. Objection sustained.

Witness continued :—I cannot enumerate minutely the damage sustained by the *Chiri Maru*. I followed Lloyds' surveyors in their list and it is right.

Mr Dickins admitted the damage to the extent in the particulars, with the exception of the stem.

Witness :—The stem of my vessel was damaged seriously. I would not go to sea in her in her present condition. I had twenty six men on board. The officers are foreigners. The *Tennessee* was nearer us than the *Audacious*. There were several vessels at no great distance from the *Audacious*. I have been prepared for sea since the 4th of this month. I was moored in a proper place, to be ready to be towed to sea. There were no ships outside of me. If the *Audacious* had let go a second anchor I feel sure she would not have drifted and the collision would not have occurred, provided the chain held. Two drift leads should have been out at both gangways with competent seamen to watch them. There are many ways of discovering if a ship is drifting. I have no knowledge of how the *Audacious* was secured except from what the officers told me. When the second anchor of the *Audacious* was pulled up two days afterwards it was astern instead of ahead of the *Chiri Maru*. Unless it had floated I connot possibly understand how the anchor got astern of the *Chiri Maru*. The *Audacious* could only have had one anchor out. She could not have drifted down in less than ten minutes. In case of necessity four anchors could have been dropped in that time, if four were all the *Audacious* had.

Cross-examined by Mr Dickins :—I have not been on board the *Audacious*. From my own observations I cannot say what the *Audacious* could or could not do. I have served upon a monitor —the American monitor, but not on board an iron-clad. I have never served upon a ship with a ram like the *Audacious*. On the 11th I was lying at single anchor till half-past six o'clock. I had been so lying since the 4th. It is not my opinion that mooring is preferable to a single anchor. I said we were *about* 220 fathoms from the *Audacious*. I merely guess the distance. The barometer did not continually fall all that day. I have had seven years experience of weather in Japan. I know that I had thirty fathoms of chain out at 6.30 p.m. from my own personal knowledge. I do not know exactly at what hour the collision occured. I did not look at any clock. I think there is an entry in the log noting the time. We veered away as much and as quickly as possible. The cables are shackled to the bottom of the ship. There were means of letting the cable clear of the ship, by unshackling the chain. We could not unshackle the port chain under the circumstances; it was not all run out. Previously to the *Audacious* coming on us we could not unshackle, because there was a quantity of chain in the locker and the end was fastend at the bottom of the ship. I might have unshackled at another particular shackle, but we did not think that proper. The same might apply to the starboard chain of which thirty fathoms less were out than on the port chain and it would have been sillyness to throw the starboard chain overboard. If I had only one anchor down it would have been easier for me to slip and run clear. It is better to put two anchors down rather than put one down and wait for an emergency and give the second. I cannot refer to any text book on seaman ship in support of this statement. I would not be surprised to hear that text books may not give the same opinion. It is a point on which many captains differ. I do not consider that my rule is the one adopted by all seamen but by some only. I had little to say on board my own ship all next day. I was quite ignored by the *Audacious* people who were on board. I am not making up for it to-day, Mr. Dickins. Of my own knowledge I do not know of any act of unseamanship or the part of Captain Colomb. My boilers were not fit for use. If my topmast gear, stem and catheads had been repaired I might have gone to sea.

Re-examined by Mr Ness :—The damage I have just stated constitute the bulk of the injuries in point of unseaworthiness. Had the second anchor of the *Audacious* been let down as she began to drift the accident in all probability would not have occurred. If the *Audacious* did not drop an anchor at eight o'clock, in my opinion, that betrayed an absence of ordinary precaution. If the *Audacious* had had two anchors out at the tine she began to drift, by letting out a third I think the collision would have been averted. If I been secured by one anchor and slipped that anchor, I should have had to let go another to try and keep off the bank. I think I did everything in my power to avert the collision.

To the Court :—The depth of water drawn by the *Chiri Maru* is I think, between eleven and twelve feet aft.

To the Jury :—No offers were made to my knowledge by the officers of the *Audacious*. I do not estimate the damage. I only give the items. It would take for repairing the vessel I think about fourteen days. If a vessel like the *Audacious* drifted with one anchor, she would drift till a second anchor fetched her up. My vessel is a steamer and is supplied with such sails as a steamer usually has, and those in good, fair condition. I think they would be passed by a surveyor.

Adjourned till 1.30 p.m.

Resumed in the afternoon.

Wm. McDonald, Lloyd's Surveyor, sworn :—On the 12th instant I was called on board the *Chiri Maru*. I surveyed the portion damaged in collision with the *Audacious*. The particulars annexed to the petition constitute the damage when I surveyed the vessel. She was then certainly not fit to proceed to sea. The stem was broken. Supposing it were patched only it would not be

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

worth as much as it was before it was broken. Putting a new stem in and going right through with the repairs, I daresay about a fortnight or three weeks would be necessary. I remember the state of the weather on the 11th. In such weather I think that if a ship like the *Audacious* was riding at single anchor, it would have been advisable to have put out a second one when it began to blow. If the *Audacious* had only one anchor out at seven o'clock on that night I think it should have put another out by eight o'clock. It is usual of course to put out an extra anchor during heavy weather. If, having only one anchor out, she had let another go immediately she began to drift, I think the collision would have been averted. Having ascertained that the ship was drifting, half a cable's length of chain ought to have stopped her. There was a swell on, but not with the wind that night. On a squally night if lying on a lee shore and you were very much afraid of drifting, steps could be taken to ascertain if the vessel was drifting.

Cross-examined by Mr Dickins:—I settled in Yokohama in 1861. I took a Turkish line-of-battle ship round to Constantinople once. That is the only time I served on board a steamer. I never served on board an iron-clad or man-of-war of any kind. It is not part of my business to repair ships. I have no special knowledge of iron-work beyond what I have picked up. I may state that it is not part of my business here to estimate the damages or say what time would be necessary to make repairs. In a case like this I would prefer to have a second anchor down. I can cite this rule in no authority, I only speak from experience. If any text book stated an opinion contrary to mine I would be surprised. I have always looked upon it as a decided point in seamanship. I never heard it disputed till now. I do not say that a captain who did not let go both anchors would be acting in an unseamanlike manner. I mean to say that in my opinion such a course is best. If a ship has only one anchor down and expected the wind to shift, I think she would do wrong to let the other anchor down without mooring properly, because there would be a chance in case of a shift of wind of the anchors getting mixed. The first storm wind does not come from the S.W. I do not think the wind shifted above a point or two that night. I do not know that Captain Colmob acted negligently and did not take precautions to avoid drifting. Under the circumstances in which Captain Colomb found himself, I do not consider that he did act wrongly in basing his conduct on the supposition that the wind might shift. I was not afloat on the evening of the 11th, though not snug and cosy in my own house as you say, Mr Dickins. I really do not think under the circumstances that I would have let out a second anchor, were I thoroughly satisfied that the other was clear. One drift lead is quite sufficient to have out in heavy weather.

Re-examined by Mr Ness:—It would be more difficult to stop such a vessel as the *Audacious* under weigh than a common merchant vessel.

David Scott, sworn, stated:—I am a marine surveyor. I was asked to survey the state of the *Chiri Maru* on the 12th instant, and found that the repairs mentioned in my report (produced) were necessary. I remember the state of the stem. If the stem were only patched the vessel would not have her old value. She was not fit to proceed to sea when I saw her. In the case of a merchant vessel it would have been a proper precaution to let go a second anchor. I know nothing of a men-of-war. In order to ascertain if a vessel is drifting you can have a lead over the side or take observations of the lights of other vessels.

Cross-examined by Mr Dickins:—The largest vessel I ever commanded was 700 tons. I never had a steamer. I never had occasion to serve on board a man-of-war of 6,000 tons. The handling of a man-of-war of 6,000 tons differs greatly from the handling of a merchantman of 700 tons. If the *Audacious* were lying at single anchor with another ready in case of emergency on such a night as the 11th, I should not consider it unseamanlike. They only have such things as text books on board a man-of-war. I cannot speak of ironwork. I do not know much about it.

Henry Dunn, chief officer on board the *Chiri Maru*, sworn:—I hold a certificate from the Marine Board of London. I remember the evening of the 11th June. The *Chiri Maru* was lying at anchor about 200 fathoms from the *Audacious*.

This witness went into details of the position of the *Chiri Maru* and the events before, at, and after the collision, on the whole confirming what Captain Maies had said in the forenoon. In the collision one of the *Audacious* boats was stove in. The Japanese crew could not have pulled the chain out of the locker. He was looking where the *Audacious* would come when it did come.

The second-officer, Lewis Tryler, then gave evidence. He said he was a Prussian under American protection. He came on deck just before the collision took place.

William Robertson, sworn:—I live at 237, Bluff, and am one of the partners in the Mitsu Bishi Iron Works. The other partners are Iwasaki Yataro and Mr Grant. I have made an estimate of the repairs necessary to the *Chiri Maru*. I estimated them at $1,400 —a fair and reasonable sum. I would require about 20 days for their execution. By working day and night it might be possible to finish in shorter time, but at greater expense.

Cross-examination by Mr Dickins:—A deed of partnership between Iwasaki Yataro and our firm exists.

Charles Fletcher, sworn:—I live at No. 35, Bluff. I have had some seafaring experience, about 40 years'. The master of every merchant ship would have let down a second anchor on such a night as the 11th June current.

Cross-examined by Mr Dickins:—I commanded a ship last about a month ago. I have mixed up auctioneering and seamanship a little lately. I have commanded the largest merchantman in the world, the *Great Republic*. I have studied the greatest text book a sailor can have—experience (Laughter). I have the authority of the examining board in London, also, but do not carry these in printed form.

This closed Mr Ness' case and Mr Dickins proceeded to introduce the case for defence.

His Honour said that he had already formed the opinion that the mere fact of collision occuring was no evidence of negligence or mismanagement on the part of Captain Colomb.

Mr Dickins said that that was exactly his position.

Mr Ness submitted that the fact of collision, the fact of the *Chiri Maru* being moored in a proper position in a proper manner with all the requisite lights, the darkness of the night—these facts combined threw the *onus* of proof of inevitable accident on the defendant. Apart from the question of what evidence he should being forward, Mr Ness stated that sufficient evidence had been given to substantiate the allegation of negligence. Captains MacDonald, Scott and Fletcher had stated that a further anchor should under the circumstances have been put out. It was admitted in the answer that defendant, Captain Colomb, was on board at the time of the accident.

Mr Dickins said Captain Colomb was always in charge of the *Audacious*. He was responsible for orders given, but not for the way in which it was executed. His learned friend's evidence was no evidence at all, merely expressions of opinions. There was nothing on the record to prove negligence on part of Captain Colomb, and Mr Dickins cited authorities in support of this allegation. There was no evidence to go to the Jury. On the following grounds Mr Dickins prayed for a verdict in favour of the defendant. First: it had not been proved that the *Audacious* was riding at single anchor; second: that even of this had been proved, that riding at single anchor was an unseamanlike proceeding; and third: that which course was best was merely a matter of opinion, and none of the witnesses examined had confessed to being possessed of any knowledge of such a vessel as the *Audacious*. If the Captain were below at the time, which has not been contradicted, the officer in charge is responsible. The Captain has no watch to keep and unless under extraordinary circumstances he was not required to be on deck.

Mr Dickins replied to Mr Ness, the following being the main points of his argument for a nonsuit:—

1st.—The fact that defendant has facts justifying his conduct peculiarly within his knowledge does not reliere plaintiff from necessity of making out a *primâ facie* case, so as to throw upon the defendant the onus of justifying himself. This is clear from the observations in Elkin *v.* Ja son, when one of the parties seeking to throw upon the other the burden of proving a fact peculiarly within the latter's knowledge, was held bound to show first *primâ facie* proof of the fact.

2nd.—The mere occurrence of an accident is in itself no proof at all of negligence, and other *primâ facie* proof must be given to permit of the case being sent to the jury. Several cases were cited in support of this position, the principal being Commau *v.* E. C. Railway Coy, 29 L. J. Ex. and Cotton *v.* Wood, 29 L.J. C.P. In both these some distinct and positive proof of negligence other than surmises, possibilities, or *ex post facto* probabilities was required to allow of the cases being sent to the jury.

The case of Cotton *v.* Wood is a very strong one. There the plaintiff's wife had been run over and killed by the defendant's omnibus. As this was manslaughter the defendant, if arraigned criminally, would have had the presumption against him, and the burden of justifying himself would then have been thrown upon him. But in the action it was held that in the absence of *primâ facie* proof of negligence the case must be withdrawn from the jury.

The case of the *Marpesia* fully bears out this doctrine. The dicta in that case were general in their applicability. In the case of the *Bothnia* it is true the rubric given in Pritchards Admiralty Digest states that a vessel in motion running down a vessel at anchor is *primâ facie* responsible. But it is almost certain (and had the full report been available it would have been shown to be quite certain) that by a vessel in motion is meant not one simply drifting from her anchorage but one under weigh. The justice of the rule is then easily to be apprehended, for a vessel under weigh can be steered clear of an obstacle, if proper care is employed, without difficulty, and under such circumstances a collision may fairly be looked upon as probative of some negligence. The case of the *Kegda* and the *Gladdon* did not militate against this doctrine. In both, which were drifting cases, acts of negligence were distinctly averred and shown acts which led to drifting and subsequent collision. Neither were Privy Council cases, and therefore not of the weight of that of the *Marpesia*. It had been supposed that with regard to this question the Admiralty rules differed from those observed by the Common Law Courts, but this is negatived by the expression of Dr. Lushington in certain cases (referred to). The Plaintiff in the present case therefore was bound to show a *primâ facie* case of negligence against—not the *Audacious* but Captain Colomb. Now no act of negligence had been shown or were averred against Captain Colomb. It had not been proved that the *Audacious* was lying with one anchor. There was a surmise to that effect by Captain Meis but no proof offered by him. Indeed he says "I do not know in what manner the *Audacious* 'was secured" nor was there any proof that had the ship been riding at single anchor this was unseamanlike.

There were only more or less vague opinions which were admitted to be backed up by no authority, and Captain Scott declares that to ride at single anchor on the 11th was not unseamanlike, while Meis admitted that his opinion was not one generally accepted.

Neither was any proof offered that even if the *Audacious* had shown any negligence, Captain Colomb had been guilty of that. Captain Colomb is not a merchant Captain and is not therefore

Digitized by Google
UNIVERSITY OF CALIFORNIA

responsible for what those under him may do—only for what he himself does. It is admitted he was in charge at the moment of collision, but not that he was so at the moment of drifting. There is nothing in the evidence to show that the collision was caused otherwise than by drifting (when Captain Colomb would clearly be freed so far as the evidence goes from liability) or that it was due to some default on the part of Captain Colomb while he was in charge—that is about the time of collision. In a word, the collision was caused either by the drifting without sequent default, or by the drifting with sequent default. If the former Captain Colomb could not be responsible unless shown or admitted to have been in charge at time of drifting; if the latter, unless shown or admitted to have been guilty of some distinct and definite act of negligence. Neither the one circumstance nor the other had been shown or was attempted to be shown. Hence no case for the jury.

His Honour refused to dismiss the case at this premature stage of the proceedings, and Mr Dickins thereupon addressed himself to the Jury, before calling his witnesses, to prove that the course taken was a proper one and any other under the circumstances would have been a wrong one.

Adjourned till 9 o'clock this morning.

Saturday, 30th June, 1877.

Mr Dickins now called the witnesses for the defence.

George Whitfield, sworn: I am a practical engineer, and have had a good deal of experience in repairing iron ships. I remember visiting the *Chiri Maru* for the purpose of estimating certain damage done to that ship. I estimated the damage at $850. I thought she might go to sea as she was. The cat-heads were broken. A small piece of stem was broken off. It was quite possible to fasten the fore stay without repairing the stem. This piece of stem was of very little importance except to fasten the fore-stay. The stem broke off at the last rivet hole. If the quickest but most superficial way were taken perhaps the stem cats heads might have been put in in four days. By working late the cost would of course be augmented considerably. I examined the boat said to be damaged and found a few new cracks besides many old ones. By its position it could not have been damaged much by the collision. There were two rents about the size of my hand in the canvas screen. I should reckon we would have to take about 30 feet of wood work from the stem. The beams of the hurricane deck were not broken The boilers of the ship would not hold water. It would almost be necessary to put new boilers in before she could go to sea. These would cost $13,000. The ship herself, previous to the collision, was worth perhaps $40,000.

Cross-examined by Mr Ness: - I have read the particulars annexed to the petition. Supposing I had to supply a new stem it would materially increase my estimation by some thousands of dollars. I only estimated what I thought sufficient. These exclusive of the sails, signal lanterns, falls and blocks, would cost about $1,400. This charge would be what I call a little "steep" This vessel would not be of less merchantable value with a patched stem than with an unpatched one. I said there was hardly enough to hinder her from going to sea. She was as safe to go to sea as she ever was, as far as the hull is concerned. Patching the stem, I think fourteen days would be necessary for repairs. I can no more tell you the size of a sail than of a piece of chalk. In certain circumstances I would set my opinion against Mr McDonald's or any body else's.

Re-examined by Mr Dickins:—I withdraw my statement about the extra $250. I was very careful in preparing my estimate, but took no notice of sail work and such things.

To the Jury:—I could not say whether those parts which were injured in the collision were in first class condition previously. All these damages included in the $850 would require fourteen days for completion.

George Augustus Nutcher sworn, stated:—I am carpenter on board H M.S. Egeria. I have been fifteen years in the service and have been carpenter six years. I have served in the *Caledonia*, the and the *Immortalite*. Before that I worked with my master and in the Royal Dockyard. I remember making a survey on board the *Chiri Maru* by order of Captain Colomb, on the 12th June. I drew up a report with Mr Turner of the amount of damage and costs. I had no idea of what the damage was before I saw it. The Captain and several officers went round the ship with us. None of the real hull was damaged. I have also some knowledge of iron-work I was on board the *Egeria* whilst building. My estimations were based on the Regulation Rate Book. The total amount I arrived at was £59.19. I took particular notice of the stem, which had been broken before. It would not have required a strong blow to break it. It was not necessary to repair it before going to sea. A couple of butt-straps would have made it as strong as before. Two ordinary men would have repaired the stem in two days. The cat heads could be all fitted and put right in two days. She could not have been towed without a cathead. I did not see the boat on the first occasion. It had very evidently been broken before and the new fractures could have been caused by a very light blow. I saw no damage of a serious nature.

Cross-examined by Mr Ness:—I have had no experience of prices out her. I have read your list of damages. I did not include the sail in my estimation. I considered a patched stem as good as a new one. I cannot form any opinion of the selling value of a ship. I never bought one. The *Chiri Maru* would be safe nowhere if adrift. No vessel would be.

Re-examined by Mr Dickins:—If every precaution were taken to prevent her going adrift the *Chiri Maru* is safe enough. I reckon £59.19 is a fair estimate of the cost of these repairs in England.

To the Jury:—The stem of the *Chiri Maru* had been broken before.

To the Court:—With regard to her hull she was perfectly safe, but some repairs might have been necessary. These could have been done at sea Practically the *Chiri Mara* was not quite so fit to go to sea after the collision as before it. I do not see that a topmast would be necessary. I do not know with what sails she could be fitted. A new topmast could be made in two days. All that I have mentioned could be done in two days, and the ship made fit for sea.

To Mr Dickins:—As a prudent officer I would go in the *Chiri Maru*, and repair the catheads at sea.

Charles Turner, chief engineer on board H.M.S. *Audacious*, sworn:—I have been sixteen years chief engineer; twenty-five years in the service. I received orders to go on board the *Chiri Maru* in company with the carpenter of the *Egeria*. The first day I went on board, I surveyed the damages and made a detailed statement in a report. The second time I went with the staff-commander of the *Audacious* to ascertain how far the details made by Lloyds' surveyor agreed with the damages actually sustained. Also to examine the engines and boilers and see what sort of a vessel she was. The third time I went with the same officers and a member of the Iron Works to estimate damages at local prices. We calculated at home prices £30 for the labour, £28 for material. This did not include topsail. I found that the repairs would cost from two to three times the amount of home prices. I called the attention of the Captain of the *Chiri Maru* to the defective state in which the stem had been previous to the accident. The bright portion of the fracture formed a triangular portion of the whole. From seven to eight tenths of the old portion formed part of the fracture. It would not have been hazardous to have gone to sea with the stem as it was. I may say that it would have been eminently unsafe to have gone to sea with the stem as it was before the collision. The forestay could be fastened to an anchor. The vessel would be of more value after repairs than she was before the accident. The engines the master stated were disconnected for towing. The boilers were totally unseaworthy, the furnaces one mass of defects, and the vessel could in no way be considered a sea going steamer I should not have liked to go to sea in that vessel.

Cross-examined by Mr Ness:—If the estimates made by Mr Robertson were sent to me to be checked I would not allow $800. I have not in any case made a detailed study of prices and labour in Yokohama. I have had experience sufficient to give an opinion on tenders with such a margin as between $1,400 and $1464, local prices. I give a general opinion only In my opinion the *Chiri Maru* was unfit to go to sea before the accident. I will go into details if you like. (Mr Ness said "No, thank you!") She was not less fit to proceed to sea after than before the accident. I cannot express an opinion on the cat-heads.

Re-examined by Mr Dickins:—I gave my opinion as an engineer of several years experience. The *Chiri Maru* was unfit to go to sea before the accident because the boilers were totally ruined, and to confine myself to one item, the stem to which the foresail was fastened was so fractured that it was in a very dangerous state, and if the fastening had given way the mast would have fallen and the ship have come to grief.

William Anderson, sworn:—I am a ship carpenter and live No. 113. I went on board the *Chiri Maru* on Wednesday to make an estimated the damage done. I saw everything except the old stay-sail. The whole of the estimate came to $750.

To the Jury:—My estimate was eight day for these repairs, working from early morning till ten at night. I am prepared to take the contract on Monday morning.

William Castle, sworn:—I am Lieutenant in Her Majesty's Navy serving on board the *Audacious*. I was on board on the evening of the 11th. I was watching attentively the position of the *Audacious* with respect to the men-of-war close to. I noticed no change whatever in their respective positions and was quite satisfied in my own mind that our ship had not altered her position. About half past seven I ceased to notice anything further except that the gale appeared to have somewhat abated. My attention was called by hearing an order given about eight o'clock to let go a starboard anchor. I went on deck to my station on the fore part of the upper deck. Before reaching my station I became aware that the second anchor had been dropped. It is possible on board the *Audacious* to feel the sensation as of release from a weight, which is sufficient to convince me that it was an anchor had been dropped. As I went forward I noticed men attempting to take steps to ease out or veer a starboard cable. I also proceeded to carry out an order that had been given to veer a port cable and also to prepare the remaining anchors for immediate service. All these details I immediately attended to. I observed that the starboard anchor had been let go and that preparations had been made to let go the port cable. On the port cable being veered she took her starboard cable. The *Atalante* was laying at single anchor. The *Tennessee* was moored, that is, she had an anchor out in the direction of the prevailing wind. I was much struck by the zealous manner in which all hands on board did their duty. There was no confusion. The orders given to me to carry out were seamanlike.

Cross-examined by Mr Ness.—We were at single anchor up till eight o'clock. I had not observed the state of the barometer during the day. I cannot say from observations of the barometer whether the gale increased or diminished between six and eight o'clock. It was the best anchor we had on board which was out. The cables are all equally good. I do not know that men were stationed with drift leads. It is a standing order on board the *Audacious*. Men should have been stationed on the night of the 11th June. I was not on deck at the time she began to drift. I do not know how long a time elapsed from the moment she began to drift and the order to let go the starboard anchor. The *Chiri Maru* was about 350 or 400 yards from us, or two cables' length. I do not think the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Audacious would have pulled up had the second anchor been let down immediately she began to drift. The cable let out was over two hundred fathoms. The *Tennessee* was from 250 to 300 yards from us. It does not follow that the *Audacious* and *Tennessee* were in improper positions towards each other, both being moored on two parallel lines 300 yards apart. It was impossible for the *Audacious* to drift on to the *Tennessee*. The idea of the two ships meeting never entered my head. The *Eli ab th* was between 400 and 500 yards from us on our starboard side. I never sent word to the *Chiri Maru* to say that she was in a dangerous position. It was so unlikely for the *Audacious* to drift under such precautions. Sufficient cables had been veered, the top gallants had been on deck; such precaution being usual and necessary. No other precaution could have been taken. Supposing the second anchor had not been immediately dropped, proper precaution would not have been taken. The other anchors were not ready for immediate service. Not more than two minutes elapsed between the time of the order being given and the time I felt the vibration. The anchor must have touched the bottom. The *Audacious* lies in the roadstead, and it is customary for vessels to lie at single anchor in a roadstead as open as this is. The measures taken by the *Audacious* both before and after the drifting were the same as those usually taken in the service on a similar occasion.

To the Jury :—I mean that the best course to adopt was to let the ship lie at single anchor and keep a second one in readiness for an emergency. The reason is that a vessel at times rides ahead of her anchor, and if the cable parts, she comes back with a sudden jerk, bringing a heavy strain on the cable. On the other hand when an anchor is kept in readiness and dropped the moment a ship begins to drift, she can be brought up more quickly.

The Court here adjourned till Monday morning, at nine o'clock.

REUTER'S TELEGRAMS.

Shanghai, 23rd June, 1877.

LOSS OF MESSAGERIES MARITIMES, S. S. *Meikong*.

The M. M. S. S. *Meikong* was wrecked on Ras Haffoon (Cape Haffoon. South of Cape Guardafui—Long: 51.22 E. Lat: 10.26 N.) on the afternoon of the 17th June.—Crew and Passengers all saved.

The M. M. S. S. *Tanais* which left Yokohama on the 16th May, connected with M. M. S. S. *Meikong* at Hongkong.

No news of importance has been received from the Armies on the Danube, or in Turkey in Asia.

LONDON, 24th June, 1877.

ENGLISH MONEY MARKET.

Consols are falling in consequence of a Report that the Government is asking for additional Credit and at the same time is increasing the Armaments of the Nation.

DEFEAT OF THE TURKISH ARMY IN ASIATIC TURKEY.

The Turkish Army has been defeated by the Russians and compelled to fall back on Erzeroum.

London, 15th June, 1877.

After continuous fighting Suleiman Pacha has succeeded in forcing the Duga pass.

THE SUEZ CANAL.

Sir Stafford Northcote has confirmed a report that Russia will not attempt to interfere with the navigation of the Suez Canal.

London, 14th June, 1877.

NEW RUSSIAN LOAN.

The Russian Government has issued a new loan of £15,000,000.

DECISIVE DEFEAT OF THE MONTENEGRINS.

After fifty-five hours' continuous fighting between the Turks and Montenegrins, the latter withdrew from their positions. Both sides suffered heavy losses.

THE INTENDED PASSAGE OF THE DANUBE.

The Russian military preparations for the passage of the Danube at Giurgevo have been frustrated.

LONDON, 25th June, 1877.

MEETING OF THE CABINET COUNCIL IN ENGLAND.

At a meeting of the Cabinet Council held yesterday, it was resolved to ask the Country for extra credit in order to meet the expenses of precautionary military preparations.

MOVEMENTS OF THE RUSSIAN ARMY IN TURKEY IN EUROPE.

The Russian Army has crossed the Danube at Galatz and the Turkish Army is retiring from Matchin.

A despatch from Prince Gortschakoff states that it is not the intention of Russia to acquire Constantinople.

LONDON, 26th June, 1877.

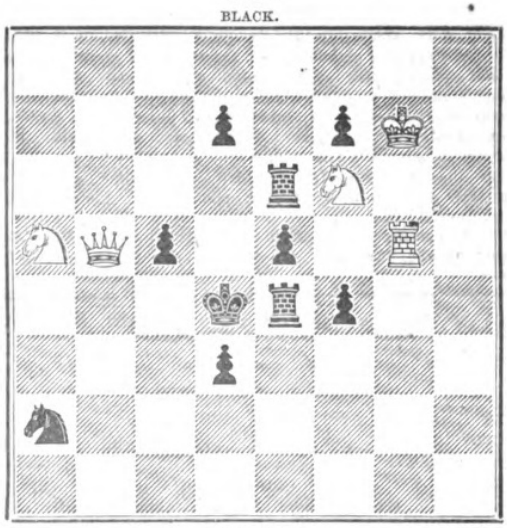
GREAT FIRE AT ST. JOHNS, NEW BRUNSWICK.

St. Johns, New Brunswick, has been almost entirely destroyed by Fire, and the damage caused by the conflagration is estimated at three millions sterling.

The following private telegram was received yesterday :

The Russians have crossed the Danube after a severe engagement.

Matschin has been taken by the Russians.



June 26th, 10.30 A.M.

A telegram has been received from Marseilles this morning by the Agent of the M. M. Company, announcing that all the passengers on board the *Meikong* were saved with the exception of Mr. Arathon, a passenger from Madras. All the cargo and mails were lost with the exception of the registered letters and some official despatches.

Treasure	$64,850
,, ...	*yen* 166,000

REPORTS.

The O. & O. steamship *Belgic*, Capt Metcalfe, left Hongkong on the 19th instant, at 5.30 p.m. On the evening of the 23rd, in Lat. 30 N., Long. 131 E., the steerage watchman saw a Chinese passenger named Lay Moy jump overboard The engines were stopped and reversed full speed, a boat lowered and sent in charge of the 3rd officer to look for him, but was recalled after an hour's unsuccessful search. The *Belgic* then steamed ahead full speed but nothing was seen of the Chinaman. The man's effects, worth about $200, were handed over to his nephew. Arrived in port at 5 a.m., June 26th.

The American barque *Etta Loring*, from New York, is now working up the Bay, and may reach the anchorage early this morning.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—A fair business has been done both in *Yarns* and *Shirtings*; prices are unchanged but firm. *Yarns* 28/32 are in good demand, especially the medium qualities; 16/24 continue saleable, and for 38/42 there is more enquiry. In *Shirtings* some important transactions are reported at current rates. For *Velvets* and *T. Cloths* there is some demand, whereas *Drills* are neglected.

Grey Shirtings:—					White Shirtings:—		
7 lbs.	38½ yds.	39 in.	per pce.	$1.47½ to $1.77½	60 to 64 reed 40 yds.	35 in.	per pce. 2.20 to 2.40
8 lbs.	38½ yds.	44 in.	,,	1.65 to 2.25	Turkey Reds 24 yds.	30 in.	2—3 lb. per lb. 0.65 to 0.75
8 lbs. 4 to 8¼ lbs.	38½ ,,	39 in.	,,	1.65 to 2.35	Black Velvets		7.00 to 8.25
9 lbs.	38½ ,,	44 in.	,,	2.00 to 2.60	English Drills 14/15 lbs.	40 yds,	30 in. 2.40 to 2.65
T. Cloth 7lbs.	24 ,,	32 in.	,,	1.40 to 1.60	Taffachelass	12 yds,	43 in. 1.70 to 2.15
,, 6lbs.	24 ,,	32 in.	,,	1.10 to 1.25			

Yarns.—

No. 16 to 24	per picul	$29.00 to 32.50	No. 38 to 42 per picul $35.00 to 39.00
No. 28 to 32	per picul	$31.50 to 34.75	Reverse Twist 16-24 —

Woollens.—Our market has been very quiet since our last, the only feature worthy of notice being a somewhat better enquiry for plain *Mousselines de Laine*, but at lower rates. *Blankets* are still in demand for Government requirements, but there are scarcely any stocks on hand. In the absence of any stock of all wool *Army Cloth* some *Presidents*, *Pilots* and *Unions* have found buyers at low rates. *Orleans* and *Italian Cloth* remain neglected.

Plain Orleans	40—42 yds.	32 in.	5.50 to 7.00	Figured Mousselines de Laine	30 yds.	30 in.	0.24 to 0.28
Figured Orleans	29—30 yds.	31 in.	4.25 to 5.25	Multicolored ,,	30 yds.	30 in.	0.28 to 0.36
Shimagoro	30 yds.	30 in.	4.00 to 5.25	Cloth, all wool plain or fancy	48 in. to 52 in.		0.80 to 1.20
Italian Cloth	—30 yds.	32 in.	0.24 to 0.31	Presidents	54 in. to 56 in.		0.60 to 0.65
Camlet Cords	29—30 yds.	32 in.	5.75 to 6.00	Pilots	54 in. to 56 in.		0.45 to 0.55
Camlets Asstd.	56—58 yds.	31 in.	16.50 to 17.50	Union	54 in. to 56 in.		0.60 to 0.75
Lastings, Japan	22—30 yds.	32 in.	12.00 to 13.00	Blankets, scarlet & green	6 to 8 lbs.	per lb	0.40 to 0.48
Plain Mousselines de Laine	—30 yds.	30 in.	0.16¼ to 0.17¾				

Sugar.—*Formosa* Sugar is unchanged, but some advance has taken place in white kinds.

Sugar:—Takao in bag	per picul	$5.00	China No. 4 Kook-fah per picul $7.30 to $7.80
,, in basket	,,	$4.85	,, No. 5 Kong-fun ,, $6.70 to $7.20
Taiwanfoo in bag	,,	$4.90	,, No. 6 E-pak ,, $6.00 to $6.50
do. in basket	,,	$4.80	Swatow Brown ,, None.
China No 1 Ping-fah	,,	None	Daitong ,, $4.35
,, No. 2 Ching-pak	,,	$8.60 to $9.00	Japan Rice ,, $2.10 to $2.35
,, No. 3 Ke-pak	,,	$8.00 to $8.40	Kerosene Oil ,, $4.20 to $4.30

Kerosene Oil.—The market has not opened since the arrival of the *Etta Loring* from Java, and prices are purely nominal at $4.20 to $4.30.

EXPORTS.

Silk.—About 200 bales of Hanks arrived during the past week, nearly all of which have been sold. Competition among buyers, however, was not brisk, as the bulk of the business has been done by one or two houses, and consequently a further considerable decline in prices has to be reported. We quote as follows:—

			In London at 4s. 1d. per lb.	*In Lyons at f. 5.15 per kilo.*
Mibash—Good all round,	No. 2½	$490 to $500	18/2 to 18/6	frs. 50.00 to 51.00
,, Fair medium	No. 2½ to 3	$460 to $480	17/2 to 17/10	frs. 47.00 to 49.00
Hatchoji—Hanks, medium	No 3 to 3½	$430 to $450	16/1 to 16/9	frs. 44.50 to 46.00

Settlements of new Silk, 200 bales, and old, none; stocks of new Silk, 35 bales, and old, 700 bales.

The season 1876-77 closes with a total export of 21,222 bales, against 13,591 bales for the season 1875-76.

Tea.—Telegraphic advices of an unfavourable nature from the United States have again somewhat checked business, and settlements for the week have been moderate, amounting to 3,700 piculs. Prices to-day are decidedly of a downward tendency, but buyers seem inclined to keep aloof.

One or two musters of second crop Teas have been shown and full arrivals of these may be expected in a few days.

Common	$13.00 to $14.00	Fine	$24.00 to $27.00	
Good Common	$15.00 to $16.00	Finest	$28.00 to $33.00	
Medium	$17.00 to $19.00	Choice	$36.00 to $39.00	Limited
Good Medium	$20.00 to $22.00	Choices	$42.00 & upwards.	supply.

EXCHANGE AND BULLION.

Exchange.—Sterling rates have been very steady throughout the past week, with a fairly large business doing.

Rates close as follows:—

Sterling—Bank 6 months' sight	4s. 0⅛d.	On Shanghai—Bank sight	75
,, Bank Bills on demand	3s. 11⅞d.	,, Private 10 days sight	76
,, Private 6 months' sight	4s. 1⅛d.	On New York—Bank Bills on demand	96½
On Paris—Bank Sight	5.00	,, 30 days sight Private	98½
Bank 6 months' sight	5.07½	On San Francisco—Bank Bills on demand	97
,, Private 6 ms. sight	5.17½	,, 30 days sight Private	99
On Hongkong—Bank sight	¼ % dis.	Kinsatz	412
,, Private 10 days' sight	1¼ ,,	Gold Yen	400

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of al kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

DYSENTERY, CHOLERA, FEVER, AGUE, COUGHS, COLDS, &C.

Dr. J. COLLIS BROWNE'S

CHLORODYNE

(Ex Army Med. Staff)

IS THE ORIGINAL AND ONLY GENUINE.

CAUTION.—Vice Chancellor Sir W. P. Wood stated that Dr Collis Browne was undoubtedly the Inventor of Chlorodyne; that the story of the Defendant, Freeman, being the Inventor was deliberately untrue, which he regretted had been sworn to. Eminent Hospital Physicians of London stated that Dr. Collis Browne was the discoverer of Chlorodyne; that they prescribe it largely, and mean no other than Dr. Browne's.—See "Times," July 13th, 1864.

The Public, therefore, are cautioned against using any other than

DR. J. COLLIS BROWNE'S CHLORODYNE

REMEDIAL USES AND ACTION

This INVALUABLE REMEDY produces quiet refeshing sleep, relieves pain, calms the system, restores the deranged functions and stimulates healthy action of the excretions of the body without creating any of those unpleasant results attending the use of opium. Old and young may take it at all hours and time when requisite Thousands of persons testify to its marvellous good effects and wonderful cures, while medical men extol its virtues most extensively, using it in great quantities in the following diseases:—

Diseases in which it is found eminently useful—Cholera, Dysentery, Diarrhœa, Cholics, Asthma, Rheumatism, Neuralgia, Whooping Cough, Cramp, Hysteria, &c.

EXTRACTS FROM MEDICAL OPINIONS.

The Right Hon. Earl Russell communicated to the College of Physicians and J. T. Davenport that he had received information to the effect that the only remedy of any service in Cholera was Chlorodyne.—See "Lancet," December 31st, 1864.

From A. Montgomery, Esq., late Inspector of Hospitals, Bombay:—"Cholorodyne is a most valuable remedy in Neuralgia, Asthma, and Dysentery. To it I fairly owe my restoration to health, after 18 months' severe suffering, and when other remedies had failed."

Dr. Lowe, Medical Missionary in India, reports (Dec. 1865) that n nearly every case of Cholera in which Dr. J. Collis Browne's Chlorodyne was administered the patient recovered.

Extract from "Medical Times," January 12th, 1866.—"Chlorodyne is prescribed by scores of orthodox medical practitioners. Of course it would not thus be singularly popular did it not supply a want and fill a place."

Extract from the General Board of Health, London, as to its efficacy in Cholera.—"So strongly are we convinced of the immense value af this remedy that we cannot too forcibly urge the necessity of odopting it in all ceases."

Beware of spurious and dangerous compounds sold as CHLORODYNE, from which frequent fatal results have followed.

See leading article. "Pharmaceutical Journal," August 1st, 1869, which states that Dr. J. Collis Browne was the inventor of Chlorodyne; that it is always right to use his preparation when Chlorodyne is ordered.

CAUTION.—None genuine without the word "Dr. J. Collis Browne" on the Government stamp. Overwhelming medical testimony accompanies each bottle.

The public are further cautioned, a forgery of the Government stamp having come to the knowledge of the Board of Inland Revenue.

SOLE MANUFACTURER—

J. T. DAVENPORT,

83, Great Russell Street, Bloomsbury, London.

Sold in bottle at 1s. 1½d., 2s. 9d. and 4s. 6d.

PROTECTED BY ROYAL LETTERS PATENT,

Dated October 11th, 1869.

Under Distinguished Patronage

DR. BRIGHT'S PHOSPHODYNE.

(OZONIC OXYGEN)

THE NEW CURATIVE AGENT, AND ONLY RELIABLE REMEDY FOR NERVOUS AND LIVER COMPLAINTS

This Phosphatic combination is pronounced by the most eminent members of the Medical Profession to be unequalled for its power in replenishing the vitality of the body, by its supplying all the essential constituents of the blood and nerve substance, and for developing all the powers and functions of the system to the highest degree.

It is agreeable to the palate, and innocent in its action, while retaining all its extraordinary properties; and as a specific, surpassing all the known therapeutic agents of the present day for the speedy and permanent cure of—

Nervous Prostration	Lassitude
Liver Complaints	Shortness of Breath
Palpitation of the Heart	Trembling of the hands and limbs
Dizziness	Impaired Nutrition
Noises in the Head and Ears	Mental and Physical Depression
Loss of Energy and Appetite	Consumption (in its first stages only)
Hypochondria	Timidity
Female Complaints	Eruptions of the Skin
General Debility	Impaired Sight and Memory
Indigestion	Nervous Fancies
Flatulence	Impoverished Blood
Incapacity for Study or Business	Nervous Debility in all its Stages
Sick Headache	PrematureDecline

and all morbid conditions of the system arising from whatever cause. The action of the Phosphodyne is twofold—on the one hand increasing the principle which constitutes nervous energy, and on the other the most powerful blood and flesh generating agent known; therefore, a marvellous medicine for renovating impaired and broken-down constitutions. It quickly improves the functions of assimilation to such a degree, that where for years an emaciated, anxious, cadaverous, and semi-vital condition has existed, the flesh will rapidly increase in quantity and firmness, and the whole system return to a state of robust health. The Phosphodyne acts electrically upon the organisation; for instance, it assists nature to generate that human electricity which renews and rebuilds the osseous muscular, nervous, membranous, and organic systems. It operates on the system without exciting care or thought upon the individual as to the process. It moves the lungs, liver, heart, kidneys, stomach, and intestines, with a harmony, vigour, yet mildness unparalleled in medicine.

The Phosphodyne gives back to the human structure, in a suitable form, the phosphoric or animating element of life, which has been wasted, and exerts an important influence directly on the spinal marrow and nervous system, of a nutritive, tonic, and invigorating character, maintaining that buoyant energy of the brain and muscular system which renders the mind cheerful, brilliant, and energetic, entirely overcoming that dull, inactive, and sluggish disposition which many persons experience in all their actions.

The beneficial effects of the Phosphodyne are frequently shown from the first day of its administration, by a remarkable increase of nervous power, with a feeling of vigour and comfort, to which the patient has long been unaccustomed. Digestion is improved; the appetite increases wonderfully; the bowels become regular; the eyes brighter; the skin clear and healthy; and the hair acquires strength, showing the importance of the action of the Phosphodyne on the organs of nutrition.

Finally, the Phosphodyne maintains a certain degree of activity in the previously debilitated nervous system; its use enables all debilitated organs to return to their sound state and perform their natural functions. Persons suffering from Nervous Debility, or any of the hundred symptoms which this distressing disease assumes, may rest assured of an effectual and even speedy cure by the judicious use of this most nvaluable remedy.

DR. BRIGHT'S PHOSPHODYNE

IS SOLD ONLY

In CASES at 10s. 6d. by all Chemists and Patent Medicine Vendors throughout the Globe.

Full Directions for Use, in the English, French, German, Italian and Dutch Languages, accompany each Case.

☞ *CAUTION.—The large and increasing demand for Dr. Bright's Phosphodyne has led to several imitations under somewhat similar names purchasers of this medicine should therefore be careful to observe that each case bears the English Government Stamp, with the words Dr. Bright's Phosphodyne engraved thereon, and that the same words are also blown in the bottle.*

OPINIONS OF THE PRESS ON

MORSONS' PEPSINE PREPARATIONS.

PEPSINE.—Among the results of the application of science to the practice of medicine, none appear to promise more important results than Pepsine, the digestive principle of the gastric juice, which in a purified state, and mixed with some inert vegetable powder, or dissolved in wine, or made into a lozenge forms a valuable medicine. It appears that the use of this important agent is greatly increasing as the knowledge of its effects becomes more widely diffused. A few grains put into a wine-glass with some water forms at once an artificial stomach in which food may be digested, in this way the relative values of different samples of Pepsine may be determined. At a lecture that was delivered a short time ago at the Society of Arts, by Dr. LETHEBY, an experiment of this sort was made, in which large quantities of animal fibrine were digested in bottles, during the lecture, with MORSON'S Pepsine.—Extract from the *Morning Herald* and *Standard* Newspapers.

The rapid popularity Pepsine has acquired among the most emiment members of the medical profession throughout the civilised world, as almost a specific for chronic dyspepsia, is due to the fact that it is the nearest possible production of the active principle of the gastric juice of the stomach. Unfortunately, like all other inventions of a like nature, Pepsine has been not slightly discredited by the spurious manufactures that have been issued from time to time, but when it was know to be the product of of such emiment chemists as MORSONS', of Southampton-row the concurrent testimony of almost every physician in France and England declared it to be the grandest and most perfect cure ever introduced for all diseases of the digestive organs.—*Church Herald.*

It is not too much to say that the introduction of Pepsine into the list of modern therapeutic agents by Dr. CORVISART created a very veritable revolution in the pathology of dyspepsia, and diseases of the digestive organs. Whereas no complaint was so common as chronic indigestion, perhaps the most painful martyrdom to which any one can be subjected, this should now be positively unknown, for as the disease is due to a lack of gastric juice, a dose of Pepsine, which contains the active digestive principle of the digesting juice of the stomach, restores the equilibrium, and effects a cure. Fortunately, too, for its popularity, the preparations of Pepsine, for which we have to thank Messrs. MORSON & SON, are of the most elegant character, enabling it to be administered with the most extreme accuracy, and also in very palatable forms.—*Freeman's.*

One is apt to look with so much suspicion on all proprietary medicines the secret ingredients of which are carefully concealed from the world that it was a relief to find there was no secret about Pepsine. This comparably new and valuable agent is simply the active principle of the gastric juice of the stomach, and as nature is above art or science it is hardly to be wondered at that it has effected the most wonderful cures of what were heretofore supposed to be chronic dyspepsia. The principle underlying the administration of Pepsine, is just this. "Where the stomatch is not strong enough, strengthen it." It is, however, of the last necessity to see that it is properly made, the best guarantee for which is to be found in the presence of the labels issued by Messrs MORSON & SON, of Southampton-Row, these eminent chemists having achieved a deserved reputation for the manufacture of Pepsine, which has completely overshadowed even the original French makers.—*Weekly Register.*

When CORVISART first announced his invention of Pepsine not a few of the faculty were inclined to denounce it as one more added to the already long list of empirical remedies. But by degrees it made its way, and when the preparations of this active principle of the gastric juice of Messrs BOUDAULT, of Paris, made under the personal supervision of the inventor, were supplemented by the improvements introduced by our own eminent chemists, Messrs MORSON & SON, of Southampton-row, all our leading physicians, one after the other, gave in their adhesion to this purely and thoroughly scientific remedy, which seems to have proved a complete specific for the most wearing and trying of "the ills that flesh is heir to"—chronic dyspepsia. Indeed, without arrogating to ourselves any very special medical knowledge, we are able to understand why this grand therapeutic remedy, which contains the active principle of the gastric juice, should prove a perfect remedy for all diseases of the digestive organs which arise from a failure of the gastric juice.—*Court Circular.*

This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omissonto renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTH.

On the 1st July, at the Russian Legation, Tôkiô, the wife of C. DE STRUVE, Minister-Resident of Russia, of a daughter.

DEATH.

On the 2nd July, at No. 88, WILLIAM WYLIE, son of William and Ellen Barrie, aged 8 months and 16 days.

Notes of the Week.

From what we can learn of the progress of events in Kiushiu, it would appear that the struggle at present is concentrated in Hiuga, where the bulk of the Satsuma forces are supposed to be situated. It is the intention of the Imperialists to close them in with two bodies, one advancing from the north and the other from the south. The floods caused by terrible rains that have prevailed to almost an unprecedented extent in Kiushiu, and the great heat, interfere with all the plans of the army. The condition of the troops in Kagoshima is said to be lamentable, and in Tôkiô it is currently reported that a plague has broken out in the city. The sickness is probably a virulent form of typhus, which together with dysentery has been making sad havoc among the troops since the commencement of the hot weather. The latest native advices state that Saigo, at the head of 500 of his body guards and 2000 fresh troops, has left Miyako-no-jô for Shigeoka in Bungo. General Murata has left for Yoshino with the insurgent forces that were stationed at Kajiki, Hamanoichi and Kokubu. Kirino with sixteen companies has gone toward Mamihara. It would thus appear that one body of the Satsuma forces are again going to endeavour to force their way into Bungo from Nobeoka, while another will advance from Yoshino to Ichiki, and cutting off the Imperialists from communication with Kagoshima and Okumi, will make another attack against Kumamoto by way of Yabe, Koyama and Otsu.

Yesterday morning about six hundred so-called policemen arrived in Tôkiô from the South. They were said to be wounded and invalided troops, but with the exception of three all were young, hearty, and active men, with no sign of wounds or ill health. It is impossible to understand why the Government, which seems so hard put to it to find recruits that it has to force into the field children of fifteen and old men of sixty, should send back young and vigorous men.

It has frequently been stated that many of those who were induced to enlist as policemen, and were afterwards shipped off to the South, on finding that they had been tricked, refused to remain and fight. A late batch of three hundred men, recruited in the province of Shonai, did not allow deception to be carried so far, for finding on their arrival in Tôkiô that they were to be sent immediately to Kiushiu they calmly refused to go, stating that they had been enrolled as Tôkiô police, and not to act as troops in the South. In consequence of their determination they all had to be sent back to their homes on the 30th June. The policemen who were not so fortunate as to be able to free themselves of the Government service were inclined to murmur at this proceeding; but regardless of jeers to the right of them, jeers to the left of them, the happy three hundred wended their way to their peaceful homes.

General Kawaji has left his command. Some papers report him sick: others say he is wounded, while the *Chôya Shimbun* hints in very plain terms that his retirement is on account of disagreements with the other commanders.

We have been informed that the real object of Mr. Inouye Kaworu's long visit to England is to make arrangements for a loan of a large amount, and that he is at present actively engaged in endeavouring to settle the preliminary conditions. Our informant goes so far as to say that Mr. Inouye Kaworu has been specially sent by the Government to effect this object. While we have every reason to believe in the good faith of our informant, we cannot think that the Government, though it might make an attempt to procure a loan, would select Mr. Inouye as its agent, remembering his former exposure of a cooked Budget. That the present empty condition of the national Treasury may suggest the wildest expedients for staving off, for ever so short a time, the bankruptcy which daily becomes more imminent, is perfectly comprehensible. But it will be well for the Japanese Government to remember in the event of its meditating another loan, that English capitalists are more difficult to hoodwink than the unsophisticated and credulous *kwazoku*. By long and dear experience they have learned that the glittering prospects of foreign loans do not all turn out gold in the long run. They have become sadder and wiser men, and the account of the national receipts and expenditure must be of a far more trustworthy nature than they are at present, before foreign capitalists can be permitted, unwarned, to lend Japan whatever money she may choose to ask for. As we had once before occasion to remark—and it will be noted that this is one of the principal evils complained of in the *Risshisha* Memorial—the statements issued by those who have uncontrolled and unaudited management of the national exchequer are not likely, without proof, to be unquestioningly received. Something more is required to compel the world's belief in their trustworthiness than mere calculations of what is to be spent in the future, and an absence of detailed account of what has been spent in the past.

We remarked some time since on the singular disturbance of the sea that was observed on various parts of this coast on the 14th May last. From advices since received it appears that a similar phenomenon was observed about the same time in various parts of the world. It was, however, most noticeable in South America, especially on the Coast of Peru, and can be probably traced to some mighty subterranean convulsion in that region. It is reported that on the morning of the 10th May, Callao was visited by a tidal wave or gradual upheaval of the sea, which caused much damage, so that the families in the town fled for safety to the high ground at the back of that city. At 10 o'clock in the morning all danger seemed to have passed. The effect along the coast appears to have been very severe. At Molindo a portion of the railway was destroyed, and at Ilo the town and railway were seriously damaged. On the evening of the 9th violent earthquakes were experienced at Arica and Arequipa, the scenes of the frightful catastrophe of 1868. Later reports speak of the almost total destruction on the same day of Antofagasta, Iquique, Arica, Tambo da Moro, Pabellon di Pica and Ilo. Iquique, the principal port of Peru for nitrate shipments, was completely destroyed in the frightful earthquake of 1868, and it is now again reduced to ruins. At Arica, which was also overthrown by the same terrible visitation, the sea washed over the town to the hills beyond. The U. S. steamer *Wateree*, which by the tidal wave accompanying the earthquake of 1868 was carried inland two miles, was again floated and has been carried a mile or two further up the coast. The lower part of the town of Antofagasta, the principal port of the rich mining district of Bolivia, is utterly destroyed. The guano deposits have suffered severely, and some half-a-dozen fine ships are ashore and total wrecks. The sea in some places rose over sixty feet. The entire extent of damage caused by this wave is not known, but must be enormous, and between six and eight hundred lives are said to have been lost.

The performance of the Band of the *Atalante* at the Bluff Gardens on Tuesday evening, at the first of the Series of Promenade Concerts given by the Amateur Dramatic Corps, afforded a treat to lovers of music such as they have seldom, if ever, before had the opportunity of enjoying in Yokohama. We have never heard a naval band that approached that of the *Atalante* in purity of tone, precision and general excellence of execution. Soft passages are rendered with rare delicacy, a far greater test of good playing than mere power, though there is abundance of that when required. Several of the members of the band are evidently performers of rare merit, as shown in the solos occurring in the various selections; notably in *La flute Enchantée*, where an air taken by the base clarinet was played with excellent taste and effect, and in an arrangement of Gounod's beautiful serenade *Chantez, dormez*, where the playing of the three solo instruments to which the air and the *obligato* accompaniment are allotted was in all respects admirable. Great credit is due to the conductor for the perfection to which the band has been brought under his direction. The Dramatic Corps, feeling called upon to subscribe their mite to the programme attempted some part singing. Now we are not going, for reasons that our readers will appreciate, to harshly criticise this performance, which was probably as well done as a paucity of numbers and hasty preparation would permit. But we cannot refrain from expressing both surprise and regret that in so large a community as our own, there exists no Glee Club or Choral Association worthy the name. There are plenty of good voices, or at least voices good enough to work into satisfactory material for part singing. A little hard work will soon supply sufficient musical knowledge to enable singers to read at sight. A pains-taking and energetic leader, regular meetings for practice, and moderate ambition on the part of the choir will do the rest. Could such an Association be formed there would always be assistance to fall back upon on occasions of concerts like the present, or special concerts might be organised with a certainty of a creditable performance and a satisfied audience. No doubt what was done in the way of part singing the other evening was the best under the circumstances that could be done. We do not want to find fault with the singing, but we cannot refrain from expressing our regret that better things were not possible.

In our last issue we took occassion briefly to refer to an article in the *Gazette*, calling attention to letters directed against the United States Consul General at this port, which have been written by certain anonymous scoundrels, and published by some of the American journals in New York and elsewhere. It is difficult to find words to express the loathing that one feels for the coward who, wishing to gratify some private spite or fancied wrong, or possibly to revenge himself for some justly merited punishment which has fearlessly been dealt out to him for his crimes, "willing to wound, but yet afraid to strike," has recourse to the dastardly means of anonymous newspaper libels. But what can be said of a press that permits its columns to be used for the base purpose of slandering and defaming any man who occupies a public position? The indignant protest that poor Goldsmith —who was a victim of such foul scribblers as have attacked General Van Buren—wrote in 1773, might well have been written to day.

"I have always," he says, "considered the press as the protector of our freedom, as a watchful guardian, capable of uniting the weak against the encroachments of power. What concerns the public most properly admits of a public discussion. But, of late, the press has turned from defending public interest to making inroads upon private life; from combating the strong to overwhelming the feeble. No condition is now too obscure for its abuse, and the protector is become a tyrant of the people. In this manner the freedom of the press is beginning to sow the seeds of its own dissolution; the great must oppose it from principle and the weak from fear, till at last every rank of mankind shall be found to give up its benefits, content with security from its insults."

This is perfectly true of a certain portion of the American press of to-day. Every public man's character affords to it a harpy feast, on which it pounces, and what it cannot devour it defiles. And the case is rendered harder, inasmuch as there is actually no redress. The law of libel is supposed to exist, but it is practically dead. The calumniators can strike their cowardly blows in safety, for the victim can obtain no compensation for the injury. The latter is in this unfortunate position:—if he suffers in silence the world sneers at him, and is apt to say he dare not contradict the accusations of his unknown accusers, while such is the abject fear that the tyranny of such a press has created, that in ninety-nine cases out of a hundred he dares not provoke its wrath by attacking it. The only remedy for this miserable state of things is for every journal that lays any claim to influence and respectability to denounce the offenders in the most unflinching manner; to give their earnest support and sympathy to those who may endeavour, in the public good, to bring the publishers, as well as the perpetrators of the anonymous libels to justice, and to hold them up to the world's scorn. By such means alone can the true liberty of the press be secured, and its licentiouness prevented from becoming its destruction.

That this licentiousness is becoming a burden too great to be borne, and that the mind of the right thinking portion of the community is commencing to rebel against its tyranny is shown by various articles that have recently appeared from time to time in the better class of journals. It is worth while quoting the following excellent remarks from the *Stockton Independent*:—

It is time that every respectable journal in the country should make an effort to expose that class of infamous scoundrels who are now degrading the public press by using its columns to slander, defame and malign such individuals as they may dislike, or who will not allow themselves to be black-mailed in order to avert such attacks. A certain class of journals in the United States have of late assumed the role of detectives and public prosecutors. While professing to be working for the advancement of the public good, they wantonly and maliciously attack the character of public men, assail the reputation of private individuals, and violate the sanctity of the domestic circle by questioning the chastity and virtue of its female members. The managers of these journals are generally devoid of character themselves, yet they are [illegible] to persistently injure, malign and traduce men infinitely their superiors in every respect, and, unfortunately for the country, there is no satisfactory remedy for this monstrous evil. We have laws for the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

protection of the property of individuals, and the thief or the robber, if discovered, can be convicted and punished. For the scoundrel who robs another of his good name—something infinitely more valuable to him than gold—there are, however, almost innumerable avenues of escape, and it seems almost impossible to punish them as they deserve. It would be unjust to charge that the people of California place a higher value upon their money than upon their good names, yet it must be confessed that if we are to judge the people by their laws and by their general conversation we are almost forced to come to that conclusion. An individual is wantonly assailed by an infamous journal, and he deems it necessary to vindicate himself from the charges by an appeal to the law. He may attempt to have the managers of the journal indicted for libel by the Grand Jury of any country where said libel circulates, or he may commence a suit against them for private damages. If he adopts the first plan a cry will undoubtedly be raised against him by some stickler for economy, which will be taken up by every carper in the community, and he may be denounced by croakers who never have paid a dollar of tax, and whose pecuniary interest in the county finances would not be affected to the amount of one-tenth of a mill by the prosecution of hundreds of libel suits. Should he, however, conclude to commence a suit for private damages, then these same carpers and fault finders would sneer at the idea of a man attempting to put a money valuation upon his wounded honor or reputation. If the same person should lose his property by the thieves or robbers, no complaint would be made about the cost of prosecuting them with a view of meting out to them condign punishment. Notwithstanding there are carpers and fault-finders in every community who may object to the cost of suits to vindicate character, we are satisfied that good citizens desire to see the reputation, as well as the property of the individual, protected by law.

The men of the East seem to be finding favour in the eyes of the ladies of the old and new worlds. Two marriages in high life have taken place in Europe wherein members of the Japanese nobility have taken unto themselves foreign wives. Now we learn that San Francisco is greatly exercised over the marriage of Miss Selina Elliot, a teacher at the Mission School, with one of her Chinese pupils named Pow Hong Whew. The *World* states that a severe sentence of social ostracism has been passed by an indignant newspaper reporter, who has probably been worried at some period of his existence by a too importunate celestial creditor in the laundry business.

There is no act, however foolish, that some one is not ready to commit for the sake of a brief notoriety; no risk however great that a man will not run for the same empty reward. The last folly is that of a man named Crapo and his wife, who are going to cross the Atlantic in the smallest craft that has ever made such an attempt. Several foolhardy voyages of this kind have been undertaken, in one or two cases attended with success, while two at least resulted in frightful suffering and death. The measurement of the present boat is, length, 19.55 feet; breadth, 6.4 feet; depth, 3.16 feet, and tonnage, 1.62 ton. She has no bulwarks, being provided with life lines, and her hatches are arranged in two parts. In the after hatchway will sit the steersman, or steerswoman as the case may be, provided with a canvas boot to fasten round the body in rough weather. When the sea is too high to make any running the boat will lie to with a drag. She is to start from New Bedford, Mass, and make for Falmouth, which it is thought will be reached in forty days. Failure means a lingering death or speedy grave; success, exhibition of the adventurers and their boat to a shilling crowd at the Crystal Palace.

The loss of the Pacific Mail S. S. Co.'s fine steamer *City of San Francisco* appears to have been caused by her striking on a reef off the Mexican coast, not marked on any chart, although known to the people living in the vicinity. One of them named Perer stated, under oath, to the United States Consul at Acapulco, that he is perfectly acquainted with the rocks extending from Point Maldonadocia in a south-west direction, and that the point on which the vessel struck is a portion of a sharp reef, extending in a nearly straight line sout-hwest to a distance of twelve or fourteen miles from land and known as good fishing ground for turtle. At the time of the accident, which took place at a little after nine in the morning, the weather was fortunately bright and the atmosphere clear, with a perfectly calm sea. She was going eleven knots when she struck, cutting her hull open a length of sixty feet. She was distant thirteen miles from the land, and had not three of her compartments held she must have gone down immediately with every soul on board. As it was, not a life was lost out of 138 passengers, and a ship's company of 150 men. The cargo valued at $750,000 was entirely lost, while the passengers and crew saved nothing but what they had on their backs. Great praise appears to be due to Caplain Waddell and his officers for the coolness and bravery displayed under the terribly trying circumstances. The following account of the wreck has been given by one of the passengers to a San Francisco journal :—

We sailed from Panama on Friday, May 11th. The time had been passed most delightfully on the trip up from Panama. The weather was charming, and the passengers, with their children, were enjoying the voyage as a pleasure excursion. On Wednesday, the 16th, the sky was cloudless. The morning was one of the most beautiful I ever saw We were standing on deck in groups, looking at the hills of Mexico in the distance, and chatting pleasantly. Suddenly there was a curious quivering of the vessel under our feet. It sent a thrill through us not unlike an electric shock. The immediate sensation was not one of danger. The thought in the mind was, What can that be? Those around me stared without speaking for an instant. The next minute came orders to launch the ship's boats. The officers said to the passengers, "Put on your life preservers. Keep cool." There was no panic, at least none where I was. I did not hear a woman scream. The officers and crew of the ship moved about with no sign of excitement, obeying orders as quietly and steadily as if going through the regular routine service of the ship. The steamer ploughed steadily ahead toward the shore. The captain stood at his post, giving his orders with such perfect coolness that all idea of danger was displaced by a feeling of confidence. I am told the ship made ten or twelve miles shoreward before going down. She was steadily settling from the moment when we felt the shock. The boats were lowered without confusion, and an officer stood at each boat with strict orders that not a pound of baggage should be taken on board. The whole company, men, women and children, were taken into the boats, and we were pulled away for shore. The surf rolled heavy, and in landing we were capsized and rolled in the surf, getting a thorough wetting and badly frightening the women and little ones. All, however, were rescued. A few were slightly bruised, and one I believe had a broken leg. All were hatless and many shoeless, but as we stood on the Mexican beach in dripping and forlorn array, we were heartily thankful that not a soul had been lost. The thermometer was at ninety degrees. The sun poured down intensely. We were 125 miles from any considerable settlement, but looking about us we found the place where we had been landed was the most favorable perhaps that could have been found for miles up and down the coast. A stream of good fresh water was found, and a ravine running into the hills, where we prepared to tarry until relieved. For provisions, we had a few boxes of hard tack, a pig that we had swum ashore, and a little tainted beef. This was our store for 250 people.

We slept that night on the ground. Several of the men of the Company were armed with revolvers, and mounted guard during the night. We had in the company twenty little children, from a few days old to ten years, and several delicate women. When morning light came, we were rejoiced to hear that a boat had been dispatched to Acapulco for aid. We had not long to remain in suspense for her return, for she fell in with the gunboat Mexico, Captain Solar, who at once, although sailing under orders with provisions to relieve Acapulco, then under siege by the rebels, sailed to our relief. We went through another scene of surf-bathing, but although wetted with spray, not a boat was overturned, and we were all once more at sea, crowded on the deck of a small gunboat, but intensely grateful to our Mexican friends. We slept but little that night. The next day, the 18th, we were placed on board the Costa Rica. The United States war steamer Lackawanna was in port, and her officers did everything to relieve the sufferers giving their clothing, money, etc., with great generosity. The acts of kindness done by these gallant gentlemen and the officers of the Costa Rica will never pass from the memory of those who received them.

One of the chief drawbacks to the enjoyment of a visit to a Japanese theatre is the painfully realistic way in which many of the tragic occurrences of the play are represented. In the blood and thunder melodramas which can always be witnessed at the minor theatres, what is wanting in the latter is made up by the plentiful display of the former, and so artfully are wounds simulated, that the spectator sometimes finds his nerves put to almost as severe a test as they would have to suffer were be called upon to witness the dreadful reality. A play called *Kokada Koheji* which is now being performed at one of the theatres in Yokohama, is not wanting in these elements of horror, but an opportunity is also afforded of witnessing an amusing and more pleasant piece of realism. One of the most terrible scenes is supposed to take place during a storm. The Japanese stage manager disdains to have recourse to the old make-believe method of peas and shot to simulate the sound of the rain. He must give his audience real rain, and so, by means of concealed pipes, have a regular pouring shower, which continues throughout the scene, deluging the stage and drenching the actors. The effect is really admirable, not only aiding the mimicry of the scene, but in wafting a cool and refreshing moisture through the house, and it was mostly on this account, we were informed, that the rain was introduced. The play is simple in construction, but extremely interesting, and contains one scene as sad and pathetic as any we have witnessed on the Japanese st ge.

"When," as Macaulay says, "travellers from some distant "region shall in vain labour to decipher on some mouldering "pedestal the name of our proudest chief; shall hear savage "hymns chanted over some misshapen idol under the ruined "dome of our proud temple," some descendant of Mr. Whalley or Mr. De Morgan, or of one of that tribe of butcher worshippers, will probably appear and request him to sign a petition in favour of the claimant to the Tichborne estate. From the following advertisement that has appeared in one of the San Francisco papers, it would seem that the friends of this arch-schemer have not yet given up their attempts to carry out the fraud:—

Osprey—If the Captain, officers or crew of the Osprey, in April, 1854, will communicate with the undersigned it will be to their advantage. * * * Attorneys-at-Law, California Street, San Francisco, California.

It will be remembered that the *Osprey* was the vessel by which the claimant stated he was rescued from the wreck of the *Bella*, in which Sir Roger Tichborne is known to have been lost. A large reward is now offered for the log-book of the *Osprey*, as it is stated that Owens, who was captain of that vessel when she picked up the boat's crew of the *Bella*, has been found, and can give important testimony in the claimant's favour. It is not, however, improbable that the impudence that could produce a claimant might find itself quite equal to the manufacture of a captain and a log-book.

High pontifical mass will be celebrated at 10 o'clock tomorrow morning in the French Cathedral by Monseigneur P. M. Osouf, Bishop of Arsinoe, and Vicar-Apostolic of northern Japan. The musical part of the service will be supplied by the band of the *Atalante*.

From the "Japan Mail Daily Advertiser."

Monday, 2nd.

The *Countess of Kintore* reports leaving London, January 23rd, and the Downs on the 24th. Met with rough weather down the Channel and all the way to the westward. The N. E. trades were very light. Crossed the equator on the 3rd March and experienced much light weather to the Cape and whilst running down the Easting. Came up through the Ombay and Pitts' passage under light winds and calms. Spoke the ship *Benclutha*, June 2nd, in Pitts' passage, bound from Cardiff to Hongkong, 140 days out. Met with light North winds in the Pacific up to port.

The *Mainichi Shimbun* of this morning says that Iwakami Takashi (*Shorokui*, senior sixth rank), Hayashi Nawotsune (*Jurokui*, junior sixth rank), both members of the *Risshisha*, one *samurai* and a *heimin* of Fukuoka *ken*, together with one *samurai* and a *heimin* of Osaka *Fu*, were all arrested on suspicion of being engaged in a conspiracy at Osaka on the 26th of last month, and at once sent to Kiôto for further examination.

Their arrest was brought about through a telegram of a suspicious nature addressed to Iwakami, the contents of which were communicated to the police, who immediately arrested the implicated parties and obtained from them a confession of the conspiracy.

Tuesday, 3rd.

We beg to call attention to a notice issued by the Acting-Superintendent of the Imperial Japanese Post Office, stating that the notification issued on the 20th June with regard to the despatch of Japanese Mails to Europe by the P. & O. S. N. Co., is withdrawn until further notice. This is sufficient proof of the correctness of the views we have from the first maintained with regard to this matter.

The P. & O. Co.'s steamer *Sunda*, with mails on board to 25th May, left Hongkong at 5 p.m. on the 30th ultimo.

From the *Hôchi Shimbun*.

A telegram was received at 1.30 a.m. on the 1st instant from Owake Ken, which had been despatched by Police Inspector Murata, to the following effect:—In the engagement which commenced at dawn of the 25th of last month at Katsuchi-mura in Hiuga, the Imperialists were overpowered and compelled to retreat to the mountain pass of Katsuchi. Soon after taking up their position there they were attacked in the rear by the rebels and put to flight. At 8 o'clock in the evening reinforcements from Saiki came to their assistance, and the next day they were able to renew the attack and recapture the mountain pass from which they had been driven. About 50 of the Imperialists were killed and wounded in these engagements.

From the *Nichi Nichi Shimbun*.

A telegram despatched by Rear Admiral Kawamura which reached Tôkiô on the 30th of last month, says the troops under Lieutenant-General Takashima will commence their march towards Miyako-no-jô, in Hiuga, on the 29th. The police force, with the troops under Lieutenant-General Soga, intend first to attack Gamô and Yoshida, and after taking these places also march to Miyako-no-jô.

From the *Akébono Shimbun*.

On the 29th of last month 23 policemen of Nagano *ken* and 49 recruits from Gumma *ken* arrived at Tôkiô.

On the 30th of last month the Government decided to discontinue further enlistment for the Police force.

Wednesday, 4th.

We understand that the second of the series of Promenade Concerts given by the Amateur Dramatic Corps will probably take place on Wednesday evening next, the 11th instant. The fine band of the *Atalante* having been again placed at the disposal of the Committee by the kindness of Admiral Véron, it may be reasonably hoped that the success of last Tuesday may be repeated.

From the *Nichi Nichi Shimbun*.

H. I. H. Arisugawa-no-Miya, the Commander-in-Chief, left Kumamoto for Nagasaki on the 3rd instant for the purpose of visiting the Hospital, the Naval Office and the *Saibansho* at that port.

Saigo is now at Kirishima-yama, in Hiuga, and there is a sign-board over the door of his abode on which is inscribed "Hospital."

From the *Hôchi Shimbun*.

A telegram despatched from Kiôto at 4.55 p.m on the 3rd instant, announces that the left wing of the Imperialists stationed at Akamatsu-dani, on the Nobeoka-kaidô, made an attack upon the rebel batteries at the summit of Igoyama. The rebels were put to flight, leaving their arms behind them.

A telegram despatched at 6.40 p.m. on the 3rd instant from Kumamoto announces, that at 4.30 a.m. on the 2nd instant the Imperialists commenced their advance from Kusuwara, Nakamura, and Okusu. The troops who advanced from Kusuwara had several severe engagements with the enemy, and by noon succeeded in capturing several tens of rebel entrenchments on Takachiwo-yama. They afterwards pursued the rebels toward Nobeoka.

A telegram despatched from Kiôto at 11.15 p.m. on the 3rd instant announces that on the 1st instant, while an Imperialist reconnoitring party were marching up the Minakoye valley in the north of Satsuma, they were suddenly surrounded by a force of rebels who numbered four or five times as many as themselves. Their retreat to the main body was impossible, as the rebels had closed all the roads, and as they could not escape they were cut down right and left. The rebels then advanced and took Tsuboya-mura, drove out the Imperialists and set fire to the quarters they had occupied, after which they made a further advance, but were met by the main body of the Imperialists, who drove them back and succeeded next day in recovering all the positions which the rebels had taken, notwithstanding determined resistance.

Thursday, 5th.

From the *Chôya Shimbun*.

A telegram despatched from Osaka at 4 p.m. on the 30th ultimo, announces that the rivers at the seat of war are so much flooded, that the Imperialists in the neighbourhood of Oyachi, though quite prepared to advance, are unable to do so, and they will, as a report from Hitoyoshi says, have to remain at a standstill for four or five days, until the waters abate.

A telegram sent by Lieutenant-Generals Miyoshi and Miura on the 1st instant, announces that on the 29th ultimo at dawn the 2nd and 3rd divisions of the Imperial army made an attack upon Awano, which they succeeded in taking, and by 3 p.m. they also took Yokokawa in Osumi.

A telegram despatched from Kiôto on the same day at 2.55 p.m., announces that the right wing of the Imperialists' advanced by a circuitous road from Tsuruda and succeeded in capturing Nogi.

Six hundred police men sent from Tôkiô, arrived at Yoshida in Ehimé *ken* (Iyo), Shikoku, on the 12th of last month. One hundred and fifty of these men have been posted at Shirobe-mura.

The policemen who have lately arrived at Tôkiô from various

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ken were summoned to the Bureau of Police on the 2nd instant, and informed that as it may be requisite to send them to the seat of war, they should each present a document stating whether, when they left their *ken*, it was with the intention of serving in the South.

From the *Hôchi Shimbun*.

The Satsuma rebels took from the farmers and merchants every article of metal that they had in their possession, such as tea kettles, pans, etc., only leaving them such pots as were required to boil their rice. Out of the utensils, etc., so obtained, the rebels have cast cannon, some of them being eighteen pounders.

From the *Akebono Shimbun*.

Seventeen fugitive rebels of Bungo were recently arrested at Uwajima in Iyo, Shikoku.

The *Gakumin Shinshi*, a journal published at Osaka, was suspended on the 20th of last month.

From the *Nichi Nichi Shimbun*.

Kuroda started from Kobe on board the *Gembu Maru* on the 27th ultimo for Owake, Bungo.

Friday, 6th.

From the *Chôya Shimbun*.

A telegram despatched from Kiôto at 8.20 p.m. on the 2nd instant, announces that on the 27th of last month the Imperialists in Hiuga divided themselves into two bodies, both of which advanced towards Nobeoka and Katsuchi-tôge. The Imperialists at Akamatsu-tôge have marched to Ikônoyama and those at Mamegaro-tôge have advanced to Sarukeya-tôge. The troops advancing toward Mamegara-toge, in preparing for an attack upon Akaki-toge, sent out a reconnoitring party who unexpectedly came upon a rebel entrenchment, and an engagement ensued, but as the sun had set by that time the Imperialist party retreated to Sarukeya. From that time to the 2nd instant, both sides have been firing at long range and no engagements of any note have taken place. Reconnoitring parties were also sent to Abumi, who found the van of the rebel forces stationed on the other side of the Abumigawa.

The Tone-gawa has so far dried up that the plying of steam ferry-boats has of necessity been stopped.

From the *Hochi Shimbun*.

H. E. Terashima, the Minister of Foreign Affairs, and Shiwoda a *Daishokikuan* of the Foreign Office, returned to Tôkiô yesterday.

Saturday, 7th.

From the *Hôchi Shimbun*.

A telegram despatched from Kioto at 2.55 P.M. on the 4th instant, announces that at 4 A.M. on the 2nd the main body of the first division of the Imperial army made an attack upon the rebels at Kudzuwara, and took the town. The left wing of the Imperialists advanced along the banks of the Hikage-gawa and successfully engaged the rebels. Desperate fighting took place during the day, and by six in the evening several rebel batteries were taken. The right wing of the Imperialists advanced and took Takewara, and after uniting themselves with the Imperial forces at Miyamidzu marched upon Nakamura where there were a large number of rebels, who defended the town with much valour for some time, but were eventually driven out and pursued as far as Shidzumura. As the Imperial troops were tired they stopped at that village. At the time that Nakamura fell the rebels at Orisu were also beaten, and were pursued as far as Wakejo. This being an unhealthy place the Imperialists returned to Ozakimura and there rested for the night. One large gun and a large quantity of small arms, ammunition and provisions were captured.

The British Minister will visit the *Daishin In*, *Jôtô* and *Tôkiô Saibansho* on the 9th instant.

Of the rebels of *Chôshiu* who have been sentenced to hard labour thirty-three have been sent to the Aitchi *ken*, the same number to the Shiga *ken*, and thirty-two to Gifu *ken*.

From the *Akebono Shimbun*.

A telegram sent from Kawaji at Kiôto, announces that he arrived at Kiôto at 3.30 P.M. on the 3rd instant, having being met by the *Daijô Daijin* and *Sangi*. Together with Oyama, Kawaji had an interview with the Mikado on the 4th, and subsequently visited the palace with the maps of the seat of war, and explained the position of the troops to his Majesty.

PERTINAX AGAINST AUDAX.

Quid immerentes hospites vexas?

SO far from wishing to class Mr. IWASAKI YATARO with the ill-natured object of Horace's 6th Epode, we think the question should be addressed to the person or persons, whoever they may be, who advised the institution of the late proceedings against the Captain of H. M. S. *Audacious*, rather than to the fortunate recipient of Government favours who figures as the Plaintiff. One of the Yokohama journals remarks that the case, which has already proved such a rich feast for the lawyers, is still *sub judice*. But our contemporary is ill-informed. No new petition has been filed, nor has Mr. IWASAKI signified—at least in any public manner—his intention to recommence the suit that came to so lame and impotent a conclusion on Wednesday last. We therefore consider ourselves perfectly justified in making some observations on the case—even should they assume a judicial character—while it is fresh in the minds of the public, and we cannot see that the mere fact of the plaintiff possessing the power to bring a new case should deter us from doing so. Any time during the next four or seven years—we are not sure which—he has the power to bring a new action, and if our contemporary were correct in his argument we should be precluded during the whole of that period from making any remark whatever on a matter of great public interest. We must confess our surprise that so vigorous an upholder of journalistic freedom should support what must be regarded as interference with the just liberty of the Press.

We have neither the time nor the intention to enter into all the merits of the case, neither are we competent to discuss many of the points of seamanship and of law raised in the course of the proceedings. But to us as plain laymen the whole case seems to wear a remarkably speculative look. Little if any evidence was brought forward by the plaintiff showing negligence on the part of the *Audacious* or her Captain. He had nothing to go upon but the mere fact of the collision, the inference drawn from certain alleged facts that the *Audacious* had only one anchor down, and the opinion of certain experts that this was not in accordance with what they supposed to be good seamanship. None of the experts had the slightest acquaintance with the handling of a man-of-war, and the only one who was afloat on the night of the accident, so qualified his evidence in cross-examination as to make it rather favourable than adverse to the defendant.

Under these circumstances, the principal if not the sole hope of the plaintiff lay in what his counsel might be able to wring from the witnesses for the defence, and we do not hesitate to express a decided opinion that litigation of this kind should not be encouraged. More than this a vast amount of valuable time was taken up with matters not very clearly connected with the single question before Court, whether the damage had arisen from personal negligence on the part of the Captain of the *Audacious*. Even in the elaborate summing up of the learned Judge, the main point at issue seems to have been missed altogether. It is there very plainly shown that the accident was due to the breaking of the stock of the anchor. For this the defendant clearly could not be held responsible, though the owners of the vessel—

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

that is Her Maj sty's Government—might be so. There was nothing to prove how or why the anchor stock broke, nor was it shown that any precautions can be or ever are taken against the occurrence of so rare an accident. The evidence showed that it was in the highest degree improbable that the accident would ever have occurred if the stock had remained whole. It therefore seems to us that a clearer distinction ought to have been made between drifting with a broken anchor and dragging with a whole one, and that the main point to be left to the jury was not whether proper precautions were taken against dragging—since dragging was not the proximate cause of the collision—but whether proper precautions could or might have been taken against breaking of the stock—which was the proximate cause of the collision—and if so, whether such precautions were taken. A failure to adopt means to prevent dragging, though open to blame, would not, we apprehend, be actionable unless dragging actually occurred. The negligence therefore ought not only to have been proved, but its connection with the accident must be either a logical inference or a sustained fact. It was not, we think, maintained that having steam up or letting go a second anchor were precautions that should have been taken in view of the remote possibility of the breaking of the stock of the anchor, and its probable consequences.

We do not propose to enter into the question as to whether all was done that might have been done after the *Audacious* had commenced to drift; whether what was done was done in proper time, or if the necessary measures were taken to ascertain when the vessel began to drift. Such questions, involving a knowledge of seamanship, and of the routine and discipline of a man-of-war, which we cannot be expected to possess, we are not competent to discuss. But it does seem as though the jury had practically precluded themselves from giving a verdict adverse to the defendant on these points, by declaring they wanted no more evidence when the officer in whose watch the accident occurred was put into the witness box. Such a declaration was equivalent to an opinion that the discipline of the ship was satisfactory, that the drifting was perceived in due time, and that the proper precautions were taken in consequence.

Our remarks are merely those that suggested themselves during the progress of the late trial, and we have carefully refrained from giving any opinion on the merits of the case. Should a second trial take place either here or elsewhere we should regret to see the jury puzzled by so many questions. It is not to be reasonably expected that any jury can be found who will be unanimous on twenty-three points. Jurymen are not usually learned in the law, and though they may generally be trusted to arrive at a fair decision, they cannot be equally depended on to give the right reasons therefor. Again, they are not bound to give any other than a general verdict, should they prefer to do so. What they have to decide in such an action as the one under consideration—apart from the question of the amount of damages—is whether the defendant has acted in a negligent and unseamanlike manner or not, and we cannot think that it is fair that any attempt should be made either by Counsel or Court to induce them to give their reasons for the decision arrived at.

It would be well if the remarks of a learned judge—we think Lord Mansfield—were borne in mind as to the wisdom of abstaining from requiring non-legal persons to go into the particular propositions upon which they base a general conclusion. The Captain of the *Audacious* is the reverse of the happy man imagined by the Roman poet, who might have had a sailor specially in mind when he wrote:—

> Beatus ille qui * * * *
> Neque horret iratum mare
> Forumque vitat.

He has had first to weather the storm and has then fallen into the clutches of the law. And perhaps he is not yet out of the wood.

THE MEMORIAL OF THE *RISSHISHA* OF TOSA.

WE beg to call the special attention of our readers to a full translation—prepared by us from the original draft of the document—of the memorial of the *Risshisha* of Tosa, drawn up by KATAOKA KENKICHI, a Representative of the Society, which was presented on the 14th ultimo at the *Anzaisho*, Kiôto, for the consideration of the Emperor. The native journals stated that its acceptance was at first refused, but that on application it was read by some of the Ministry and at once rejected.

Time and want of space prevent us, in our present issue, from doing more than calling attention to it. The large questions underlying the memorial must be discussed in our future issues. At present we can only say that no such important state paper has appeared within the knowledge of foreigners resident in Japan. It is plain spoken though respectful; powerful in its exposure of existing evils though moderate in expression. It lays bare the whole system of mal-administration, and cuts at the very roots of the evils it seeks to destroy. Its views are such as we have always expressed with regard to the wrongs complained of, and which alone can be held by those who sincerely desire to see the Nation freed from the terrible dangers that at present beset it, and fairly started on the true path of progress.

The writer might have taken for his text the words of a famous French writer, "Sauver la noblesse de l'infortune et le peuple de la misère en etendant le commerce, et s'eloignant l'esclavage, c'est élever des remparts contre le despotisme." Should the memorial be widely circulated in the country, it ought, if there be any spirit left in the people, so to stir the heart of the Nation that the Government would no longer dare to pursue its present selfish policy, but would be compelled to make popular interests its chief care. Recognising this, the Government is doing its utmost to suppress the memorial, and to prevent a true knowledge of the evils it complains of and the reforms it advocates from becoming known. Constitutional Government means an end of personal power,—and to secure the latter every spark of national life must be extinguished in that grave of progress—a centralised despotism.

It was decided by the *Daishin-In* on the 5th instant, that those who borrow money must both sign and stamp the receipt, and not append their seal only, as was hitherto the custom. Those borrowers, who through blindness or ignorance are unable to sign such receipt themselves, can do so by attorney.

MORE JOURNALISTIC MISREPRESENTATION.

THE most unpleasant duty that falls to the lot of the conductor of a journal in Yokohama is that which compels him once a week to glance through the columns of the *Tokio Times*. It is from no feelings of personal interest that he does this, its utter want of information on any subject in which the public are concerned rendering it absolutely valueless. In fact it does not rely on information to fill its columns, as its powers of invention are able to supply all the matter contained in its weekly issue. It is only when it chooses to exercise this power on a public question that we feel called upon to draw attention to it, and for this reason we are again, to our own infinite regret, compelled to refer to the utterly unfounded and false assertions contained in its issue of this morning, with reference to the Postal Regulations.

One would have thought that our remarks of last week, followed as they were by the withdrawal of the notification issued by Mr. FARR of the Imperial Japanese Post Office, would have proved conclusively that the Japanese Postal Authorities had acknowledged that they had no right to forward mails by P. & O. steamer, and that the issue of the notification was altogether out of order. But the *Tokio Times* in its wish to advocate the cause of something or somebody, or what is far more likely, looking round in despair for matter to fill its columns, and finding fabrication, and abuse of the British Minister, afford the easiest means of doing so, returns to the subject, not only in an article, but in a number of separate paragraphs containing one and the same statement, and that statement equally absurd and untrue.

We are not going to review in detail the remarks of the *Times*. Once and for all we are going to give the facts of the case, and that done, we leave the *Times* to its own reflections and to the verdict of the community. We cannot refrain from saying, that had the *Times* been wise, it would, in the interests of its friends, have let the matter alone. If we are now compelled to speak in harsh terms of those whose actions it strives to defend, they must blame their advocate and not ourselves. We do it reluctantly, but the *Times* forces the duty upon us.

The article in the *Tokio Times* denotes such intimate communication with the Post Office Department that its assertions might be supposed to be grounded on Official Japanese Authority. We have therefore taken pains to inform ourselves on this point, and it will surprise our readers to hear that the proceedings attributed to "*the Department*" turn out to be those of a foreign clerk, "dressed in a little brief authority," who happens to be charged with the receipt and despatch of the Foreign Mails in the Japanese Post Office, and that the Japanese Government have entirely disavowed the indiscreet and precipitate acts of the so-called "*Department.*"

When intelligence reached Japan through the newspapers at the close of May, that Japan had joined the Postal Union, Her Majesty's Minister was the first to invite information from the Japanese Government on the subject, and was informed by them that they had only received telegraphic advice that Japan had been admitted to the Postal Union under a treaty lately concluded at Berne. This treaty was intended to take effect from the 1st June, but, as they stated, until they received the despatches reporting the conclusion and the conditions of the treaty, they obviously could not say what steps they would have to take, and that it was impossible therefore that the treaty could come into operation on the 1st June. They offered, however, to communicate with Her Majesty's Minister as soon as they received fuller information. No further communication was received from the Government, and the next occurrence was the publication of Mr. FARR'S notification of the 20th ultimo, purporting to be issued "by the order of the Postmaster General." On asking for explanation respecting the statement made in this notification that "on and after this date (20th June) mails will be received at the Imperial Japanese Post Office for despatch by steamers of the P. & O. S. N. Co. to all countries of Europe and elsewhere beyond Alexandria," Her Majesty's Minister was informed by the Japanese Government that it had been issued without sufficient authority, and that it was disapproved by the Post Master General. The latter spontaneously offered to withdraw it, as in view of negotiations now being carried on in London, he considered that it placed his Government in a false position. Her Majesty's Minister, on his part, voluntarily offered to do all in his power to facilitate the despatch of Japanese Mails by the P. and O. steamer, pending the receipt of instructions, but the Japanese Government thought that it would be undesirable to anticipate the result of the above mentioned negotiations, and that it would be better, for the present at least, that Japanese Mails should not be forwarded by the P. and O. steamers.

Now we will ask anyone to compare this statement of facts with the invented accusation of the *Tokio Times* against Her Majesty's Minister, contained in such a paragraphs as the following:

"There was an absolute and persistent refusal to com-
"municate upon the subject."

"Every effort of the Japanese Post Office to communicate with the British officials in this neighbourhood has been met with a rebuff,"

and notably the paragraph commencing

"It is well to recall that an effort was made to con-
"fer with him," &c.

the said effort being a letter—which he had no business whatever to write—from Mr. FARR to Her Majesty's Minister, asking how effect was to be given to the Berne Treaty, and in reply to which he was told that Her Majesty's Minister was in communication with his official superior, the Post Master General, by whom he had been informed that the Treaty could not come into operation on the 1st June.

As to subsidy—subsidy—subsidy—spoken of we do not know how often—the thing is a pure invention (? of the *Times* or of "*the Department*") as Her Majesty's Minister has had no communication whatever with the Japanese Government on the subject. It was wholly unnecessary that he should do so, as what arrrngements have to be made respecting the transmission of mails will be made at home. The only object of this falsehood (probably repeated in so many separate paragraphs on the principle that by constant repetition a man may come to believe his own untruths) is to trick the public into believing that the English are aiming at gaining some advantage, the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

truth being that nothing of the kind has ever been thought of.

It must naturally be vexing to the *Tokio Times* to find that all its scheming and misrepresentations are in vain; that the trickeries of the adventurers who started and support it—those would-be advisers or governors of Japan—are seen through and checkmated. But it would be well in their interests, and in its own, that it should abstain from threats like that implied in the closing paragraph of its article. We scarcely think the Japanese Government will thank the *Times* for having made it on their behalf.

THE MEMORIAL OF THE *RISSHISHA*.

With greatest reverence we present to His Majesty the Mikado this, our most humble memorial.

Shortly after Your accession to the throne, the *daimios* yielded up their territorial rights, their provinces being placed under a Central Government. The feudal system was thus entirely abolished and the whole country united under one Emperor. Laws were re-enacted; the Army, Navy, and system of police were established; schools were instituted; the postal system regulated; railways and telegraphs inaugurated.

The rapidity with which this country has advanced in civilization is unparalleled in the history of the world; so powerful has the nation apparently become, that it may seem to many as though little remains to place it on a level with European and American powers. But in reality our position is far otherwise. Internal strife, and disaffection among the agricultural classes and the *samurai*, keep the country in a state of constant uneasiness, while we cannot claim to exercise an external influence equal to foreign powers. Neither the Government nor the people are freed from anxiety for a single day. It is our opinion that all these evils arise from the fact that Your Majesty's ministers exercise a power solely despotic, the Administration being carried on entirely without reference to the opinion of the Nation.

We will not recount the various events that have taken place in other countries in ancient times that bear out our opinion, but will merely refer to what has passed in Your Own land since Your Majesty favoured us by taking the reins of government.

The cause of the downfall of the *Bakufu* is solely attributable to the tyranny of ministers and to their oppressing the people, instead of considering their wishes. Zealous patriots arose in all parts of the country to overthrow the *Bakufu*. In vain did it fulminate laws and mete out inhuman punishments in order to crush these patriotic spirits. They had yet to learn that tyranny and oppression cannot be relied on for safety as a support; that the united will of a nation cannot be overcome, but will achieve its aim in the end. Thus the power of the *Bakufu* naturally waned, and was at last utterly overthrown by the efforts of the patriots it had relentlessly persecuted.

When Your Majesty came to the throne, the *han* were still powerful, and the foundations of the Government were not firmly laid. But Your Majesty took an oath before the Gods that you would administer the Government in accordance with the just will of the Nation. In order to ascertain the popular feeling as to the best means to be pursued to put the affairs of the country in order, representatives of the various *han* were summoned to Tōkiō, and after due deliberation, it was decided that the *daimios* should return to the throne the domains which they had held for hundreds of years. This decision was duly carried into effect and the former Lords of the lands were appointed governors *(chiji)* of the Provinces which, up to that time, they had been in the habit of governing independently.

Your Majesty's Government, not regarding this step as sufficient to consolidate its power, divided the country into *fu*, *han* and *ken*, thus centralizing the power of the administration in the capital, by abolishing the *chiji* of the *han*, and replacing them by Governors of *ken*. This is the first step we took towards civilization.

Why did these changes take place? Because the will of a people will have its own way, as surely as water runs down hill. It becomes irresistible. The people have never spoken harshly of the measures which converted *han* into *ken*, or which gave *heimin* equal rights with *samurai*, because they accord with the national sense of right. It is clear, then, that the oath of the Emperor should be strictly observed, and a representative assembly established in order that the people may have a voice in the affairs of the nation, and that they may aid the ministry in promoting the welfare of their country.

The time has passed for talking about the change of *han* into *ken* and of the rights of *heimin* and *samurai*. The opportunity for establishing a limited form of Government on solid foundations has arrived, and the exercise of the soundest judgment is required to secure that most precious fruit of civilization, a representative assembly; yet the several members of the administration do not appear to be endowed with sufficient perception to see their opportunity: on the contrary they seem to have resolved to act despotically, and with wilful perversion, to do only what shall please themselves, regardless of the wishes of the nation.

Despotism and oppression were the sins of the administration of the *Bakufu*. Its overthrow can only be regarded as a just punishment for its disrespect toward the Emperor, and its oppressive treatment of the people.

Alas! the present Government is following the same course. Laws have been enforced, taxes imposed, the collection of the land-tax reformed, wars declared against foreign countries, portions of the empire exchanged; solely at the caprice of several officials, without allowing public opinion to have a voice in the matter. The sacred oath taken by the Emperor on his accession to the throne has been altogether set aside.

So great is the distance that separates the Government from the people, that the latter look up to it as astronomers look up to the heavens, with the greatest uncertainty. The sky seems continually obscured by threatening clouds whose constant and terrible lightenings and thunders strike terror, if not despair, to the minds of the beholders, who tremble lest they may never see the bright beams of the sun again.

The outbreaks that have recently taken place have arisen from various causes. Those who have misunderstood the intention of the pole tax; those who have suffered by the reform of the land-tax; those who insisted on an invasion of Corea; those who favoured a return to the feudal system; those who wished the dismissal of certain officials surrounding the Imperial throne; all these have fomented disturbances. If any one, who in the future may write the history of the first ten years of *Meiji*, shall say that wars ceased not for a day, and that the country was brought to the very verge of ruin, he will fairly well describe the actual condition of affairs.

The duty of a Government is to preserve peace in a country; not to interfere with the happiness of the people, and to hinder them from enjoying their first right and privileges. With these the Omnipotent has endowed men as surely as he has given them bodies and souls, and if a government, relying on its power, endeavours to prevent their full exercise, there is no reason why a people should remain passive under such oppression.

If we look into the condition of various Asiatic nations, we see that although their territory is extensive and their land fertile, the Government is tyrannical and the people slavish. The latter have no control over their rights, and are separated from their rulers by a great gulf. The wants of the people do not influence the actions of the Government, and so, becoming slavish, they cease to take any interest in the well-being of their country. In such a case a Government cannot become upright nor a people advanced in civilization.

Since Your Majesty's accession to the Imperial power, though great reforms have taken place, and wonderful improvements have been made, yet the nation is continually plunged into civil war, and the outside world treats us with contempt. Such evils are brought about by the Government not paying attention to the will of the people.

First among the prevailing evils, and the one which causes us the greatest anxiety, is the action of the Cabinet in imposing its own oppressive measures without in any way respecting the will of Your Imperial Majesty.

In the 14th March, 1868, (1st year of Meiji) Your Majesty in the presence of the *daimios* and *kuges* swore before the Gods five oaths. First, that the Government should be administered in a liberal manner, and that the will of the nation should be consulted as to the management of its affairs. Secondly, that both the higher and the lower (meaning the Government and the people) were to be united in the Administration. Thirdly that your Majesty would consider the rights of the *samurai* and the people. Fourthly, that old and useless customs should be abolished, and that the action of the Government should be progressive. Fifthly, that the wisdom of the world should be adopted to promote the dignity of the Emperor.

Again, on the 14th of April, 1875, (8th year of Meiji) Your Majesty decreed as follows, with regard to the establishment separately

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

of the legislative, executive and judicial bodies, and the institution of a liberal form of Government:

"According to Our oath we do here establish the *Genro-In* as the "fountain head of law giving. We create the *Daishin-In* to give "strength to upright judicial procedure. We likewise summon "the local officials in order to take opinion on matters affecting "public welfare, and so by degrees to build up a well founded politi- "cal structure for the welfare of our country, and we are desirous "that each and everyone of you should partake in its benefits."

When Your Majesty subscribed to these oaths the people were put into a great state of joy, and on the issue of the above edict could not sufficiently praise Your Majesty's benevolence, looking confidently for the fulfilment of the several pledges. But it seems that Your Majesty's Ministers did not choose to act in accordance with the Imperial will, as before a month had elapsed they ignored it utterly. It is true that a meeting of the Governors of the Provinces did once take place, but in the following year Your Majesty's journey to the North was made the excuse for not again summoning them to the capital, which ought to have been done.

Moreover, when the first convocation did take place, sufficient time was not allowed to discuss all the questions put before the assembly. Can it be said therefore, that public opinion was allowed any expression, or that the people were in any way benefitted?

With regard to the *Genro-In*, its powers were curtailed and its mode of administration changed at the whim of the Cabinet, so that it became essentially the same as the *Sa-In*.* The *Daishin-In* met with the same fate directly after its establishment, and was put under the control of the Judicial Department. Thus were the powers of institutions that were intended to act as Legislative and Judicial bodies, rendered void by the arbitrary will of Your Majesty's Counsellors. If the Imperial will be treated thus, what hope is there that the people will be permitted a voice in the Government, and be allowed to unite with the official class in the administration of national affairs.

Some time ago, the ex-*Sangi* Soyejima Taneomi urged the establishment of a representative assembly and the people generally agreed with his views, the lowest classes even expressing a wish to see such an assembly established. But the Ministry disapproved of the idea, saying that it was too early, and that the people were too ignorant. They speak as though they are the only men in the country who know anything, and that all the rest are fools. Yet if they show no desire to do anything for the promotion of the welfare of the people, they are no better than the Ministry of the *Bakufu* whose place they have taken. If this state of things is allowed to continue, when shall we get on to the real road to progress, and when will old and evil customs be abolished?

Those who have held the actual power in the Government since the Restoration are composed solely of men from Satsuma, Chôshiu, Tosa and Hizen, and to serve their own interests they all play into each other's hands. Although the Ministry limits its choice of members to the four provinces referred to, surely no once will say that these alone produce men of sense. Is this acting in accordance with the oath of your Imperial Majesty? Is this uniting the best intellect of the nation in an endeavour to promote the dignity of the Emperor?

Your Majesty's Ministers have acted directly contrary to Your Majesty's will, which is that the people shall have a voice in matters of National Administration. They have enacted such laws as the Press and Libel-laws, in order, by the former, to stifle all expression of public opinion, and by the latter to ensnare the people in a most obnoxious manner. Those who dare to express an opinion on the Government, or who, from their position, might naturally be supposed to concern themselves in the affairs of the nation, are continually under the suspicion of the Government, and are not unfrequently arrested. Imprisonment has been made the vile means of silencing all expression of public opinion, and Your Majesty's subjects are thus kept in a constant state of alarm.

The second evil is that the management of this Government is conducted in a random and confused manner.

As we have previously stated, the Administration is in the hands of a few despotic officials who act without reference to the opinion or welfare of the nation. This is proof of the bad form of the Government which causes all this disorder. All the positions, from the *Daijô Daijin* to the heads of the various departments are filled by men who formerly possessed influence in their various *ken*, and who received their appointments during the confusion of the civil war. They go about from one department to another, and pretend to be perfectly acquainted with the affairs of each, but in reality they know little, if anything, about them. Witness the length of time they take to execute the simplest duties. The lower class of officials, in imitation of their superiors, treat all public matters in a similar spirit, as though they alone were personally interested in them, and in this way is the Government constantly chopping and changing. The officials have probably no special aims. They are men of about equal ability, but one says "go east" the other insists on going west, and hence a state of constant confusion. The Prime Minister can with difficulty hold his own. The legislative body may be called *In* or *Kioku*; its nature remains unchanged; it is absolutely powerless. As to the executive departments, when governors memorialize the Central Government it is very partial in its decisions, approving on the part of one governor what it would reject if coming from another governor. As for the Judicial Department, although it is supposed to have been founded, its workings are far from satisfactory. For instance, the question of a mere collision between two vessels cannot be decided until after several departments have been consulted, and though it is cognizant of mal-administration in certain *ken*, it takes no steps to have the evil corrected. Such facts as corrupt officials receiving the assistance of the chiefs of their departments in carrying out their evil practices are not unknown. The Cabinet Ministers have all their own way. When they wish anything carried out in the several departments under their control, they bring it before the Cabinet which they themselves form, and give it their own approval. When a measure is enforced which may benefit one department, but is unsuitable to another, it is subject to constant alterations. Thus, notifications are always being altered and withdrawn directly after their issue, to the great misguiding of the people. Indeed, the fickleness of the Government is so well known, that when a measure is passed, the people say "Well, it may probably remain in force thirty days;" so that the constant issue of notifications causes unending confusion. No sooner have the people become used to the working of some new regulation than it is changed, and though the lower officials must understand how extremely prejudicial all this is to the welfare of the people, yet they are compelled to obey the orders of their superiors without daring to utter a word of protest. All this causes the people to dislike the Government.

Such important measures as the enactment of laws and the imposition of taxes are carried out by the Government without due consideration, for the reason that there is no system in its administration. At the time of the Restoration, the officials were appointed for a term of four years only, but the regulation was merely a nominal one, never having been carried into effect.

In order to advance the public welfare, public opinion must be allowed expression, and such liberty will be the foundation of our prosperity. Be its ministers ever so wise, it is natural to a Government to become despotic. With a country in such a condition as ours, how much more likely is such a state of things to come about.

The third evil is that the power of the country has been too largely concentrated in the Central Government. Officials who recognised perpetually the evils of feudalism, have gathered to the capital all the powers that were originally in the hands of the *daimios*. This power is far greater than it should be, and it seems as though the Government was endeavouring to make itself as despotic as possible.

With the view of facilitating the administration of Government, Governors were appointed to the various *ken* with entire powers of jurisdiction over the people placed in their charge. But we find that the actual powers of these Governors are limited to the collecting of taxes. No road, bridge or public building can be constructed without first obtaining the approval of the Central Government. Thus we find the time of all local officials principally occupied in writing letters and attaching seals to documents for transmission to the Central Government. Their time being thus frittered away, what time have they to give to the consideration of petitions and memorials sent in to them by the people? Every fraction of the taxes has to be sent to the *Okurasho*, while the *Naimusho* must always be consulted before the most trivial matter can be carried out. Then the continual receipt of notifications from the Government, and the constant changing of edicts are sources of no slight amount of vexation. While, therefore, the expenditure of the local offices

* This was an institution which was abolished when the *Genro-In* was created.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

is strictly limited, they are called upon to perform an unlimited amount of work.

The establishing of schools, and the promotion of agricultural industries are no doubt necessary and excellent, but when the ideas are carried out to an extravagant extent at the expense of the people, the only effect is to create a great deal of ill-will.

The country has been divided up into *ken* and various offices have been established in connection therewith, but they are so frequently changed, one office being divided into two or three, or several being amalgamated, that the greatest inconvenience is occasioned. The Government is, in fact, always endeavouring to to decrease the little power possessed by the local authorities, and to concentrate it wholly in its own hands.

Last year the Government issued a regulation specifying the term of service of the local officials, and placing in their hands a certain amount of responsibility in their discharge of the affairs of the *ken*. The authority granted them is, however, far from being sufficient, and in order to check the power of the Central Government, far more freedom of action must be permitted to the local officials.

The Government, in order to prove to the people that its administration is a just one toward them, should encourage the idea of popular Government and show, at the same time, that it can be influenced by opinion. But the action of the present Government is the reverse of this, for regardless of such considerations, it seeks only to accumulate the power in its own hands. The dwellers in the cities are rendered bankrupt, and the people in the country are brought to utter poverty. These are the sad results of despotic rule.

The fourth evil is that the military system will never be placed on a proper open footing, until the mode of recruiting the army is made to agree with the form of Government.

General conscription and poll taxes are not matters with which a despotic government should meddle. They can only be imposed by limited forms of government. Reforms can be more readily enforced by despotism, yet our Government, despotic as it is, cannot carry out and support measures of reform. In the conducting of a limited form of administration the people unite with the Government in the management of the affairs of the country, and peace is, therefore, more likely to be preserved under such a rule than under despotism. The people under limited forms of Government pay taxes in order to secure to themselves the happiness that arises from a sense of protection by the Government. They hold themselves responsible for the defence of the country and are willing to shed their blood in its cause. This proves that they understand the meaning of self government.

But under a despotic rule the case is a very different one. The rulers possess absolute power while the people are in a condition very grievous to be borne. Whatever little money they may possess is wrung from them by taxation. Worse than that, they may be called upon at any time to give their blood. Surely such treatment of its people by a government cannot be pleasing in the eyes of the Gods who govern all. The people under this absolute rule have no responsible existence. The Government does what it likes, and enlists troops on the plea of necessary defence of the Emperor. The system of general conscription can never work well unless it accords with the form of Government.

Let us show how the military system at present in force was first brought about. After the Restoration the military and civil duties of the *samurai* were abolished, and a proclamation was issued to the effect that the *samurai* and *heimin* should unite in forming an army for the defence of the nation. Regulations were published relative to the enlistment of young men throughout the country regardless of class, for the formation of regular forces. Now we do not hold that this system is bad, but we maintain that it is not suited to the present time, or, in other words, to the present form of Government. Since the above regulations were enforced, large barracks have been built, officers dressed out in showy uniforms, the troops furnished with arms of the latest improved pattern, and everything done in splendid form. Yet we see on the occasion of a rebellion breaking out in Kiushiu, the Imperial Army finds itself very hard pressed in the engagements in Higo. Not only the whole of the regular army and reserves have to be sent down, but, finding they cannot suppress the insurrection, police forces are armed and despatched to the seat of war, together with large numbers of *samurai* of various *ken*. Now police were not intended to be used as soldiers in the field.

The condition of our country may be compared to that of a house ruled over by an obstinate and avaricious steward, who allows the family a sufficiency of neither food nor clothing, and who even goes so far as to sieze their possessions, beating and ill-treating them if they dare to murmur, causing to all the greatest distress. With matters going on in this way, a fire breaks out in an adjoining house which quickly spreads to the dwelling of the steward The family say "Well, we have been existing without a sufficiency of food or "clothing, and have been despoiled of everything we once possessed "What is the good of our making any efforts to save our own property "when it has been taken away from us?" And they run out of the house saying "We are lucky as long as we escape with our lives," and they take no pains to extinguish the flames.

Such an excellent institution—that is, excellent in the eyes of the Government—as a poll-tax cannot be introduced in such countries as Japan. The people now consider it a cruel imposition. Like the conscription it is only suited to constitutional forms of Government, and such is the Government that Japan requires. For were a popular Government to be introduced, the people would get rid of their miserably slavish customs and ideas, and feeling that they were to some extent responsible for the administration of their country's affairs, they would interest themselves therein, and become happier. They would not then deem their blood too precious to be spent in their country's cause, a feeling of patriotism that is sadly wanting at the present time.

We are of opinion that the first step toward the formation of a limited form of Government was taken when the duties of the *samurai* were abolished. This was done principally in the interests of the people. Unless it was the intention of forming a limited Government, the object of abolishing the duties of the *samurai* is not apparent.

Under present circumstances the general conscription is useless, and the enormous sums spent in maintaining these forces produce fruitless results. The necessity of sending to the seat of war policemen, who are only enrolled to aid in keeping civil order in peaceful times, does not arise from indolence of commanders, nor want of discipline among the troops, but because the people have no idea of their responsibility in the affairs of the nation and because nothing is done to acquaint them with their duty. The using of policemen as troops, serviceable as they may be to the Government in the present emergency, will not, we fear, prove a good thing in the end. Moreover, it is a mighty wrong that the people should have to supply the means for carrying on war, and be compelled to sacrifice their lives on behalf of a Government in which they have no part or voice.

The fifth evil is the mismanagement of the Finances of the Nation.

This is an evil from which all nations have for a long time had to suffer. In any country which has not a limited form of Government, the public are, as far as possible, kept in ignorance of the state of the exchequer. Since Your Majesty came to the throne large sums have been supended in wars, public works, and the like. We are well aware, as we see by the dismissal of officials whose services are no longer required, that all unnecessary expenses have been done away with. Accounts of expenditure are also kept. This is all well and good, but the Government Departments have had branch offices in certain banking establishments, to which portions of the public moneys have been entrusted. This has been done without first examining the financial conditions of such establishments. But there comes a day when the suspicions of the Government being aroused, it desires to withdraw its deposits Then it is discovered that though the Bank may sell off every thing it owns, the proceeds will not suffice to pay back one-tenth of the Government money entrusted to it charge. In consequence of this, the Government issued certain laws (concerning the depositories of of national funds) which were acted upon by all the *fu* and *ken*, and which by their action brought ruin to many a banking house. The consequences were felt in all quarters and the free circulation of the currency affected.

The taxes of the *fu* and *ken* are collected and sent directly to the *Okurasho*. This causes great scarcity of money in the country and cripples its powers of production. The Government shows great activity in promoting schemes for agricultural industries, in opening up Yezo, and in establishing manufacturies, but the officials appointed to take charge of such matters utterly mismanage whatever is entrusted to their care, and interfere with the just rights of the farmers and merchants. Hundreds of thousands of *yen* are spent in assisting certain companies, or in forming new ones, but such benevolent acts of the Government are confined to certain persons or associations, and in no way exercise any benefit for the public good.

The chiefs of the various departments have full powers to increase or decrease the allowance for their annual expenditure, as they can also increase or decrease the duties of their respective officers. The amount of work, therefore, done by any depart-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ment depends on the amount of its allowances, instead of the expenditure being in proportion to the work actually done. The taxes represent the fruits of the people's labour, won with great sweat and toil. The Government has taxed the people enormously, but we do not see that the revenue is economically used. We see, certainly, estimates of what is apportioned each year to the several departments, but we are not shown how it is expended. Reserve funds and surplus from the annual allowances are spoken of from time to time, but their existence is very doubtful indeed.

On coming into the capital from the country one is struck with the vast difference there is between the wealth of the former and the wretched poverty of the latter. It seems as though all money had collected in the capital and ceased to circulate in the country. The nation is greatly troubled on account of this, but it is only because the Government keeps everything secret from the people. Although it shows them tables of expenditure, it never lets them see the real accounts, as to how such expenditure is conducted.

With whom does your Imperial Majesty consult with reference to the manner in which the expenses of war, cost of public works, the foreign and native loans, and such like, shall be met? If the people get no return in increased happiness for the taxes they pay, there must be some great mismanagement of the finances.

The sixth is the present system of collecting the land-taxes, which constitutes an oppression too great to be borne by the people.

It is the duty of a Government to watch over the people, to govern the country with a sole view to their welfare, and to enable them to do this it is necessary that taxes should be levied. Should the Government rightly perform its duties, the people will readily acknowledge their obligations. A proper administration can only be secured through the adoption of constitutional Government, and when this takes place many existent evils will be done away. But under a despotic Government the people are kept, as it were, slaves. It imposes taxes at will. It boasts of its benevolence, but in reality the people are stripped of their rights and properties, and no heed is paid to their complaints. Owing to feudal influences, the method of collecting taxes has differed in nearly every province, and the issue of the edict providing for a general reform of the land taxes, by which all the land in the country was to be taxed equally, caused great joy among Your Majesty's subjects. But the officials in their haste to carry this into effect caused a vast amount of inconvenience to the farmers, who were compelled to leave the cultivation of their lands, and set to work to survey the ground, prepare maps, do this thing and that thing, while the officials insisted on the taxes being paid before the value of the land was properly settled and apportioned. Thus the good intentions of Your Majesty in issuing this proclamation have been entirely frustrated by the conduct of your Majesty's officials.

The Government introduces many reforms which are good in themselves, but are totally unsuited to its present despotic form, and which results in much evil instead of the good they are intended to produce. When they saw the Imperial decree of the 4th January, 1877, the people's suspicions were again aroused, People pay taxes in order to promote their own happiness, and if they feel secure of this they pay willingly; but how does the Government propose to collect taxes before the value of the land has been settled? The Imperial degree is a good one in intention, but not in practice, for the Government can at its pleasure increase or decrease the taxation. The farming class, who are the most peaceable of men, could not see the necessity of all this haste in the change of method of collecting the land tax, and pressed beyond endurance, rose in arms against the Government, deeming it better that the old mode should exist rather than that they should be put to such hardships as the speedy reform involved. Surely this was not the wish of Your Imperial Majesty.

The seventh evil is the method pursued by the Government in equalizing the rights of the *samurai* and the common people.

The *samurai* of Japan form a class that has existed since the middle ages. They were controlled by feudal lords, and their spirit of patriotism, though confined to their own provinces, was noble. They possessed great virtues. They hated the idea of disgrace, they were faithful to their lords, and they interested themselves in the administration of the affairs of their respective *han*. The lord of a province and his chief advisers were restrained from acts of oppression by the watchfulness of the *samurai* of the *han*, who could compel their feudal lord to transfer his duties to another member of his House, or enforce the resignation of an official. Since Your Majesty took the power of the administration into Your hands, the feudal system has been abolished, and the *samurai* are no longer required. But the *samurai* still retained their rank and a certain portion of their rights, in consideration of their being superior to the common people in education and knowledge. Steps should therefore be taken to render the people, by education, the equal of the *samurai*, so that they may be able to take the same interest in the affairs of their country, and advance in happiness. This is the will of Your Imperial Majesty.

But not only are the people prevented from taking any part in the Government, but the effort is made to bring the *samurai* down to the same slavish level as the lower classes. No matter how cruel or deceptive the edicts of their rulers may be, they are expected to make no remonstrance. A great mistake has been made in endeavouring to lower the *samurai* to the level of the common people. Encouragement should have been given to the latter to raise themselves to the level of the *samurai*. Instead of this the Government has acted in a directly contrary manner. Great consideration should be given to this question. The *samurai* have always taken part in the administration of affairs of their various *han* since the commencement of feudal times; their minds have thus been familiarized with political matters, and they are not content to be deprived of all their prerogatives. Although their services may be no longer required their minds remain unchanged. It is owing to this that nearly all the insurrections that have taken place since the Restoration have been caused by the *samurai*. To raise a rebellion is undoubtedly wrong, but that the *samurai* should be driven to do so is certainly due to some mismanagement on the part of the Government.

A wise man once said that as long as a man has plenty to do he is not likely to commit evil, but idleness is certain to lead to crime. The real cause of the *samurai* of Saga, Kumamoto, Hagi and Satsuma taking up arms against the Government is that they had nothing to do but brood over their grievances. This country cannot be coerced into tranquillity by means of oppression until the race of *samurai* has died out of the land. The Government may exult over its conquests, but the country is weakened every time that it achieves a victory over it own people.

This is the present condition of Japan. Public opinion is in no way consulted. Efforts are made to hold both the *samurai* and the *heimin* in absolute slavery. They are granted no political rights. They have no control over their own welfare. What does His Majesty suppose is the cause of all this misery?

The eighth evil is the mismanagement of Foreign affairs.

As Japan has not a Constitutional form of Government, the people cannot enjoy peace and happiness. Neither does a country so governed obtain its just rights from nations with whom it may be in intercourse. For such errors the people hold a Government responsible. There have been four mistakes committed with regard to Foreign affairs—the Formosan expedition; the Corean affair; the cession of Sagahlien, and the revision of the treaties; with all of these the honour of our country is intimately concerned, as well as the happiness of the Nation. Our people know that Corea is a country with which Japan has had intercourse from the most ancient times. Suddenly the intercourse was broken off, and when we sent an envoy thither he was befooled, and all his proposals rejected. Not only were the Coreans insulting, but they threatened hostile resistance. It was proposed to send a second envoy to remonstrate against the treatment of the former one, but the Government suddenly changed its views, and nothing further was done. The people when they learned this became enraged, and their feelings found vent in the rebellion of the *samurai* of Saga. No sooner was this suppressed than sudden orders were issued for a hostile expedition against Formosa. The reason for the Government's undertaking this was perfectly incomprehensible to the people. What kind of race are the Formosans? They are under no King or Emperor, but are ruled by some savage chief. They are cannibals and such a set of savages are not worthy of being spoken of. Corea is different. It has an established Government with whom we have been on terms of friendly intercourse from times long past How comes it that our Government asked no explanation for a national insult from a country like Corea with an established Government, and yet sent a hostile expedition against such a barbarous island as Formosa? The reason assigned was that the Formosans had been guilty of murdering some shipwrecked sailors from Loo-Choo. Now the nationality of the Loo-Chooans has not yet been settled, as it remains undecided whether they are subjects of Japan or China. The nationality of the Formosans was also not known, as it was uncertain whether the whole or only a part of the island of Formosa belonged to China. The expense of these expeditions was immense, but on that point we will say no more here.

We will take it for granted that Loo-Choo was supposed to be under the dominion of Japan, and that for this reason we sent the expedition to Formosa, giving rise to trouble between us and China. In order that the country might suffer no disgrace, the people took

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

up the cause in a most zealous spirit, but the Government sent an Envoy to China and on payment by the Chinese Government of the indemnity of five hundred thousand taels, all the troops were withdrawn from Formosa and sent back to Japan. Our forces therefore neither succeeded in acquiring Formosa, not in proving that the sovereignty over the Loo-Choo Islands pertains to Japan and to Japan alone.

An indemnity of five hundred thousand taels, and nothing else, is not sufficient to make thirty millions of our countrymen believe that the Government had accomplished any great object, or to make it clear to the eyes of the world that to obtain this was the object of the expedition.

The Kokua affair took place shortly after. Before it was certainly ascertained whether the act of firing upon the Japanese vessel of war was commited by order of the Corean Government, or only by some one opposed to the Government, an envoy was despatched, demanding an immediate explanation. Now it is wholly inexplicable to us why the Government did not demand an explanation when the Coreans openly insulted our envoy and treated Japan with contempt, when it is so ready to demand reparation for a shot fired against a vessel of war, not by order of the Government, but by the Governor of some fort. In which was the honour of the country most concerned? Yet the Government took no notice of the former case, while it was greatly exercised over the later. An ambassador was sent, the main object of his mission being identical with that of the first envoy, the renewing of friendly and commercial intercourse. The people are perplexed to know why what was deemed wrong in the first instance should be thought right two years later.

But this is not all. It is natural to every one to resist any claims that may be made on his property, and no one who had been improperly deprived of one portion of his property would of his own free will receive for it another portion. We will proceed to expose the mismanagement of the Government in the Sagah'ien question.

For a long time past Japan has neglected to give proper attention to the protection of the Northern portion of her dominion. In the time of the *Bakufu*, even the children knew that Sagahlien and the Kuriles belonged to Japan. But the Russians have come down below the fiftieth degree to hunt, and have commenced to devour our country.

After the Restoration, when the *Kaitakushi* was established enormous sums of money were spent in opening up the northern islands, promoting education, establishing agricultural industries and farming institutions, founding and laying out schools and towns. The nation looked forward to the portion of Sagahlien which had been occupied by the Russians again becoming the property of Japan. Instead of this the whole island has been taken from us. What good then has the *Kaitakushi* done, and what benefit have we gained from all the money spent on a place which a treaty has taken from us?

Loo-Choo constitutes a Japanese *han* Our troops are garrisoned there, the post office and a branch of the *Naimusho* have been established there; but both the king and people of Loo-Choo are endeavouring to free themselves from the authority of Japan. China is endeavouring to do the same with Loo-Choo as Russia has done with Sagahlien. If China succeeds, our territory will gradually decrease, and with it our power.

Let us turn to the question of the revision of Foreign treaties. When the appointed time had arrived, ambassadors, with a large number of subordinate officials, numbering in all about one hundred, were sent to the various treaty powers, and returned without having accomplished any object but the spending of a vast amount of money. This caused foreigners to regard us with comtempt. The Japanese people, in their rage, say that all this arose from the action of an irresponsible Government.

The above eight evils that we have mentioned all arise from the despotic rule of a Government, which, refusing to consult the public welfare in carrying out its administration, becomes confused. This is very clear, and cannot be denied. Hence it arises that the Government and the people are continually opposed, and there is no single day when universal peace prevails.

Since the commencement of the Kiushiu rebellion, the whole of the naval and military forces have been sent to the South, the treasury is exhausted, and the Government is putting forth all its power to keep back the insurgents. Now, although the Government should put down the rebellion, what will it benefit the people? Nothing at all. More than that; when it has suppressed this rebellion, it is likely to turn all its power against objects of its hate. Examples of this have not been wanting in ancient and modern times. Under such circumstances all men of intelligence, all those who stand up for the rights and liberties of the people would be looked upon as its enemies, and measures be taken against them accordingly. Thus the Government would become the same as the Tokugawa Administration previous to its final dissolution.

When the *Bakufu* interfered with the rights of the people, the latter grew more and more determined, and though one might fail in his endeavour to oppose the Government others arose, and so after much blood had been shed, the present administration was established.

If a *betto* in riding a horse pulls too hard upon the bit, in order to escape from the pain the animal will commence to kick and bite. Does not this apply to the treatment of mankind?

Suppose that the nation were to bring forward the five oaths of Your Imperial Majesty, and Your Majesty's decree for the establishment of a constitutional form of Government, and demand the Government to give an explanation why it had not acted in accordance therewith, how could they answer, or what excuse would avail Your Majesty before the Gods?

Suppose that at the present time a foreign power were to declare war against the country, what could Your Majesty do? It is such considerations that cause us the deepest anxiety.

By this, our memorial, Your Imperial Majesty will be able to judge which of the acts of Your Majesty and of Your Majesty's Ministers are right and which are wrong. The Ministry acts as though it were not in the least degree responsible for any acts done in Your Majesty's name. Should ruin fall upon our country in consequence of such acts the members of the Ministry can only be degraded, while all the blame will be imputed to Your Majesty, and the people will be called upon to undergo terrible hardships.

Nothing could more tend to the well being of the country than for Your Majesty to put an and to all despotic and oppressive measures, and to consult public opinion in the conduct of the Government. To this end a Representative Assembly should be established, so that the Government may become constitutional in form. The people would then become more interested and zealous in looking after the affairs of the country; public opinion will find expression and despotism and confusion cease. The nation would advance in civilization; wealth would accumulate in the country; troubles from within and contempt from without would cease, and the happiness of Your Imperial Majesty and of Your Majesty's subjects will be secured.

Your Imperial Majesty's oaths at the time of your ascent to the throne, and the Imperial edict of the 14th April, 1874, prove that it is the wish of Your Majesty that the people should have a voice in the administration, and that a constitutional form of Government should be established. The people rejoice greatly at learning that such is your Imperial Majesty's wish.

We hope that Your Imperial Majesty will not be led astray by the words of others, but approve of this our memorial, in acting in accordance with which happiness may be secured to Japan.

BRITISH CONSULAR TRADE REPORT FOR KANAGAWA, FOR THE YEAR 1876.

BRITISH CONSULATE,
Kanagawa, 23rd June, 1877.

SIR.—I have the honour to enclose Returns of the Trade of this Port for the past year ended December 31st, 1876.

Enclosure 1.—Return of the Import Trade.
„ 2.—Return of the Export Trade.
„ 3.—Return of Shipping.
„ 4.—Return of Export and Import of Treasure.
„ 5.—A Return showing the amount of Duties collected at the Customs on Imports and Exports, together with a Return of Storage charges, also Entrance and Clearance charges in respect to Shipping.
„ 6.—A Return showing the number of British residents and British firms, also the number of Foreign residents and Foreign firms at this Port.

I proceed to compare the Trade of 1876 with that of 1875.

The figures for 1876 show as follows:

Imports	$18,841,880
Exports	$21,431,879
	$40,273,759

Being an increase of $5,853,120 on the trade of 1875.

The following table gives the value of the trade in Imports and Exports for the two years:—

	1876.	1875.
Imports	$18,841,880	$21,953,909
Exports	21,431,879	12,466,730
	$40,273,759	$34,420,639

Or to particularize:—

IMPORTS.	1876.	1875.
Cotton Manufactures	$7,747,138	$7,299,603
Woollen Manufactures	2,532,152	2,867,543
Mixed Cotton and Woollen	593,920	1,072,292
Metals	626,886	655,408
Arms and Ammunition	51,959	42,520
Miscellaneous foreign	4,255,228	7,009,960
Miscellaneous local	3,034,597	3,006,583
	$18,841,880	$21,953,909

EXPORTS.	1876.	1875.
Silk, Raw	$13,191,710	$ 5,424,916
Silk-worm Egg Cards	1,902,271	474,921
Tea	3,473,178	4,813,458
Copper	154,003	184,710
Cocoons	475,296	248,416
Lacquer Ware	92,484	128,334
Tobacco	34,622	43,925
Wax, Vegetable	6,530	2,640
Camphor	1,789	729
Coal	11,521	23,957
Fish, Dried	279,495	153,414
Miscellaneous	1,808,980	968,039
	$21,431,879	$12,466,730

IN IMPORTS.

Cotton Manufactures exhibit an increase of	$ 447,535
Woollens, a decrease of	335,391
Mixed Cottons and Woollens, a decrease of	478,372
Metals, a decrease of	28,522
Arms and Ammunition, an increase of	9,439
Miscellaneous foreign, a decrease of	2,754,732
Miscellaneous local, an increase of	28,014

IN EXPORTS.

Silk shows an increase of	$7,766,794
Silk-worm Egg Cards, an increase of	1,427,350
Tea, a decrease of	1,340,280
Copper, a decrease of	30,707
Cocoons, an increase of	226,880
Lacquer Ware, a decrease of	35,850
Tobacco, a decrease of	9,303
Wax, an increase of	3,890
Camphor, an increase of	1,060
Coal, a decrease of	$ 12,436
Fish, Dried, an increase of	126,081
Miscellaneous, an increase of	835,941

NOTE.—The export of Camphor falling below one thousand dollars in value in 1875 did not figure separately in the returns of that year, but found a place under sundries and unenumerated. The export in that year was, however, as stated above, $729.

The Import Trade of 1876 falls below that of 1875 by $3,112,029, while the Export Trade of 1876 exceeds that of 1875 by $8,965,149.

Of the above sum of $3,112,029, as exhibiting the decrease in the Import Trade of 1876, only $260,805 is the decrease in the actual trade of the place, for while in 1875 articles on Government account figured for $3,119,535, in 1876 they only amounted to $621,284, or a decrease under this heading of $2,498,251.

In my last report I drew attention to the unsatisfactory nature of the trade during the period then under review, and I think the figures now brought forward clearly demonstrate that the remarks I then made were not put on record without fair grounds. Many merchants and importers have probably found that the field here, after all, is but limited, and the intense desire prevailing on all sides to enter into large operations cannot but be attended with danger in any small markets, especially in one such as this, where the capital at the command of most of the native merchants is comparatively so small.

Reviewing, however, the general result of the Import Trade for the past year, I think I am right in saying that more satisfaction in respect to trade is generally expressed, and it is admitted that not only have profits been realized on most goods, but that heavy losses on the importations of the year have been avoided. I say importations of the year, because it is impossible for me in a Report of this kind to take into consideration the stocks which remain over at the close of the year.

Merchants must necessarily be actuated by different motives in disposing of their goods, and while one is enabled to quit his consignments immediately on arrival, incurring perhaps but a small loss, another may have peremptory orders not to sell unless a profit can be realized, and in the attempt to gain this end a further loss has generally to be submitted to, for I am informed that in nine cases out of ten an offer once refused is but seldom improved upon unless from some unforeseen and unexpected circumstances.

Before proceeding to comment upon the Import figures already noted, it may be as well to examine how it is that this past year has been a satisfactory one to most Importers.

Throughout the greater part of the first six months of the year the Import trade appears to have been in a very languid and depressed state. The low prices ruling for silk in the home markets had naturally affected the export of the article from this side, and the consequence was a considerable reduction in the purchasing power of the country; in other words, that the natives having less money at their disposal were unable to purchase goods to the same extent as in former years.

The low value of silver created great apprehensions at one time, and it was feared that the rate of exchange might decline to 3s. 6d. for six months' sight Bills or even lower, and this to a great extent prevented shipments being made to this market, for prudent men were naturally disinclined to enter into transactions when it seemed impossible to foresee at what rate their money could be returned to them. Indeed, I understand that so fearful were some of the tendency to depreciation in silver, that they would listen to no transactions unless the exchange was settled at home at the time of entering into it. The failure of the silk crop in Europe naturally re-acted upon the market, and the Banks being unprepared for the large purchases made both here and in China, the consequence was a great scarcity of money and a rise in exchange from 3s. 9½d, at which it had stood in March, to 4s. 6d. The fluctuations subsequently were considerable, and though this rate was not maintained exchange ruled much higher than what had been expected, rendering the outturn of goods satisfactory in a corresponding ratio. The Japanese, too, were enabled to purchase more freely, and I am informed that

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

at one period of the year the excitement among the Import dealers was such as had not been witnessed for many years.

The producing markets at home, after constant decline, seem to have reached their lowest point in July, and a considerable improvement took place towards the end of the year.

All these circumstances combined to render the Import trade a paying one, but, as might naturally have been expected, shipments were eventually too heavy, and the year closed with a gloomy aspect.

I have now only to make a few remarks upon the increase or decrease in the importations of various goods as exhibited in the returns.

Cotton Yarns again show a healthy increase, being 12,287 piculs in excess of 1875. Prices have remained very steady, and except at one time shipments did little more than keep pace with the demand.

Shirtings show an increase of over 13,000,000 yards, having just recovered the position they lost last year, but I must confess, I do not consider this any sign of an increasing trade in these goods, for stocks are very much in excess of what they were at the close of 1875, and evidences are not wanting of the native merchants having bought largely in excess of their requirements. *T. Cloths* require no comment, but in *Drills* an increase in value of $37,541 against $12,235 last year, is due probably to the requirements of the Government owing to the disturbed state of the country.

Chintzes show a falling off of seventeen per cent., a matter which cannot create any surprise when the increased importation of the previous year is taken into consideration. The business is, I should imagine, very unsatisfactory when the risk attendant upon the introduction of new designs is taken into consideration.

Cotton Italian Cloths figure for rather less, but nevertheless prices ruling have been unsatisfactory when the risk attendant upon the introduction of new designs is taken into consideration.

Cotton Thread has been brought into the table of Cotton Manufactures. It figured in the Import Return of 1875 under Miscellaneous foreign. The Import in 1876 amounted to $19,828 against $8,089 in 1875.

Dyed and Twilled Shirtings show a considerable decrease, the value being only $21,107 against $126,332 in 1875. I must confess, however, that I can hardly reconcile these figures with those published by the Board of Trade, which I notice from home circulars show a very considerable increase in the shipments of those goods.

Taffachelass.—Three years ago I drew attention to the increasing native manufacture of these goods, and as last year I expressed surprise at the importations having kept as large as they did, I find now no cause for wonder in noting a considerable falling off, namely, to $49,936 from $257,915 the previous year. Prices have kept very low, and must, I imagine, show a considerable loss to importers. Of the decline expected they must, however, have had ample warning.

Woollens.—The decrease of $335,391 in these articles is to be accounted for by the marked falling off in the importation of Mousselines de Laine.

Check Lustres, which figured in 1875 for $112,663, do not appear at all in the Custom House returns for 1876.

Blankets also show a reduction, and *Camlets* have dwindled down to the insignificant amount of $3,812.

On the other hand, *Cloth*, strange to say, shows an increase of nearly $140,000; and *Lastings*, though goods of no new import, figure separately for $18,949.

Woollen Taffachelass figures for the first time, the import amounting to $70,741, but I am under the impression this is no new fabric, but simply Lustres or such like goods made up in patterns similar to Cotton Taffachelass.

The increase in *Cloth* noted above is probably due to the fact of the import in the year previous having been very small, and to Government requirements. I fear this trade is not an expanding one, and that the Japanese cannot afford to pay a remunerative price for a good fabric, such as would repay them for the first outlay better than by the purchase of the inferior articles brought here under the name of cloth.

Blankets show a falling off of nearly twenty-five per cent., but as much of the surplus stock has now been disposed of, the prospects appear more favourable than they did last year. Competition will, however, I presume, soon destroy all chance of profits being realized.

Mixed Cotton and Woollen Goods show a falling off of $478,372. The cause is to be found chiefly in the decreased import of Lustres and Orleans which figure for barely a third of what they did in 1875. I am not surprised at this diminution, for I understand the increased importations of 1875 were not warranted, and it must be borne in mind that an article like Woollen Italians (Italian Cloth), which has been steadily increasing, cannot fail to interfere with Black Lustres.

As regards *Metals*, I can see but little requiring comment. There is a falling off of over 18,000 piculs in the importation of Manufactured Iron, but on the other hand Scrap Iron shows an increase of over 14,000 piculs, the bulk of the latter being, I imagine, composed of old wire roping which has been sold during the past year to a considerable extent, and when untwisted takes to a certain extent the place of nail rod iron.

Arms and Ammunition may in future be left out as a separate item, for they are only imported now under exceptional circumstances.

Miscellaneous Foreign figure for only $4,255,228 against $7,009,960 in 1875, but in the latter figures articles on Government account were included to the extent of $3,119,535, which for 1876 figure only to an amount $621,284.

Though many fluctuations from the values of 1875 are apparent in the numerous articles under this heading, there is but little for actual comment. I notice with pleasure an increase in the value of *Foreign Books*, and while on this subject I may refer to the numerous translations of foreign books into Japanese that are now to be found in all the native book shops. Original works on every-day subjects are, however, difficult to procure; as a case in point I may mention that I made enquiries some time since for any native work on agriculture or farming, but while translations of several foreign works were offered to me, I could not obtain one original work on the subject emanating from a native source.

Silk and Cotton Mixtures from $136,295 in 1875 dwindled down to $41,213 in 1876. The low prices ruling for Silk here in 1875 have probably enabled dealers to supply their wants from the native looms.

The increase of 60 per cent. in the importation of *Umbrella Frames*, and diminution of nearly 40 per cent. in that of Umbrellas, clearly testifies to the Japanese having taken to the manufacture of these now very necessary articles, a fact which were there any doubt at all about, would be quickly removed by a walk through any of the busy streets of Yedo, where umbrella manufacture appears to be one engaging much attention. The manufacture is probably stimulated by the favourable market that is offered in Hongkong, to where foreign umbrellas made up here are exported in no inconsiderable quantity.

Miscellaneous Local show a slight reduction notably in respect to Sugar.

I proceed to review the trade in the principal articles of Export—Silk, Silk-worm Egg Cards, and Tea.

Silk.—Export for the year ended December 31st, 1876, 18,418 piculs 67 catties, valued at $13,191,710, against 11,813 piculs 87 catties, valued at $5,424,916 exported in 1875.

The past year will always be a memorable one to those interested in the Silk trade, remarkable as it has been beyond precedent for the violent fluctuations in prices which it has witnessed, and as a year of excitement surpassing in intensity anything hitherto witnessed.

At the commencement of 1876 prospects for Japan Silk were as gloomy as they could well be, for prices, although so low as to border on the actual cost of production, compared unfavourably with the values then current in Europe, and it was well known to shippers that even the lower cost purchases of November had arrived to an unprofitable market, stocks of manufactured goods as well as of raw silk were heavy at home, the fashion too, averse to silk and in favour of Woollen goods, and manufacturers had complete control of the situation, obliging holders of raw silk to make continuous fresh concessions.

January opened with a slightly improved demand for Hank sorts, and prices advanced $10 to $15 per picul,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

good No. 2 Maebashi being then quoted $450 to $460. The enquiry came almost exclusively from the Lyons market, where an opinion was gaining ground that prices had touched the lowest point. Business fell off at the end of the month, and much uneasiness prevailed owing to the failure of a prominent Continental house engaged in the silk trade.

Prices nevertheless remained steady, the demand for native consumption being good and for which supplies were freely taken from this market, the better description of silk had, moreover, become scarce at this period.

Maebashi, medium stood at	$400 to $420
Oshiu Kakeda, best at	$550 to $570
Other best Oshiu sorts	$500 to $520
Hamatsuke	$400 to $420

The stock of Silk in Yokohama was one thousand one bales (1,100 bales).

Throughout *February* holders were firmer in their demands, and succeeded in obtaining $15 per picul advance in prices, evincing great unwillingness to sell though buyers were few and purchases on a most limited scale.

Hamatsukes and Oshius had a good share of attention towards the end of the month, buyers being especially attracted by the low cost of the former.

In *March* there was greater activity though of a purely speculative nature, for prices at home had still a downward tendency, though here a further advance of $10 per picul took place on all classes of hanks. Such was the depression in the European markets at this time that it was scarcely possible to obtain in Lyons forty-four francs for best Japan hanks, while common qualities were more readily saleable at francs 42 to 43. In London 14s. 6d. was an extreme price for best Maebashi, and common qualities were rather preferred at 13s. 3d.

These comparisons are made to show that with manufacturers price was the main object, and yet, strange to say, consumption was not stimulated by the almost unprecedented low value of the raw material.

April and *May* were very dull months, the market being bare of good hanks, and the little business done was confined to Oshius.

Towards the end of May telegrams came forward reporting unfavourably as to the progress of the European silk crops, and some anxiety was shown to secure parcels, which led to fair settlements of Oshius, other sorts failing at this moment.

June.—Oshius were pushed up $20 per picul, but transactions were unimportant.

The great feature of the month was the opening of the new silk season, which commenced on the 18th, somewhat earlier than usual, by the arrival on the market of twenty-five bales of Maebashi.

This silk was found to be of good nervous quality, rather full in size, but less mixed than first arrivals usually are. The parcel immediately found a buyer at $455, a very moderate price at which to open the market, and worthy of note as showing that at this epoch no suspicion existed of the vast changes in value so shortly to take place. It will be seen by the foregoing that the business for the first six months of the year had been of little importance, and of a very unsatisfactory nature on the whole, though the very last shipments of old silk had the good fortune to fall in for the great advance in prices that followed in Europe.

The export for the six months ended June 30th, 1876, was 3,339 piculs and 80 catties, value $1,525,406, as against 3,959 piculs and 23 catties, value $1,867,330, for same period in 1875.

These figures call for little comment; the falling off in the export as compared with the corresponding half year of 1875 is to be accounted for by the large increase in the native consumption of Raw Silk, and further to the unremunerative prices ruling in Yokohama, which had the effect of keeping a good deal of Silk back in the interior. It will be seen that the average cost of shipments to the end of June, 1876, is a trifle below the average of the same period 1875.

It was known here in May that the French crop was almost a total failure, and that of Italy likely to prove a short one, but so far this was regarded with indifference by manufacturers, and no material change had taken place in prices in Europe which permitted of the market being opened here at a higher figure than $455 for Maebashi on the 18th of June.

Just about this time speculation, which had been dormant for several years past, stepped in, and capitalists in London, in consequence of the abundance of money and the suspicion with which many of the ordinary channels of investment were regarded, now looked upon Silk as a fair subject for venture, a very large business ensued and manufacturers and "throwsters" were compelled to follow the market.

I will now follow the course of events succeeding the first arrival of new Silk, presenting a rise in prices quite without precedent in the annals of the trade. The next supplies that reached this market in June, consisting of seventy-five bales No. 2½ to 3 Maebashi, were taken up at an advance of $25 per picul, namely $480, and before the close of the month $550 had been paid for Maebashi No. 2½, and the market was bare of stock.

July.—Buyers anxiously awaited fresh arrivals, and the Japanese strained every nerve to meet the exigency of the market, and to reap the golden harvest that was in store for them.

Advices from Europe were more and more positive as to the deficit in the European crop, which was now set down at two-thirds, and the desire to buy Silk being general, and supplies altogether inadequate to the demand, prices came up with a rush, reaching by the 18th July

$750	for best	Maebashi.
$675 to 690	„ No. 2½	„
$650 to 670	„ inferior.	„

Here a pause took place, for direct communication with Europe by wire was broken off, and buyers being quite in the dark as to the course of events there, hesitated to continue with purchases at the enormous rise that had taken place, already in advance of last known quotations from home.

This check to business, coupled with heavy arrivals from the interior, brought about a fall in prices of $50 to $60 by the end of the month.

Arrivals up to this time exceeded 4,000 bales, very unusual figures for this early stage of the season.

On the 29th of July, news had crept in by way of China that during the interval of the interruption of the telegraph, prices in Europe had been running up far above anything looked for, and although few shippers were yet in the secret, the whole stock was not in excess of requirements, and the next day witnessed every available bale of silk bought up at the decline previously noted, which brought prices to $630 to $640 for Maebashi medium, and $680 for Shinshius.

August.—During the first week of the month, when it became generally known by the reopening of direct telegraph communication that prices were always rising in the home markets, the excitement in Yokohama was intense, and Japanese obtained for the silk then coming forward $750 for common Maebashi, and for best $850. In addition to the higher prices for silk the cost was further augmented by a rise in exchange of ten per cent. on the rates current during the latter half of July.

A slight reaction in consequence took place in prices, which fell $40 to $50, but quickly recovered $20 of the ground lost, and upon this basis purchases were very large. August closed with the astounding settlements of 9,668 bales since the opening of the season, and the market bare of stock.

Current quotations were:—

Hanks, best	$800 to $820
„ medium 2½	$760 to $780
„ No. 3	$720 to $740

But this decline in prices, it must be mentioned, was simply due to the great rise in exchange, which had gone up to 4s. 7d., the highest point reached during the year.

September.—The demand continued without abatement, and every class of silk was caught up for shipment at daily advancing prices. An important decline in exchange enabled buyers to meet more readily the increasing demands of the native silk-men for more dollars, and prices went bounding upwards with the large transactions that were taking place, until the climax was reached at the end of the month, when prices ruled as follows:—

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Hanks, No. 1	$1,200
„ Nos. 1 and 2	$1,140 to $1,170
„ good No. 2	$1,100 to $1,120
„ „ „ 2½	$1,060 to $1,080
„ 3 & 4 inferior	$1,000 to $1,040
Oshius, best	$1,100
Oshius, medium to good	$1,050 to $1,080
Kakeda, good and best	$1,150 to $1,200
do. medium and good	$1,050 to $1,100
Hamatsuke, good and best	$ 860 to $ 890
do. medium	$ 820 to $ 850

Native filatures :—

1st Order, 11/13 deniers	$1,300
2nd „ do. do.	$1,250
3rd „ 14/16 do.	$1,200

Transactions from the 1st July had reached 14,200 bales, of which 11,400 were Hank sorts, and 2,800 bales only Oshius and other sorts.

Buyers for native consumption, which had previously been checked by the high prices paid for export, now bought largely on this market of coarse Silk, fearing no doubt that everything would be shipped off.

October.—Much uneasiness prevailed on account of the unsettled state of politics in Europe, and prices fell fully $120 per picul.

The market was burthened with a heavy stock of 2,200 bales.

November.—Very discouraging news from home markets paralysed business, and there was little or nothing doing, though prices had fallen rapidly to

$800 to $840 for best Maebashi.
$700 to $740 „ 2½ do.
$600 to $640 „ inferior do.

December.—Stocks had accumulated to 3,000 bales, and with the absence of any demand $50 to $60 decline was established, and the year closed with the same range of prices that were current in July.

Stocks had accumulated to 3,000 bales. The Export for the six months ending December 31st was 15,078 piculs 87 catties, valued at $11,666,304, as against 7,854 piculs 64 catties, valued at $3,557,586, for the corresponding period in 1875.

The total export for the year, as already stated, 18,418 piculs 67 catties, valued at $13,191,710, against 11,813 piculs 87 catties, valued at $5,424,916, exported in 1875; an increase of 6,604 piculs 80 catties in quantity and of $7,766,794 in value. The sudden collapse of prices in Europe, while such large quantities of dear silk were still *en route*, must have almost neutralized the brilliant profits derived from early shipments.

Of native silk dealers it may also be said that the large gains of the first three months of the new season have been to a great extent lost, for they bought with avidity up country at the highest prices ruling here in September.

To the peasants and silk reelers up country the season must have been a most prosperous one, and will probably greatly stimulate the production next year, especially of fine sized silks, which have not been subject to such violent fluctuations as common qualities and coarse sized silks.

Native filature silks have been more abundant than in former years, and the ready sale at high prices during the whole season must have been highly flattering to the proprietors.

The crop of 1876 has been a very abundant one, and will in a great measure account for the increased export; but the high prices caused much old silk to be brought forward, as well as largely curtailed native consumption, the usual supplies taken for that purpose having been diverted to the European markets.

The quality of all the past year's cocoons was excellent, the improvement, however, looked for in the silk reeling has not been fully realized. Such was the pressure to bring down the silk to market in as short a time as possible, that reeling was carried on under all circumstances, and not only by day but by night, and no further explanation is required to account for a large preponderance of undesirable silk.

Silk-worm Eggs.—The total export for 1876 reached 1,018,525 cards, valued at $1,902,271, against 727,463 cards, valued at $474,921, exported in 1875, representing an increase of 291,062 cards and of $1,427,350 in the value of this article of export.

Italian buyers began to arrive in Yokohama towards the end of August, but they came with few orders in hand, and as the business they came here to transact was to a great extent of a speculative nature, a sort of understanding had been come to amongst themselves to hold off from buying until cards could be had at exceedingly low prices such as had ruled here during the past season. Several circumstances had occurred prior to their arrival which rendered this project unfeasible. Viewing the higher prices paid for cocoons in Italy, and the greatly enhanced value of silk, merchants, both European and native, had made large contracts for Silk-worm eggs in the interior, and these operations were further based to some extent on the knowledge that the whole quantity available for export was not likely to exceed 1,000,000 cards, a quantity considered barely adequate to the requirements of Italy and France.

This very sensitive article being now held in strong hands instead of being brought to market by a multitude of small cultivators and proprietors, as for the previous two years, was better able to hold its own against the combination that was made for its defeat.

By the end of October arrivals had reached 950,000 cards, but no *bona fide* transactions on this market had as yet been entered upon, as there was a wide difference of opinion about prices between buyers and sellers.

It was not until early in November that Italian buyers, dreading the approach of cold weather, were forced to buy, and made considerable purchases on the basis of $2.25 to $3.00 for best Oshiu cards and $2.75 to $3.25 for best Jôshiu ditto. A few parcels of superior Yanagawa sold as high as $3.90. By the 17th November 360,000 cards had been shipped off, costing from $2.25 to $2.50, the average being between these figures. Prices after this gradually declined, upon which buying became more general, and the American mail of the 25th November took away 500,000 cards, costing on an average $1.70.

By the end of November total purchases had reached 860,000 cards, leaving over 300,000, some fair, but the bulk inferior qualities, which were held at about $1.20. 270,000 of these remaining cards were held by a Native Bank that had given advances to holders. A part of these, amounting to 140,000, were sold here at from ninety cents to one dollar forty cents, and the remainder were returned into the interior for native use.

A new feature of this season's business in Silk-worm eggs was the departure of several Japanese for Italy with cards which they expected to be able to realize there to greater advantage than by selling here. Should they meet with success it is not improbable that in future a large portion of this trade will be carried on direct with Italy by the native merchants.

Tea.—The Export for 1876 amounted to 115,994 piculs 7 catties, valued at $3.475.178, falling considerably below the export of 1875, which was 134,415 piculs 67 catties, valued at $4,813,458, a decrease of 18,421 piculs in quantity and of $1,340,280 in value. The following is a brief review of the trade for the year 1876.

Prices at the commencement of the year were high considering the quality of teas on offer, good medium commanding from $26 to $29 per picul, and other grades in proportion.

An idea that some re-imposition of duty on tea would be made in the United States kept the market active with speculative purchases until the month of April, when the excitement entirely died away.

With the opening of May first arrivals of new crop came, in and immediately found buyers at prices ranging from $42 to $54 per picul.

As supplies increased rates declined, and about the middle of August good medium teas were in full supply at $19 to $21 per picul. This was the cheapest period of the year.

The export continued steady, and during the month of November showed fairly large figures, owing to the departure of three sailing craft for New York direct. With the close of the year the tea market might be considered as finished for the season, as settlements during the period until the arrival of the new crop teas were small and unimportant.

Original from UNIVERSITY OF CALIFORNIA

Japanese producers have apparently become alive to the fact that they have fallen into the error of over producing, and also that their teas are losing their former great popularity with consumers in the United States. They are now endeavouring to correct this by paying more attention to the picking and curing of the leaf, and the present season's produce shows a marked improvement as compared with the last two seasons.

As the consumption of Japan tea is restricted to the United States, which market seems to have received last year more than it could dispose of, causing a consequent depression of prices here, it is not likely that the year 1876 has witnessed any increase in the area of the plantations. Indeed many native merchants assert that in some districts the tea plantations will in future be used for other and more profitable crops.

Some samples of Japan Black Tea prepared under Chinese supervision have been shown, but no encouragement can be held out to the Japanese for producing them in quantity. The teas are handsome in leaf but entirely devoid of any character or quality in cup, resembling low grade Amoy Congous, and worth on the London market about 10½d. to 1s., or in New York 22 to 24 cents per pound. Some shipments of Japan Teas by native merchants under Government auspices have been made to New York, but prices realized there are reported to be so unsatisfactory that it does not seem likely that the experiment will be repeated. It is asserted that the losses, taking into account the market price at which the teas could have been disposed of here to foreign buyers, exceed $120,000.

The Californian trade is gradually changing, the somewhat gaudy lacquered tea chests and fancy packing which were marked features of this business are not now so popular, and several of the leading importers in San Francisco find it cheaper to import teas in bulk and pack them over there, having the papers necessary for such packing made up here.

The facilities afforded by the railroads make Chicago an important distributing centre, and shipments to that city direct from Japan amount to 2,500,000 lbs. or about ten per cent. of the total amount exported.

It seems probable, speaking of the current season, that Japan producers, warned by the low prices at which teas were only saleable at the close of 1876, will greatly limit the amount of third crop leaf picked, and as the United States markets seem to point to an import of 18,000,000 lbs. as a fully ample supply for each year, anything in excess being against the interests of shippers, we are likely to have a decrease in export. The past season 1876-1877 showed an export of 22,750,000 lbs. against 25,500,000 lbs. exported in the season 1875-1876, and and this season the export from Japan will probably not greatly exceed 20,000,000 lbs. In speaking of "seasons" as regards tea, the period from the arrival of the new crop, which may be said to date from May 1st to the same date in the succeeding year, is meant.

The decrease in the export as noted above is, I think, to be attributed to the overstocked markets in America. The same reasons will account for depreciation in value, as prices during 1876 were fully fifteen to twenty per cent. lower than in the previous year. I append a table showing the export of tea in each month from Yokohama during the year 1876, and fluctuations in price of good medium (market standard) during same period.

1876.	*Exported each Month.*	*Price of good medium per picul, 133⅓ lbs.*	*Rise during course of Month.*	*Fall during course of Month.*	*Remarks.*
January	1,075,592	26 to 29	—	—	—
February	909,657	—	—	—	—
March	442,911	25 to 28	—	$1	—
April	261,393	no quotations	—	—	Season closed.
May	690,688	29 to 31	—	—	Opening price new crop tea.
June	1,779,192	24 to 26	—	„ 5	—
July	2,774,879	20 to 22	—	„ 4	—
August	2,148,003	18 to 20	—	„ 2	—
September	1,151,080	21 to 23	$3	—	—
October	1,389,737	22 to 24	$1	—	—
November	2,733,853	21 to 23	—	„ 1	—
December	472,842	19 to 22	—	„ 1	—
	lbs. 15,829,827				

Representing a total a little in excess of the Custom House Returns.

The fluctuations in other grades correspond very nearly with those of "good medium," which are accepted here as the market standard.

Shipping.—Under the heading "General" British shipping exhibits an increase of 18,685 tons in the entrances and 24,483 tons in the clearances as compared with 1875. Mail steamers remaining much the same, American shipping "General" also shows an increase of 16,582 tons inwards and 18,690 tons outwards in 1876, against 14,692 and 13,633 tons respectively in 1875; but in mail steamers the decrease is very marked. In 1876 the entrances were 37 vessels of 133,931 tons, the clearances 39 vessels of 141,154 tons, against 79 vessels of 228,771 tons entered, and 77 vessels of 221,154 tons cleared in 1875.

The falling off in number of vessels and tonnage is due to the transfer from the American to the Japanese flag of the three steamers *Costa Rica*, *Oregonian*, and *Golden Age*, known now as the *Genkai Maru*, the *Nagoya Maru*, and the *Hiroshima Maru*. The steamer *New York* of the same line was transferred to the Japanese flag on the 10th August, 1874, the *Oregonian* on the 22nd October, 1875, the *Golden Age* and *Costa Rica* on the 1st and 9th November, 1875.

In my report on the trade of 1875, and under the heading "*Shipping*," I drew attention to the falling off in entries and clearances of mail steamers (American) as compared with the previous year, to be attributed, as I then remarked, to the sale of three of the Pacific Mail Company's steamers to the Japanese. The *New York* it should be remembered, had been sold the year previous—1874—but the sale of those steamers did not take place until October and November 1875, the American flag therefore had the benefit of their tonnage returns for ten months of the year 1875. Throughout the year 1876, these steamers have continued under the Japanese flag, thus accounting for the falling off in American tonnage which the returns for 1876 exhibit. I may take this opportunity of noting that the American steamer *Nevada*, which boat alone continued to run between this and Shanghai during the year 1876 under the American flag, was transferred to the Japanese flag on the 24th of January of this year. The shipping returns (American) for the current year will probably, in consequence at its close, compare unfavourably with those of 1876.

I may here mention that the transfer of these boats from the American to the Japanese flag has not affected the carrying trade either in respect to goods or passengers. The steamers are run with commendable regularity, due regard being had to their liability to being taken up for Government purposes. I am not, I think, saying too much when I state that the management and working of the Mitsubishi Company—the name under which the Japanese line is known—compares well with that of the older Companies established here.

Some fast passages have been made during the year 1876 by the steamers of the Pacific Mail Line (American) and those of the Occidental and Oriental Steam Ship Line (English) between this and San Francisco. The steamer *City of Peking* (American Steamer) made one passage from this to San Francisco in fifteen days eleven hours, the *Oceanic* (British Steamer) in fourteen days fifteen and one-third hours.

French shipping, both in respect to general and Mail Steamers, exhibits no marked difference comparing the figures of 1876 and 1875.

German shipping exhibits a decrease of over Five thousand tons in the entries and clearances as compared with 1875.

Russian shipping exhibits no great change.

Swedish and Norwegian tonnage has sprung from 312 tons entered and cleared in 1875 to 3,635 tons entered and cleared in 1876.

Danish tonnage calls for no particular comment.

Dutch shipping exhibits an increase. Numerically the entries and clearances of Danish, Dutch, Swedish, and Norwegian and Russian ships remain at a low figure, as will be seen by a reference to the tables.

A report on the shipping of 1876, so far as this port is concerned, would be incomplete were I to omit mention of

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the Regulations issued by the Japanese Government in respect to the engagement of masters, mates, and engineers and the granting of Certificates to same, and of the Regulations in respect to Pilots and Pilotage. The first mentioned were published on the 6th June, the latter on the 15th December, 1876.

With regard to masters, mates, and engineers, being foreigners employed on Japanese vessels, the possession of Board of Trade or other certificates has not relieved the holders from the obligation of appearing before the Japanese Board of Examiners and satisfying that Board of their proficiency.

The Japanese are assisted by competent foreigners in the conduct of these examinations, and I have good reason for believing that candidates are subjected to as searching an examination as they would be in England, or any other country, where this subject commands attention.

The Pilotage Regulations have for the moment supplied a want long felt, and the obligation is now on every master of a vessel entering the port who may engage a pilot, to see that he holds a certificate qualifying him for the pursuit of his vocation as Pilot.

The following are the signals for a pilot in the day time.

1st.—The jack or other national colour of the ship hoisted at the fore.

2nd.—The International code pilot signal P.T.

At night the following signals, when used together or separately, are deemed to be signals for a pilot.

1.—A blue light every fifteen minutes, or

2.—A bright white light flashed or shown at short intervals just above the bulwarks for about a minute at a time.

The attention of the Japanese Government has also been directed to the overloading of junks, and regulations are now in force under which all cargo in excess of that allowed to be carried is confiscated to the Japanese Government.

I append, as customary, a table of the Traffic receipts of the line of Railway between this and Yedo (Tôkiô) for the year 1876, and add for purposes of comparison a table of the receipts for the preceding year, 1875.

No. of Passengers.	*Amount.*	*Goods.*	*Amount.*
1876 ... 1,664,101	$367,558.28	1876 ... 348,390 $\frac{80}{100}$ pls.	$31,308 $\frac{73}{100}$
1875 ... 1,732,391	$402,578.62	1875 ... 316,414 $\frac{75}{100}$ pls.	$28,998 $\frac{19}{100}$

1876 Total receipts..... $ 398,867.01
1875 Total receipts..... $ 431,576.58

I have the honour to be

Sir,

Your most obedient, humble servant,

(Signed) RUSSELL ROBERTSON,

SIR HARRY S. PARKES, K.C.B.,
&c., &c., &c.

Ichiku Kuanroku, a young Japanese nobleman, aged twenty-one years, died in Georgetown yesterday, of consumption. Kuanroku came to this country in March, 1876, to enter the Naval Academy at Annapolis. He went to a preparatory school at East Hampton, Mass., where he remained until November last, when he went to Washington to recruit his health, which was much impaired from over-study. The Japanese Minister was with him at the time of his death. General Saigo, the Japanese Chief Commissioner to the Centennial Exposition, now operating against his brother, the illustrious soldier, in Japan, was an uncle of the deceased.—*New York World.*

Law Reports.

IN H. B. M.'s COURT, KANAGAWA.

Before H. S. WILKINSON, Esq., Acting Law Secretary,
Messrs. J. J. GRAY, GEORGE BUTLAND, L. LICHTENSTEIN,
E. ABBOTT, ALEXANDER CLARKE, sitting as jurors.

Monday, 2nd July, 1877.

IWASAKI YATARO *vs.* CAPTAIN P. H. COLOMB.

Plaintiff, who is proprietor of the S. S. *Chiri Maru* claimed from defendant, who is Captain of H. M.'s ship *Audacious*, the sum of $4,400, being $1,400 for injuries sustained by the *Chiri Maru* on the 11th instant through the *Audacious* fouling her, and 3,000 demurrage.

(Continued from Saturday.)

Frederick Augustus Johnson, sworn:—I am a staff-commander in Her Majesty's service, serving on board the *Audacious*. I was on board the *Chiri Maru* on the 12th ultimo, but not acting officially in the survey. The stem piece was broken forward. The cat-heads were damaged very slightly and several other little things were broken. The cat-heads were the most serious injuries done to the vessel. The damages would have been very little hindrance to a vessel proceeding to sea under tow. It would have been advisable to renew the cat-heads if time allowed. In my opinion the repairs necessary to allow the vessel to go to sea could have been made in two days. These fixtures could have most certainly been made at sea. When I looked at the boilers with Mr Turner they were not seaworthy. The *Chiri Maru* was certainly not a seaworthy ship. The sails might have enabled her to keep straight till taken in tow again if adrift at sea. On the second visit I compared the reports of Lloyds' surveyor and our engineer and the carpenter of of the *Egeria*. I should think three-fourths of the stem, roughly speaking had been factured before. On the third occasion we found that the fracture had rusted under the heavy rain since the second visit. The only use of the stem appeared to me to be to hold the forestays. If the stem had been known to be froken it would have been advisable to have repaired it before going to sea. Considering the state of the stem I think the *Chiri Maru* would have been in better condition after repairs than before the accident. Being a staff commander the stores to a certain extent come under my charge, and I can give an opinion as to the estimates of our chief Engineer and the carpenter of H. M. S. *Egeria*. It is customary to be at single anchor in a port like this. I have had 25 years' service. Mooring a ship is only to economise space. Where there is plenty of room, single anchor is preferable. Under ordinary circumstances two anchors ahead are dangerous. When a gale begins to blow in a harbour like this, the precautions usually made are, to send down top gallantmasts, to clear away the other anchor ready to let go and, the wind increasing, to put a drift lead out, though the drifting is observed sooner by the eyes than by the lead. The ship has two bower and two sheet anchors; so that with one anchor out we have practically one fourth of our holding power. I have been with the *Audacious* just three years. I have found that she is particularly steady whilst riding at anchor; indeed I am astonished that so large a ship should ride so easily. There was nothing to lead me to suppose that the *Audacious* would drift on the night of the 11th. This is nothing in the nature of the bottom to lead to the supposition that the anchor would drag. The lead brought up thick, black mud, and indeed we were in good holding ground. Rocky, shingly or sandy bottom is the reverse. We could not have better anchorage than in Yokohama. Between six and nine o'clock I thought the weather was moderating. There was nothing to lead us to suppose that the ship would drift. I considered it was unnecessary to get up steam, nor am I aware that any ship in harbour did so before nine o'clock. As staff-commander I am generally responsible to and with the Captain for the navigation and safety of the ship. It is my duty to assist the Captain in every way I possibly can. Although I do not keep watch I am liable to be on deck all night if there is any chance of danger. Suppose by negligence or any other cause the ship ran on shore, I should be charged with the Captain for the loss of the ship. If on such an occasion I showed that I had given the right order at the right time, I should hope that that would exonerate me. On the 11th at six o'clock, the weather was overcast, rainy and squally. I was on deck then, watching the weather, and at half past six being perfectly satisfied in my mind that the ship was in perfect safety, I went down below to dinner. During dinner I considered that the wind had lulled. About half-past seven on going on deck I looked to see of the ship was in the same position as when I left the deck before, and being perfectly satisfied, went into the upper battery and lit my pipe, casually looking out of the port hole. Whilst there I thought I perceived the ship dragging and I ran up the ladder and gave the order to the boatswains mate to stand by to clear the starboard anchor, and it was done almost immediately. The ship was driving very rapidly. We ascertained the cause on weighing the port anchor afterwards. It came up without a stock. First the report was "anchor clear" and immediately afterwards "without stock." Our anchors and cables are surveyed every six months. The *Audacious* carried her usual light that night, as well as the Admiral's. Every usual precaution was taken on board the *Audacious*, and I observed no negligence anywhere. I should think about three minutes at the outside elapsed from the time I saw her drift and collision. Time appears very long on these occasions. I had every reason to believe that the anchor was clear. On a Monday sail drill, about a fortnight before, sails were set and the cable stretched to its full length. It was blowing a little fresh at that time, and I judged from the way the ship rode to her anchor that it was perfectly clear. After an anchor has been several days down there is less chance of fouling

at the bottom. I had some conversation with the Captain of the ship as to state of weather and we were both satisfied that we were safe. In my experience in the harbour, the wind has shifted from south round to north. Shifting is not unusual.

Cross-examination by Mr Ness:—I expected a change of wind and remarked that to the Captain. These changes are frequent in my experience of this coast. To the best of my belief I have experienced circular winds in this harbour. The barometer went down very low and stopped there about eight o'clock. When the barometer falls very rapidly it will most likely rise as suddenly, and there is often a shift of wind. I looked at the barometer about half-past five. The interview with Captain Colomb took place about half-past six. Looking at the log is the same as looking at the glass, for on such occasions hourly observations are taken. I guessed that the wind would change, and Captain Colomb did not dissent from my guess. The glass was falling I think from noon till eight o'clock. It would have been an unseamanlike proceeding to have let a second anchor go after six o'clock. It might have rendered the collision less probable. If any accident had occurred by the letting go of that second anchor we should have done wrong in letting it go. If we had got up steam the collision would have been less likely to have happened. If we had set sail the ship would have been lost. We should have had to go right astern, and it would have accelerated the collision from the direction of the wind. My opinion is that the ship went adrift just as I saw it. Apart from the lights I did not rest my observations on anything else. I cannot say the speed at which she did drift. I know it was very rapid, for I looked over the side. I have never said anything about the ship having drifted before I observed it. Mr Lingham had the watch. It was his duty to order the anchor to be let go and report to the Captain when the ship went adrift. He was on the bridge. So far as I know I was the first to notice the drifting.

Mr Ness:—As a matter of fact have you any positive knowledge how long the *Audacious* was adrift before you discovered the fact?

Witness:—No, but this answer does not alter what I said before. I believe there were drift leads out. If the ship had been merely drifting with the anchor that was down in proper order she might have been brought up almost immediately. I have no knowledge of when the stock was broken. It is my belief that we should not have drifted if the stock had not been broken. I cannot account in any way for the breaking of the stock. It was broken. When a ship is riding at anchor it is not usual to sight the anchor occasionally, unless it is knowingly an old one. The mere fact of its holding on is sufficient to prove that the anchor is all right. In letting down the anchor after sighting it there is much more chance of fouling it than when under headway It is dangerous thing to sight an anchor to see if it is clear. The stock most likely would have been buried in the mud as well as the , and these would be little chance of fouling with it. I cannot say what caused the stock to break. I daresay three minutes passed from the time the order was given till the starboard anchor was let go. When I saw that about three minutes elapsed from the time I discovered the drifting till the collision, I meant not the collision, but the letting go of the anchor. My impression is that I saw her commence to drift. I cannot say how many minutes elapsed from the commencement of drifting till the collision. The second anchor when pulled in two days afterwards was found to be somewhat beyond the *Chiri Maru*. The head of the ship fell off to port when she began to drift. I should have let out more cable had not the Captain sent an ordernot to let out more. The anchor was dropped before the accident. I cannot account for the fact of the anchor being found astern of the *Chiri Maru* unless the anchor had tripped. The anchors are always ready, except to shackle on. They were not shackled till a little after the second anchor was let go The starboard was prepared. It is possible to let it go in a minute and a half. The morning after the collision we were lying with two anchors ahead. The *Tennessee* was moored that night, at about a cable and a half from us. The *Chiri Mara* was about two cables. The *Tennessee* frequently lies at single anchor. I never formed any opinion as to the marchantable value of the *Chiri Maru*. I said the boilers were not sea-worthy. I can give an opinion on them, certainly. I know nothing about iron. (Broken part of stem produced). In my opinion that could be patched by two bolts. I cannot say from experience how long it would take to repair it. I think the vessel might proceed to sea without it, though I would consider it prudent to look to it. I have no knowledge of the use to which she was to be put. I consider the weather such as we had on the 11th an "ordinary circumstance."

Re examined by Mr Dickins:—The captain of the *Chiri Maru* told me the boilers were unserviceable. The *Tennessee* made use of only one anchor. I do not know that she let go a third during the evening. The *Chiri Maru* might have hove up after the collision. I have no reason to suppose that the *Audacious* began to drift before I saw her drifting. I immediately gave the order "stand by the starboard anchor." When I looked and made certain that she was drifting, then I said "let go." I had to go about twenty or thirty feet from where I was smoking to where I gave the order. Not more than—I should think not so much as—half a minute elapsed from the moment I saw the drifting and when I gave the order. I was aft when the anchor was let go and did not hear the chain rattle. My observations of the barometer, aneroid and log book influenced my idea of a probable change of weather. When the starboard anchor of the *Audacious* was pulled in I observed that the *Chiri Maru* had hauled up.

To the Jury:—No one but the officers on board the ship saw the anchor as it came up without its stock. I believe in one anchor. The *Chiri Maru* was lying in a safe place.

Adjourning till 2 p.m.

In the afternoon.

Alfred Smith, leading seaman, sworn:—I remember the 11th June. I remember seeing the starboard anchor between six and half past six with the tackles hooked on to the lever. It would take about two seconds to let it go from that position after an order was given.

Cross-examined by Mr Ness:—I cannot explain how three minutes could elapse between an order and its being carried out. I was changing my clothes at the time the order to lower the anchor was given. I first knew of the drifting when the collision took place. I had not to go immediately to the anchor, and it was about three or four minutes before I got on deck. I did not say anything to anyone on board the *Chiri Maru*. I clambered on board as we struck. I was mooring the steam pinnace at half past six and the anchor was right in my way so that I could not but notice. I was on duty all the evening. I went to change my wet clothes about eight o'clock, I think. I do not know of any one being sent with the drift lead. It was not my duty.

Alfred Arthur Chase Parr, commander of H. M. S. *Audacious*, sworn:—I remember the night in question. Shortly after eight o'clock I went to the bridge to see that everything was in order. I inquired whether the second anchor was clear and was told "yes." On board a man of war, the Captain gives his orders to the subordinate officers who see that it is carried out and reported to him that such is the case. Those officers are appointed by the Admiralty. These are the rules on board the *Audacious*. It was not my duty to report this to Captain Colomb. I keep no watch as commander. My duty is the general supervision of the interior economy of the ship. I have to report to my superior officer if anything is wrong, and I did my duty on this occasion I satisfied myself in usual way that the anchor was clear. If I had reason to believe that the anchor was not clear I should have had to report the fact to the Captain, but it was not my duty to see that it was clear. I merely ascertained the fact as a precautionary measure. If it had been found that the anchor was not clear I should not have been responsible. If anything were amiss, to the danger of the ship, it was of course my duty to report the circumstance. Having satisfied myself that the ship was in safety I went to the upper battery to smoke. There I heard that the ship was drifting. I immediately ran out and asked if the second anchor was ready ran forward, and the second anchor was let go just as I got to the forecastle. I came aft again and saw that we were very near the *Chiri Maru*, and soon after the collision took place. In a roadstead like that of Yokohama it is the custom to ride at a single anchor. I have never seen or heard of a ship of the service lying with two anchors ahead. Mooring is not in an open roadstead safer than riding at single anchor. The object of mooring a ship is to take up less room in a harbour. The usual precautions were taken against a heavy blow. I saw the anchor which dragged or drifted when brought up. The stock was completely broken off. I have never seen the anchor sighted without special reason. On such a night as the 11th June I should prefer to be at single anchor as we were, with a second anchor ready. It is the custom in the service. I think it possible that if the *Chiri Maru* had had one anchor down and had veered 100 fathoms, the collision would have been averted.

Cross-examined by Mr Ness:—The object of mooring is to take up less room in harbour and to guard against currents in rivers. This is a roadstead, but not perfectly open. I looked at the barometer during part of the day. I cannot say whether the anchor may have been fouled or not. I do not know when the *Audacious* began to drift. I should say about a minute elapsed before the anchor was let go. On the night in question I think it would have been very difficult to have brought the ship up within a quarter of a mile. With the knowledge that other vessels were nearer, and that it would have rendered the accident less probable, it would not have been a proper precaution to have let the starboard anchor go. The *Tennessee* had three anchors out at ten o'clock. All the evening before she lay moored, with one of the anchors useless. Had we been under steam the accident *might* have been less probable. Captain Colomb was in charge of the ship.

Re-examined by Mr. Dickins:—Captain Colomb always takes charge of the ship when on board. If her cables were clear the *Chiri Maru* ought to have been able to veer out the remaining 75 fathoms. I do not think the *Audacious* would have dragged had the stock not broken. If instead of having one anchor ahead we had had all four we should have been safer; but this would certainly not have been a seaman like proceeding.

To the jury:—Suppose there had been a rock in the place of the *Chiri Maru*, no precautions, other than were taken on that night, would have been taken.

Philip Howard Colomb, sworn:—On board the *Audacious* there are four anchors at the bow, the front two of which are the bowers. When an emergency is anticipated the second bower anchor is prepared to be lowered at two seconds' notice. The two after are called the sheet anchors and could scarcely be got ready to let go under ordinary circumstances in less than ten or fifteen minutes. On each of the bower anchors there is 200 fathoms of chain. Each anchor is over 95 cwt. There are really three ways in which the anchors are used.

Men-of-war never let go two anchors at the same time. If a man-of-war intends to lie at two anchors she must moor. (Captain Colomb illustrated by diagrams the different modes of anchoring and explained these to the jury at some length). Men-of-war never moor except in rivers or tide ways. In places where anchors are liable to be fouled, it is usual to moor to avert this very fouling. Men-of-war in anchoring have to think of their own safety and the chance of neighbouring men-of-war drifting and running

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

foul of her. The *Chiri Maru* was disregarding her own safety by having two anchors down. The captain showed that a second anchor was unnecessary by the accident occurring to the anchor of the *Audacious* and her drifting on to the *Chiri Maru*. If a ship is lying at single anchor it is easy to sheer out of the way of a drifting vessel. With two anchors down it is twice as difficult to sheer round. One of the best understood rules in the service is "never let go your second anchor unless you have cause to distrust the first." I have been nearly three years on board the *Audacious*, and over thirty-one years in the service. During that time I have constantly been in the habit of riding out strong breezes in harbour at single anchor. We rode out a strong gale in Chefoo at single anchor, with another ready. After the collision had taken place we rode out the night with two anchors, one being broken. The broken anchor might have bitten again. It was a dangerous position in the case of the *Tennessee* when after riding with two anchors down a third had to be let out at ten o'clock. The *Atalant* was right ahead, and had she drifted the *Tennessee* would have had to ship two cables before being able sheer out of the way.

During the afternoon of the 11th I received constant reports of the heights of the mercurial barometer, and watched very carefully the aneroid in my cabin. Up to about half past six I drew the inference that we were in for the ordinary wind experienced here. After that I thought it possible there might be something still stronger brewing; but as the wind seemed to lull at half past seven I thought it might be over. I imagined the breeze might then come from some other quarter. No reports were made to me but we had one or two of usual conversations as to the weather, etc. One of the standing rules is that in the event of the breeze coming on I am to informed of it, the fore top gallant masts brought down, the drift lead put out and the second anchor prepared. I had been at work in my cabin in the early part of the afternoon. I noticed the wind rising and looked at the barometer. It is an old habit of mine to test the cable when a squal comes on. More or less I was giving orders for preparing for the breeze all afternoon till seven o'clock. I know of nothing happening till ten minutes past eight when the midshipman of the watch came running down to call me, and told me the ship was drifting. I ran immediately on deck and meeting the staff commander and officer of watch, gave orders to look to the starboard anchor and asked them to repeat that order.

I ran forward myself to see that the men were at their stations for veering cable, and I called out to take care that both presses were manned. I then ran to the upper deck and from there I saw the *Chiri Maru* on our port quarter about a cable or a cable and a quarter from us. I went aft to the bridge so as to be in my usual place for receiving and issuing orders. I saw from the rate at which we were approaching the *Chiri Maru* that we should very probably foul her if we did not come up, and at that moment I also came to the conclusion that our anchor had broken. I have never seen the stock of an anchor break in a muddy bottom. Very shortly after I got aft the port quarter of the *Audacious* came in contact with the starboard of the *Chiri Maru* to the extent of about twelve feet. I think it was before we actually collided that I gave the order to stop veering both cables. I sent some hands on board the *Chiri Maru* to try and veer her cables, but the two ships remained more or less in contact for some considerable time. From time to time I sent officers, a blacksmith and other seamen on board to endeavour to free the ships, my idea being that if I passed into her our own stream chain, we might slip her and veer her astern clear of the *Audacious* for the night. Circumstances not under my control rendered that step unattainable. If the *Audacious* was brought up by her own anchors at the time or a little after the collision, the accident might have been averted. If the *Chiri Maru* had shipped her cable it might have certainly prevented the accident, but under the circumstances it would have been an unseaman-like thing. The *Chiri Maru* was moved out of her old position in the morning so that the fact of her port anchor being picked up astern of us is easily explained. The stock was made new at Hongkong. My theory is that the stock sunk into the mud and in a sudden jerk after a squall broke, and as no motive power was left, so the ship drifted. We did not steam up previous to the collision, now did any other vessel that I know of. The *Tennessee* was moored, riding at single anchor. There are on board the *Audacious* standing rules, and on principle I give as few orders as possible. Before I went on deck I was not "carrying on." A captain of a man-of-war is always in command of the ship. When I left the deck at half-past seven, I ceased to be in charge of her, though I remained in command. That is to say that if the officer of the watch had been, in my opinion, to blame for drifting, I should say so in this Court and terminate the action, supposing that I myself had not been otherwise to blame. But having made, as it is a Captain's duty on these occasions, very minute and careful enquiries into the conduct of every person concerned under my command, I am able to say that the economy of the ship was worked with its usual clock-like regularity, and if I am not to blame myself, most distinctly no one else is. Having heard the description given and witnessed it personally, I am of opinion that the damage could have been repaired within two days, and if I had been going to tow her to sea on the 14th I should certainly have towed her to sea. But in any case unless I had plenty of towing power, I think I should have been sorry to have gone to sea in her before the collision. She is a mere hulk. If towed to sea and cast adrift she would be in a helpless condition.

Some time on the following day three gentlemen called upon me representing themselves to be agents of the Mitsu Bishi Co. Mr Krebs were one of them. They said they had come to settle about the amount of damages. I was exceeding busy at the time and anxious to make the interview as short as possible. I said "all right; we're a man-of-war and of course will pay the bill." I represented to them that if they would get all the necessary repairs done and send the bill in and we would pay it. As to the question of demurrage I could not listen to it, and told them to get it if they could, in the usual way. I said the only thing that would lead to litigation would be an unfair demand. They specified no grounds for their demands. They then made some communications through the Consul. (Letters from Mr E. B. Jones read.) These were answered from the Consulate. The Mitsu Bishi did not accept the offers made in the interview and correspondence. There was no personal demand made till I received the petition. It is the custom of Her Majesty's ships to make good damages irrespective of liability, and in this case I proposed the usual steps. I consulted with the Admiral to make sure that my views were right, and they were confirmed.

Cross-examined by Mr Ness:—I cannot say whether the *Audacious* would have retained her berth if she had been moored on the 11th June. If she had been moored as in Diagram IV the probability is she would not have retained her position. Captain Johnson and I had some conversation together during the day. My very strong impression that is we did consult about letting go the second anchor. The *Tennessee* was moored. I consulted the barometer from the early part of the afternoon. I knew its state most likely up till half past seven. After hearing your cross-examination I will reserve my opinion of the time between the beginning of the drifting and the collision. I did not know how long she had been drifting before I was aware of it. (Mr. Ness said this conveyed the answer witness wished to abstain from giving. Captain Colomb said he must congratulate him so far.) If the anchor bites at once it does not take long to bring the ship up. Men stationed at leads could ascertain almost in a moment when the vessel got adrift. The starboard anchor had not been let go when I got on deck, but it was out before I got aft. I do not attach negligence or mismanagement to the *Chiri Maru*. I think she was imprudent in anchoring so near a man-of-war. I made no pecuniary offer whatever, nor am I aware that any has been made. In the technical sense of the words I was not "in charge" of the ship from half past seven till half past eight. According to Royal Naval law I am not "in charge" when another responsible officer is in my place.

Re-examined by Mr Dickins:—Between the time I was informed of the drifting and when I gave the order to let go, only a few seconds could have elapsed.

Adjourned till 10 o'clock to-day.

Tuesday, July 3rd, 1877.

(Continued from Monday.)

George Thomas W. Purvis, retired captain in H. M.'s Navy, sworn:—I have had thirty years sea experience, thirty seven years in service. I held the post of Harbour Master for three years in Yokohama. During that time I became familiar with the prevailing weather both here and on the coast. I am acquainted with the usual mode of anchoring vessels in roadstead or harbour. In my experience it is very common for the wind to change, broadly speaking, from N. to S. I remember the night of the 11th June. In the event of a high wind rising a prudent seaman should make provision for a shift of wind. If the barometer went down and then became more or less stationary, it would lead me to expect a change of wind. If with a N. wind the barometer falls I should certainly expect a shift of wind from the opposite quarter, and *vice versa*. If the barometer was rising and then falling I should also expect a shift of wind. I am in the habit of watching an aneroid barometer which I have at home several times a day. I should always lie at single anchor with a man-of-war in this harbour or any other under similar circumstances. I have always done so when in command of Her Majesty's ship. It would not be right so far as my experience goes to lie with two anchors ahead. In the event of a blow coming on in a harbour like this I would not drop half my anchors but would lie at single anchor and keep the second one ready for an emergency. If I had reason to distrust the anchor at which I had been riding I should let go the second. I should trust to a single anchor as long as I could.

Cross-examined by Mr Ness:—If the gale increased to a certain extent I might put four anchors down or a dozen if I had them—it depends of course upon the state of the weather. I was not in Yokohama on the night of 11th, but away. In event of the gale increasing to a certain extent, of course I should let down a second, third or fourth anchor as the case may be. When the weather increases to a certain extent the plan explained in Diagram III is adopted.

Mr Ness:—Whether do you consider it more important to retain the berth a vessel occupies or to take steps to provide against an emergency which might never occur.

Witness:—I really do not understand what you mean. I am not enough of a lawyer to make it out. We are always providing against emergencies in this world, so far as my experience goes. It depends upon circumstances whether it is a first duty to provide for keeping a vessel's berth. I consider it of equal importance to provide against drifting and to provide for retaining a berth. I I cannot say which is of more importance than the other. Under some circumstances it is possible to form an opinion of probable change of weather without consulting the barometer. But even a barometer is not infallible here. I consider that those in command of a ship are right in acting upon the guess of a probable change of weather. The meaning of the term "guess" is—urh—ah—a "guess." (Laughter.) I don't know the exact dictionary definition of the term. Forming one's own conclusion and acting upon it is "guessing." Without I formed a sufficient ground for my own conclusion I could not "guess." I do not know the American meaning of the word. I never served on board an ironclad. I believe it is the custom on board a great many merchant ves-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

sels to let go two anchors, but I do not consider that it adds to their safety in any way. A great many merchant vessels in the harbour now have, I daresay, two anchors down. Certainly I should prefer to lie at single anchor in Yokohama bay unless I wanted a shore berth, or went amongst the merchant shipping, or wanted to economise space, then I should moor. In lying at single anchor when a gale came on, when the wind reached what I considered a sufficient strength, I might let go a second anchor. But I would not let go a second anchor unless it blew *very* hard.

Re-examined by Mr Dickins:—I would not let go my second anchor in an ordinary blow, nor if I thought I was riding safely at my first. I would not let go my second anchor except in the event of a very hard blow, in this harbour. On the night of the 11th I think I was between Odawara and Enoshima: I rather think I was at Enoshima. I have heard the evidence given in this case. What I mean by a "hard blow" (though it is very difficult to explain) is what we sometimes get here at the beginning of a typhoon, when the wind is increasing in force before it reaches its height. In a case of a typhoon I should very likely drop a second anchor under foot when the wind had reached a certain strength and a certain force. A "whole gale" "strong" and a "hurricane," range between 10 and 12 in the tables of relative blows.

To a Juryman:—The berth occupied by the *Audacious* before I left Yokohama was a perfectly safe one.

The Jurymen at this stage of proceedings notified the Court that it was unnecessary to call any other witnesses, for they had already made up their minds as to the verdict. Lieut. Lingham, who had been called, accordingly retired.

Mr Dickins said he would like to show another point, and recalled Captain Colomb, who said:—On the night in question, before drifting, 35 fathoms of chain were out on the port anchor. I may add that a great number of the ships in harbour on that night were riding to a single anchor, although many of them were moored.

To Mr Ness:—I give my evidence from personal observation on the day in question.

Adjourned till 2 p.m.

Mr Dickins said he was sorry so much time had been taken up with so frivolous a case, one that never ought to have come into Court. He wished to exonerate the plaintiff who had acted through ignorance from all blame and no doubt his advisers had acted with perfect good faith but under an erroneous impression which they ought to have corrected by more careful examination of this claim before they took measures which have detained one of Her Majesty's vessels for so long a time. They were clearly chargeable with a gross error in judgment. Nothing can prove this more abundantly than the irresolute manner in which their claims were brought forward. There were four different claims, one after the other. First, they asked for repairing damages and demurrage at $300 per day until the *Audacious* chose to accept such terms. When they next asked for $300 per day, for 20 days estimated time of effecting—not repairs necessary to allow the ship to be towed to sea, but *all* repairs. These claims were against *Audacious* not against Captain Colomb. The third claim was like the second in substance, but was against Captain Colomb as a private individual. This demand was deemed so exorbitant by their own counsel that he at once repented of having made it and reduced it by one half.

The evidence of Iwasaki is such as to render his assertions of no value. He says he is the Company; that there is no Company established in Law or otherwise; that the Government presented him with seventeen or eighteen steamers for—what?—for nothing; absolutely nothing whatever. Such statements are absurd and show that the real plaintiff is the Japanese Government and not Iwasaki who is a mere paste-board figure.

Now as to damages. The only damage of importance was that to the stem and cat-heads. The master of the *Chiri Maru* admits that he could go to sea with these repaired. These could be repaired in two days: that is before the 14th June when, as the plaintiff's evidence shows, the ship was to have been towed out. Hence the claim for demurrage was a mere attempt at extortion. The case indeed was a speculative one from the beginning. The plaintiff had not a shred of evidence of neglect on the part of Captain Colomb except the mere occurrence of accident and trusted to picking up inaccuracies and confusions in the evidence of the defendant's witnesses. A hope in which he had been signally disappointed.

The case of the defendant might, however, be put higher. Before the collision the *Chiri Maru* was not fit to go to sea either alone or in tow. She was a steamer with boilers that could not be used and imperfect sail powers. The stem was three-fourths broken through; to it an important part of the rigging—the foresail—was attached. This showed clearly enough the danger such a vessel would be in, even if towed, if from any cause she might be cast adrift. Again, she was to be towed by the *Amakusa Maru* which came to grief; and probably, had she had the *Chiri Maru* in tow, would have involved that vessel and herself in a greater grief. Hence as a matter of fact, we have rendered a service to the *Chiri Maru*. A small ill is better than a great one.

Into the matter of the stem it will be unnecessary to go—the evidence of Mr Turner and Captain Johnson proved conclusively that it was three-fourths broken through before the collision. Of course it might have been bent before also. The bending was produced probably when the first fracture occurred.

The contract again under which the damage occurred was vague and not such as to form a basis for consequential damage. (Cases were here cited.) Nor was the expense of maintaining the ship deducted from the $150 per day as it ought to have been. Lastly, the evidence showed that at most we were only bound to repair, not replace, the stem, and that the whole of the repairs could be effected for $750 or $850, and such of them as were necessary to make the vessel as seaworthy in every sense as before could have been effected before the vessel was to leave—before the 14th June. On these points the evidence of Mr. Whitfield and Mr Robertson (the latter selected by the plaintiff himself to estimate the damage) is conclusive. And the fact that no attempt has been made by the plaintiff himself to commence even the commonest repairs show that very little importance was attached by him to the whole matter.

Mr Dickins then entered upon the merits of the case, asking the jury to keep carefully in mind that this was a personal suit against Captain Colomb and not one against the ship. The *Chiri Maru* was to some extent in fault, and this by Common Law Rules relieved the defendant.

The learned Judge here pointed out that by the Judicature Acts the admiralty rule was to be followed in such cases, namely, halving the damages when both parties were to blame.

Mr Dickins resumed:—The plaintiff's servant, Captain Mais, was bound to be doing and to do what could be done to be avoid the collision. Now Captain Mais had two anchors down when (as the other ships in harbour showed) this was unnecessary. Of course when he came to to veer he had the double difficulty. Ten minutes, Captain Mais said, elapsed before the collision occurred, during which he might have veered much more than he did had he been quick and had his apparatus in order. He had, it appeared, only six to eight men to assist out of his crew of twenty Japanese. Had he veered the collision might have been averted; if not averted, effects mitigated. He might also have unshackled or slipped and then would, most probably, have avoided the collision altogether, if properly supplied with anchor power. It would have been easy as he had plenty of room and was light to pick up again with another cable. Lastly he was anchored in a foul berth, out of his place without necessity, for there was no need for his intruding into the man-of-war anchorage until the 13th at earliest. It is clear that had he been at single anchor the accident would have been averted.

There was, then, some contributory imprudence if not negligence on the part of the plaintiff. (Cases were cited to illustrate the learned gentlemen's meaning—*Hammack* v. *White*, *Cotton* v. *Wood* and others).

Our defence was "inevitable accident" and we showed this by the fact that there was no negligence on the part of Captain Colomb. Before going into this it was necessary to explain to the jury the various modes of anchoring—a necessity which the counsel regretted because of his incompetence for the task and because he had to prove again what had been so excellently explained by Captain Colomb.

Mr Dickins then showed, by means of a model, the various modes of anchoring ships and their respective advantages and disadvantages. Now the facts of the case proved no negligence on the part either of the *Audacious* or of Captain Colomb, but on the contrary made it clear that every precaution had been taken. The definition of "negligence" was given in the cases cited and also in the case of the *William Lindsay*, L. R., 5, P. C. P., 343. That given by the other side was not correct. We were not obliged to take all precautions that *might* have averted the accident, only such as a prudent seaman would under the circumstances have taken. It was easy to be wise after the event. Now, did we take such precautions? We did. We had the ship snug; we had the leads over; we had a second anchor clear. There was nothing to show that the first anchor was foul. All these points had been fairly proved. But the plaintiff said that the second anchor ought to have been down and supported this by the evidence of MacDonald, Scott, Fletcher and Mais. Mais admitted that lying at single anchor was better than mooring, that he did not let go a second anchor until 6.30 p.m. That if he had had one anchor down only "it would have been easier to slip and run clear." That as to having two anchors down, he prefered that plan; but could support it by no authority and would like to hear that text-books gave a different opinion. The point was one on which many captains differed; that his rule was not accepted by all seamen, but by some only, and that he knew of no act of unseamanship on the part of Captain Colomb. Mr McDonald said it would had been advisable to put down a second anchor *when it began to blow*. Now this was certainly not a necessary precaution. The whole evidence was that the second anchor could not be necessary until the wind had reached a certain violence, not *when the wind began to blow*. Mr McDonald admitted that he knew nothing of men-of-war, and was not afloat that night. That he gave only his own opinion, and that if Captain Colomb based his conduct upon the supposition of a shift, he was not negligent in not dropping a second anchor, and that he had not followed the sea since 1861. He ended by this remarkable statement "I really do not think under "the circumstances that I would have let out a second anchor, were "I satisfied that the other was clear.' Mr Scott expressly admitted in cross-examination that if the *Audacious* was lying at single anchor with another ready in case of emergency on such a night as the 11th June, he should not consider it unseaman like. This evidence, it was to be remembered, was that of the other side.

The evidence of our own witnesses it not necessary to go through. It thoroughly supported Captain Colomb's position that a second anchor was not necessary, that the necessary precautions were taken, that there was nothing in the weather to require a second anchor, or steam etc., etc.

Now from the above it was clear that no blame is attachable either to the *Audacious* or to Captain Colomb, because the second anchor was not let go before eight o'clock.

The next question was was the anchor let go as soon as the drifting was perceived or as soon after as fairly possible? On this point we had no evidence from the plaintiff there was

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

but the evidence of the defence and of course it was the only evidence procurable. The witnesses for the defence were more or less uncertain about the exact number of minutes or seconds as naturally would be the lase the time between drifting and the collision was a little ever three minutes the utmost time from the drifting being perceived and the order to let go being given was less than a minute. There was nothing to prevent the anchor from being let go as it was perfectly clear, the sailor's evidence shewed that so did that of Captain Parr and the evidence generally. The probability was that captain Colomb's statement was correct that not more than a minute and a half elapsed between perception of the drifting and letting go the anchor. Indeed the times were exaqqerated at such moments of danger events seemed to take up mmch more time that they really did, and a minute might appear to be an hour.

A number of cases were then cited and observed upon by the learned gentleman among which the principal was that of the *William Lindsay* L. R. 5 P. C. appeals. There a vessel in port broke from the mooring in a heavy gale and drifted foul of another. Her anchor was held ready to drop and on the drifting taking was dropped but without averting the collision. Sir Montague E. Smith said "The master is bound to take all reasonable precaution to prevent his ship doing damage to others. It would be going too far to hold her owner to be resposible because he may have omitted some possible precaution which the evert suggests he might have resorted to . . . . . It was suggested that when the gale come on and when he (the master) found it likely to continue "which iu the present action it will be kept in mind was not the case," he should have taken further precaution of letting go his anchor, not only of keeping in prepared . . . . . The nautical assessors in answer to the question put to them have informed their Lordships that they think it was a better course for the master of the *W. Lindsay* to have kept her anchor as it was prepared for letting go than when the storm came to have dropped it.....the more usual and practical and as they think the better course to keep the anchor ready to let go in case of accident. Upon these grounds the *William Lindsay* was exonerated from blame." In fact the case should not have come to a jury—there was no *prima faire* evidence of negligence other than the mere fact of collision and this was not sufficient unless where the collision was caused by a ship under weigh and as such having steering power which if a proper look out was kept must almost certainly have enabled the ship to avoid a vessel at anchor. This was the meaning of the cases such as the Bothnia and Telegraph referred to in the judgment on the demurrer. Now whether or not the *Audacious* was in fault it was certain that Captain Colomb was not personally in fault. He was personally sued and if the verdict was against him he would have to pay all the damage and costs out of his own pocket, and as the verdict would be a censure upon him it is more than doubtful whether the Government would be willing to repay him.

These were matters which it was right to lay before jury. Now Coptain Colomb as Captain was always in command whenever on board the ship, but was 'in charge' only when he chose to supersede for the time being to the officer of the watch.

Thus the defendant was repensible for any wrong order or wrong omission of order when on deck after 8. p.m. He might also be responsible for any wrong order or omission of order upon matters reported to him. No attempt had hardly been made to show that any circumstances were reported to the Captain requiring him to give any other orders, or act otherwise, than he has acted. And it was hence clear not only that no personal default in the part of Captain Colcomb had been shown, but that he had used every proper precaution called for by the circumstances. It was equally clear that the officers of the ship and the men also had shown great zeal and skill on the occasion so that no blame whatever could attach to them. And that the misfortune was due so far as *Audacious* was concerned entirely to the breaking of the anchor-stock and not to the omission of any precaution which ought to have been taken. Had the ship dragged instead of drifted the case for the ship would have been less clear. But she had drifted, the loss of the stock (explained by Captain Colomb) had allowed the anchor to get out of the ground and glide over the bottom. What precaution could be taken against such an accident? The fact of dragging might prove that a wrong estimate had been made of the force of the wind on of the holding power of the anchor. The fact of drifting through a broken anchor showed nothing of the kind. It was true having up steam, etc., would probably have prevented the accident, but it was absurd to say it was a proper precaution to take against drifting from a broken anchor to have steam up, or a second anchor down. Such precautions would be proper against dragging when the wind was such that it ought to have been recognised as too strong for a single anchor. But it was clear from the whole of the evidence thas the wind was not such, not a vessel in the harbour having two anchors ahead, and mooring had been shown to be never a more secure and often a less secure mode of anchoring than lying at single anchor. It had been suggested the anchor might have been foul and ought to have been sighted. This was Mr McDonalds' assertion, backed up by no other witness for the plaintiff and contradicted by all the ordinary evidence for the defence, as well as by experience; also the defence showed that the anchor as a matter of fact was not foul. Nor was there any evidence to the effect that the wind was strong enough to require a second anchor. Messrs. Scott and McDonald simply testified to what might have done and admitted they were not afloat on the night of the collision, and knew nothing about men-of-war—from number of men and other circumstances very differently situated from merchant ships. They gave no estimate as to the force of the wind. All the nautical evidence on the part of the defense on the other hand proved clearly that the wind was not such as ought to have led any one on board the *Audacious* to suppose that the ship would drag her anchor. Heavier gales had been ridden at single anchor. The anchor itself and the chain were of the heaviest and strong make. In addition the osher ships in the harbour were all practically at single anchor.

Mr Dickins then said he did not propose to go into details as to the ordinary routine of the *Audacious*, the jury had evidence as to that before them, and could not, he conceived, come to any other conclusion than that the routine was proper and efficient and amply followed out on the night of the 11th June.

The learned counsel next explained the action of Captain Coloomb after the collision. The representatives of the plaintiff called upon him and as it is usual for men-of-war to make good any damage done by them irrespective of legal liability Captain Colomb offered to make good or pay for making good the damages done. This offer was refused in a huff, and exhorbitant demands (recognised as such by the plaintiff's own Counsel) ending in a demand for some $7,000 were made. One could not but be surprised at the conduct of the plaintiff agents who seemed to have acted without proper enquiry into the facts. Had such an enquiry been made they would have seen that all important damage might have been repaired before the *Chiri Maru's* sailing day and that, therefore, anything in the nature of demurrage was entirely out of question, whatever might have been the right to damage.

Finally, remainding the jury once more that the defendant was sued as a private individual and would have to pay both damages and costs if found guilty out of his own pocket with the chance only of recovering both or either from the British Government and showing how different was the position of a Captain of a man-of-war from that of a merchant captain or owner (Nicholson *v.* Mouncey 15 East) the learned Gentlemen left the case in the hand of the jury assuring them that the defendant, as his conduct had amply showed, shirked no responsibility, concluding his remarks by demanding a simple verdict of not guilty on all issues.

Mr Ness in replying for the plaintiff said be would occupy very little time with his remarks. It was in his opinion nonsense for his learned friend to speak of any hindrance being put in the way of the movements of the *Audacious*. As to the statement that Captain Colomb, if the verdict went against him, would be unable to recover from the Government, Mr Ness cited cases in support of his claim that it was his only alternative to sue Captain Colomb. The verdict of the Jury could not amount to a charge of gross negligence on the part of Captain Colomb, as his learned friend tried put it. Mr Ness' case was to show that the *Chiri Maru* was moored in a proper manner when the *Audacious* went adrift and collided with her. It was for the other side to show that no negligence occurred to cause the accident. That it did occur was sufficient to support his claim. Defendant had failed to exercise due precautions in four instances, 1st: In consideration of the state of the weather between six and eight o'clock, no second anchor was let go. 2nd: No steam was got up as the gale increased. 3rd: No one knew when the drifting commenced, and 4th: An insufficient watch was kept.

Mr Ness then went at length into the merits of the evidence on the point of the necessity of letting go the second anchor under the then state of the weather. Surely it was the duty of Captain Johnson to look to the state of the glass at the time of his consultation with Captain Colomb before he stated his opinion that it was unnecessary to let go the second anchor. If this anchor had been let go the accident would undoubtedly have been rendered less probable, and it would have been a matter of the highest prudence to have done so. Captain Johnson admitted that his opinion was based upon simple guessing of the probable state of the weather, not upon any data of the barometer. They considered it unnecessary because they failed to attend to the change in the glass. The evidence of four witnesses Captains McDonald, Scott, Fletcher and Mais went to show that they, having long experience of the harbour and prevailing weather here, thought a second anchor might with propriety have been let go. These considerations alone were sufficient ground for Mr Ness asking a verdict for the prosecution. It was an acknowledged fact that no one knew the moment of the commencement of the drifting.

Mr Dickins interrupted his learned friend by saying that Captain Johnson had most decidedly stated that he had seen the beginning of the drifting.

Mr Ness said Captain Johnson's words were "I was in the smoking room and looking out the port hole I saw the vessel was drifting." Had the anchor been let go in the two seconds which were necessary after the drifting commenced the collision would certainly not have happened. A sailor stated that four minutes elapsed before the anchor was let go, and another witness said that the ship took three minutes to reach the *Chiri Maru*, so that the anchor must have been let go after the accident occurred. Mr Ness then spoke of the amount of the damages due. The carpenter of the *Egeria* knew nothing of the value of labour and material in Yokohama nor did the chief Engineer of the *Audacious*, so that their evidence might he dismissed, and that of the other three shore witnesses might be listened to. Mr Anderson, who said he could do the work in eight days, had evidently not looked into the case as Messrs Whitefield and Robertson had done. If the Jury thought the ship would have been of equal value after the collision with only the repairs to the stem, then damages would only be asked for this particular. There was no evidence whatever that Iwasaki Yataro is identical with the Government, and if this was part of his learned friend's case, he had failed to prove it. As a matter of fact the ship was going on the morning of the 14th. His friend rested an argument upon the supposition that the stem was three parts broken before the accident and that the ship was therefore unable to go to sea. It was only at the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

end of the case that any witness had been asked as to this fracture. When plaintiff's witnesses were examined nothing was said about it. It was well known that a ship was unable to repair these damages at sea, and this Captain Colomb had admitted. A hulk has no carpenter to attend to these things and whilst serving as an ammunition store at the seat of war it was improbable that any attention could be given to these things. It was therefore a prudent thing to propose that these repairs should be seen to before she left harbour. Plaintiff must incur considerable loss through the inability of the ship to go south; it was nothing but truth that he must lose $150 per day for the next six months. Mr Ness closed his remarks by asking for a verdict in favour of the prosecution.

His Honour said that the hour being so late it would be well to adjourn at this stage of the proceedings.

The Court accordingly adjourned till this morning at 10 o'clock.

Wednesday, 4th July, 1877.

(Continued from Tuesday.)

On the Court assembling His Honour carefully and at great length summed up the case, after which Jury retired to consider their verdict.

After an absence of forty minutes His Honour recalled them in consequence of a note received by him to the effect that they were quite unable to come to any decision whatever.

His Honour offered to enlighten them, if possible, upon any point which they could not understand, but the foreman explained that out of the whole of the fifteen they had formed an opinion upon only the first question.

Mr Dickins agreed to take the decision of the majority, but to this Mr Ness would not consent.

Mr Dickins then requested that a simple verdict of guilty or not guilty should be returned. His Honour said this could not be, for it was essential that the whole of the questions put by him should be answered. He could see no way out of the difficulty except to ask the Jury to retire a second time and reconsider the whole of the questions, and write opposite each question what point in it they could or could not agree upon.

The Jury said they knew that though they puzzled over it for a whole week they could never agree; but, notwithstanding, they again retired.

It was twenty minutes past two o'clock before they returned, and Mr Abbott, as foreman, began to read in order the decisions arrived at with regard to the questions proposed by the Court, but His Honour, when the fifth had been reached, interposed and asked if they had agreed as to the damages. The answer was yes, and a discussion then followed as to whether a verdict could be taken on this point alone; but this was abandoned, and all that remained was for the Jury to be discharged.

This was accordingly done and the Court then closed.

REUTER'S TELEGRAMS.

London, 6th July, 1877.

MOVEMENTS OF THE BRITISH IRONCLAD SQUADRON.

The British Ironclad squadron has gone to Besika Bay.

RETIREMENT OF THE TURKS FROM RUSTCHUK.

The Turks are retiring from Rustchuk.

LONDON, July 4th, 1877.

DEFEAT OF THE RUSSIANS.

The defeat of the Russians at Batoum is substantially confirmed.

Turkish official despatches state that on the 27th June, near Sukumkaleh, the Russians were completely defeated with heavy loss.

TRANSFER OF THE RUSSIAN HEAD-QUARTERS.

The Russian Head-Quarters have been transferred to Sistova.

BOMBARDMENT OF RUSTCHUK.

The Bombardment of Rustchuk continues and the principal buildings have been destroyed. Nicopoli has also been destroyed.

LONDON, 4th July, 1877.

MOVEMENTS OF THE BRITISH IRONCLAD SQUADRON.

The above Squadron has left Greece under sealed orders.

DEFEAT OF THE RUSSIANS.

Turkish unofficial accounts report the Russian advance guard to have been driven back at Biela with heavy loss.

LONDON, 1st July, 1877.

IMPORTANT NEWS FROM THE SEAT OF WAR.

The Head-Quarters of the Russian Army have been transferred to Simnetza.

Sistova has been occupied by the Russian forces, the Turkish troops being driven from their entrenchments.

Heavy fighting is being maintained along the line of the Danube from Kalafat to Oltenitza.

London, 22nd June, 1877.

The Turks have been defeated at Deli Baba and compelled to fall back on Erzeroum.

Consols are falling in London in consequence of a report that Government intends to ask for additional credit for armaments.

London, 21st June, 1877.

Eight Russian batteries have commenced bombarding the forts round Kars.

The left wing of the Russian troops is marching towards Kuprikos.

London, 20th June, 1877.

Servia disclaims any intention of declaring her independence.

The French Chamber of Deputies has adopted a vote of want of confidence in the Ministry, and will probably be dissolved to-morrow.

London, 18th June, 1877.

A despatch received from Ahmed Muktar Pacha announces that the Russians have been defeated at Alasehgerd and Plaimla.

There is no news from the seat of war on the Danube.

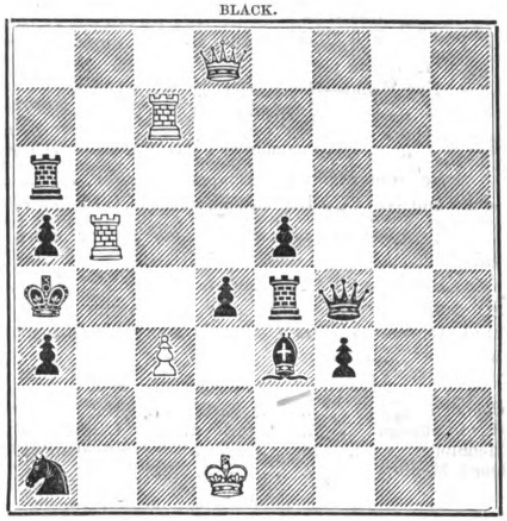
It is semi-officially stated at St. Petersburg that mediation is impossible and has never been proposed.

London, 17th June, 1877.

The right wing of the Turkish Army in Asia Minor has taken the offensive against the Russians.

The Russians have been making repeated attacks on Kars, but in every instance have been repulsed by the defenders.

Turkish troops have crossed over to Kodor, where they were met by Cossacks, whom they defeated.



Ahmed Muktar Pacha is in a strongly entrenched position at Zewin; his right wing confronts the Russian left wing at Alaschgerd.

The Turkish troops that recaptured Olti from the Russians are now advancing on Pennek.

Multicolored „	30 yds. 30 in.	0.28 to 0.36	
Cloth, all wool plain or fancy	48 in. to 52 in.	0.80 to 1.20	
Presidents	54 in. to 56 in.	0.60 to 0.65	
Pilots	54 in. to 56 in.	0.45 to 0.55	
Union	54 in. to 56 in.	0.60 to 0.75	
Blankets, scarlet & green	6 to 8 lbs. per lb	0.40 to 0.48	

Sugar.—Sales continue to be made at last given quotations, and the market generally, though quiet, shows little change. Stocks have somewhat increased.

Sugar:—Takao in bag	per picul	$5.00	
„ in basket	„	$4.85	
Taiwanfoo in bag	„	$4.90	
do. in basket	„	$4.80	
China No. 1 Ping-fah	„	None	
„ No. 2 Ching-pak	„	$8.60 to $9.00	
„ No. 3 Ke-pak	„	$8.00 to $8.40	
China No. 4 Kook-fah	per picul	$7.80 to $7.80	
„ No. 5 Kong-fun	„	$6.70 to $7.20	
„ No. 6 E-pak	„	$6.00 to $6.50	
Swatow Brown	„	None.	
Daitong	„	$4.35	
Japan Rice	„	$2.10 to $2.35	
Kerosene Oil	„	$4.10 to $4.20	

Kerosene Oil.—The market has remained quiet since the arrival of the *Charter Oak*. Quotations are nominal at $4.10 to $4.20, but a sale of 2,500 cases at $4.25 was reported on the 30th ultimo. The stock is by no means excessive.

EXPORTS.

Silk.—Supplies of new Silk have been limited, and notwithstanding that foreign buyers evince little disposition to operate, an advance of $20 to $30 per picul has been established. Old Silk has been settled at:—

		In London at 4s. 1½d. per lb.	*In Lyons at f. 5.20 per kilo.*
For Harimitchi	$530 to $540	19/9 to 20/0	frs. 54.50 to 55.50
„ Hamatski	$420 to $430	15/11 to 16/3	frs. 44.00 to 45.00
„ Fair Sinchiu	$520 to $540	19/5 to 20/0	frs. 53.50 to 55.50
We quote for			
New Hanks—Good No. 2	$530 to $550	19/9 to 20/5	frs. 54.50 to 56.50
„ Good all round, No. 2½	$510 to $520	18/8 to 19/5	frs. 51.50 to 53.50
„ Medium, No. 3	$470 to $490	17/8 to 18/4	frs. 49.00 to 50.50
„ Common to I'rior, No. 4-5	$420 to $460	15/11 to 17/4	frs. 44.00 to 48.00

Settlements are 175 bales of Hanks, 75 bales of Oshius, and 25 bales of Filatures, in all 275 bales. Stocks consist of 30 bales of new, and 700 bales of old Silk.

Tea.—Our market has been rather more quiet during the past week, and prices have perceptibly weakened.

Settlements have amounted to 2,800 piculs, mostly of the lower descriptions. Second crop Teas are now beginning to arrive more freely, and holders seem rather anxious to avoid accumulation of stocks. The Suez Canal steamer *Glamis Castle* is expected to arrive here at an early date, to take freight for New York viâ China ports and Suez.

Common	$10.00 to $12.00	Fine	$24.00 to $27.00
Good Common	$13.00 to $15.00	Finest	$28.00 to $33.00
Medium	$16.00 to $18.00	Choice	$36.00 to $39.00 } Limited
Good Medium	$19.00 to $22.00	Choices	$42.00 & upwards. } supply.

EXCHANGE AND BULLION.

Exchange.—Sterling rates are slightly firmer with, however, but very little doing in either Bank Bills or Private Paper.

Rates close as follows:—

Sterling	Bank 6 months' sight	4s. 1d.

In the U. S. Consular General Court at Kanagawa, Japan.

J. M. BATCHELDER,

Against

THE PROCEEDS OF THE SALE OF THE BARQUE

"CAYALTI."

TO THE FORMER OWNER OR OWNERS OF THE SAID BARQUE AND ALL OTHERS WHOM IT MAY CONCERN. GREETING.

WHEREAS an action has been brought in this Court by the above-named Plaintiff against the proceeds of the sale of the Barque *"CAYALTI,"* now in the hands of the UNITED STATES CONSUL-GENERAL for Japan, praying that the said proceeds may be paid to him on account of monies advanced and transportation and supplies furnished to the crew and coolies belonging to the said Barque *"CAYALTI."*

Now therefore take notice, that unless answer be filed therein within three months from the date hereof, judgment will be taken by the said Plaintiff according to the prayer of his Petition.

Given under my hand with the Seal of said Court affixed, this 28th day of May, A.D. 1877.

[Seal.] (Signed) THOS. B. VAN BUREN,
U. S. Consul-General.

J. 1. 3ms.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of al kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

DEVOE'S BRILLIANT OIL.

RELIABLE, ECONOMICAL, SAFE!!

DESIRING to benefit by the **world-wide** reputation of our oil, certain parties have attempted to imitate our packages. Suits at law have been instituted against the MAKERS AND PURCHASERS of these imitations. Buyers should be careful to see that the words "**DEVOE'S BRILLIANT**" are stencilled on the cases, and the words "**DEVOE M'F'G CO. PATENTS**" are stamped on the top of the can.

THE DEVOE MANUFACTURING CO.,

80 Beaver and 127 Pearl Streets,

NEW YORK, U. S. A.

July 7, 1877.

BUGS, FLEAS, MOTHS, BEETLES,

and all other insects are destroyed by

KEATING'S INSECT DESTROYING POWDER

which is quite harmless to Domestic Animals.

Sold in tins 1s. and 2s. 6d. each, by THOMAS KEATING, St. Paul's Churchyard, London, and all Chemists. The 1s. tins are so made that the Powder is easily distributed from them, and will be found a great improvement on the old paper packets. In exterminating Beetles the success of this powder is extraordinary, and no one need be troubled by those pests. It is perfectly clean in application.

SOLD IN TINS AND BOTTLES, BY ALL DRUGGISTS.

KEATING'S BON BONS OR WORM TABLETS

A PURELY VEGETABLE SWEETMEAT both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for INTESTINAL or THREAD WORMS. It is a perfectly safe and mild preparation, and is especially adapted for Children.

TESTIMONIAL.

Mr. KEATING. Medical Hall, Gildersome, Nov. 28th, 1876.

Dear Sir,—I think it nothing but my duty to inform you of the immense sale I have for your Worm Tablets, which I may justly say is enormous, and in every case gives the greatest satisfaction. I have now in stock two bottles containing the Round Worms brought me during the last few days by customers, one Worm 40 yards long. I dare not be without the remedy.

Yours respectfully,
M. E. WALKER.

SOLD IN BOTILES, BY ALL CHEMISTS AND DRUGGISTS.

Proprietor—THOMAS KEATING, London.

REWARD AND CAUTION.—Whereas I am informed fraudulent imitations of this unsurpassed remedy have been sold, I hereby request anyone knowing of the vendor of the same to communicate with me, and on conviction of the offender a liberal Reward will be paid.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omissonto renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person bv whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

It is now pretty clear that Saigo is at Takahara in Bungo, while Kirino and Kishima are at Miyazaki in Hiuga, making every preparation for a desperate defence. The port of Zadzu (?), has been thoroughly fortified by the insurgents. There seems to be a general feeling gaining ground that the worst will be over in a few weeks, and the Government is industriously spreading reports to the effect that the insurgents are disheartened; that they are defeated at every point; that Saigo has committed suicide, and so forth. Such rumours are not to be credited for a moment. That the war may come to a termination within a short period we sincerely trust, but it will not be by annihilation of the Satsuma forces that it will be brought to an end. Any one who reads attentively even the most flattering accounts of Imperial successes in the native papers will see that in the so-called engagements, although they retreat from point to point, the insurgents suffer no loss worth mentioning. We can only repeat what we stated in our mail issue, that every effort is being made by the Government to bring Saigo to terms, and even at this late hour to effect a compromise and prevent further bloodshed. Private information gives us full warrant for believing this, and it is partly owing to this cause that Kawaji has been compelled to retire, as Saigo, for reasons that can be readily understood, has refused to listen to any terms as long as he remained in command. The source whence this information is derived we have hitherto found in the highest degree trustworthy, and we believe that results will prove that it is correct on the present occasion.

With singular bad taste, when the circumstances which have brought him into notoriety are considered, Lieutenant General Kawaji was made the object of an ovation upon his return to Tôkiô from the disturbed districts in the South. A strong body of police extending in double line from the steps of the Shinbashi terminus to the Kiôbashi at the end of the main street, was assembled to do him honour; in addition to which large crowds of townspeople, attracted by the unusual demonstration, were to be seen loitering at every corner, and blocking up the foot-paths along the route, and thereby contributing largely to the general aspect of rejoicing with which it was evidently the intention of the Authorities that the reappearance in the Capital of the man who has gained for himself the reputation of being the most successful exterminator of his fellow-countrymen should be signalized. Lieut-General Kawaji may have proved himself an able commander and a courageous soldier, and in the part which he has taken against the Satsuma rebels he has simply performed the duty that the state required of him. But what we find fault with, is the spirit which recognises no indecency in rejoicing over the spilt blood of friends and relatives, for to this if there is any truth in logic, such an unseemly demonstration as that of yesterday amounts. In a frightful calamity like civil war, there is no glory to be gained on either side, and the strongest sentiment which any right minded man ought to permit himself to indulge in, under the circumstances, should be that of satisfaction at the termination of the strife, and the triumph of law and order. Such a sentiment tempered by the recollection of the price at which tranquillity has been purchased should save him from the commission of any act which might seem ungenerous in the eyes of the world. We have spoken of individual opinion, because there is always an advantage in arguing on questions of good taste in embodying, so to speak, the case in a unit, than in discussing it, as a generality. By such a method even the most cursory reader can test the soundness of the views advanced in his own person. He will readily perceive, too, that what is true of individuals, is equally true of collections of individuals, and the executive of a state is nothing more. We are fully alive to the difficulty that the Government labour under, in their desire to acknowledge suitably, the obligations which faithful services such as those of Lieut.-General Kawaji have imposed upon them, but we submit that other means than public rejoicings,—which savour of savage exultation, and are really an outrage to humanity—are open to them, whereby they can attain this end.

The *Akébono Shimbun* states that the following will probably be the plan of the Imperialists in carrying out a general attack against the insurgents. The troops that occupied Kagoshima are proceeding against them by various routes, the destination of the majority being Miyakonojo. The forces at Kakuto and Jino are also to be sent forward to that place and uniting with the Kagoshima troops will make a combined attack against the town. The Government forces at Mamibora in Higo and Shigeoka in Bungo are advancing toward Nobeoka. The interest in the campaign will therefore centre in Hiuga, and some decisive battles may be expected at Nobeoka and Miyakonojo.

A person returning from Kagoshima has reported that the insurgents are divided into four bodies. The first is commanded by Saigo in person, and is in the neigbourhood of Kakuto and Jino, opposing the Government troops under Lieutenant General Yamada. The second is stationed at Nobeoka, and is commanded by Kirino, keeping in check the Imperialists

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

under Colonel Nodzu in Bungo. The third body is under the command of Murata Shimpachi watching the troops under Miuru and Miyoshi at Oguchi and Demidzu; while the fourth is under Generals Kishima and Nakajima, and were until their retreat on the 24th of last month surrounding the Imperialists at Kagoshima. On Kawaji's advance, however, they retired. It would now seem that the third and fourth bodies of the insurgents have united under Murata, and are marching to the defence of Miyakonojo. The Imperialists have therefore taken steps to attack this place before the insurgents can have time to strengthen their position, and have landed troops at Shifushi who are advancing against this stronghold. If an immediate attack take place the insurgents will not have been able to take proper steps for defence, and if they should therefore be obliged to retreat from Miya-kono-jô, and lose the commanding positions of Shinko, Takaoka and Takanojo, they will be compelled to give up the entire southern portion of Hiuga, and retreat to Bungo, where a final engagement may be looked for. Supposing that the body of insurgents succeed in holding Miya-kono-jô, and that another body advances toward the north of Hiuga, their force can avail little, as it is said not to exceed ten thousand men, although Kirino is zealously recruiting his army. The Imperial forces are as follows. Under Takashima, thirty-six hundred; under Soga, twenty-six hundred; under Oyama—who has assumed Kawaji's command—thirty-three hundred; under Miura twenty-six hundred; under Miyoshi one battalion of six hundred and fifty, under Yamada fifty-six hundred; under Nodzu twenty-five hundred; and five or six battalions in Bungo. A total of about twenty-four thousand men.

In a letter addressed by Mr. Henry C. Carey to the London *Times* the writer, referring to an article that appeared in the *Fortnightly Review*, thinks proper to relate a story of Japan which he considers "worth telling" and which he proceeds to narrate in the following words:—

> A dozen years since that country concluded treaties with Great Britain, France, and other European powers, closely resembling that with Turkey, and those with other Eastern nations, by means of which they have been so largely barbarized, and so generally ruined. Unused to treaty making, however, the Japanese authorities wisely inserted provisions by means of which it was supposed to be secured that those now made were to be replaced by others at the close of the first decade. That time arrived some four years since, and down to the last hour it was supposed that new treaties would be made. Not so, however, Britain at once asserting that there could be no "revision," except with the consent of both parties, and that until such consent should have been obtained the original treaty must remain in force. From that time the Japanese government has stood in the position of being compelled to submit to all the provisions of a treaty whose maintenance cannot fail to result in utter ruin; or, on the other hand, risk being involved in war with a nation that has always in the Eastern seas more vessels of war than would be required to close at once all that great domestic commerce now carried on by means of boats and ships between the various towns and cities, islands and provinces of the empire. Here, as usual in all cases in which Britain is interested, the question is one of might and not of right.

Now the story told by Mr. Carey is a piece of pure misrepresentation, and is accordingly quoted delightedly by the *Tokio Times*. With reference to the revision of the treaties, we also have a story equally well "worth telling" and having, moreover, the advantage of being strictly true. As will be seen by the above extract, Mr. Carey gives the Japanese the credit of introducing a clause providing for the revision of the Treaty. Now in all probability, it was inserted at a suggestion from our side, as the desirability of obtaining means for revising Treaties with the Far East periodically, was very generally discussed at the time of Lord Elgin's mission in1857. Accordingly we find that Lord Elgin provided in his treaty of Tientsin, signed 26th June, 1858, for a revision of the Commercial Articles in ten years time from the date of signature; and that Mr. Harris, in his Treaty with Japan signed July 29th, 1858, a month after that of Lord Elgin with China, provided for a revision in 1872. Lord Elgin's Treaty with Japan, signed August 26th, 1858, contained a similar provision. When the stipulated time (1872) approached, England was the first to *demand a revision*, and the Chambers of Commerce of Yokohama and Hiogo will remember the reports they drew up on the subject in 1871, on the invitation of the British Minister. The Japanese Embassy which left for the United States and Europe at the end of 1871 was charged by their Government with the work of the revision, but the abortive result of the negotiation, which occupied Iwakura and the other Ambassadors for upwards of six months in the United States, seems to have led to some change of view, as when the Embassy proceeded to England, Iwakura informed the British Government, who were prepared to enter on the question of revision, that the negotiations on this subject would be conducted, *not* in Europe, but in Japan. The Embassy returned to Japan in the Autumn of 1873, but from that time to this the subject of the revision of the Treaties has never been mooted by the Japanese Government, who are alone responsible for the perfect silence maintained on the subject. Mr. Carey's remarks on the opium question contained in the same letter from which we have quoted, are just as easy of refutation. He might, had he chosen to do so, have drawn the above facts from the same source whence we have obtained them; namely, "Papers on the Foreign Relations of the United States," laid before Congress; and for less jaundiced information on the opium question he cannot do better than refer to the sensible speech on this subject lately made in London by the Chinese Ambassador. But we have said enough to show how far Mr. Carey's singularly prejudiced statements can be relied on. His arguments on Protection the Editor of the London *Times* to whom he writes will know how to dispose of.

The Editor of the *Kakumin Shimbun*, the journal lately suppressed at Osaka, has been sentenced to one year's imprisonment for his offences against the Press-laws. One of the expressions which led to his punishment was as follows: "One cannot be astonished at the frequent outbreak of troubles in the country, while the Government pursues its present course, which is completely at variance with the interests and wishes of the Nation, and does not hesitate to issue, without any form of guaranty, paper money which is of no more real value than so many rags."

It would seem that the time so earnestly prayed for by certain philanthropists when a good joint of meat should be found on the table of every English labourer is not far distant. The American dead meat importations are no longer experimental, and are increasing in an amazing manner. This trade, only so recently inaugurated, has already footed up to the value of £600,000, or about three millions of dollars. The *Scotsman* states that a thousand tons of American beef or mutton are now landed every week in perfectly sound condition in Liverpool and Glasgow. The import of fresh beef into the United Kingdom during the month of March last was 60,162 cwts. against 24,084 cwts. in the same quarter last year. In view of the important results to British farmers and stock raisers that are likely to arise by the development of this trade, and in order to estimate the probable effect on their industry of the American competition, the *Scotsman* has sent a member of its permanent staff to carefully examine into and report upon all those circumstances of American agriculture which have any bearing upon the subject. The British community watch the trade with singular interest, for its development means cheap and sound meat for the million. By America its importance cannot be overestimated as it affords the cattle breeders of the Western States fresh inducements for rearing stock, and enables them to dispose of it to far greater advantage. As the area for stock raising is practically unlimited, the growth of the trade is more likely to be checked by insufficient means of transport than by absence of demand or deficiency of supply. Of course the British stock raiser will feel the effects of this new trade, and to some extent suffer from its development, but thanks to the system of Free Trade, a new branch of Commerce, so important in its results to two nations, cannot be strangled in its birth at the instance of the interested few, in order that they may grow rich on the hardships of the million. We wonder what reply American champions of Protection can find to this.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

A generous and voluntary interchange of national feeling and good fellowship has lately been shown on both sides of the Atlantic; in America by the celebration of Her Majesty's birthday at Petersburg, a town of the old Dominion, where Americans vied with English visitors in offering a tribute of personal respect to the Queen, recognising her as the chief of a race from which both nations have sprung; and in England by the cordial reception tendered to the ex-President of the United States, General Grant. The sentiments which found utterance on these occasions have something of more significance than mere expression of after-dinner goodwill. On both sides there is evident the existence of an earnest wish to throw aside those petty jealousies that from time to time find expression, but which both nations must regard as unworthy of their greatness; jealousies, which it is not too much to say, would quickly die out, were they not continually fanned by the venomous breath of political agitators, or contemptible schemers, who have no difficulty in finding newspapers venal enough to become the exponents of their pernicious views. We refer our readers to the following extract from an article which has appeared in the London *Times*, which admirably expresses the views of all moderate and sensible men of both nations on their national relationship:—

With the United States, more perhaps than with any other great Power in the world, does it become us to be on terms of friendship. Our interests are so closely bound together that a blow struck at one of us would be felt scarcely less by the other. In their progress and development the two nations go not less truly hand in hand. We are of the same family. We hold, for the most part, the same Faith. We are proud of the same literature. We share the same reality of freedom, though we differ somewhat in the terms and institutions by which it is secured, we have had, it it true, our joulousies and ill-feelings, our misunderstandings of one another; but these, with their dark results, are each day receding further into the past.

* * * * * *

We have no wish to throw a gloom upon the present day by any ill-omened words. It may be well, however, and it may save us some disappointment hereafter, if we keep in our mind the essentially transitory character of mere feeling, and the kind of reaction which so frequently follows it. We must not expect that American kindliness will always continue at the same white heat to which by the sympathy with rejoicings over a British festival, it is raised this morning. Other interests will make themselves felt by and by, and will push up to a prominence which will hide England and Englishmen from American eyes. We must submit with good grace if we are thus overshadowed and for a while forgotten. But when speeches are over and shouts have died away, and crowds have dispersed and gone home, the essential facts will remain the same. The kindly relations of the two countries will, we may trust, be as real, as they certainly will be as important, as ever. We shall say less and we shall hear less said about them, but they will subsist still in spite of all silence, and will duly assert themselves through all outward signs of indifference. Look at the matter as coldly as we will, we shall be forced to confess that for England and America to return to their old jealousy continually and to the needless threats and dangers to which that jealousy gave rise, would be folly and worse that folly on both sides. We may be rivals still on many points, but our necessary rivalry will be such as to be consistant with a solid friendship. How much more closely we could be united, and how much more useful we could be to one another by the mutual services of free trade, is, we fear, at present an idle thought, not likely to be soon realized. But we may at least reflect with pleasure that some of the first obstacles have been cleared away on both sides, and that the old bitterness of feeling has died out that once troubled our relations with one another and made them not only imperfect but capricious. We do not attach too much meaning to American sympathy with the celebration of to-day when we regard it as an assurance thus far. It would be a mistake, and an ungracious mistake, to look upon it as less than this.

The second Promenade Concert at the Bluff Gardens, which came off, after several postponements on account of the weather, on Friday evening, was extremely successful, although owing to the continued high wind the fine playing of the *Atalante's* band could not be heard to such advantage as on the occasion of the first Concert. The wind, too, played sad pranks with the lanterns, and all kinds of contrivances had to be resorted to in order to obtain sufficient light for the musicians to read the music. From the same cause the singing lost much of its effect. Open air singing at all times requires the most perfect stillness to be properly effective, and it was scarcely fair to put so small a body of performers to the severe test to which they were subjected last night. The singing was, however, far better than at the first concert, the second piece, Kücken's "Soldiers' Farewell," being admirably sung, and receiving the compliment of a hearty *encore*. The playing of the band was marked by the same fine qualities which we remarked at its first performance, the most noticable of which is the extreme delicacy with which *piano* passages and accompaniments are rendered. This most severe test of good playing is so rarely found in wind bands, that when, as in the present case, it becomes the distinctive excellence of the performance, it proves that a finely selected body of players have undergone the most careful training by a band-master of exceptional taste and skill. Monsieur Cretella has every reason to be proud of the band of which he has charge. On behalf of the community we beg to tender sincere thanks to Admiral Véron for his kindness in permitting us to enjoy a treat, unfortunately too rare.

Much of the benefit and all of the comfort that ought to be derivable from a trip to the country, far away from the glare and dust of the settlement, is neutralized by the persistent and overwhelming attentions of the fleas in the tea houses. Oil paper placed over the mats is only partially effective. Persian Insect destroyer is laughed to scorn. They are ubiquitons, bloodthirsty, insatiable. We see by one of the French papers that the Cossack soldiers are provided with a large cloak called a *bourka*, made of a peculiar kind of native cloth, which is said to be light, warm, impervious to moisture and indestructible by wear. At night this garment serves as a bed, possessing the invaluable property of driving away insects and vermin of all kinds. Won't some philanthropic and enterprising importer send for them and make a few dollars profit, to say nothing of earning the gratitude of this much enduring community.

We have great pleasure in calling attention to a most admirable address, recently delivered, at the end of the session of the Tokio Dai Gaku, by Professor R. H. Smith, which will be found elsewhere. It will amply repay a most careful perusal. We know not the extent of Professor Smith's experience of Japanese character, but we cannot call to mind any one who has so truly sketched it off. As every one is aware it requires the most intimate knowledge of a subject to enable an artist to execute a truthful sketch in a few bold strokes. And this is precisely what Professor Smith has done. The address is just what it should be. Those faults, which present so formidable an obstacle to progress on the part of the Japanese, are boldly attacked, but with perfect moderation, while those qualities which are worthy of admiration, receive a fitting acknowledgement without any empty flattery. If the Japanese will listen to the wholesome advice of Professor Smith, and others who hold equally sound views, they will advance to a point whither the sickly adulation of teachers, ignorant of everything but the art of flattery will never lead them. *Mais! Helas—*

That the system of education pursued at the Imperial College of Engineering at Tôkiô meets with the approval of those who are qualified to judge of its merits is shown by the following short article which is taken from *Nature* of May 17th. It has been found by long experience that with Japanese students the only useful method of teaching is the one here advocated, namely the combining of actual practical work and theoretical studies in about equal proportions. Any other system appears not only useless but worse than useless, as it tends merely to foster that most marked characteristic of the Japanese student, self-conceit, without enabling him to undertake any real work. It is not even sufficient that he should complete his theoretical education, and then be sent to learn the practice of his profession, as in that case he has become so imbued with a sense of his own super-excellence that it impossible to get him to condescend to work. The superiority of this system over the general method of teaching is clearly shown by those students who have studied engineering in English and American Colleges and are supposed to have received a thorough education. When they return here they prove to be of far less use than an ordinary third year cadet of the Tokio College. The following is the article referred to:—

ENGINEERING EDUCATION IN JAPAN.

The technical education of engineers is a subject which has engaged public attention for a long time past and is one of great national importance. It is somewhat singular that this country, foremost as it has

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

always been in matters of engineering enterprise, should be so behind-hand in the systematic education of its engineers, there being no establishment in England devoted to that object which is recognised by the profession. Under the system that has been in vogue up to a comparatively recent period a youth intended for an engineer is taken from school at the age of sixteen being thereby deprived of the most valuable years of his education, and placed in some engineering manufactory, where he remains, perhaps, till he is twenty. In those four years his so-called "training" consists in going through the manual routine of the various workshops and "picking up" what knowledge he can by keeping his eyes open and living on good terms with the workmen. His last year is usually spent in the drawing-office, where, by a similar process of "picking up," he learns how to draw if not to design machinary or works of construction. At the end of that time his education is supposed to be complete, and he either remains as a draughtsman until something better is offered him, or he enters the office of another engineer for the purpose of improvement. All this time the far more important theoretical training is neglected altogether, no classes or examinations are held, no lectures or other instructions are given, and though some few energetic young men in some way make up this loss by private study they are a great exception, and the hours of manual work are usually so heavy (from 6 A.M. till 5 P.M.) as to render working in the evening both fatiguing and unprofitable.

The Continental system goes to the other extreme, teaching the theory and discarding the practice. This system is as bad as the other, for experience has shown that in engineering works a practical man without scientific training seldom makes such serious blunders as a scientific man without practical experience. It can only be by a judicious combination of the two systems, allowing science and practical experience to work hand in hand together in the education of an engineer that the best results can be looked for, and in these days of close competition, not only between man and man, but between country and country, it is of the utmost importance to a nation that its engineers should be instructed upon the best and soundest principles. The Indian Government recognised this when it established the Royal Indian Engineering College at Cooper's Hill for the systematic training of engineers for the Public Works Department of India; and it is remarkable that the profession of engineering should stand alone in England as having no recognised *Alma Mater* of its own. Many years ago an engineering college was established at Putney upon a good system, but it was badly managed, and after becoming a nuisance to the neighbourhood, was ultimately shut up; at the present time, with the exception of the technical classes at the Crystal Palace and at King's College, which, in a small way, are doing good work, there is no institution in this country devoted to the education of engineers.

While England is so far behindhand in this important question, a great work has been done by the Japanese Government in the establishment of an Imperial College of Engineering at Tokio, an institution which gives to its students a highly scientific training, combined with actual practical experience in engineering workshops which give employment at the present time to over three hundred workmen, but which are being largely increased and are turning out all classes of engineering work.

The system adopted is as follows:—The course of training extends over six years. The first two years are spent entirely at college; during the next two years, six months of each year are spent at college and six months in the practice of that particular branch which the student may select; then two years are spent entirely in practical work. The system of instruction in the college is partly professorial and partly tutorial, consisting in the delivery of lectures and in assistance being given to the students in their work.

Candidates for admission must be Japanese subjects under the age of twenty, and must pass a preliminary examination, the best fifty being chosen as cadets, of which there are two classes. A student may elect to enter either as a Government cadet—in which case all his expenses are defrayed by Government, under whom he binds himself to serve for seven years at the expiration of his six years' training—or he may enter as a private cadet, paying his own expenses, in which case the obligation to serve subsequently under Government is dispensed with. In all other respects he is on the same footing as the Government cadet.

The whole system of training may be divided into three courses:—(1) General and Scientific, (2) Technical, and (3) Practical. The general and scientific course, which is taught during the first two years, includes (1) English language and composition, (2) geography, (3) elementary mathematics, (4) elementary mechanics, (5) elementary physics, (6) chemistry, and (7) mechanical drawing.

The Technical course consists of the following branches of engineering:—(1) Civil engineering, (2) mechanical engineering, (3) telegraphy, (4) architecture, (5) chemistry and metallurgy, and (6) mining. This course is taught during the third and fourth years of the curriculum. The practical course, in which the students are engaged during the last two years in the practice of the special branch each man may have selected, consists of working in the laboratories of the college, and in the engineering works connected with it established at Akabane, where they serve a regular engineering apprenticeship. While this course is going on lectures on special subjects are given, and the students are required to prepare reports upon the work in which they have been engaged.

In the Technical course are included the higher mathematics and natural philosophy, engineering, civil and mechanical, geology, mineralogy, surveying, naval architecture, strength of materials, practice in the chemical, physical, metallurgical, and engineering laboratories, and in the drawing office and workshops.

The main building, which is a very handsome structure, consists of a central portion containing the large examination hall and library, drawing offices and class rooms, and on each side of this extends a wing containing other class rooms and lecture halls. This is the College proper, and surrounding it are separate buildings set apart for the dormitories, Professors' houses, museum and laboratories of which there are four devoted respectively to chemistry, physics, metallurgy, and engineering. The buildings have been very admirably arranged by the Principal of the College, Mr. Henry Dyer, C.E., and the architectural details have been carried out with great skill by Mr. C. A. de Boinville.

The Staff of the College consists of a Principal and nine English Professors, assisted by Japanese teachers, and the Institution is under the jurisdiction of the Minister of Public Works.

A calendar of the College is published annually, which contains information relative to the admission of students, courses of study, and examination papers, as well as catalogues of the splendid collection of instruments in the laboratories, and of the books in the library, which seems to be exceptionally rich in almost every branch of general and scientific literature.

The discussion as to whether sensation ceases immediately after decapitation has recently again been revived. The writer of this was himself witness of an execution where the face of the criminal, a young fellow of twenty-two, underwent the most terrible change fully a minute after the head had been severed from the body by a sword cut and placed on a spike. The eyes opened, the tongue was protruded, and the features passed from an expression of perfect calm to that of acute suffering. The *Shanghai Courier*, however, relates, on the authority of Mr. Davenport, who has recently returned from a mission to Yunnan (we must state that Mr. Davenport got his information from a local mandarin), that in the Yunnan province there is a tribe called the Lolos, who are very curiously constituted in this respect, being so barbarous, that they are unable to form any conception of death, and "only object to lose their lives when they have been already decapitated." It would certainly be interesting to know how this knowledge of their *post mortem* objections to losing their heads has been arrived at.

The *Celestial Empire* states that Hongkong has at present a sensation in the shape of a giant eight feet three inches in height, being a foot more than the last Chinese giant Chang. His name is Yaou San. He is still young and growing fast, having added two inches to his stature in the past year. The same paper contains an account of a child born in Singapore of Batavian parents having two faces, four arms and four legs. The creature happily died, and the father very properly refused to sell the body to a physician for a large sum, saying that it was a monster and ought to be buried out of sight.

We take from *Nature* the following account of a curious property said to pertain to Japanese Mirrors:—

JAPANESE MIRRORS.

A short time ago a friend showed me a curious effect, which I had previously heard of, but had never seen. The ladies of Japan use, in making their toilet, a small round mirror about $\frac{1}{12}$ to $\frac{1}{8}$ inch in thickness, made of a kind of speculum metal, brightly polished and coated with mercury. At the back there are usually various devices, Japanese or Chinese written characters, badges, &c., standing in strong relief, and brightly polished like the front surface. Now if the direct rays of the sun are allowed to fall upon the front of the mirror and are then reflected on to a screen, in a great many cases, though not in all, the figure at the back will appear to shine through the substance of the mirror as bright lines upon a moderately bright ground.

I have since tried several mirrors as sold in the shops, and in most cases the appearance described has been observed with more or less distinctness.

I have been unable to find a satisfactory explanation of this fact, but on considering the mode of manufacture I was led to suppose that the pressure to which the mirror was subjected during polishing, and which is greatest on the parts in relief, was concerned in the production of the figures. On putting this to the test by rubbing the back of the mirror with a blunt pointed instrument, and permitting the rays of the sun to be reflected from the front surface, a bright line appeared in the image corresponding to the position of the part rubbed. This experiment is quite easy to repeat, a scratch with a knife or with any other hard body is sufficient. It would seem as if the pressure upon the back during polishing caused some change in the reflecting surface corresponding to the raised parts whereby the amount of light reflected was greater; or supposing that of the light which falls upon the surface, a part is absorbed and the rest reflected, those parts corresponding to the raised portions on the back are altered by the pressure in such a way that less is absorbed, and therefore a bright image appears. This, of course, is not an explanation of the phenomenon, but I put it forward as perhaps indicating the direction in which a true explanation may be looked for.

We regret that we must defer our review of Mr. Aston's valuable Grammar of the Japanese Written Language until a future issue, as the work is too important to be dismissed in a few words.

From the "Japan Mail Daily Advertiser."

Monday, 9th.

From the *Nichi Nichi Shimbun*.

A telegram despatched from Kiôto at 10.10 a.m. on the 6th instant, announces that the forces under Lieut. Generals Miura and Soga united on the 5th instant. The forces under Takashima have arrived at Shifushi on their way to Miyakonojô, and by this time they must have reached that town. The rebels seem to make Miyakonojô their most important stand point, so that much opposition is expected. About three hundred rebels surendered themselves on the 5th instant.

From the *Hôchi Shimbun*.

A telegram from Police Inspector Murata, who is now in

Owake *ken* (Bungo), despatched at 10 p.m. on the 5th instant, announces that on the morning of 3rd instant a reconnoitring party of the Imperialists was sent out to Assa-tôge in Hiuga, but were there attacked by about one hundred rebels. Firing of guns was heard from the direction of Takachiji-tôge.

From the *Mainichi Shimbun*.

It is rumoured that the *Asama Kan* has been wrecked on the coast of Hiuga.

Captain Reeves, of the P. & O. steamer *Sunda*, has favoured us with the following report of a Cyclone encountered by that vessel June 23rd and 24th, in Lat. 29.30 N, Long. 126.00 E.

June 23rd 4 p.m. wind E.N.E., force 6°, overcast and rainy weather, rising sea (Bar. 29 86—Ther. 74°). 8 p.m. wind E N.E, force 7°, overcast, with rain and increasing sea (Bar. 29-72 Ther. 73°). No change till 9.30 p.m. when the wind increased with strong gusts Bar. 29.68—Ther. 74°), heavy rain and increasing sea. Heavy rollers coming up from S.S.E. All appearances now indicating a Cyclone to S.S.E., probably travelling to N.W.—Rounded to on starboard tack, heading N. E. by E.; engines half speed. Midnight, wind E. by S., force 9° to 10°, torrents of rain, very high cross sea (Bar. 29 59 Ther. 78). From midnight the wind rapidly increased to a whole gale with terrific squalls, and very heavy confused sea with torrents of rain till 7 a.m., when the storm was at its worst with squalls of hurricane force and torrents of rain, the sea now running in enormous pyramidal masses, the ship notwithstanding behaving admirably, heeling over in the more furious blasts, but shipping very little heavy water, though enveloped in a continuous sheet of spray. The engines, working very regularly, enabled the ship to keep well up to the sea. At 11 a.m. the port lifeboat, having been frequently struck by heavy seas, broke up altogether. At noon the weather commenced to improve rapidly till 4 p.m., when the ship was enabled to proceed on her course. Subjoined are the hourly readings of the barometer, etc.

Went on course, wind and sea rapidly decreasing. Barometer rapidly rising. Wind remaining at S. W. till noon.

Tuesday, 10th.

We yesterday published an account of a typhoon which the P. & O. steamer *Sunda* met with on the 23rd June during her voyage from this port to Hongkong. The thirteen passengers on board the steamer presented an address to Captain Reeves before they left the *Sunda*, acknowledging the skill and judgment with which, ably seconded by an excellent staff of officers and a good crew, he handled his vessel during the storm, and to which, under Providence, they attributed their escape from imminent peril. Among these passengers were Chief Justice Snowden, Colonel Dickins, Commander Pusey, R.N., Captain Dempster, and Messrs. Donald and Gadsden, both master mariners, and this address therefore derives unusual value from the professional signatures appended to it.

The following report of the *Sunda* will show that she narrowly escaped a similar difficulty on her trip up from Hongkong to that which she experienced on the 23rd ultimo:—"When off the North end of Formosa, July 2nd at 10 a.m., a fresh gale set in from E. N. E. with sultry and hazy weather and rapidly rising sea. At noon, with the barometer at 29.75 it blew a strong gale from the same quarter, with a high increasing easterly sea. At 11 p.m. the barometer fell to 29.70, it then blowing a strong easterly gale with hard squalls and torrents of rain. On the 3rd at 2 a.m. the barometer registered 29.60, a strong gale blowing from E. by S., accompanied by squalls and rain increasing in violence, and heavy rollers coming up from S. S. E. At 4 a.m. the weather was becoming worse, the barometer being 29.49. At 6 a.m., with the barometer at 29.46, it was blowing a whole gale from the S. E. with furious squalls and torrents of rain, and it was necessary to bring the ship to the wind in order to take on the bow the tremendous sea which was then running. It became evident that a cyclone was passing to the southward on a westerly track towards the Coast of China. At 8 a.m. the barometer rose to 29.50 and the wind blew from S. S. E., otherwise there was no change. At noon the barometer rose to 29.50 and the wind from S. by E. was decreasing to a strong gale, the weather appeared to be clearing and the sea slightly improved. At 3 p.m. the barometer was 29.75, the wind S. by E. and blowing a fresh gale, the sea had decreased and was more regular, so that the ship was kept on her course, N. 60° E. under reefed trysails and staysails and full steam. At midnight the barometer was 29.85, with a moderate gale from S. by E., a high but decreasing sea, and passing clouds. At 8 a.m. on the 4th the barometer rose to 30.00 with a moderate gale, though squally, and decreasing sea, the wind S. S. E. with a force of 6 to 7. At noon the weather was fine with a strong S. S. E. breeze, and the barometer 30,07. The wind gradually fell, and on the 5th blew moderately, the weather being fine.

Japanese silk producers, who last year obtained an average of $800 per picul for their produce, find it difficult to realize the fact that this year they will have to part with their silk at a price under $550, and it is not strange that they resort to every means in their power to endeavour to reach last year's prices. The native merchants are to be pitied, as it is more than probable that they will lose on every bale of silk they are at present bringing to the market. Telegraphic advices from Europe, both political and commercial, are as bad as they can be, and reports of forced sales in London do not tend to improve the depression which such telegraphic news causes. Owing to the very small arrivals, an advance of $25 per picul was paid last week by the few buyers who had the field all to themselves, but with larger arrivals prices are sure to decline again. There would seem to have been some excitement on the last Maebashi and Hachoji markets, transactions having taken place there at upwards of 32 *mommé* ($535) for all round Maebashi, and 37 *mommé* for Hachoji Hanks, whilst such silk is worth here at the utmost $490 to $500 and $430 to $440 respectively, and with but few buyers at that.

The schooner *Otsego* arrived in port this morning from the Kurile Islands. About two months ago Mr. Cook purchased her as she lay stranded at Skotan, and left here in the *Beatrice* for the purpose of floating the *Otsego* again. In this he succeeded, after putting a new bottom in the schooner, and brought her down safely to this port.

The *Ocean Pearl* reports light S. W. winds after leaving Hakodate, until the last three days, during which she experienced strong N. W. winds. The *Annie W. Weston* left Hakodate June 16th. During the passage saw three barques and passed the *John Mc Kean* yesterday. The *Ching-too* was to have left on the 2nd instant.

From the *Hôchi Shimbun*.

Lieut. General Tani, who commanded the beseiged forces in Kumamoto castle, has been ordered to Hiuga, where he will probably have a command.

From the *Akébono Shimbun*.

A rebel who was taken prisoner confessed that he had only seen Saigo once since the capture of Hitoyoshi, and that many days ago. He said that Saigo might be at Miyako-no-jô with Murata, but was inclined to think that he had committed suicide.

From the *Chôya Shimbun*.

Major-General Saigo will, it is said, proceed from Osaka to the seat of war.

Mr. Tsunei Sei-itchiro, the editor of the recently suspended *Yakunin Shinshi* which used to be punished at Osaka, has been punished with one year's imprisonment for violating several articles of the Press laws by the following statements:—That the Central Government mismanaged public affairs and acted contrary to the will of the nation, and that it was therefore quite natural that rebellions should arise. Also that the Government is issuing paper money without any security, so that such paper money is likely to become as worthless as waste paper; and further for publishing the report that H. E. Iwakura had been assassinated.

From the *Nichi Nichi Shimbun*.

A telegram despatched from Kiôto at 1.50 p.m. on the 8th instant, announces that a report had just been received from Admiral Kawamura that the first division of the Imperialists had taken

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Shifushi, and the fourth division had reached Kokubu. The third division was to advance that day from Midzobe to Odori.

Wednesday, 11th.

The M. M. Co.'s steamer *Tanais*, with French Mails on board to the 3rd June, left Hongkong yesterday, the 10th instant, at 8 a.m.

From the *Akébono Shimbun*.

A telegram despatched from Kumamoto at 4.10 p.m. on the 9th instant announces that the troops under Lieut. General Miura advanced to Odori on the 7th instant, but on the night previous the rebels who had been stationed there retreated towards Oguchi.

The town of Odori was occupied by the Imperialists, and ten companies sent on to Okubo, two companies to Jinshutai in Kirishima, and six companies to both Shiwohitashi and Auraku.

The troops under Miyoshi advanced against Masaki at dawn of the 8th instant, the rebels having evacuated the town on the previous day and retreated to Iino. The Imperialists took possession of the three villages Nagaye, Haitsuka and Nagayama.

From the *Mainichi Shimbun*.

A telegram from Colonel Ozawa, now at Kumamoto, received at 4 p.m. on the 8th instant, announces that Lieut. General Tani had informed him that at 3 p.m. on the 4th instant, as a body of rebels were advancing from Nagase on the road to Shigeoka in Bungo, the Imperialists attaked them both in front and rear and defeated them. The rebels then retreated to Kurotsuchi-tôgi, where they were reinforced by another body of rebels, and together made an attack upon the Imperialists at Jônokoshi. The Imperialists received the attack boldly, and fighting continued till night-fall.

At 5 p.m. on the day following the Imperialists made an attack upon Kurotsuchi-tôgi but failed to capture the rebel positions.

Lieut. General Tani will take command of the Imperialist forces in Bungo.

A telegram from Kawaji, dated Kiôto 5.40 p.m. on the 8th instant, announces his intended departure the following day for Kiôto viâ the Tokaidô.

Thursday, 12th.

The *Caroline* reports leaving London March 3rd. Had N. E. winds down Channel, passing the Lizard on the 6th. Met with very light N. E. trades and crossed the Equator in 29° West, March 23th, falling to leeward near the Brazil coast and had to beat along it, the winds hanging far to the southward. The passage to the Cape was rather tedious owing to southerly winds. Running the longitude down met with the usual strong westerly winds, and passed Anjer on the 9th June. In the Java sea had very dirty weather; light winds up the China sea, a cyclone passing close to the ship whilst off Formosa. Up to the Japan coast experienced a strong N. E. current, exceeding 2 knots an hour most of the time. Passage from London 129 days.

From the *Nichi Nichi Shimbun*.

We hear from one who has just returned from the seat of war that the rebel commander Ikebe Kichijuro was killed on the 20th of last month.

The rebels are said to have been notified by their commanders that they should capture the Imperial surgeons whenever possible. The head-quarters of Saigo are said to be on the borders ofthe provinces of Hiuga and Osumi.

From the *Hôchi Shimbun*.

The rebels who now surrender themselves are mostly *samurai* of Miyozaki and Obi (Hiuga), and are not the Satsuma *samurai*.

A display of wrestling and acrobatic feats will take place at the public gardens Uyéno, Tokiô, on the 17th and 18th of this month, for the entertainment the of Foreign Ministers.

Great drought continues in Matsuyama, Iyo, and Gumma *Ken*.

Friday, 13th.

Yesterday afternoon the United States Consul-General heard a charge brought by George Miller, stevedore, and his wife, against three seamen of the U. S. S. *Tennessee*, McAdams, Mooney and Moore, for assault and battery. Mrs. Miller said that while she was sitting in a *jinrikisha* near the English hatoba on Monday morning last waiting for the return her husband from on board ship, one the accused named McAdams accosted her and demanded the return of some two dollars which he said she owed him from the night before. As McAdams was quite a stranger to her, she told him so and assured him that she was not in his debt to her knowledge. After giving vent to a tirade of foul words and uncalled for abuse, Mrs. Miller said that Mr. Adams with the assistance of another seaman named Moore who came up at this moment, capsized her *jinrikisha*, so that she was pitched into the street, receiving several bruises in consequence. Mr. Miller now made his appearance and a general scrimmage took place, in which Mr. Miller was severely kicked and had to take refuge in the boat house.

The evidence for the defence was of a very contradictory nature, and in the end the Consul-General, who characterized the assault as a disgraceful act, unworthy of men and American seamen, sentenced McAdams and Mooney to ten days imprisonment, three to be passed on bread and water. Moore was discharged.

From the *Hôchi Shimbun*.

A telegram despatched from Kiôto at 3.40 p.m. on the 10th instant, announces that after the Imperialists arrived at Odori on the 7th instant they made several attacks upon Jinshukan and Okubo. At the latter place were a large number of rebels who fled from Kokubo and Asoyama, and who fought in a most desperate manner. The Imperialists have recently received reinforcements. Fighting continued from the noon of the 7th to about 4 p.m. on the 8th, when the rebels showed signs of giving in, and retreated to a hill near the town of Okubo. The Imperialists attacked this place but without success, as the rebels were too strongly posted. Six companies under Lieut. General Oyama attempted to turn the rebel flank but failed. Attacks were also made on Shimidzu and Asoyama.

A telegram despatched from Osaka at 4.55 p.m. on the 10th instant announces that on the 9th instant a desperate attack was made upon the rebels, and the town of Okubo eventually taken, together with all the rebel positions outside the town and at Jinshukan. The rebels were pursued as far as Iino and Kanagoshi.

Itagaki Taisuku, Hayashi Yuzo and two other *samurai* of Tosa will shortly start for Kiôto.

From the *Mainichi Shimbun*.

Lieut. General Kawaji is suffering from rheumatism, which commenced to trouble him about the time he opened communication with Kagoshima. He is now hardly able to walk.

Lieut. General H. I. H. Higashi Fushimi-no-Miya will start for the south in command of reinforcements on the 15th of this month.

From the *Osaka Nippô*.

The Commander-in-Chief of the Imperial army arrived at Nagasaki on the 4th instant.

Saturday, 14th.

An action was brought by Messrs. Lane, Crawford & Co., against J. H. McGregor in the American Consular-General Court yesterday, to recover the sum of $134.57, balance of two accounts rendered. Defendant admitted one bill and stated his willingness to pay the amount as soon as he had earned the money, but the other he claimed to have already paid. After hearing the evidence, which General Van Buren characterised as being too equally balanced to admit of any decision other than mere guess-work, the case was adjourned. The litigants in the meanwhile were advised to come to some amicable arrangement out of Court. We have since heard that this has been effected.

From the *Akébono Shimbun*.

A telegram despatched by Lieut. General Miura at 11.15 a.m. on the 12th instant, announces that a determined attack was made by the Imperialists upon the villages of Omizo, Hara, Igokubo and Chiri, and they succeeded in capturing several rebel batteries. The left wing then advanced from Hirashima to Tashiro, and many rebel entrenchments were taken. The rebels retreated to Kobayashi by the way of Rokukannon and Herajima-goi. The main body of the Imperialist then advanced as far as Ikono-také.

From the *Chôya Shimbun*.

A telegram despatched from Osaka at 2.30 p.m. on the 11th instant, says that a report had been received from Miura to the effect that the left wing of the troops under his command had advanced to the foot of Kirishima-yama, the right wing to Sumiyama, and the main body to Kobayashi.

A telegram despatched from Kiôto at 8.55 p.m. on the 11th instant, states that on the 10th the troops under Miyoshi, the right wing of Yamada's force, the *Tondenhei* (Yezo troops) and those under Colonel Yamakawa united and attacked the rebels in the neighbourhood of Iino, defeated them and forced them to retreat to Kobayashi.

From the *Nichi Nichi Shimbun*.

It is rumoured that His Majesty the Mikado will return to the capital on the 20th of this month.

THE MEMORIAL OF THE *RISSHISHA*.

[First Notice.]

THIS singular manifesto merits the careful attention of all who desire to inform themselves of the current political sentiments of a large section daily increasing in numbers, power and influence of the cultured public of Japan, or who regard with any interest the doubtful fortunes of a country for centuries so strangely isolated from the rest of the world, only—more strangely still—to embrace with the over-eagerness of a newly converted proselyte the very civilisation it had for more than two hundred years viewed, or pretended to view, with horror and detestation. The long and varied roll of history nowhere presents so curious and interesting a phase of national life as that in the midst of which we live, and which we regard, for the most part, with an apathy that the philosophic historian of the future will ridicule or lament according to the humour or tendencies of the moment. Before our very eyes is being accomplished the most radical transformation that was ever effected in the social and political character of any nation—a transformation such as no Eastern potentate or people ever yet dreamed of as either possible or in the least degree desirable; such as only a dozen years ago would have been deemed by every European student of the history and manners of the Far East the most unrealisable of political chimeras. For the first time in the annals of the world a nation has of its own motion completely severed itself from its past, thrown aside its religion, destroyed its social hierarchy, annulled its history and without a ruler, without a policy, sought to merge or hide its nationality in the dress, manners, laws and science of over-sea visitors, almost ere the breath had cooled with which it had expressed the contempt and detestation they had inspired. A sort of suicidal phœnix, it has hoped to rise into a new and stronger life from the ashes of a self inflicted immolation. If the ease with which the Japanese have torn themselves from the past be reckoned a proof of weakness, the resolution with which they have maintained their faces in the right direction, however much their feet may have erred along unknown ways, must be accepted as a proof of strength, and the generous onlooker will not too severely criticise either the over confidence which has impelled them without due preparation to undertake a perilous journey along unexplored tracks towards an undefined goal, or the devious and often purposeless wanderings into which lack of the discipline, that experience alone can teach the necessity of, too frequently betrays them.

It is in this spirit, and with a desire less to find fault with the people or Government of this country than to signalise the dangers both have to encounter, and so far as our lights enable us, suggest remedies for the ills which afflict the state at the present moment, that we shall proceed to examine the complaints set forth in the remarkable document before us. Considered merely as a literary effort the memorial of the *Risshisha* does not call for any enthusiastic admiration. Its style is turgid and beset with the faults commonly incidental to Japanese compositions. We meet with redundancy where conciseness is desirable, with meagreness where some fullness of detail would be welcome. Not a few of the facts averred are to say the least, of doubtful authenticity, and the premises stated do not always warrant the conclusions drawn from them. But with all these drawbacks the document is a remarkable one, and shows a political earnestness and insight never before, to our knowledge, displayed by any state paper emanating from a Japanese source. The author has managed to say what he had to say, though he might have said it better and in fewer words, and what he had to say was well worth the telling, and is well worth the hearing and laying to heart by those who hold the destinies of Japan in their hands.

What however lends a certain air of injustice to the whole Memorial is the absence of all recognition of the difficulties of the position in which the Government found itself after the downfall of the *Bakufu*. We should have been better pleased had some reference been made to these difficulties and their unprecedented nature taken into consideration, as fairly excusing much that was then, and has been since, erroneous in the policy of the Government. Before passing judgment upon the present rulers of Japan, who with some exceptions comprise all the leaders of the Restoration, we should remember what sort of a task it was they found themselves confronted with in 1868-9. Whether or not they were wise in bringing about the events of those years we do not care to enquire, for our present purpose it is sufficient to indicate what the task was accomplished facts had set before them. It was nothing less than a complete reconstruction of the whole system of Government under circumstances altogether different from what those who were to effect that reconstruction had had any experience of. For more than two centuries the Mikado had left all executive power to the Yedo Shôguns. The functions of the Kiôto nobles had been restricted to the management of Court intrigues and the conduct of the empty ceremonial intercourse between the Western and Eastern Capitals. They were wholly unversed in political affairs. Least of all were they fitted to deal with foreigners then knocking more loudly than ever at the gates of the Empire, almost within hearing of the Son of Heaven himself. The Kiôto Court had been in the habit not only of leaving the execution of its vague decrees to the Shôgun, but of having those very decrees, in most instances at least, suggested by the agents of the powerful dignitary upon whom all real responsibility for them rested. Now they saw themselves forced, without the aid of skilled subordinates, with no precedents to aid them, no definite policy to guide them, to frame their own decrees, to see to the execution of them, and to bear the full responsibility attaching to them. The state machinery of the Imperial Court had become

'Rusted with a vile repose,'

the framework of the Bakufo administration was shattered to pieces, the *daimios* were busier with mercantile speculations than with the interests of the commonwealth, and the leaders of the Revolution found themselves obliged suddenly to replace the system they had overturned, equally destitute of such experience as alone could fit them for the task, and of such means as alone could enable them adequately to perform it. Novices in the supremely difficult art of Government, it is no marvel that these men who had enough to do in the confusion of the moment to keep things going, were led into committing the errors which eventually forced them to assume a position they did not, we verily believe, contemplate or desire at the outset. Seduced by the new born fervour of their admiration for western institutions, they promised

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

reforms which they have found themselves unable to carry out, and have naturally enough sought refuge from the difficulties their inexperience has created in the easy haven of a Venetian despotism. Such a result might have been anticipated, and the oligarchs of to-day merit blame less for being what they are, than for the inconsiderate haste with which they made delusive promises that a little reflection ought to have convinced them were not likely to be within their power of fulfilment.

Before proceeding to a particular examination of the charges preferred in the Memorial we think it right to say a word or two in defence of the Bakufu. It is the fashion—a somewhat silly one in our opinion—to revile and decry the Shôgunate on every possible occasion, and the author of the Memorial has allowed himself to fall in with this fashion.

Whatever may have been the hierarchical rank of the Shôgun, there can be no doubt that at least from the time of IYEYAS the actual administration of the Government was chiefly in his hands, and it is equally certain that since the pacification of the Empire by Gongen Sama—the one really great man measured by a western standard Japan appears to have produced—the people enjoyed a high degree of prosperity and a practically uninterrupted peace. The reports of the Spanish and Portuguese missionaries and of the Dutch and English traders of the 17th and 18th centuries testify abundantly to this. The troubles that attended what may be called the second advent of foreigners after the visit of Commodore Perry were almost entirely caused by the action of the Court at Kiôto. Orders were and again and again sent to Yedo commanding the immediate execution of the impossible task of expelling the foreigners, and when the *Bakufu* fell the very first decrees of the new Government were directed against foreigners, and many of the very men whom we see in marvellous travesties of the ugliest of Western costumes pay court to their Sovereign every new year's day, were among those who most violently called for the expulsion of the hairy barbarians. We believe that the *Bakufu* up to the day of its downfall was favourable to the gradual development of foreign intercourse, and we are not at all sure that, had its policy been persevered in, a progressive assimilation by the people of this country of so much of our civilisation as was suited to them, in lieu of the violent and half-forced wholesale imitation of its externals with which we are familiar, would not have resulted in a state of things more agreeable in every respect than what we actually live under. Under such a process the Japanese would not have lost so utterly and irrecoverably as they have the exquisite and unique charm of their national character, and in their intercourse with foreigners would have retained that suave gravity which the younger generation have exchanged for a a saucy familiarity. The fanaticism of the past is, it is true, wholly a thing of the past, but it has not made way for liberality of sentiment or conduct. In the old *Yamato-damashii* there was something not ignoble. In the ill-will towards foreigners subordinate officials take no pain to conceal—an ill-will born of wounded vanity and ignorant envy—only a contemptible and wretched spirit can be discerned.

Turning now to the Memorial which in all probability will never meet the eye of His Majesty, whom nevertheless the meanest Japanese has a constitutional right to petition, we are first presented with a brief review of the circumstances under which the Restoration was brought about, and the Government of the country resumed by the MIKADO—or rather assumed by those who used his name—the overthrow of the *Bakufu* being ascribed to just such a despotic and oppressive course of administration as that which the author accuses the existing Government with following. The specific charges against the Government are then set forth, with some diffuseness but, with an exception or two we shall not omit to note, with sufficient clearness. The counts of this indictment are eight in number, and the first and most serious of them in effect accuses the Government with being unfaithful to their trust in that, in lieu of taking measures to enable the Emperor to redeem his oath to give the people a due voice in the Government of the country, they have retained the whole direction of affairs in their own hands, and have thus constituted themselves an irresponsible and despotic oligarchy, the members of which by a sort of esoteric pact are recruited from the four *Han* of Tosa, Choshiu, Satsuma and Hizen. No one acquainted with the history of Japan during the past eight years will doubt the truth of this charge so far as the facts are concerned. But it is a much easier thing to promise than to create representative institutions. Some attempts to inaugurate a representative system have been made, and these were probably sincere. The task is confessedly a difficult one, the elements of a representative system as understood in the West hardly perhaps existing in Japan (though it may be fairly doubted whether the Japanese farmer is not on a par in political wisdom and intelligence with the peasant-proprietor of France or Italy), and the difficulty may have deterred the Government from making any further attempt to fulfil the promises which they must now regret they ever allowed themselves to utter. The other alternative that they have been mainly influenced from the beginning by a vulgar lust for power is not an impossible one, but is one which we are loth to accept. The truth of the matter probably is, that while the party now in office had at the outset a sincere desire to inaugurate a representative system, when they came to understand what a representative system really meant and involved, and found or fancied that it would be incompatible with their own permanent retention of power, they lost their zeal for that particular species of reform, and established as strict an oligarchical polity as the world has ever known, which they have since maintained by every means at their command. Now an oligarchy as all history shows is the very worst and weakest of all forms of Government. Venice may be cited as—but is not really an instance to the contrary. The South American republics are really oligarchies, and point the moral though they do not in the least adorn the tale of this species of despotism. The miserable history of the Italian republics of the middle ages is known to every one. An oligarchy, always more or less undermined by intestine jealousies, is irresolute in council and undecided in action. Its divided responsibility makes it little amenable to the pressure of public opinion, and what energies it possesses are chiefly employed in keeping itself in power. It is worse than the hated 'Turannis' of the Ancient Greeks, and is immeasurably inferior to an hereditary despotism of which it possesses all the vices

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

with none of the redeeming virtues. A despot must and usually does care for the opinion of his subjects; his interests are permanently, not transiently, bound up with those of his people; under him a change of policy may be accomplished by a change of advisers. Under an oligarchy, a change of policy can in most cases only be effected by a change of government—both in form and essence—a change too frequently accompanied by a civil war. The constitution of Japan is such, that though in form an hereditary despotism, events have converted it into what is really an oligarchy veiled by a despotism. The Emperor has for centuries been a puppet, and has neither exercised any real action in the Government—which it is not necessary perhaps, nor advisable he should—nor any choice in the selection of his advisers, a function it were well he discharged under the guidance of public opinion. Such a condition of things is the outcome of the national history, for which it would be absurd to hold the existing Government responsible. But the party in power should recognise the difficulty and danger of the situation, and cast about for a remedy against the disorganisation which threatens their country—a duty which we cannot refrain from saying they do not show a proper anxiety to perform. Not that the remedy is far to seek. Japan, it may be, is not yet fit for a representative system in the full sense of the expression. The three conditions enumerated by JOHN MILL do not, possibly, exist in the country. The people may not be, broadly speaking and in any active sense, particularly desirous of a representative system. They perhaps would not be able to preserve it if bestowed upon them, and they might not be found equal to fulfilling the duties or discharging the functions which it would impose upon them. But however premature an Assembly of Representatives might be, an Assembly of Notables could with perfect propriety be called into existence without further delay and herald a not remote advent of a real representation. In the ranks of the *Kwazoku* and higher *samurai*, among the officials, merchants, bankers and men of letters, some two or three hundred persons might at any moment be easily found possessed of sufficient leisure and culture to undertake and perform reasonably well the functions of members of a deliberative or consultative assembly, whose share in the councils of the Government, considerable from the beginning, might be enlarged *pari passu* with the development of the representative principle. Under the *Bakufu* each *daimio* had his council of elders, nor could the Shôgun refuse to hearken to the advice of the nobles and *hatamoto* of his court. The destructives of 1868-9 have abolished all the ancient modes of communication between governors and governed, and have not hitherto seriously attempted to fill the gap. The essence of a true reform is not merely to destroy but to replace; to abolish a bad political method without replacing it by a better is always a half-measure and often a great political folly. It cannot for a moment be doubted that there exists in this country a public sufficiently numerous and sufficiently intelligent to justify the pretensions put forward in the memorial. The Government cannot with safety or justice turn a deaf ear to the demands of the more earnest and cultivated classes of the people they rule over to be allowed a voice in the administration of the Empire. All history shows the unwisdom and peril involved in a persistent refusal to gratify the legitimate aspirations of men to exercise rights, which their training, their culture, and their position indubitably entitle and their necessities force them to claim.

THE GOVERNMENT AND RICE.

A SHORT time ago some of our contemporaries drew attention to the subject of the export trade in rice. Nothing could well be more unfortunate than the turn which the discussion then took. Wrong issues were raised; the question was looked at entirely from the foreign merchant's point of view; and there was displayed on all sides an astonishing forgetfulness of certain facts essential to a correct understanding of the subject. Both those who found fault with and those who defended the Government laboured under the misapprehension that the rice which it was exporting was all received by it direct from the farmers in the shape of taxes; that the same revenue system which existed years ago is still in force; and that by consequence the same considerations which were pertinent to the question of the exportation of rice then are equally pertinent to it now.

These mistakes are fundamental and necessarily vitiate all reasoning founded upon them. In theory, at least, the Japanese Government now collects the land tax not in kind but in currency. The rice which it exports so largely it professedly buys, and, in fact, to some extent does buy, in open market; a market in which, from the enormous advantages of its position, it must have everything pretty much its own way. Between the Government as tax-collector and the government as grain merchant the unhappy Japanese farmer—that is, five-sixths of the entire population—is ground between the upper and the nether millstone. A correct apprehension of these facts would surely have led to a bestowal, in the first instance, on the native producer forced to sell his rice, of that sympathy which was mistakenly invoked on behalf of the foreign merchant anxious to be allowed to have the export of it.

The measure promulgated four years ago for the revision of the land tax, like so much of the rest of the multifarious departmental legislation under which this country groans, was hurried through with a precipitate rush, before either the public mind was prepared for its acceptance or the necessary arrangements were made for its being carried out.

Of all the rash changes in the national economy attempted by the Government, none has aroused so fierce and so general resistance as the innovation in the mode of assessing and collecting the land tax. The old system was, as regards rice lands, that a certain proportion, roughly speaking about a half, of the annual crop was paid in kind as a tax or rent to the Government, which thus became the largest rice holder in the country. But as all official salaries and nearly all the other state expenses were calculated and paid in rice, the Government seldom experienced much difficulty in disposing of the contents of its enormous granaries. There was always in store a sufficient surplus to provide against unfruitful years. There being no foreign intercourse, no export was thought of. The changes introduced by the present Government four years ago may be summed up under two heads. First, the tax was ordered to be paid in money instead of in kind; and secondly, the basis of assessment chosen was

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the selling value of the land instead of as before, the annual harvest yield. The country was not then, is not now, and for many years to come cannot be, properly prepared for either of these changes, and the attempt to carry them into effect has been productive of the utmost hardship to the farmers.

For the taxes all over the country had to be paid in at the same time of the year; and in order to obtain the money wherewithal to pay them the farmers had no choice but to sell their rice in the nearest market. The rice market all over the country was thereby glutted, and prices necessarily went down with a rush. Consequently the poor farmers had to sell off a much larger proportion of their crops than usual to realize the money amount of the tax. Their own share of the crop, always far too small, was thus further reduced to starvation point. As was to be expected, the exasperation of the over taxed victims found vent in agrarian risings all over the country, and the Government was forced to cast about for some remedy for the disastrous consequences of its hasty and ill considered legislation.

A variety of contrivances were thought of. In some districts the local authorities petitioned and obtained from the central Government leave to accept from the farmers rice in pledge for the ultimate payment of the tax in money. But this was obviously much the same thing as the condemned system of paying the tax in kind, and if such a relaxation of the letter of the law were widely permitted it would be tantamount to a confession of the impracticability and failure of the Government measure. It was incumbent on the Government itself to come to the rescue of its own handiwork, and the plan hit upon was this. 'We will not,' they said, 'go back upon what we have attempted to do; the tax upon rice lands must, in the terms of the law which we in our wisdom have promulgated, be paid not in rice but in money: the hardship thereby entailed upon the farmers by having to sell their rice at low prices in a glutted market we will remedy by going into the market ourselves and purchasing largely. So shall depressed prices be raised, and the farmers obtain without difficulty the money they need for the payment of their taxes.' This ingeniously absurd scheme is understood to emanate from the Finance Department.

For, granting it to have been put forward in all good faith, the round-about inefficacy of the plan is one of the least of the objections to it. Not only is it at best a mere palliative of the evil it was designed to remedy, but it is also capable, not to say only too susceptible, of being made to serve a widely different end, and so to make matters worse instead of better. For in Japan the interests of the rulers and the ruled in this matter, so far from being identical, are diametrically opposed. The hardship of having to sell their produce at grievously reduced prices is not the only one which the new law entails upon the farmers; another serious drawback is the drain of the currency from the provinces to the capital, whence little of it ever returns. The appearance of the Government in the markets as a purchaser will leave this evil untouched. And what guarantee is there that the Government purchases will always be made at the times and in the places where the rice market most needs to be sustained?

The very fact of such an expedient having to be resorted to at all is of itself an admission of the failure of the attempt to exact payment of the rice-tax in money. For simultaneously with that measure, and as a necessary accompaniment to it, the Government issued a notification permitting rice to be exported free of duty. It was of course intended that this freedom to export should operate as a relief to the depression of the overstocked rice market; and no doubt to a certain extent it has done so. But not to any thing like the extent anticipated. The causes of this paralysis of this branch of trade will be set forth at length on another occasion; meanwhile the conclusions which we are concerned to establish, bear on an entirely different aspect of the question.

In the present social condition of the Japanese people the effort which the Government is making to exact the tax on rice lands in currency instead of in kind is premature. Against the convenience of the Government, which is to receive its tax direct in money, ought to be set off the inconvenience, the hardship, the injustice inflicted on its subjects who are able to pay only in kind. Both features of the Government measure, its rate of assessment and the mode of collection, have aroused in every province a bitter sense of wrong, and in many, overt insurrection. Reluctant as the Government naturally is to recognise its own mistakes, it has already made a partial concession to public opinion by the issue, at the beginning of this year, of the decree reducing the rate of assessment from three to two and a half per cent. on the valuation of the land. But the mode of collection is hardly less galling to the bulk of the population than the heaviness of the rate, and in the interest both of the reputation of rulers and the welfare of the ruled it would be a good thing if, on this point also, the redress of a popular grievance were preferred to persistence in a premature innovation.

Oyama Tsunayoshi was summoned on the 30th ultimo from the temporary prison in Sakuracho to the Special Court and examined from the morning until 4 p.m.—*Cosmopolitan Press.*

The *Kiusiu Maru* came off the Slip on Monday, the 2nd instant, having been repaired sufficiently to make the trip to Shanghai, for which port she left early on the morning of the 4th. Her repairs will not take more than three months.—*Rising Sun.*

Prince Arisugawa, the Commander-in-Chief of the Imperial forces, whose arrival was announced early on Wednesday morning by a royal salute from the fort, is now on a tour of inspection among the wounded soldiers quartered in the various parts of the town. His presence among the men will go far to cheer them up under their sufferings, and those among them who are sufficiently convalescent will be stimulated to return and fight again on the side of a Government which has shewn itself so solicitous in caring for and sympathising with them during the period of their recovery. We trust also that this short relaxation will prove beneficial to the Commander-in-Chief himself, who after his long and arduous duties must now be sadly in want of change and rest.—*Rising Sun.*

A telegram has been received by Messrs. Adamson Bell and Co. announcing the arrival of the *Loudoun Castle* in London at seven o'clock on Monday night (July 2nd). She is therefore the first ship, having made the passage in 37 days 2 hours from Woosung, including all stoppages, and nobly justifying the opinion of her backers.—*Shanghai Courier.*

The silk market is reported opened by the purchase of Buffalo and Woman chops at Tls. 415 (19/3 @ 5/5½), Dancing Bear No. 2 Tls. 410 (19/), SSS Dollar Chop Tls. 390 (18/1). It is difficult to criticize these operations in a serious spirit; presuming that they are as reported, *bonâ fide* purchases, and not shipments under a private arrangement with the native owners we fail to see what advantage has accrued to any one (except Chinese) by the patient inaction of buyers for the past month. These silks could certainly have been bought any time during the last three weeks under the prices now quoted. The pharisaical thanksgiving of silk inspectors "that they are not as the chinzees are" now appears somewhat premature and uncalled for. The disposition that can face a margin for loss of 15 per cent in these times might be called sanguine, but that is not the word for it.—*Shanghai Courier.*

SPIRIT OF THE JAPANESE PRESS.

(Osaka Nippô.)

The following is a letter sent by Kawamura Sumiyoshi, the Vice-Minister of Marine, to the *samurai* of Satsuma during the time they were beseiging Kumamotò castle:—

"Saigo Takamori, at the head of a hostile army has marched into Higo with evil intent, and has thereby incurred the displeasure of the Mikado. His Majesty has sent military and naval forces to punish both him and his followers. After a lapse of several weeks, as might have been expected the insurgents have been defeated by the Imperialists, for an unjust cause can never make headway against a just one. The insurgents can neither advance nor retreat, and there is nothing left for them but to die among the hills and on the moors. Day after day have the insurgents looked that some other clans would come to their assistance, but as their cause is an evil one, such expectations must for ever go unfulfilled.

"My heart overflowed with sorrow, when I heard that Beppu and Hemmi were endeavouring to induce men in Kagoshima to join them by means of false representations or by exciting their fears. As their cause is bad and they have met with no successes they are, necessarily, compelled to have recourse to such means.

"I have for some time past been intending to write a letter to you, but have been unable before to do so, on account of my many duties. Hearing that Yamazaki, the commander of the *Hô-shô-Kan* had written to you on two occasions in the same spirit as that in which I wished to address you, I trusted that you might receive his arguments with favour. I now write a few words to explain to you the justice of my views.

"It is needless to say that it can never be justifiable for a subject to take up arms against his ruler, or to plunge his country into strife in support of an unjust cause. At the present time our country has a mass of foreign and internal questions to deal with, and the present state of the country demands that they receive the greatest attention in order that the foundations of progress and civilization may be soundly laid. If, then, at a time when such important questions are pending you allow yourselves to be roused to anger and disturb the peace of the country, you do yourselves infinite harm, inasmuch as you are weakening the power of your own nation. Now I am well aware that although you have involved yourselves in the present rebellion you are not the originators of it, and if you will confess yourselves in the wrong and surrender yourselves, as I earnestly hope you may be induced to do, I will petition the Government to extend to you all possible leniency. If it be your intention to die, is it not better for you to die in your country's cause than to die rebels, disgraced and dishonoured? Let me entreat you to put this question to yourselves, and to endeavour to come to a right decision."

The following was the answer to the above: "We have had the honour of receiving a communication from Your Excellency, Kawamura Sumiyoshi, Vice-Minister of Marine. Having considered your arguments, we have come to the conclusion that they are one-sided, and that Your Excellency does not weigh the questions fairly.

"The originators of the present troubles are * * * * * *. Saigo Takamori when residing in Kagoshima, held the rank of *Sho-sammi* and General-in-Chief of the Army. He is thus a high officer of the Throne. But * * * * * and others, in direct violation of the laws of the Nation attempted or caused to be attempted his assassination. This is the entire cause of the present civil war. Yet the Government take no notice of those who thus violated its laws. If, therefore, laws are not to be binding on certain individuals confusion must prevail, and bad men will usurp the place of good. Under such circumstances it is useless to look for any tranquillity in the Empire.

"These were the causes that induced Saigo Takamori to set out from Kagoshima to obtain redress from the Government, but on his arrival in Higo, he was opposed by the Imperial troops, his rank and titles were taken from him, and he was proclaimed a traitor. This was not done by consent of the Emperor, but by those who wished to conceal their own crimes and deceive the Mikado.

"We are therefore much angered, and have determined to destroy these corrupt officials and to disperse the infernal clouds which surround the Emperor and the Imperial Throne.

"Those whom Your Excellency in your letter styles Imperialists, are in our in our eyes merely Rebels, used by a set of corrupt officials to destroy reason and justice. As such they must be destroyed.

"You say you will petition the Government to extend its clemency toward us if we will surrender. This is ridiculous. We are fighting for justice, and in a just cause we care not what our fate may prove. Your Excellency further says that we may recover our honour. This we cannot understand. Surely the cause of justice is honourable. How then have we lost our honour?

* * * * *

"So greatly do we differ from the views expressed by Your Excellency that we think Your Excellency must be out of your mind or speaking under the influence of nightmare. When Your Excellency has exhausted all your talents you had better come to Kumamoto and ask our pardon. We beg to inform Your Excellency that this is the last time we shall hold any communication with you."

BRITISH CONSULAR TRADE REPORT FOR KANAGAWA, FOR THE YEAR 1876.

BRITISH CONSULATE,
Kanagawa, 23rd June, 1877.

(Continued from the "Japan Weekly Mail," July 7th.)

I.—RETURN OF THE IMPORT TRADE OF THE PORT OF KANAGAWA FROM THE YEAR ENDED DECEMBER 31ST, 1876.

VESSELS SOLD TO JAPANESE PURCHASERS.

1 British Hulk	$6,000
1 British Ship	7,000
1 American Steamer	7,500
Total, 3 vessels for	$20,500

IV.—RETURN OF TREASURE IMPORTED INTO AND EXPORTED FROM KANAGAWA DURING THE YEAR 1876.

Imported from England other Countries	$13,026,290
,, Open Ports in Japan	8,350,981
Total Import	$21,377,931
Exported to England and other Countries	$22,685,389
,, Open Ports in Japan	5,365,294
Total Export	$28,050,683
Total Imported and Exported	$49,428,614

V.—PORT OF KANAGAWA.

RETURN OF THE DUTIES COLLECTED ON IMPORTS AND EXPORTS WITH A RETURN OF SHIPPING ENTRANCE AND CLEARANCE FEES AND STORAGE CHARGES DURING THE YEAR 1876.

Import Duties	$840,496
Export Duties	676,774
Shipping Fees	7,616
Storage Charges	8,233
Miscellaneous	2,201
Total	$1,535,320

VI.—RETURN SHOWING THE NUMBER OF BRITISH RESIDENTS AND FIRMS, AND THE RESIDENTS AND FIRMS OF EACH FOREIGN NATIONALITY ESTABLISHED AT THE PORT OF KANAGAWA ON THE 31ST DECEMBER, 1876.

Nationality.	No. of Residents.	No. of Firms.
British	635	54
Austro-Hungarian	15	2

I have the honour to be
Sir,
Your most obedient, humble servant,
(Signed) RUSSELL ROBERTSON.

SIR HARRY S. PARKES, K.C.B.,
&c., &c., &c.

We deeply regret to hear that rumours are in circulation pointing to the possible stoppage of the Woosung railway at the expiration of the present term. It it most devoutly to be hoped that these are without good foundation. There is no doubt, however, we believe, that an active correspondence is now being carried on upon the subject between the British Legation and the Viceroys of Chihli and Nanking, and we can only trust that their negotiations may result in the aversion of any step so ruinous to the interests of both foreigners and Chinese as that which is now said to be in contemplation.—*Shanghai Courier.*

On Sunday evening, the 24th June, a severe storm of wind occurred, causing many of the ships in harbour to drag, more or less. Fortunately little or no damage was done, and this is matter for congratulation, as some of the larger vessels, notably one man-of-war, dragged very considerably, and had a collision taken place, the results would probably have been very serious, as the gusts at times were particularly severe.

At Takahsima and Hashima, where the violence of the storm was more severely felt than in our immediate neighbourhood, we regret to hear that at the former place no less than five junks were wrecked, involving the loss of two lives, besides considerable damage having been done to the sea wall, wharf, and other property. We learn that at Hashima the wharf has been washed away, and serious damage has been sustained by buildings on the island—*R. S. & N. Express.*

VALEDICTORY ADDRESS,

TO THE ENGINEERING STUDENTS OF TÔKIÔ DAI GAKU, JULY, 1877, BY PROFESSOR R. H. SMITH.

The subject which I have thought a suitable one upon which to address you on the present occasion is "Engineering and Education of Engineers in Japan." The subject is one on which a very great deal may be said, and there are questions in connection with it, both sides of which may be very plausibly argued by different men fully qualified to form an opinion upon them. I make no pretence, therefore, to infallibility in the opinions I may express, and will gladly admit the possibility of the experience of the next few years shewing some of these opinions to be wrong. Recent events, however, are precipitating the adoption of great changes in the educational establishments of this country, and in view of these changes the importance of the subject becomes such that no excuse is necessary for my speaking upon it to-day, even if my own ideas with regard to it were not perfectly matured. My remarks, although all having reference to my own profession, may, I hope, be not wholly uninteresting to those before me who have no present or prospective immediate personal connection with engineering, the more so because they are specially addressed not only to those students who have already joined the engineering classes, but also to those looking forward to so doing, and on that account I have avoided technicalities that could be understood only by those who have already gained some special knowledge.

Both with regard to the possible or probable progress of engineering itself, and with regard to the most advantageous mode of educating engineers, the situation of Japan is in several ways different from that of other nations. It is the present misfortune of Japan to have lived for centuries strictly separated from all the rest of the world. This seclusion has, in the first place, kept the mechanical arts in a stationary and very rudimentary condition, and it has also effected what can only be remedied with far greater labour and difficulty than the hindrance to the development of the arts, for it has destroyed the useful spirit of rivalry and competition with other nations. No one will be inclined to dispute my statement that the arts have made no very great progress since the date of their birth in this land, and probably most men will freely admit that there is good evidence for believing that they have very considerably retrograded from the degree of excellence they had formerly attained. The many steps Japan has fallen behind Europe in this respect, however, can be rapidly overtaken by means of what may be called artificial education from without, but the knowledge and skill which may be thus rapidly acquired will certainly remain absolutely unproductive if it be unaccompanied by some stimulating spirit which will drive the nation forward to ever renewed energy and effort. And the history of the whole world teaches us that there is no other stimulus strong enough to do this than that of rivalry with neighbouring nations. The desire that our own country should stand as high or higher in the estimation of the world; that our own countrymen should enjoy in as great or a greater degree the comforts and happiness that the material and intellectual wealth, the possession of which is called civilization, can ensure; that the men who are born in the same land and owe the same allegiance as ourselves should have as great or greater freedom and liberty, than the men of other lands; this is the rivalry between nation and nation of which I speak, and it is this sentiment which has received the sacred name of patriotism. The destiny of the world is to move from bad to better, and from better to better still, and the force which guides it to this noble destiny is the spirit of rivalry between different races, or, as I have said, patriotism, which spirit has never been wholly dead in any nation since man first became an intelligent and sympathetic being. What was it that urged the Germans to establish that splendid system of thorough education and, thereby, during this last half century to establish a national prosperity so infinitely greater than before, that their industry may almost be said to have been created anew? It was the sting of shame that the German patriots felt when they saw their fatherland so far behind the French and the English. What was it that secured

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

for England a few years ago its Education Bill, and has at last awakened English manufacturers from their blind faith in the superiority of their own industrial resources and processes? It was the knowledge that Germany had advanced beyond us in education, and the fear that she and Belgium would soon outstrip us in the excellence of their productions.

Many will hesitate to admit my proposition that the seclusion of Japan for centuries has resulted in an almost entire destruction of this useful and necessary spirit among the Japanese. They will cite the eagerness with which foreign knowledge is sought after at the present day; the resentment with which any assertion of inferiority is received; the extreme jealousy with which even the appearance of foreign interference with Japanese affairs is guarded against. I am glad to believe that the undeniably wide-spread desire to acquire a knowledge of European science is produced by a sincere and hearty anxiety for the welfare of the nation. But I am sorry to be obliged to express my conviction that, whatever may be in the minds of that small body of intelligent men who are the leaders of thought in Japan, the idea of the mass of the people is that there is a certain quantity of knowledge and skill which somehow or other the King of Heaven has allowed to fall into the hands of the wrong people, and which has to be got from them by purchase or otherwise, and as soon as it has been got possession of, then Japan may again retire into the dignified repose of a secluded life. The people of Japan have yet to recognise that these Europeans themselves are learning and finding out every single year more new things than have been discovered by Japan during any fifty years of her seclusion From very ignorance of the necessity of it, there has as yet come into existence among the mass of the people no steady resolve to enter into the race of competition that is always from century to century being run by the nations of the wide word. Until Japan consents to become one of the common brotherhood of nations—a brotherhood of rivalry it may be, but still a brotherhood—to throw itself once and for all boldly into the life of the world, and to accept the responsibilities and privileges which that position involves; until communication between this and other countries is as free and unrestrained as it is between France and Germany and Britain; until this position has been deliberately assumed as a permanent one and the dream of possible future retreat from it has been altogether discarded as an absurdity of the past; until that time arrives Japan will constantly risk the danger of a relapse to that ignoble stagnation wherein there exists no stimulus to progress in industry, in act, or in culture, but which of itself is a sure guarantee of an opposite retrogression.

I am endeavouring to shew that the probability of future engineering prosperity does not depend so much upon the existence in the country of a small body of well-trained, energetic and enthusiastic engineers, as upon the diffusion throughout the mass of the nation of a certain sentiment—upon the creation of a new industrial spirit which will affect the people as a whole. Of course, a moderately large body of good engineers is essential, but they must be supported by others very much more numerous than themselves. In no country at all do engineers supply one hundredth part of the capital requisite for the work they carry on. The scientific engineers must operate in conjunction with good business men and must be able to command the services of good workmen.

Now a radically false idea of work is only too prevalent in Japan. The true idea of work is that the product should be of as good quality, and the production as cheap as possible. But the too common idea in this country, unconfessed, it may be, no less real and influential, is that the main object of work is to furnish an excuse for the workman receiving wages. What is the result? When business is conducted in accordance with the desire to furnish as many men as possible with the minimum amount of wages, it infallibly follows that the work is done in a wretchedly inefficient manner, and the workmen are demoralized, it being their interest to do as little as possible. General poverty and degradation are the certain results, and are attended by as general a slothful sentiment of contentment with the miserable condition. But there is this further result, which is more immediately our concern as engineers; there are fostered the more deeply-rooted prejudices against the use of labour-saving machinery. Now the labour-saving quality is in most cases the only true measure of the efficiency of the machine. A machine which will produce the same thing with the help of just half as much human labour as another machine requires, is simply on that account nearly twice as good as that other. But in Japan at the present day, with the two homely exceptions of sewing and knitting machines, no labour-saving machinery worthy of mention is used in the common industry of the country. Setting aside a few printing-presses and silk-spinning jennies, the only places where you can meet with labour-saving machinery is inside the new government workshops, and even there the most of it is destined to the manufacture of war material; which, however necessary it may be at times, is the reverse of favourable to that kind of industry which I am at present recommending. Not only does such machinery not exist at the present time here, but the fight for the gradual introduction of it will be a long and arduous one. The reason is that there is among this people just now no hearty desire that business of all kinds should be done in the best possible way; that mechanical work should be done by machinery if it is proved that it can be done better and more cheaply by machinery than by hand-labour; and no permanent progress can be expected, not even the dawn of an age of engineering prosperity can be looked for, until that desire is honestly entertained—nay more, until it is deeply felt—by the majority of the industrial classes. And you must not hope for a too rapid development of this sentiment, even should the best efforts of the wisest lovers of Japan be crowned with success. A reformation of this kind is in all countries accomplished only slowly. Consider, if every extensive new application of labour-saving machinery meets with so much opposition from ignorance and prejudice as it does in England, the very nursery of modern mechanical science and where these innovations have been introduced only gradually over a period centuries long, what difficulties and dogged resistance must not the apostles of applied science in Japan be prepared to meet and battle against? You who have entered, or are about to enter, the engineering courses of study in this University, are all of you, no doubt, willing to devote your energies for years to the acquirement of engineering knowledge and skill, and those of you who do so with distinguished success at this time of the beginning of the scientific regeneration of the empire, have very special prospects of fame and honour; but you have another and a very different task outside of the walls of the University and after the completion of your studies here—the task of educating the people you work for to a proper appreciation of those few simple industrial truths which I have tried to explain; and a far more glorious and lasting fame will attach to the names of those fewer and more earnest ones who will do most in teaching the people this, that it is their own truest interest to make production as good and cheap as possible; who will succeed best in convincing the workmen that it is their interest and duty, and ought to be their pride, to take a quarter of an hour's wage for doing in a quarter of an hour accurately and honestly a quarter of an hour's work, rather than an hour's wage for doing the same work in a careless and slovenly fashion in four times the right time. It may occupy only a few months to suppress the Satsuma rebels, but the battle against the prejudices, the carelessness and the want of business honesty that prevail among your countrymen will be a far longer and more difficult one, and will put to the test all the courage and patient persevering energy you can summon to it. I am convinced there will never be wanting soldiers to fight in this nobler warfare, and the victory which will most assuredly come though it be gained slowly step by step, will be worthy a far brighter jewel in the crown of the Mikado than the defeat of Saigo, or the establishment of a popular representative assembly as an integral part of the government.

You see then, that according to my idea the main barrier that opposes the onward march to engineering activity is rather the want of the proper sentiment and spirit than the want of material resources. If the proper idea once took firm hold of the mind of the people, there would then be no fear of the ultimate result. For the natural

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

resources of Japan are very great. Japan undoubtedly possesses great mineral wealth and a rich, fertile soil. Although the mountainous nature of the country makes transport expensive through some districts, that ought to be compensated for by the large number of rivers, long stretches of which are navigable, and by the unquestioned advantage of a remarkably extensive seaboard. Again the natural capabilities of the people are great. Their physique is strong, wiry and enduring, and their intelligence is quick and receptive. The majority of the present Japanese workmen are the very reverse of what a good workman ought to be, but in those few instances in which, as for example in the government workshops, they have been subjected to the proper training and discipline, it has been proved that they are very capable of becoming skilful, clever mechanics.

In fact, the producing powers of the nation are more than ordinarily great if they were only utilized. The only material which is perhaps not sufficiently plentiful is money. This is not the proper place to attempt to deal with the large and difficult question of the supply of capital to an impoverished country. It is enough to remark that many experienced foreigners hold decidedly to the opinion that a sufficiency of capital does not at present exist in the country. But there are large engineering enterprizes and small ones; projects which to ensure success require vast outlays of capital, and others which may be conducted profitably on a much more moderate scale. There can be no reasonable doubt, I think, that the capital in the possession of native merchants and men of property is at any rate amply sufficient to allow of foreign machinery being used to an immensely greater extent than is done just now. It is only in recent times that the system of monster factories has been developed in other countries, and although it has no doubt been proved that in the modern circumstances of these countries, this system is by far the most profitable, it must not be forgotten that the same system, if it had been adopted in those countries last century, would probably have proved only ruinous, and that the same system may not be at all suitable to other countries whose present condition is very different from that of any part of Europe or America. At the same time I will say, that to any Japanese financier who has studied the existing relations between capital and labour in European countries, and has learnt what proportion of the earnings of a great industrial establishment really goes into the purse of the capitalist and what proportion is really sunk in the district in the shape of wages and otherwise, ought surely to recognize very easily the short-sightedness of the policy that would much longer resist the free employment of foreign money in this country.

What we are doing in the different engineering schools, then, is merely to pave the way for a revolution that is to take place outside the college walls in industrial society. This, the teaching of pure engineering students, is our special work, and I intend now to dwell upon the peculiar circumstances affecting that education, and the proper means of facing these circumstances.

The unwillingness to learn which is the chief difficulty in the larger education of the people, is not one of the obstacles that present themselves to us inside the University class-rooms. Nowhere else that is known to me, could be found more industrious or more well-intentioned students than those it has been one of the great pleasures of my life to teach since I have been engaged in the Dai Gaku. Nor is there any want of talent displayed. They have had a great deal to learn that is perfectly new to them, and which is to a great extent out of harmony with the intellectual temperament imparted from past generations. The associations of childhood or of the later home-life contribute nothing whatever to facilitate these new-fangled studies. Taking such considerations into account, I am of opinion that their success has exceeded all reasonable expectation. Some teachers complain of want of originality among their Japanese students. Under present circumstances I do not think that this is particularly unfortunate. I agree with what was said by a student in this hall not long ago; namely, the important object of the Japanese student of the present day is to learn the facts that have already been found out in other countries, not to find out new things for himself. Japan has fallen behind other nations so far that the effort to regain this lost ground must and ought to absorb the whole energies of the student-population for many years to come, and originality ought not to be expected. Originality is only a curse if it be developed before the mind has been well disciplined by the patient acquirement of knowledge. Japan at present has not to advance as other nations have done, step by step; on the contrary, the already highly developed arts of other countries are to be suddenly introduced. Thus if the nation has suffered from past seclusion, she has at present the advantage of obtaining at the very outset of her new career all the valuable results that the rest of the world have laboured for during five hundred years; for which they have spent untold millions of money in gigantic experimental failures; for which the lives of many of our very greatest men have been spent in misery and want and ended in disappointment and without reward. Japan receives the benefit of all this hard won experience without paying a cent for it. No other country will grudge her her share of the harvest, but her debt of gratitude is accordingly great, and we may look forward with hope to the time when she may perhaps be in a condition that will enable her to repay part of that debt in kind.

Our object, then, being to teach this foreign knowledge of art, the greatest difficulty by far that we have to encounter is the absence of illustration of our teaching in the practical life outside the school. An American or German, or English boy grows up from childhood in the very midst of factories and machine-shops. He has seen a thousand times, and become familiar with the general outline of, the steam engine at work long before he even understands its object, much less its detailed construction and rationale. Especially if he be destined by parental connection to any sort of mechanical occupation, he will constantly be hearing talk of mechanical affairs, and thus becomes gradually and without any effort, almost unconsciously, more or less familiar with the actualities of mechanical business life. Of course, even with all these advantages it is necessary for him to devote many years of patient effort to attain to an accurate familiarity with the details of his profession, but long before that is reached, general ideas of the utmost usefulness have been instilled into his mind. In Japan of the present day none of these favourable influences act upon the youth destined for the engineering profession. All the professional knowledge that he gains must be gained in the school, with the exception of that that he finds out by his own unaided efforts This is by far the most important fact that ought to be looked to in organising a scheme of engineering education for the wants of this age in Japan. It leads at once to the conclusion that the school instruction here must be more thorough and detailed than it requires to be in other countries. What I mean by thoroughness and detail is, that it is not only necessary to expound the broad principles underlying the various branches of engineering, and to illustrate these principles by sketch descriptions of special works and machines in so far as their construction is governed by these fundamental principles; but it is, besides this, necessary to take in each division of the subject several examples and explain in the completest manner possible every fact that ought to guide the construction of any part of the whole; to point out the method of making exact calculations as to the proper dimensions of each part with regard to which it is both possible and useful to make such exact calculations; to let the student understand where it is not useful to strive at such exactitude and why, and finally to endeavour to train him to the faculty of roughly estimating the relative importance of those facts the calculation of whose exact influence is either impossible or useless. Take for example, the science of building "machine tools." To any one here who determined to teach the subject well, it would be requisite to explain the rationale and various possible constructions of every detail in, say, two of the most important machine-tools, for instance, turning lathes and planing machines, or some special example of wood-dressing machines. This would need to be done in addition to a general description of the functions and construction of a much larger number of machine-tools. In short, the system of engineering school education which I recommend, may conveniently be termed the "thorough" system, as distinguished from the "outline" system, which

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

last leaves the necessary filling in of details to the student himself during the course of his ordinary business life after he has gone from the college. I would not go the length of attempting to make the class-instruction supersede the necessity of an apprenticeship in one form or another, but this subject I will mention again immediately.

Another fact ought to be taken into account in laying out our scheme of education. All who know anything of the subject, know that engineering practice is very different in different countries. I dare to say that a very large proportion of these striking differences are due not simply to accident and prejudice, but have their rise in the very different needs of different countries, and the very different resulting conditions under which the engineering practice of these nations has grown up. The experience of each gradually guides it to certain rules and to a certain style, and as it advances the work is wisely guided by precedent as much as by reason. But Japan has as yet no experience of her own to guide her, and yet it is evident that engineering here cannot, and ought not, to be the same as in England or in America. There are just as many, perhaps more, reasons why it cannot be identical here and there, as there are why it would be inadvisable to construct the new army of Japan by copying in every detail the model of the French army without allowing any modifications whatever.

Now an engineer who has not inherited a long experience from the triumphs and failures of others, must, in order to be himself successful, be a particularly well-educated engineer. I disagree wholly with those who say that what Japan wants just now is solely a large number of young men who are just sufficiently well drilled in knowledge to make them able to go on with the ordinary routine of office-work and draughtsman's work. A large number of such men are certainly desired, but they alone are not sufficient. If the country were flooded with such men without any of the higher class of engineers to guide them, the result would be mere stupid confusion and ruinously frequent failures, such as would inevitably strengthen the old prejudices and create new ones against the foreign sciences which it is our endeavour to introduce.

The system should, then, provide for two grades of pupils; the lower standard of comparatively easy attainment for a large number; after passing which a selected few may aspire to a higher academic rank.

There are two ways in which this higher education for a small number may be provided for. It may either be done at home at the expense of some additional outlay of money, and the college provided with the power of granting a higher titular degree as well as the common one, or the few selected students may receive scholarships on condition of their carrying on their further studies at foreign universities, or otherwise. The question which of these two ways is the better, is chiefly a matter of relative money cost, and is a question into which I will not enter.

Let us now consider the means which it is necessary to adopt in order to carry out this "thorough" scheme.

Every one will recognize it as an ambitious scheme; many will stigmatize it as far too ambitious. I freely confess that in order to carry it out with completeness—and its whole essence is completeness—a considerable expenditure of money would be unavoidable. But it is surely worth the consideration of the government whether it would not be wiser to spend the funds at its disposal in equipping one school completely rather than in running two schools, to one of which is given a sum wholly inadequate to its requirements, and in the other of which is sunk capital which cannot with strictness be said to represent the actual or probable results.

There are two things without which what I propose could not be accomplished. The most important is a moderately large staff of thoroughly competent technical teachers. Neither of the two engineering schools in Tôkiô are at all adequately supplied in this respect. In our own little school there are only Prof. Chaplin and myself. The large establishment at Tora-no-mon we are astonished to find even more insufficiently furnished in this respect than we are.

Engineering as a science had its rise in military engineering. All the great roads of ancient days, for instance, in almost any country you like to mention, were built for military purposes. It was only much later that people began to think it worth while to apply science to the common arts, and it was then that industrial engineering came into existence under the title "civil" or "civic" engineering, to distinguish it from the military science. Later on this civil engineering became gradually differentiated into two sections; the one retaining the old name, the other receiving the name of mechanical engineering. This change which was developed only gradually, is only one example of the constant tendency to division of labour. As the applications of science become more and more complicated, there arises a greater and greater need of men becoming specialists. Originally the civil engineer was as much a mechanical as a civil engineer according to the modern meaning of the words, and the term was properly applied to all well-educated men who devoted themselves to the application of the exact sciences to the arts. But now-a-days, even when we add to the list of sections, mining, which is a cross between mechanical and civil and which has been wittily, if also somewhat unfairly, described as that section which borrows from both these latter and understands neither; and naval architecture whose chief peculiarity seems to be that its devotees labour at a problem too difficult for them but whose difficulty they do not perceive; even when we add these to the list, we find our subdivision wholly insufficient to represent the actuality. We have now many perfectly distinct kinds of civil engineers, and a still greater number of varieties coming under the designation mechanical engineers. Now I say, that in any complete school of engineering—and it is of far greater importance here in Japan than anywhere else—that these different classes of engineering ought to be represented by different teachers. If in our medical schools it is considered necessary to have different professors of anatomy, of materia medica, of mid-wifery, of physiology and hygiene, why, I would ask, should we too not have our special professors of road and railway engineering, of hydraulic and harbour engineering, of surveying on the one hand, and on the other professors to teach machine-tools—*i.e.* machine producing machinery—factory and mill machinery, power-engines and pumps, marine engines and ship-building, locomotives and agricultural machinery.

With, perhaps, three teachers of those subjects necessary for all engineering students, such as mechanical drawing and applied mathematics, including mechanics, strength of materials and thermodynamics; and four others for the above-mentioned specialties arranged in proper groups, the staff might be considered adequate to the requirements of the case, and any advance towards this from our present condition would be an improvement.

There is a fallacy which may be fallen into by those considering this subject which deserves to be pointed out.

It is sometimes imagined that if you increase the number of teachers and subdivide the subjects, you thereby, necessarily, increase the amount of study required from the students in the same proportion. This is a great mistake. The real difference is this. If you have only a few teachers for a wide range of subjects, the teaching will inevitably be either very incomplete, or else very superficial. In our countries when a professor is insufficiently supported so that his full subject is too wide for his time, he chooses, if he is a wise man, the former alternative of incompleteness, deals thoroughly with a very few subjects, and leaves the rest to be learnt by his pupils from other sources. These other educational means are talk with people in engineering business, observation of engineering works going on in the neighbourhood, and private study of books. But there is very little Japanese engineering society for Japanese students to talk with; very few engineering works being carried out in the country; and as for the private reading of books, most books on technical subjects contain much that is not satisfactory, and can only do their full amount of good when the student is by other means sufficiently guided in the right path to be able to form a shrewd judgment as to the worth of what he finds in the book. Japanese students require especially such guidance, as I have already remarked, because they have not the same advantages in training to the faculty of practical judgment as their European fellows have.

If, on the other hand, you have a sufficient number of

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

teachers to allow each to concentrate his energies upon the collecting together of the main features and important details of a few specialities, and upon the fittest mode of presenting them to pupils just entering upon the study; and with sufficient leisure, too, to examine carefully the numerous books he has to recommend to his class for study; these pupils will not only get over more ground in the same time on account of their not having wasted their time in unguided wanderings through worthless literature in search of a scrap of knowledge here and there, but will finally possess a much larger, more detailed stock of information, and a much truer understanding of the whole subject; and that, too, with less weariness and mental effort. Even if you succeed, as the Mombusho has succeeded very well in doing, in getting men who will consent to work harder than they would be asked to do in other countries, there can be no doubt that the quality of their work will be the lower the greater the quantity; and to this my own experience here testifies most unequivocally, because I have been surprised to find, now that I have somewhat more leisure than then, the number of mistakes I made during my first session here, when I was compelled to deliver eleven new lectures per week for nearly ten months' time, besides conducting various classes which did not involve any lecturing.

The other things that are wanted in order to carry out this thorough scheme of engineering education as especially adapted to the present needs of Japan, are a good collection of books, a good collection of illustrative wall-drawings, a good collection of models of machinery, etc., and a number of instruments. These are not so necessary as the teachers themselves, but the teachers will not be able to accomplish much without them. To illustrate what is desirable in the way of models, I need only point to the splendid machinery museum of which, through the praiseworthy energy of its Principal, the Kobu Dai Gakko is now in possession. Our college, on the other hand, can hardly be said to be supplied at all in this respect, and nevertheless models are here of infinitely greater importance than in English schools. In addition to these good class-rooms are wanted, but this is a matter of a very little importance beside what I have already mentioned.

Such, gentlemen, is the programme of engineering education which I think essential for Japan. Although it aims at as great thoroughness and completeness as can be attained anyhow in the class-room, I do not wish any one to think that I imagine that a young man could by going through this training alone become an entirely competent and trustworthy engineer. The student himself must complete it by that self-teaching which can only be carried out in the practice of business-life. Something which shall have the same object as the English apprenticeship system, is as necessary here as elsewhere. My own experience has given me too lively an appreciation of the evils of that English system to allow me to recommend it for adoption here, but it would be only foolish to suppose that any one of you could gain a right to the title of engineer, in any full sense of the word, by successful study in University classes alone. In the absence of private engineering establishments in which our students could obtain some practical training by private arrangement, I hold it to be the clear duty of the Mombusho authorities who invite young men from various parts of the country to receive an engineering education at their Tōkiō Dai Gaku, to secure for those, at any rate, who are successful in their college career, admission to one or other of the well-conducted government workshops as apprentices, or whatever you may chose to call them. There need be no connection between the University and the working establishments further than is necessary to secure the admission of the students from the former into the latter. With thorough practical-theoretical instruction I propose for the college course, a long apprenticeship is not necessary. I am no believer in the absolute necessity of a man's becoming a first-class chipper and filer in order to become an educated engineer. Such hand-skill as he may acquire in the workshop he will infallibly lose again very speedily. What he has to learn during his apprenticeship is simply how affairs are really carried on in the workshops, and he cannot learn this by observation from without, but only by living, as it were, in the workshop for a time.

In Germany the apprenticeship is commonly served after the completion of the lower education and before the commencement of the higher theoretical instruction. Not very many years ago a friend of my father's whom I have to thank for drawing the outline of my own professional education, introduced into Scotland the system of working the apprenticeship in the long vacations between the winter sessions at the University, and this system has been found to work remarkably well, although the masters would object, for obvious reasons, to permit it to any exceedingly large number of students. As somewhat connected with this subject, I may remark that any boy who is from infancy destined to a mechanical occupation, ought to be encouraged to familiarize himself with the use of tools from childhood. Where this has been done systematically, it has been attended with the happiest results. The boy is early imbued with sound mechanical ideas, and it requires very little knowledge of children to be sure that one who is helped to amuse himself in this way, will grow up healthier and happier than one who is continually kept to his spelling book and grammar. I myself would go so far as to say, that such training during childhood and boyhood would probably make it possible to reduce the time of the later apprenticeship to less than one half of what it would otherwise need to be.

But even after making this obvious and necessary confession that the scheme of thorough college education that I have laid before you in outline this afternoon, requires to be supplemented by something else, I will still admit it is an ambitious programme—a properly ambitious programme. I know that it is a somewhat expensive one. I know also that it will not be carried out—at least if it is to any extent at all, it will not be with the completeness that I think desirable. Nevertheless, I wish at this time to chronicle my belief that this, and nothing less than this, is what will do the work of engineering education in this country at this state of her history. What comparison can be made of the value of the few tens of thousands of *yen* that would need to be disbursed in accomplishing it, and the benefits that would most assuredly accrue in a very few years? Think of the rich materials that lie buried in Japanese soil as yet unconverted into wealth; think of the lithe activity, both mental and physical, of the Japanese people as yet allowed to run prematurely and unproductively to very indifferent seed; think of the engineering possibilities in the future of Japan, and say whether it is a wise policy to stint the schools of the little money that they need. Think of the rapid strides forwards from the barbarism of only a quarter of a century ago that Hindostan has made in consequence of the school-system introduced by the British government, and learn the marvellous results of modern education. It may be said that the money would be willingly given if it were there to give; but that is a poor excuse. Do you think that the capitalists of other countries are not willing to help you if you are willing to receive their help? Will your government not borrow foreign money from patriotic motives? Why! borrowed money is better than no money at all. Or can it not borrow foreign money except at high rates of interest? What is the reason? It is because Japan will not join hands with foreign nations to live with them their common life. Does a cautious man willingly lend his money to one who carries it into his house, where he keeps all the doors locked and bolted and all the window-shutters closed, so that no one knows what is going on in the house, or what will become of the money? No, he will charge a very high rate of interest before he trusts his money into that house. But if Japan were opened to the world it would be different. If foreigners were allowed in this country as great freedom of business as Englishmen are in France, there are few people who know anything about the condition of the land that could doubt that a sufficient, if not more than sufficient, influx of capital would readily take place without the necessity of any Government borrowing.

A despatch from Athens asserts that it is untrue that the Porte demanded an explanation of the Greek armaments. On the contrary, the Turkish Minister has been instructed to express the satisfaction of the Sultan at the formation of the new Ministry.

Correspondence.

IWASAKI YATARO *v.* CAPTAIN P. H. COLOMB.

To the Editor of the "Japan Mail Daily Advertiser."

Sir.—The observations on this case in your paper of the 5th instant imply that if the jury had pronounced for the defendant, as they led him to expect when they stopped his evidence, they would have expressed the opinion of a majority of this community. And I infer from what I have myself heard that in this impression you are quite correct.

But majorities, though powerful, are not always right. If they were, many names now much honoured among men would be unknown, the distinction of those who bore them being due to their having been decidedly in the minority while they lived. I am therefore, not in absolute despair at finding myself on this subject differing from the majority in regard to the desirability of the verdict preferred. And, if you will allow me, I will offer some reasons for this opinion.

1.—It is a maxim of law in collision cases that the vessel in motion shall respond for damage to the vessel properly anchored, unless the former proves her act of damage to have been inevitable, that is to say, wholly beyond her own control.

I fancy that, although Captain Colomb offered this defence in Court, he did so as a matter of form and with little actual reliance on it. For no one can read the evidence given without perceiving at once that, however excusable the drifting of the *Audacious* may have been, the defence wholly fails to establish that absolute inevitability which it was bound to prove.

Captain Colomb may have been quite justified in trusting to a single anchor on the night of the 11th June; and in trusting to its old-fashioned wooden stock; and in trusting to occasional observations of neighbouring lights to detect drift instead of to the regulation leads over the side; and in being very deliberate about letting go his second anchor when the first was proved inefficient; and the facts that other men-of-war near him had each two or more anchors down, and that the *Audacious* was the only ship in harbour that drifted, do not necessarily prove him to have been in error. But there remains the fact that a first class man-of-war, of nearly 4,000 tons, did, in smooth water, in a moderate gale hardly in typhoon season, drift upon a merchant ship properly anchored nearly an eighth of a mile away, and that some precautions which might have prevented that mischief were confessedly not taken. To plain common sense it looks therefore as if the *Audacious* were responsible for the damage done, and as if the only questions to ask were To whom? and For how much?

2.—In dealing with the first question the defence tried to show that the plaintiff was not the owner of the *Chiri Maru*. The point was a fair one to take, and the common notion, which the *Gazette* has just repeated, that the Mitsu Bishi Company is a branch, and its vessels the property, of the Japanese Government, lent it some force.

But it was a point easily elucidated by reference to a few facts. The Japanese Government, which formerly owned the *Chiri Maru*, recognises her as now belonging to the Mitsu Bishi Co., and recognises Mr Iwasaki as representing that Company. In the Fifth Report of the Postmaster General, printed in English in 1876, the Government published most of the very facts which were triumphantly extracted from Mr Iwasaki the other day in H.B. Majesty's Court. Plaintiff might naturally have felt bewildered at being required to prove facts already so notorious, especially as the ship's Register and the Post Office contract, both produced in Court, amply established them.

Whether Mr Iwasaki paid much or little for his ships seems of no real consequence so long as the Government of Japan thus recognises them as his. That Government, for its own ends assisted (it did not create) the Mitsu Bishi Company, and is now deriving much advantage from the foresight and liberality of its policy in that respect. If its manner of doing this appears strange (though it could be precedented in Europe), it may be remembered that it is a Sovereign Government, and is not obliged to conform its shipping laws to foreign customs.

Mr. Iwasaki is certainly under no obligation to account to any foreigner for the manner in which he acquired his ships; and when defendant's counsel, in dealing with this part of his case, ridiculed the notion that he had acquired them fairly, impugned the honesty of his testimony regarding them, and insulted him and his Government by describing him as "a man of straw," or "a pasteboard partition" between the people of Japan and the "real owners of the vessels," (*vide* your own and the *Herald's* reports), he descended to a mode of defence which it is quite incredible that the gentleman in whose behalf it was employed could ever have sanctioned. If it were even relevant, its utter offensiveness should have precluded its use.

If respectable Japanese entering foreign Courts as plaintiffs or as witnesses are so treated we may look for some disagreeable retaliation—and before "the greater part" of this community commit themseves to approval of it, they would do well to consider its possible consequences.

3.—The question of the amount of liability remains. The plain rule of law is that the delinquent party in a collision is liable not only for direct damages but for their consequences. This was clearly stated by Dr. Lushington in the case of the *Countess of Durham*, and it has been carried so far that delinquents have had to pay for a vessel wrecked subsequently to but in consequence of the collision.

In the case of the *Chiri Maru* there was room for difference of opinion as to the amount and as to the time required for repairs. But we all know that repairs cannot be executed here at moderate cost and that estimates are generally exceeded by results, both as to cost and delay. Without questioning the fairness of those put in by the defendant and obtained *after* controversy had begun, one may reasonably doubt if they would have been quite the same if obtained *before*, and if most of them would not have swelled considerably in practice. At all events plaintiff naturally and necessarily based his claims (the law requiring him to fix a sum) on the estimates of the experts whom he usually dealt with and trusted; and I can neither see any indication of extortion in this proceeding, nor any reason to distrust the honesty of Mr. Robertson's calculations on account of Mr. Iwasaki's having a share in his business. If Captain Colomb had been content to "pay the bill" for reinstatement, as he first proposed, he could have had no difficulty in checking overcharges.

As to the claim for demurrage, the owner of the *Chiri Maru* was entitled to whatever any private ship-owner would have recovered under the circumstances, and his contract with the Government showed what his loss per diem was. The Jury appear to have admitted this *rate*, but to have undertaken to fix the *time*, just as they had previously fixed the *cost*, of repairs. It seems to me that they might wisely have left both points to be settled by experts, or by events; for one can hardly imagine the majority of them competent to decide such matters. Their proposed award of two days was probably pure guess-work, and, according to the evidence, is either too little or too much. If they supposed, as seems likely, that the vessel was really Government property it would have been more consistent to allow no demurrage at all.

Had the *Chiri Maru* been under French, American, or German colours, I venture to assert that this whole question would have been treated quite differently, and the charge of extortion would probably not have been heard of. And here arises a consideration which possibly underlies and taints the whole of this controversy, and gives a significance to the action and judgment of this community, and of Her Majesty's officers, in regard to it, which ought to be seriously weighed.

If the *Chiri Maru* had been under one of the foreign flags named would not Captain Colomb have received the owner's representatives, when they went on board the *Audacious* after the collision, with the considerate politeness due to those who had innocently suffered injury from his ship? Would he have taken pains to make the interview as "short as possible," or "refused to listen" to a claim for consequential damage which British law clearly declares to be admissible on such occasions? If reference to a Court were after all found indispensable to settle responsibilities or decide rights, would irritating and offensive enquiries into the means by which the owner had acquired his property have been permitted to embitter the process? And would counsel, under the shelter of a Court of Justice, have been allowed to insult him with defamatory epithets? The Judge's charge could not have been more conscientious and impartial than it was in this case; but would there have been derisive "laughter" in Court over plaintiff's efforts to give straightforward answers to what he thought serious questions, and would some of the public and the newspapers have regarded his appeal to British justice against a man-of war as something impudent and ludicrous? Would it have been described or considered as an Act of Grace in Her Majesty's officers to entertain his claim at all, and would that Grace (if such it was) have been so ungraciously demurred to by the defence? If the verdict of a jury had been required would not care have been taken to select men qualified by position and experience to determine delicate nautical and mercantile points and exempt from every influence that might possibly prejudice their judgment? And, in case of disagreement, would respectable members of this community have ventured to suggest in print or in conversation that an intelligent juror, standing on his oath and his knowledge against the others, was influenced either by stupid obstinacy or by still baser motives?

In my opinion these things would have been unlikely to occur in the case supposed. And I think it very greatly to be regretted that things too closely resembling them should have occurred in this case, where the plaintiff was a prominent and highly respected Japanese gentleman, who may easily have been more concerned, in pressing his claim, to gratify the patriotism of his countrymen, to vindicate his flag, and to exhibit his own good-standing with foreigners, than to recover money lost through the unreadiness of a drifting man-of-war. For such occurrences tend to deepen the impression, already too strongly established in Japan, that foreigners in general are arrogant, unjust, and unwilling to practise toward Japanese the rules they observe toward each other.

I think it should be the aim, even if it were not so clearly the interest of this community to counteract this impression whenever a fair opportunity offers itself, and I regret that they have not discerned such an opportunity in the present case.

Since the majority appear, by your account, to think otherwise, I prefer to remain

ONE OF THE MINORITY.

Yokohama, July 6th, 1877.

P.S.—No one ought to know better than defendant's counsel, that "Kwei-sha" in Japanese does not usually imply a corporation in the foreign sense.

To the Editor of the Japan Weekly Mail.

July 14th, 1877.

Sir,—A word or two in reply to the letter of "One of the Minority" in the *Advertiser* of the 10th, in reference to the late *Audacious* case.

Your Correspondent states that "the vessel in motion shall respond for damage to the vessel properly anchored" unless inevitable accident is proved. This is quite true, but the question, as is shown in the argument of the Counsel for the defence in the *Audacious* case, whether by a "vessel in motion" is not meant a vessel under

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

weigh, and therefore with steering power, and so able to avoid, if a proper look-out is kept, a vessel at anchor It is surely ridiculous to say that a vessel in motion, if the motion is itself due to inevitable accident, is to be treated as if it were under weigh and so under the control of those on board. If this were so in every conceivable case of collision the mere fact of collision would be *primâ facie* proof of negligence which we know very well it is not. The fact of the vessel being in motion throws, then, no burden on the colliding ship when that very motion is the result of the inevitable accident alleged in excuse.

Your correspondent cannot have read the proceedings with any care, for had he done so, especially had he studied the summing up, he would have seen that the defence was not bound to prove absolute inevitability. It was only bound to show that the collision was due to an accident unavoidable by the exercise of such ordinary care as a prudent seaman should employ under the circumstances. And that such care, and more than such care, was employed, was amply proved by the evidence for the defence, and was hardly sought even to be disproved by the plaintiff, who indeed proved nothing at all except that he was a very lucky fellow. The summing up shows clearly that the drifting was due to the breaking of the anchor stock, and I should like to know how your correspondent would prevent such an accident. Whether a wooden stock is old fashioned as your correspondent says, or not, I cannot say; but, however, the defendant was clearly not personally responsible for what he was supplied with by the Government. As to your correspondent's intimation that the lead was not used to detect drifting, the evidence showed a clear presumption that it was used in accordance with the common routine of the ship, and the jury prevented that evidence being given which would have formally proved what seems as little necessary to prove as the fact that there was the usual watch on duty. So, again, "One of the Minority" —and I venture to say of a very microscopic minority indeed—alleges that the defendant was "very deliberate" in letting go his second anchor when the first proved inefficient. But the uncontradicted evidence shows most clearly that the order to let go was given by the defendant the moment he was informed of the drifting; that the same order had previously been given by Captain Johnstone, and that the anchor was let go by the time the defendant got forward Your correspondent proceeds to assert that the other men-of-war near the *Audacious* had two, or more, anchors down. This is not true in the sense meant by your correspondent. The *Tennessee* was moored, but practically riding by a single anchor until long after the collision (if I remember right), and the *Atalante* throughout the night rode by a single anchor. Indeed, I believe I am correct in saying that hardly a ship in the harbour had two anchors ahead during the whole of the night, and not one of these drifted or dragged—they were in fact holding on by one anchor, and clearer proof of the non-necessity of the *Audacious* letting go her second anchor could not be adduced. Had the *Chiri Maru* been lying at single anchor, the collision in all probability would have been easily averted. I am happy to find myself in agreement with your correspondent in his statement that the wind was but a "moderate gale." I remember the night in question very well, and up to about 10 p.m. looked upon the wind as quite of an ordinary character.

As to the cross-examination of Mr. Iwasaki, he appears to me to have been treated with singular lenity. A man who says first there is no Mitsu Bishi Company, then that he is himself the Company, then that the Government has presented him with seventeen or eighteen steamers, invites strange surmises and courts some degree of ridicule. For my part I know as a fact that the purchase of many of the steamers now belonging to the so-called company was arranged between their owners and the Government, and were paid for by the Government. Whether the defence knew this or not I cannot tell, but in view of the rumours current in Yokohama as to the real position of the company, it was necessary for him to examine closely on the point of ownership, if only to avoid a repetition of litigation. Let any one imagine such a witness as Mr. Iwasaki in any of the Superior Courts at home, and compare the merciless interrogatory he would there be subjected to with the mild treatment he received at the hands of the defence.

Japanese of the calibre of Mr. Iwasaki are not such children as their protector assumes them to be. They know perfectly well that they may have to undergo a disagreeable interrogatory if they seek the aid of a Court of Justice, whether Japanese or foreign, and are not such fools as not to understand that the subjection of witnesses to close examination, however unpleasant it may be to the witnesses themselves, is absolutely necessary to the ends of justices and not more advantageous to the defendant than to the plaintiff. The threat of "disagreeable retaliation" which the "greater part of the community would do well to consider the possible consequences of" is alarming. Does Mr. Iwasaki intend to scuttle the next of the thirty or forty steamers (he is not sure which) he is the fortunate owner of, at as small an outlay as the Heir of Linne got back his land at, on which a goodly muster of hated Britishers, the greater part of the community, may happen to be the unlucky passengers? O that my friend would not write a letter! might the incarnation of the Mitsu Bishi Company well exclaim—reversing the cry of the Psalmist.

Like your correspondent I also "venture to assert" that had the *Chiri Maru* been under French, American or German colours, "the whole question would have been treated quite differently and the charge of extortion would not probably have been heard of," and for the simple reason that no such rediculous claim as that put forward on behalf of the owner would ever have been made. What follows seems to indicate the real *punctum veri* of the whole matter. The very respectable representatives of the Great Mitsu Bishi Company—in other words the clerks of Mr. Iwasaki—were not treated with the consideration they deemed their due on the occasion of their visit to the *Audacious* the day after the collision. This is regrettable, and the officers of the *Audacious* have been properly punished in the vexations and delays they have been subjected to for any lack of courtesy they may have been guilty of on that memorable occasion.

The charge made against the defendant's Counsel that he availed himself of his position to insult the plaintiff is an extremely silly one. He took special pains to exonerate the plaintiff from all blame on account of the proceedings, and in treating the plaintiff's account of his ownership as ridiculous and incredible, according to the law and custom of a British Court of Justice, was perfectly justified by the strange facts disclosed by the plaintiff himself. I do not suppose there are ten impartial men in the settlement who are not convinced, that according to the principles of western law, the Government are the real owners of the whole Mitsu Bishi fleet. The defence never for an instant condescended to adopt the captious and quibbling mode of examination used by the plaintiff, who appeared to rest his sole hope upon the chance of some sailor or officer of the *Audacious*, unaccustomed to the tortures of the witness box, being confused into self-contradiction or unwary admission.

The remaining reflections upon British justice contained in your correspondent's letter may be briefly met by the following remarks. The case against the *Audacious* involving difficult technical points, important questions of law and a discussion of recondite matters of seamanship, as well as effecting great national interests, was fixed and decided within a fortnight of the claim being made. How long would it have taken to decide a similar claim had the *Audacious* been a Japanese vessel and the *Chiri Maru* a British hulk? Who would have given ten cents for the chance of such a claim ever being entertained with anything like the fairness Mr. Iwasaki has experienced? I, Sir, have had the misfortune of appearing three times as a plaintiff in a Japanese Court of Justice, once against the Government, twice against individuals. In one, although the claim was of a perfectly simple nature, it took eighteen months to get any Court to entertain it at all. In the other, two months were occupied over the preliminaries. In the first no decision has been given; in the other two the decisions were based upon arguments of a childish absurdity—almost as absurd as those used in the late judgment on the case of Braun *v.* Kashiwo. On every occasion that I appeared before the Yedo Court I was treated and addressed like the commonest coolie. I was howled at for bringing an umbrella, a coat, or a hat into Court, although the only place I could have left these articles in was a distant cell, inches thick with dust and dirt and without chair, table or hook. An unfortunate Chinaman whom I once brought as a witness was apostrophised in the rudest manner, because he wore spectacles. In almost every instance in which I have come into contact with Japanese judicial or other officials of a subordinate rank, I have remarked an ill-will against foreigners amounting almost to fanaticism and a positive desire to work injury to foreigners, as such, that I am utterly at a loss to explain. Of the people of Japan, especially the peasantry, I have only to record my profound admiration, and from the higher officials I must admit that I have never experienced discourtesy.

I deny utterly that there is any impression in Japan that foreigners in general are arrogant, unjust, and unwilling to practice towards Japanese the rules they observe towards each other, or any foundation for such an impression. I believe the impression is quite the reverse, and that what unfavourable impressions against us may be current in Japan, have relation chiefly to our social habits which the Japanese do not understand, to our independence, our behaviour towards women, our love of open air exercise, our conduct as members of a family, our music, art, etc., etc. And I feel quite sure that most fair-minded and intelligent Japanese will resent the advocacy of 'One of the Minority' as an officious and unwelcome patronage.

I am, Sir,

A BRITISHER.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Yokohama, July 13th, 1877.

SIR,—In the *Advertiser* of the 10th, your correspondent "One of the Minority" says that I ought to know that the word "kweisha" (kwaisha?) does not imply what is understood by foreigners as a corporation.

I have had to deal officially with three Kwaisha and with three only. Each of the three had its articles of Association, its Shareholders, Directors, Secretary and President, and, as far as I am able to judge of such things, was the exact homologue of what is usually known in England, at least, as a public company or mercantile corporation.

It is, however, quite true that "kwaisha" would not extend to a municipal corporation or any analogous body.

I am, Sir,

Yours truly,

F. V. DICKINS.

It is reported that Sir William Vernon Harcourt, after the close of Parliament, will visit the United States, to prepare a biography of his father-in-law, the late John Lothrop Motley.

Dr. Kenealy, the Tichborne claimant's parliamentary champion and counsel, has denounced Ex-President Grant as a corrupt man, who amassed immense wealth while in the White House.

The Pope received during the Jubilee $1,100,000 in hard cash, not counting innumerable articles of value presented. The Pope announces three new Cardinals. A delegation from Guadaloupe presented a number of bricks made of solid silver, similar to one previously given to the Church by the citizens of San Francisco.

THE DOMESTIC MALE.

(The World.)

There is an old saying that a surgical operation is necessary to enable a Scotchman to enjoy a joke; but it would, we think, require a very prolonged and severe course of treatment before the ordinary domestic minded male could be brought to comprehend that he could, by any conceivable possibility, be in the way. He believes firmly and serenely that every woman in the whole world would rather talk to a man than to a woman, and is absolutely oblivious of the fact that there is a time for all things. Without entering into the large question of the undoubted mutual attraction of the sexes for each other, it may surely be conceded that women do occasionally, not to say frequently, like to talk to their own sex on divers topics mutually interesting. But the truly domestic male cannot be made to comprehend this, and bores his wife and all her friends to extinction by remaining persistently in the drawing-room, and believing he is conferring a boon upon them by his presence, when all the time they are dying to get rid of him, and to talk of their own concerns. If he were not so self-satisfied, he could hardly fail to comprehend the very broad hints that are occasionally given him by some visitor more audacious than the rest as to the desirability of his absence; but he remains serenely impervious, and really believes that his wife's friends like calling upon her all the better for having the advantage of talking to him. Even if on their arrival he happens to be in his own proper sphere, in the library or the smoking-room, and the friends, profiting by so rare an opportunity, rush into a stream of confidential chatter delightful to the soul of womankind, the treat is but of short duration; the faintest sound of the visitor's bell reaches him at any distance, and he at once makes his appearance on the scene, to the utter destruction of a comfortable *tête-à-tête*. To endeavour to make him comprehend this is but lost labour; that true old saying as to the number that is really company has never penetrated the density of his brain, and it is beyond his mental grasp to perceive that conversation which may be delightful in *tête-à-tête*, or interesting and sparkling in a larger party, is invariably languishing and dull when undertaken *à trois*. He generally is a man loving the sound of his own voice, and monopolises the major portion of the conversation, holding forth lengthily on the Eastern Question to a lady who is longing to talk bonnets or society to his wife, and who wishes him in Bulgaria with the Bashi-Bazouks; or prosing away to a man who certainly did not take the trouble of paying a morning visit for the pleasure of talking to him, and who chafes considerably at finding the person he really came to see to reduced a simple lay figure.

But the domestic male is before all things ineffably conceited, and sincerely believes that it is to him that visits are paid; that any one would really prefer to talk to his wife never enters into his calculation of possibilities. He is the delight of a certain number of twaddling old ladies, chiefly of the maiden persuasion, who have, naturally enough, no conception of what is or is not manly, and who perpetually sing his praises as 'so delightfully domestic,' and would be amazed and scandalised if they knew how devotedly his wife sometime wishes that he would go to his club, or anywhere instead of her drawing-room. Though not a great admirer of Mr. Martin Tupper, she fervently recognises the wisdom of one axiom in his *Proverbial Philosophy* on 'matrimony'—'Be not always in each other's company; it is sometimes good to be alone'—and sighs as she thinks that such good is to her absolutely unattainable. It is only a quiet and steady wife who ever has such a husband as the domestic male; a fast one would very speedily emancipate herself from the thraldom, and tell him plainly that he was not wanted. But a good wife, who loves her husband ever so dearly, may be pardoned if she cast an almost envious eye on the freedom of her less gentle sisters, when she feels that at no moment of the day is she ever alone, free to read, write, or think, as seemeth to her good. For the domestic male cannot do anything alone; if he writes a letter he must recite portions and discuss the choice of words; and even if, as is frequently the case, he adopts his wife's suggestions, never gives her the credit of them. If he reads, he requires her to be ready to listen to extracts that may strike him; while if he elects, as he often does, to talk about nothing in particular, she must abandon every other occupation to be ready to listen and reply. He always drives with her, even in the brougham, which most men would consider the direst of penances; thereby rendering her visits totally uninteresting, and her shopping a delusion and a snare; hurried over because he is impatient, instead of undertaken comfortably, and as a pleasure. Sometimes as a rare occurrence, he will condescend to be deposited at his club, and then she has the unspeakable indulgence of paying a visit by herself, and for once really talking to the woman on whom she calls.

Those to whom this is a matter of daily occurrence will hardly understand the privilege; but let the wives of domestic males say if it is not an undoubted one. Naturally such a wife loves society—who can blame her? it is her only escape from one constantly-recurring set of ideas,—and of all forms of it prefers a dinner-party, where for nearly two hours she is absolutely safe from martial interference with her discourse. It is generally a matter of considerable surprise to the domestic male if he perceives that this wife's conversation is considered interesting; he thinks it very vapid, and does not deign to reflect that if two people are constantly together and never go out independently to obtain fresh ideas, their stock is somewhat apt to run low. He frequently waxes peevish, remarking that she looked very animated, but does not evidently think it worth while to amuse him. Poor woman! She feels the accusation is hard; she knows that if, like other men, he went about among his fellows, talking to men at the club or elsewhere during the major portion of the day, and leaving her free to read quietly in the morning and to receive her friends, or visit them comfortably in the afternoon, they should meet again at dinner with fresh ideas, and have something to talk to each other about. As it is, a *tête-à-tête* dinner at home coming at the end of a day spent together is apt to be but a dull entertainment; love great and deep as it may be, will not insure a constant flow of ideas, and she feels it is hard to be reproached for not being amusing, or called frivolous for looking forward to a dinner-party as a positive relief. Of course, being in the drawing-room when he ought to be elsewhere, the domestic male hears all the household details from which men in general are so happily free; but he does not thereby lessen the labours of the mistress of the house; for carefully avoiding all the trouble of the matter, he constitutes himself a perpetual critic, nothing being so easy as to find fault, he almost invariably pronounces that everything that has been done or decided is wrong, though he fails to offer any suggestion as to any course which would have been better. It is much the same as to the management of the children; but there, his want of knowledge being greater, he is of course more domestic. Altogether his wife often feels, when she hears her friends deplore the time spent by their husbands at their clubs, that she wishes they could for six months be subjected to all the tiny annoyances inseparable from union with the really domestic male.

REUTER'S TELEGRAMS.

LONDON, July 12th, 1877.

INTELLIGENCE FROM THE SEAT OF WAR.

Despatches report that the Russian left wing has retreated and that the Turkish right wing is pursuing it.

WAR IN TURKEY IN EUROPE.

J. M. BATCHELDER,

Against

THE PROCEEDS OF THE SALE OF THE BARQUE

"CAYALTI."

TO THE FORMER OWNER OR OWNERS OF THE SAID BARQUE AND ALL OTHERS WHOM IT MAY CONCERN. GREETING.

WHEREAS an action has been brought in this Court by the above-named Plaintiff against the proceeds of the sale of the Barque *"CAYALTI,"* now in the hands of the UNITED STATES CONSUL-GENERAL for Japan, praying that the said proceeds may be paid to him on account of monies advanced and transportation and supplies furnished to the crew and coolies belonging to the said Barque *"CAYALTI."*

Now therefore take notice, that unless answer be filed therein within three months from the date hereof, judgment will be taken by the said Plaintiff according to the prayer of his Petition.

Given under my hand with the Seal of said Court affixed, this 28th day of May, A.D. 1877.

(Signed) THOS. B. VAN BUREN,
[Seal.] U. S. Consul-General.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—During the last week a fair business has been done, especially in *Yarns* and *Shirtings*. *Yarns* 16/24 are weaker, whereas 28/32 are saleable at current rates and 38/42 are moving in small lots. *Shirtings* :—Heavy importations of 7lbs. and 8¼lbs. low qualities from China had a depressing effect on the sale of these chops, and quotations must be reduced. The medium and best makes of 8¼ lbs. and 9lbs. continue fairly saleable at advanced rates. In *Velvets* a good business has been done at current prices. For *T. Cloths* the demand has subsided. *Drills* are dull. *Turkey Reds* are saleable; light weights at the former low rates, whereas heavier goods show a slight advance.

Grey Shirtings :—							
7 lbs.	38½ yds.	39 in.	per pce.	$1.40 to $1.75	White Shirtings:—		
8 lbs.	38½ yds.	44 in.	,,	1.70 to 2 30	60 to 64 reed 40 yds.	36 in.	per pce. 2.20 to 2.40
8 lbs. 4 to 8½ lbs.	38½ ,,	39 in.	,,	1.60 to 2 40	Turkey Reds 24 yds.	30 in.	2—3 lb. per lb. 0.67½ to 0.77½
9 lbs.	38½ ,,	44 in.	,,	2.00 to 2.62½	Black Velvets		7.00 to 8 25
T. Cloth 7lbs.	24 ,,	32 in.	,,	1.45 to 1.65	English Drills 14/15 lbs.	40 yds.	30 in. 2.40 to 2.75
,, 6lbs.	24 ,,	32 in.	,,	1.10 to 1 25	Taffachelass	12 yds.	48 in. 1 70 to 2.15

Yarns.—

No. 16 to 24	per picul..	$28 50 to 32.00	No. 38 to 42 ...per picul...$35.00 to 40.00
No. 28 to 32	per picul..	$31.50 to 34.75	Reverse Twist 16-24 ,, —

Woollens.—During the last week business has been very limited, and prices have not undergone any alteration except for *Mousselines de Laine*, which are firmer again and command higher rates. The demand for *Blankets* and *Blue Army Cloth* still continues, but owing the paucity of stocks, no transactions of any importance can be mentioned. In other articles general dullness prevails.

Plain Orleans	40—42 yds.	32 in.	5 50 to 7.00	Figured Mousselines de Laine	30 yds.	30 in.	0 24 to 0.28
Figured Orleans	29—30 yds.	31 in.	4 25 to 5.25	Multicolored ,,	30 yds.	30 in.	0.28 to 0.36
Shimagoro	30 yds.	30 in.	4.00 to 5.25	Cloth, all wool plain or fancy	48 in. to 52 in.		0.80 to 1.20
Italian Cloth	—30 yds	32 in.	0 22 to 0.31	Presidents	54 in. to 56 in.		0.60 to 0.65
Camlet Cords	29—30 yds	32 in.	5.75 to 6.00	Pilots	54 in. to 56 in.		0.45 to 0.55
Camlets Asstd.	56—58 yds.	31 in.	16 50 to 17.50	Union	54 in. to 56 in.		0.60 to 0.75
Lastings, Japan	22—30 yds.	32 in.	12.00 to 13.00	Blankets, scarlet & green	6 to 8 lbs.	per lb	0.40 to 0.48
Plain Mousselines de Laine	—30 yds.	30 in.	0.16½ to 0.18				

Sugar.—There has been scarcely any change in this market since our last report. Total stocks of all kinds amount to 90,000 piculs.

Sugar:—Takao in bag	per picul	$4.90 to $5.00	China No. 4 Kook-fah	per picul	$7.30 to $7.80
,, in basket	,,	$4.85	,, No. 5 Kong-fun	,,	$6.70 to $7.20
Taiwanfoo in bag	,,	$4.90	,, No. 6 E-pak	,,	$6.00 to $6.50
do. in basket	,,	$4.80	Swatow Brown	,,	None.
China No. 1 Ping-fah	,,	None	Daitong	,,	$4.30
,, No. 2 Ching-pak	,,	$8.60 to $9.00	Japan Rice	,,	$2.10 to $2.35
,, No. 3 Ke-pak	,,	$8 00 to $8.40	Kerosene Oil	,,	$4.00 nominal.

Kerosene Oil remains in the same position as last reported; no transactions have been reported, and prices are quite nominal.

EXPORTS.

Silk.—The following was our report per American mail of 11th instant:—

Immediately after the issue of our last mail report, several transactions in new Hanks took place at a further considerable decline, but arrivals being very limited, and the demand having increased, an advance of $20 to $30 per picul was afterwards established, and now the market closes firm, though only a few houses have as yet operated. Purchases of old Oshius and Filatures have been effected at quotations. Settlements are 425 bales of Hanks, and 100 bales of Oshius and Filatures,—in all 525 bales. Stocks consist of 600 bales of old, and 30 bales of new Silk.

The total export for the season 1876-77 has been 21,217 bales, against 13,591 bales during the season 1875-76. Since the 1st of July shipments amount to 370 bales, against 165 bales for the same period last year.

We quote:

		In London at 4s. 1½d. per lb.	*In Lyons at f. 5.20 per kilo.*
Hanks, Good No. 2	$530 to 550	19/9 to 20/5	54.50 to 56 50
,, Good all round No. 2½	$500 to 520	18/3 to 19/5	51.50 to 53.50
,, Medium No. 3	$470 to 490	17/8 to 18/4	49 00 to 50 50
,, Common to inferior No. 4 & 5	$420 to 460	15/11 to 17/4	44.00 to 48 00
Oshius, Good	$510 to 530	19/ to 19/9	52.50 to 54.50
Hamatski	$420 to 460	15/11 to 17/4	44.00 to 48.00
Filature Silk, best	$700 to 720	25/7 to 26/3	71.00 to 73.00

Since then about 180 bales of Hanks have been settled at an advance of $10 to $15 per picul on above quotations, and 20 bales of Filature Silk have been delivered against contract. The stock of new Hanks is 100 bales.

Tea.—The second crop having come in freely since the commencement of this month, prices have been decidedly weaker and a drop of $2 per picul has occurred on last quotations. The quality, however, has so much deteriorated, as to preclude general buying even at this decline.

Settlements for the interval since the last American Mail amount to 11,400 piculs, and stocks in first hands are rather heavy.

Quotation are as follows:—

Common	$ 9.00 to $11.00	Fine	$25 00 to $28.00
Good Common	$12.00 to $15.00	Finest	$29.00 to $32.00
Medium	$16.00 to $18.00	Choice	$34.00 & upwards.
Good Medium	$.9.00 to $21.00	Choicest	—

EXCHANGE AND BULLION.

Exchange.—Sterling rates have remained perfectly steady during the past week, with very little doing.

Rates close as follows:—

Sterling—Bank 6 months' sight	4s. 1d.	On Shanghai—Bank sight	75
,, Bank Bills on demand	4s. 0⅛d.	,, Private 10 days sight	76
,, Private 6 months' sight	4s. 1⅛d.	On New York—Bank Bills on demand	97
On Paris—Bank Sight	5.02½	,, 30 days sight Private	98½
Bank 6 months' sight	5.10	On San Francisco—Bank Bills on demand	97

INSURE YOUR HEALTH

BY TAKING

HOCKIN'S

IMPROVED SEIDLITZ POWDER.

IT differs from the Seidlitz Powders usually sold in having all the ingredients in one bottle, is quite tasteless, and may be taken by persons of all ages as a *Cooling Beverage, Mild Aperient* or *Brisk Purgative* according to dose. Its extensive use during nearly HALF A CENTURY proves its valuable qualities as a Purgative Saline, and the fact that the powder retains its qualities for any number of years renders it a most reliable and efficient Domestic Medicine. It will be found invaluable to Families, Travellers, or Emigrants, as a preventive or remedy in all cases of **Sickness, Headache, Bilious Attacks, Fevers,** and the other ordinary **ailments** of life.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of al kinds It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to look up the small remaining stock"

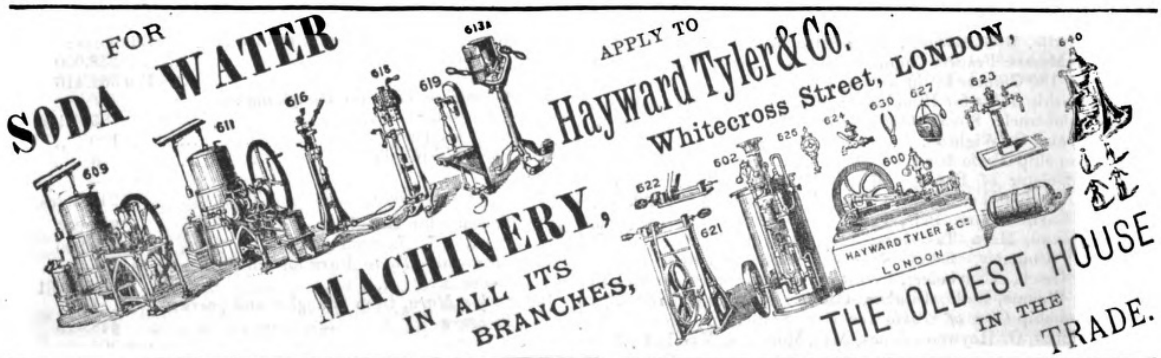
Sold by all Chemists and Medicine Vendors throughout the World

May 17th, 1873. tf.

THE FOLLOWING

IS AN

EXTRACT FROM A LETTER



dated 15th May, 1872, from an old inhabitant of Horningsham, near Warminster, Wilts:—

"I must also beg to say that your Pills are an excellent medicine for me, and I certainly do enjoy good health, sound sleep and a good appetite; this is owing to taking your Pills. I am 78 years old.

"Remaining, Gentlemen, yours very respectfully,
To the Proprietors of L. S.

NORTON'S' CAMOMILE PILLS, London.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omissonto renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

In spite of the prophetic utterances of the native press, there is nothing in ths news of the past week to lead one to to believe that the struggle in Kiushiu is approaching a speedy termination. We repeat that efforts have recently been made, and we believe still continue, to bring about a compromise with Saigo, and put an end to the cruel strife that has been waged too long. That such efforts will be crowned with success we can scarcely hope, but that they have been made on the part of the Japanese Government we positively assert. The news from the South is of the vaguest nature. If the strength of the insurgents has decreased at some points it has been augmented at others, and no definite result appears to be gained by the almost bloodless skirmishes that are day by day reported. On one occasion a great victory is accomplished with the loss of *one* man wounded. Another time the press is exultant over the capture of *seven* rifles. As long as it is considered necessary to publish lengthy reports of such victories in order to give proof of the invincibility of the Imperial arms, we must be pardoned if we doubt the speedy subjection of Kiushiu. Two thousand more troops were sent down at the beginning of the week. We say troops but we cannot call them men. It was as though the Government had said, "Give me the spare men and spare me the great ones." Those that were not young boys were old men, and surely a sorrier sight was never seen than this last batch of recruits. They seemed for the most part to have been called direct from the fields, and many a one could have said truly with Ralph Mouldy "my old dame will be undone "now for one to do her husbandry and her drudgery. You "need not have pricked me, there are other men fitter to go out "than I." We suppose recruiting has come to that pass when there must be "a number of shadows to fill up the muster book." But why were so many veterans, strong hardy fellows, good men and true, allowed to return with Kawaji?

Nothing could be more propititious than the weather on Thursday night, which was the evening selected for the third Promenade Concert by the Amateur Dramatic Corps. It was perfectly calm and still. No dew fell to cause any anxious fears as to bedraggled dresses or the appalling consequences of wet feet. A brilliant moon softened the light of the many lanterns which, in marked contrast to the former occasion, burnt undisturbed by the faintest breath of wind. Never before have the arrangements been so successfully carried out, and although the attendance was not so large as on the two former occasions, still no complaint could be made of its paucity. Thanks to the courtesy of Admiral Reynolds, Captain Young and the officers of the *Tennessee*, the band of that vessel was allowed to attend, and gave a good programme in a very acceptable style. We are not going to compare it with the band of the *Atalante*, which is of entirely exceptional excellence. Playing after such a band is to put other naval bands at a serious disadvantage if comparisons are instituted. But taken by itself the *Tennessee's* band is an extremely good one, and considering its numbers, plays remarkably well, especially the lighter styles of music. We may specially remark, Schubert's 'Serenade,' a Mazurka by Faust—not by Gounod as the programmes had it, though it is not surprising that the name of the former, a famous composer of dance music, should get mixed up with that of the latter—and a waltz "La Jolie Parfumeuse," which were excellently played. The vocal selections were repetitions of those given on the former occasions, and went neither better nor worse than before. We still cling to the hope that it is possible to form a Glee Club that shall make itself heard and be worth the hearing. We appeal to all singers to come forward.

We are in receipt of two tables of Japanese Weights and Lineal Measures which have been compiled, apparently with great care, by Mr. William Bramsen. There has long been felt a want of reliable tables of this kind, which are required both for practical and scientific purposes. Some time ago, the matter of the equivalent in English for Japanese weights and measures was discussed in the *Mail*, Mr. Bramsen pointing out certain inaccuracies in some of the denominations under this class in Dr. Hepburn's dictionary. Dr. Hepburn at once recognised the discrepancies, which had occurred through inadvertence, and they have, we believe, since been corrected. Mr. Bramsen has evidently been at great pains to calculate the exact equivalents and to make up the tables, which will prove of the greatest value to all whose business or profession necessitates their use. We may remark that it is to the same gentleman that we are indebted for the tables of distances, weights and measures that appeared in the "Ladies' Directory."

The *Hiroshima Maru* was despatched to Kobe to-day on Government business, her place on the berth for Shanghai and ports being taken by the *Nagoya Maru*, which is announced for departure on or about Friday, the 27th instant.

We publish elsewhere Dr. Willis' report of his journey to the North in the winter of 1868, which he undertook in order to render medical assistance to the Japanese troops who had been wounded in the conflicts which took place between the Imperial forces and those of Aidzu, in the Civil War preceding the restoration of the Mikado. On the eve of Dr. Willis' return to his native land after so long a residence here, it is fitting that something should be known by present residents of the services he has rendered; services so modestly estimated by himself, and yet doubtless productive of the most important results. He took occasion, at every opportunity, to inculcate the principles of humanity in war, and compassion to wounded enemies, and there can be no doubt that those teachings have been remembered and acted upon. Bloody as the strife has been, and will, we fear, continue to be in Kiushiu, there have been no reports of cruelty, or of neglect of wounded on either side. Indeed the influence he immediately exercised was proved by his being invited by the Commander-in-Chief of the Mikado's forces to proceed to Wakamatsu, the stronghold of Aidzu, directly it was taken, and by the fact that nearly 700 of the patients he attended belonged to the Aidzu clan. These services, and the arduous duties and privations they entailed, were entirely voluntary on the part of Dr. Willis, and without remuneration of any kind from the Japanese Government. He was at the time in the service of Her Majesty's Government, but permission was granted him to undertake the journey, at urgent solicitation on the part of the Japanese.

A number of visitors, both native and foreign—amongst the latter of which we noticed a leavening of ladies—assembled by invitation of the Japanese authorities, upon the 13th instant at the *Kaigunsho*, for the purpose of witnessing the annual distribution of prizes—now for the first time held in public—to the Cadets of the Imperial Naval College who were successful at the midsummer examinations.

Owing to the difficulty of finding a suitable room in the building the ceremony was held upon the parade ground of the institution, where a central marquee for the officials of the College, flanked by two rows of open tents to accommodate the visitors, had been erected. In the mid space thus left, the Cadets, upon whom no doubt the future efficiency of the Navy of Japan will altogether depend, were drawn up in double line, under command of the officer of the day. The ceremony was a simple one enough; upon the name of a prize-winner being called he stepped out of the ranks, and advancing to the table in the marquee received at the hands of Rear-Admiral Nakamuda the prize for which he had fought, after which he retreated to his former position amongst his comrades.

The examinations of which these proceedings were an appropriate sequel may be described as a triple event, composed firstly, of the ordinary class examinations designed to ascertain the amount of progress made by each individual Cadet in the subjects taught to him during the previous twelve months;—secondly, the entrance examination for students prepared at the Preparatory School attached to the College;—and thirdly, the final examination of Cadets whose period of theoretical instruction had come to an end, and who, on receiving certificates of efficiency, are drafted to the training ship for one year's practical instruction afloat, at the end of which time they become eligible for promotion to the rank of Sub-Lieutenant.

The plan of instruction pursued at the College may be briefly summed up as follows. After two years of preparatory training in the Junior School, the Cadet is admitted to the College proper by examination in the following subjects:—English, Geography, Arithmetic, Algebra, Geometry, Trigonometry (the use of logarithms). In these branches of learning he must gain two-fifths of the marks allotted to each, in order to qualify for admission. The curriculum then requires the successful candidate to undergo a three years' course of instruction at the College in nautical and mathematical studies, seamanship and gunnery, at the end of which time he receives a certificate of qualification—being classed according to merit in one of three classes—after which he passes to the training ship to complete his education. It will thus be seen that each naval officer is under special instruction for six years; two of which he passes in the Preparatory School, three in the College proper, and one at sea.

In addition to the Cadets under the immediate superintendence of Lieut. Baillie, R.N., Director of nautical studies, and receiving naval instruction, there are a certain number who are being trained for Engineer officers under Chief Engineer F. W. Sutton, R.N. The course which these latter have to go through is divided into a theoretical one taught at the College and a practical one at Yokosuka.

Such is a meagre outline of the work done at the Imperial Naval College. That the happy blending of theory and practice manifest therein is likely to produce an able and useful officer who can doubt. The Cadet is taken in hand at such an early age—we noticed some very mannikins—that he is easily impressed with those habits of order and obedience which are so essential to the very existence of the service he is destined to belong to; and that that service is a popular one is amply evidenced by the very high standard of marks obtained at the examinations, and by the uniform good conduct which has hitherto marked the career of the Cadets at the College. Indeed, we have been assured that so much was this latter the case, that the utmost difficulty was experienced in selecting, where everyone was well conducted, the Cadet whose conduct was sufficiently remarkable to permit of it being said that he deserved to be rewarded any more than his neighbour.

A word about the prizes may not be amiss. They consisted, as might be expected, of articles likely to be of use to the winner, and were really in most cases handsome and substantial gifts. Watches we noticed, and telescopes, boxes of instruments, and text books on nautical and mathematical subjects. All useful on board ship, whether it might be to scan an enemy's coast, or time a royal salute, or pass an hour or two of study in the cabin.

Where everything was satisfactory it may seem invidious to breathe a word of dispraise; but really we do not mean to hurt any body's feelings when we say that the Imperial Marine Band which was in attendance was not as good as it might have been. It is generally considered essential to harmony that some kind of time should be kept, and fastidious persons even go so far as to say that the instruments should be in tune. We know that it is difficult to please everybody, but we venture to suggest that if music is a *sine qua non* at such ceremonies, a mechanical piano or a musical box would silence such complaints, or at least obviate the possibility of two different tunes being played at the same time.

We have to acknowledge the receipt of a pamphlet entitled Confucianism in relation to Christianity by the Rev. James Legge, D.D., LL.D., Professor of the Chinese Language and Literature in Oxford University. The essay was written, we are told in the preface, at the request of the Committee of Arrangements for the General Missionary Conference held at Shanghai in May last, but was omitted from the printed record of proceedings, "in "deference to the wishes of those who regarded it as taking "one side in the controversy respecting the terms to be used "for God in Chinese language." The high reputation of the author, who stands, we believe, preëminent among foreign students of Confucian literature, to the study of which the unceasing labour of nearly forty years has been devoted, entitles his views to be received with respectful and dispassionate consideration, however much they may differ from those generally held by the members of the Missionary Body. Those views are expressed with great moderation, and throughout the essay we remark a liberal tone, but too often wanting in similar productions. Dr. Legge, instead of attempting to destroy and root out the old beliefs, would take what he finds of good in them and make them the ground work of deeper, richer truths. This is well put forward in the following closing paragraphs of the essay:—

I will now conclude by referring to a conversation which I had not very long ago on missions, with one of the ablest and most

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

learned men n England, a very broad churchman, and perhaps something more. "I have read and thought," he said, "about the work of missionaries, and approve of what they are doing; but I think they might find a more excellent way than that which they generally take to accomplish their end." I asked him what way of missionaries made him express himself in such a manner, and he replied, "You dash too much into collision with the existing heathen religions, and speak too bitterly of their great teachers." I told him that so far as my knowledge of missionaries and their work went, he was labouring under a misapprehension as to their methods; that they were glad to recognize whatever was good and true in the heathen religions, and careful not to excite angry feelings in their hearers, by speaking evil of dignities, and rashly condemning the great names they had been accustomed to venerate. He would be glad to think so, he said; but he still seemed unconvinced. After leaving him, I mused on our conversation, and have often mused on it since, something in the following way:—

Christianity cannot be tacked on to any heathen religion as its complement, nor can it absorb any into itself without great changes in it and additions to it. Missionaries have not merely to reform, though it will be well for them to reform where and what they can; they have to revolutionize; and as no revolution of a political kind can be effected without disturbance of existing conditions, so neither can a revolution of a people's religion be brought about without heat and excitement. Confucianism is not antagonistic to Christianity, as Buddhism and Brahmanism are. It is not atheistic like the former, nor pantheistic like the latter. It is, however, a system whose issues are bounded by earth and by time; and though missionaries try to acknowledge what is good in it, and to use it as not abusing it, they cannot avoid sometimes seeming to pull down Confucius from his elevation. They cannot set forth the gospel as the wisdom of God and the power of God unto salvation, and exhort to the supreme love of God and of Christ, without deploring the want of any deep sense of sin, and of any glow of piety in the followers of the Chinese sage. Let them seek to go about their work everywhere—and I believe they can do so more easily in China than in other mission fields—in the spirit of Christ, without striving or erring, with meekness and lowliness of heart. Let no one think any labour too great to make himself familiar with any Confucian books. So shall missionaries in China come fully to understand the work they have to do; and the more they avoid driving their carriages rudely over the Master's grave, the more likely are they soon to see Jesus enthroned in his room in the hearts of the people.

We have to acknowledge the receipt of the Fifth Annual Report of the Silk Association of America; an association which has been formed within the last five years for the purpose of promoting the advancement and prosperity of the silk interest,—which is commencing to form so important a branch of American industry—by the increase of information, and the interchange of ideas. The past year has been specially characterized by the opportunity afforded to the American manufacturers to exhibit to the world at the Philadelphia Exhibition, the progress attained in this branch of manufacturing. The silk industry is one that has been struggling into existence for many years, but it is only comparatively recently that it has achieved anything like success. It was not, however, until the Centennial Exhibition that the extent and completeness of that success was generally known. As the Secretary states, "The memory of its early failures "still clung to the business. The prejudice in favour of foreign "goods still lingered among American consumers, and the "days had not wholly passed in which it was thought needful "to stamp domestic manufactures with European names to "make them saleable on equal terms. That American silks "were, in certain lines, of more substantial material, of brighter "and more permanent colour, of neater finish, of more tasteful patterns than those which Europe could supply—these "were new facts to most Americans, facts which they learned for "the first time and greatly to their surprise, last year, at "Philadelphia."

We shall endeavour at some early date to enter more fully on the subject of the silk industry of America, which seems to be fairly progressing. Space forbids us at present to do more than briefly notice the report.

The *Hochi Shimbun* reports that on the 15th instant the leading political Society in Tosa held a meeting which was attended by seven thousand five hundred *samurai*.

The *Tokio Times* of this week presents those usual features of impertinence and abuse by which it is has endeavoured, failing other means, to bring itself into notoriety, and to the monopoly of which it is heartily welcome. We regret that we have again to call attention to certain mistatements, which cannot in the interest of the public be permitted to pass unnoticed. In a note of last week in which we showed the incorrectness of certain statements made by Mr. Henry C. Carey in a letter to the London *Times*, we wrote as follows.

Accordingly we find that Lord Elgin provided in his treaty of Tientsin signed 26th June, 1858, for a revision of the Commercial Articles in ten years time from the date of signature; and that Mr. Harris, in his Treaty with Japan signed July 29th, 1858, a month after that of Lord Elgin with China, provided for a revision in 1872. Lord Elgin's Treaty with Japan, signed August 26th, 1858, contained a similar provision.

The *Tokio Times* proceeds to comment on this in the following manner:—

"It states that Mr. Harris and Lord Elgin "provided for "a revision of the 'Commercial Articles' of the agreement, "to take place in 1872; the truth being that both these "Ministers, as well as others, arranged for the revision of the "most important of the Commercial Stipulations, viz, the "customs duties, in 1863 and not in 1872. These oversights "betray a carelessness of inquiry as to the exact details, &c."

We stated nothing of the kind, the "oversights betraying carelessness" or a wish to misrepresent, being entirely on the side of the *Times*, which has mixed up several different things. Thus Lord Elgin in the 27th article of the Treaty of Tientsin provided for the revision of the commercial articles of that Treaty in ten years time, that is in 1868, Mr. Harris by the 13th article of his Treaty of Yedo and Lord Elgin by the 22nd article of his Treaty of Yedo, provided for the revision of the said Treaties in 1872, that is the revision of the Treaty generally, not only of the Commercial Articles. All of this was clearly stated in the *Mail* of last week. The revision of the Custom's duties, only, of Mr. Harris' and Lord Elgin's Treaties was another matter, and is thus referred to at the end of the Regulations of Trade attached to those Treaties.

Mr. Harris' Treaty.

"Five years after the opening of Kanagawa the import and export duties shall be subject to revision if the Japanese Government desire it."

Lord Elgin's Treaty.

"Five years after the opening of Kanagawa the import and export duties shall be subject to revision if either the British or Japanese Government desire it."

As is well known, the Japanese Government expressed no desire to have the import and export duties revised in 1863, and profiting by Lord Elgin's stipulation that this revision should not be left to the option of Japan only, the United States of America joined with the other powers in demanding a revision of these duties in 1866, and the present Tariff is the result.

Every paper has recently quoted the terrible story, for which we believe the London *Echo* is responsible, of a Russian peasant, travelling in a sleigh with his wife and four children, when they were pursued by a pack of wolves, from which he and his wife escaped only by the sacrifice of the whole of their family. It is astonishing how history repeats itself, as anyone with a fairly good memory will often have cause to remark. We distinctly remember an almost exactly similar case of which we heard the account thirty years ago. In fact we were always hearing it, for its horror rendered it a story dear to the boyish mind. It was contained in the pet book of our juvenile library, and great was our shuddering delight when we could wheedle any one into reading the dreadful tale. Its blood curdling powers were intensified by a full page picture of the sacrifice. How vividly can we recall that picture. A pack of ferocious beasts in the foreground engaged over the body of one innocent, while the father holds aloft another which he is about devote to the wolves that are endeavouring to spring into the sleigh. The crouching mother holds another child convulsively clasped to her breast, while the terrified horses are seen careering madly through the snow. In this case there were only three children. The *Echo* makes the number up to four. Thirty years hence when a similar terrible event is chronicled the number of children sacrificed will probably be five. There is another version of the story, which relates that the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

wife's mother was also in the sleigh. The husband, finding that the sacrifice of all his children did not suffice and that the wolves still continued their pursuit, in utter desperation threw to them his mother-in-law. "And they lived happily ever after." But we do not believe this.

On the 6th instant, during her passage down to Hongkong, the O. & O. Co.'s steamer *Gaelic* rescued six Japanese from a disabled junk. Three other of the junk's crew had died from starvation before the *Gaelic* appeared, and the six rescued men were in a very weak state from the same cause.

We take the following account from *Notes & Queries*:—

ORIGIN OF THE AMERICAN DOLLAR MARK(5th S. vi. 386, 434; vii 98, 155.)—The most natural explanation of the American dollar mark seems to be this. Before the establishment of our national coinage system each state issued its own paper currency, which was naturally, from its previous colonial condition, in pounds, shillings, and pence, but the Spanish or Pillar dollar was the specie standard by which all paper money values were regulated. It was on this specie standard that the Continental currency was issued. This Spanish dollar was divided into eight parts, or reals, and wherever Spanish influence was felt or its commerce had penetrated, it freely circulated. To English speaking people it was known as the piece of eight, and thus Defoe calls it in *Robinson Crusoe*. Prior to the American revolution Florida was a Spanish province, and Louisiana, although nominally French, held intimate commercial relations with the Spanish dependencies of Mexico and Cuba. Naturally the Spanish dollar had free circulation. Accounts were kept in dollars and reals, that is, in pieces in eight and eighths; and, as a distinguishing mark, a cancelled 8 was used, or sometimes an 8 between two slanting lines thus /8/. A period separated the digits representing the reals or eighths from those representing the dollars. When the dollar was adopted by the United States as its money unit, merchants found it convenient to continue the use of the sign, while the period separated the cents, now represented as hundredths, from the dollar figures. But the Spanish dollar and its fractional parts still circulated, although the word *real* was displaced by the more easily pronounced term "bit," which word is still in common use in the states bordering on the Gulf of Mexico. Dollars and "bits" are better known there than dollars and cents. Ask a shop-keeper in New Orleans, or Mobile, or in Montgomery, the price of an article, and he will say "two bits," where his Northern *confrère* would say "twenty-five cents." But the "bit" is now an imaginary coin, like the English guinea, although once it had a function for making small purchases, and was known in Philadelphia as a "levy," and in New York as a "shilling." It is but a few years since that while in the South I had occasion to verify a statement of account that had been made out, according to ancient custom, in dollars and bits. A smaller coin was formerly in use, dear to darkies and to little children, useful for the purchase of candy, and known to common speech as the "picayune." The dollar mark from a cancelled 8 passed by an easy transformation to a cancelled S, and gave rise to a very ingenious but totally mistaken theory concerning one Uncle Sam, or the plausible but equally baseless idea that it repesents the initials of the words United States. JOEN E. NORCROSS.
Brooklyn, U.S.

From the "Japan Mail Daily Advertiser."

Monday, 16*th*.

The annual opening of the Sumida-gawa took place yesterday evening. The display of fireworks commenced at dusk and was kept up until after 10 o'clock. The number of spectators was even greater than usual, and everything passed off successfully.

The *Genkai Maru* and *Kumamoto Maru* were despatched yesterday with reinforcements for the South, about 3,400 soldiers having been on board those vessels. The *Saikio Maru* will take down another 1,300 to-day.

The Agent of the Great Northern Telegraph Co. informs us that the Singapore and Penang cable is at present interrupted during repairs by a steamer of the Eastern Extension Co. A speedy restoration is probable.

The steamship *Glenfalloch*, Captain Taylor, from London, arrived at Singapore on the 24th ultimo.

The *Harriet N. Carleton* from Hongkong, with 322 coolies, put in here on Saturday, and left again yesterday for San Francisco, after repairing damages to sails and filling up her water.

From the *Hôchi Shimbun*.

A telegram despatched by Colonel Ozawa at 6 p.m. on the 12th instant, announces that a report had just been received from Lieut. General Miyoshi to the effect that the rebels had evacuated Kobayashi after setting the town on fire. The Imperialists are now occupying the town.

Tuesday, 17*th*.

We have to acknowledge the receipt from the British Postmaster of a revised Postal Tariff, dated Hongkong, July 3rd, 1877, and which was accompanied by the following circular:—

A Table of Rates of Postage corrected to date is circulated herewith. It is suggested that all former issues should be destroyed, as keeping them can only give rise to errors and inconvenience.

Various countries have joined the Postal Union since the last Table was published, the most important being Brazil.

It appears to be but imperfectly understood that the general rate of Postage to a Union Country, by whatever route, is 12 cents, &c. The 16 cents rate is wholly exceptional, and is only chargeable when there is a transit by Brindisi AND LONDON, including correspondence for London viâ Brindisi. The same applies to the exceptional 4 cent rate on Newspapers, Circulars, and Prices Current.

The mark T upon correspondence signifies that it is unpaid.

There is no charge on redirected correspondence under the Postal Union.

The *Hôchi Shimbun* of yesterday contains the following extraordinary announcement:—"The Government has decided on instituting improvements at the Bonin Islands, and has sent there a lot of gas tubes and other articles." This is certainly improvement with a vengeance, if we are to suppose that sending gas tubes to those sparsely populated islands is only preparatory to lighting them with gas. What will our Gas Committee say now—or rather what will they do? for that is very much more to the purpose as far as this settlement is concerned.

From the *Nichi Nichi Shimbun*.

The Imperial forces in Bungo have been reinforced so that they are now very strong. The Naval forces are to be landed on the coast of Hiuga south of Nobeoka, and the rebels in that part are to be attacked simultaneously in front and rear.

From the *Osaka Nippô*.

A person returning from Bungo says that although he expected that nearly all the arms and ammunition of the rebels would have have been exhausted, they still seemed to have abundant supplies of them. Kirino is in Bungo at the head of eight companies of troops, and is assisted in his command by Ishi-i and Hemi, both Saga men who took part in the rebellion which some time ago broke out at that place.

Wednesday, 18*th*.

Mrs. Rappeport was sued by a Japanese shoemaker before Mr. Consul Robertson yesterday morning for $8.50, the value of boots supplied. The complainant produced in Court a bundle of lady's clothing which he said had been forced upon him in payment. A verdict was given on a note of hand for $4.50 which Mrs. Rappeport acknowledged, and she was advised to take possession of her dresses again.

In the American Consular-General Court yesterday a complaint, brought by Mrs. Miller against her husband for assaulting and abusing her on Monday evening last and on several other previous occasions, was heard before Mr. Dennison, Vice Consul-General. The charge was found proven and Miller was fined $5 and $12 costs, with the alternative of 15 days' imprisonment. The fine was paid but not without some grumbling on the part of Miller, who dropped certain remarks which did not escape notice for he was recalled, and on the testimony of Mr. Elmer, the deputy marshal, was found guilty of contempt of and using threats against the Court, to the effect that he would "do justice" to His Honour and "put a head on him." Miller denied that his words implied any threat and said that he had been led to use them through annoyance, but the Court took a different view of the matter and sentenced him to imprisonment for twenty-four hours.

From the *Mainichi Shimbun*.

A telegram from Osaka despatched at 5.40 p.m. on the 15th instant, says that at 3 p.m. on the 12th instant a body of Imperialists made an attack upon Kurosawa while another body stormed the rebel entrenchments at Ishigami mountain pass. The rebels at both places were surprised and put to flight. The Imperialists stationed themselves at sunset on Torihira Hill in open communication with the Imperialists at the villages of Machiye, Todoroki and Tei.

From the *Hôchi Shimbun*.

About 2,000 of the late rebels of Owake *ken* (Bungo) have been captured, 1,000 of whom were *samurai* of Takeda, 400 of Usuki, about 300 of Saiki, and the remainder of other towns in Bungo. On the 20th of last month the trial of the Choshiu *samurai* commenced and the following sentences have since been passed upon them:—Two to decapitation, fourteen to three years' hard labour, and one hundred and seventy-nine to hard labour not exceeding two years, or deprivation of the rank of *shizoku*.

From the *Nichi Nichi Shimbun*.

Lieut. General Kawaji received on the 15th instant a telegram from Colonel Tanabe at Kokubu, in Satsuma, which announces that on the 14th instant at 2 p.m. an attack was made by the rebels upon the Imperialists at Araisogatake but they were unable to carry

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

the Imperial positions and therefore retreated. Another attack was made at 5 o'clock by the rebel main body and left wing, but by 7 o'clock this attack was also successfully repulsed with great loss in the rebels. Of the Imperialists only four were wounded.

H. I. H. Higashi Fushimi-no-Miya left Yokohama on the 16th instant in command of 4,300 troops who are being sent as reinforcements to the South. His Highness is to proceed first to Kiôto and after an interview with His Majesty the Mikado will, if necessary, proceed immediately to the seat of war.

Thursday, 19th.

A fire broke out in Ai-oi-cho, a street running parallel to Otamachi, at half-past two this morning, by which about ten houses were destroyed. The foreign and native fire brigades were quickly on the spot, but owing to an insufficiency of water the engines were not of much use, though the firemen worked well in pulling down houses and thus preventing the fire from spreading. Thanks to their exertions all danger was over within an hour from the first alarm being given.

A *jinrikisha* coolie named Hoshino Eijiro lodged a complaint in the Imperial German Court agrinst H. Lotz for running into and damaging his *jinrikisha* while driving on the Bluff on the evening of Sunday, the 17th June. Hoshino backed up his complaint by a claim of $4.50, damages to *jinrikisha*, 75 cents doctor's fees and a further sum of one *bu* per day since the accident for loss of work.

Plaintiff in the hearing before Mr. Zappe yesterday said his *jinrikisha* had been rendered utterly useless, and being unable to meet the cost of repairs he was without employment. He wished the remuneration of 25 cents per day to be counted from the time of the accident till the *jinrikisha* should be repaired. Mr. Lotz's defence was that the plaintiff had occupied the middle of the thoroughfare, and as he could have moved aside but did not do so, the accident was of his own causing.

The case was adjourned till Saturday next for the production of further evidence.

From the *Mainichi Shimbun.*

A telegram despatched by Colonel Ozawa at Kumamoto at 6.15 p. m. on the 16th instant, announces that Lieut. General Tani had reported to him that an engagement took place on the 13th instant between the rebels who were at Asano-yama, numbering about two hundred, and the Imperialists at Ishigami. The rebels were beaten and put to flight, being pursued as far as Mumeki.

Another body of about fifty rebels met some Imperialist forces, when advancing from Battei, on a hill called Mikawanai, where a hand to hand encounter took place, resulting in the defeat of the rebels. This body of Imperialists then stationed themselves on hills in the neighbourhood of Mumeki.

Another report has been received from Lieut. General Miyoshi to the effect that at 3 a.m. on the 11th instant, the Imperialists proceeded in three bodies to make an attack upon Takahara. They found the rebels stationed in entrenchments on the banks of a river at Tsutsumimura, but they were driven out and the Imperialists finally took Takahara at 7 a.m.

SECOND NATIONAL BANK.

(Dai-Ni Koku-ritsu Ginko.)

Statement for the week ending 14th July, 1877 :—

Total Amount of notes (dollars) received by us from the *Shihei-rio*		1,200,000
On hand	787,675	
In circulation	412,325	
	1,200,000	
Reserve Fund		412,325
In Foreign money :—		
In dollars	263,094.98	
In Bank notes and cheques	3,230 02	
Deposited with Foreign Banks	50,000.00	
	316,325.00	
Do. in native currency	96,000.00	
	412,325.00	

From the *Akebono Shimbun.*

A telegram despatched by Lieut. General Nodzu at 1.10 p.m. on the 16th instant, announces that the troops under his command, having made arrangement with the Imperialists in Bungo, marched toward Nobeoka, but the rebels advancing in force against him, he was obliged to retreat and took up a position at the mountain passes of Akamatsu and Jônogoi. General Nodzu advises that he will remain entrenched in those positions until sufficiently reinforced by the Imperialists from Bungo, when an attack will be made on Nobeoka. The rebels are being reinforced daily at that place, and frequent attacks are made by them on Nodzu's forces. On the 14th the rebels commenced preparations for an attack on the Imperialists stationed on the Koshiki-gawa, and as it is important to retain this position in order to keep open communication with Bungo, the Imperialists will defend it to the last.

Friday, 20th.

The Danish telegraph steamer *H.C. Oersted*, which arrived from Hakodate yesterday, leaves to-day for Nagasaki and Shanghai.

The *Hiroshima Maru* has been withdrawn from the berth for Shanghai and ports, as she will be despatched for Kobe some time this evening.

There was a slight shock of earthquake at 12.40 p.m. yesterday, and another at 9.45 p.m.

From the *Akebono Shimbun.*

A telegram despatched by Colonel Ozawa at 10.30 a.m. on the 18th instant, announces that a report had been received from Captain Hirasa, at Shigeoka in Bungo, stating that at dawn of the 16th instant the Imperial forces made an advance upon Ikono-yama and the Katsuchi mountain pass. The attack upon the latter place commenced at 3.30 a.m. and all the rebel entrenchments there were captured.

The troops who advanced to Ikono-yama were delayed by a heavy rain-fall, and not succeeding in reaching the rebel batteries until after sunrise, they retired to their former position.

From the *Chôya Shimbun.*

A spy has discovered that Saigo has made the former *Kencho* at Mimidzu, in Hiuga, his headquarters.

From the *Hôchi Shimbun.*

His Majesty the Mikado is expected to leave Kiôto for Tôkiô on the 26th instant.

Saturday, 21st.

From the *Hôchi Shimbun.*

Our reporter in Kiôto has informed us that His Majesty has decided to leave Kiôto on the 26th instant, and return to Tôkiô by the *Nagoya Maru.*

From the *Chôya Shimbun.*

The *Jiyu Shimbun*, published at Nagasaki, announces that Shimadzu Yoshimitsu, the son of Saburo, requested the *Kencho* to give him two hundred *koku* of rice and other grain as he was very much in want of it. The *Kencho* complied with his request.

From the *Mainichi Shimbun.*

A report has been received from the seat of war to the effect that the whereabouts of Saigo is uncertain, but it is rumoured that he is either at Miyasaki or Nobeoka.

Kirino is evidently in Miyadani, Hiuga, and Murata at Miyako-nojô.

The rebel forces in Osumi and the neighbourhood of Mamihara have considerably decreased, while their forces in Bungo are three-quarters greater in number than hitherto.

IMPERIAL GOVERNMENT RAILWAYS.

YOKOHAMA STATION.

Statement of Traffic Receipts, for the week ending Sunday, 1st July, 1877.

Passengers, Parcels, &c.	$6,042.84
Merchandise, &c.	$ 698.15
Total	$6,740.99
Miles Open 18.	
Corresponding week last year.	
Passengers, Parcels, &c.	$5,906.82
Merchandise, &c.	$ 473.04
Total	$6,379.86

Statement of Traffic Receipts, for the week ending Sunday, 15th July, 1877.

Passengers, Parcels, &c.	$6,193.35
Merchandise, &c.	$1,027.02
Total	$7,220.37
Miles Open 18.	
Corresponding week last year.	
Passengers, Parcels, &c.	$7,571.86
Merchandise, &c.	$ 465.85
Total	$8,037.71

THE MEMORIAL OF THE *RISSHISHA*.

[Second Notice.]

THE second article of this vigorous *acte d'accusation* is in part a repetition of the first, in part a charge of incapacity and neglect of the opinion and welfare of the nation. That public opinion is rather suppressed than consulted is unfortunately true enough, but that the Government are indifferent to the welfare of the people we cannot believe. We are loth to think them guilty of more than want of judgment—a sufficiently grave offence on the part of men holding in their hands the destinies of an entire people—and we do not consider that the author of the Memorial has any substantial grounds for assuming that they are actuated by a desire to retain power regardless of the advancement and happiness of the millions whom they force to obey their beck and nod. To an impartial observer unstirred by the passions that are evidently, and we may add naturally, distracting the upper strata of Japanese society, the Government wears the appearance of a well-meaning and clever body of men not equal to the very difficult situation in which their own rashness and want of experience, aided by very untoward circumstances, have placed them ; a situation from which the suspicious distrust common with politicians of the second order that they allow themselves to be influenced by prevents their escape. The Government taken as a whole has no homogeneity. The various departments work each after its own method towards the attainment of its own special ends, and not seldom clash if they do not quarrel with each other, while the members of the Cabinet, if one may use the term, exercise far too little control over the bureaucratical army of which they are the nominal rather than the real generals. In most of the departments a similar state of things obtains and the result of the whole is a confused administration undermined by jealousies, the ways of which rather diverge from—than converge towards the good of the commonwealth. Such at least is the impression the working of the political machine leaves upon foreigners, who, however, it must always be recollected, can unaided have but a more or less obscure perception of the difficulties to be overcome and of the degree of success or failure which attends the efforts made. But this impression is corroborated, in great measure at least, by the public opinion of the country so far as this is allowed expression, and has never been confirmed in a more significant or unmistakable manner than by the statesmanlike paper we are reviewing. The body politic resembles a headless trunk, with limbs innumerable deriving their nervous energy from no common centre, and obeying external stimuli in an aimless way rather than combining their powers upon a common plan for a common object, definitely apprehended as advantageous to the whole system. Or if there are capital organs to this torso, itself not without vigour, these are individually powerless in proportion to their number and are equally destitute of community of method and distinctness of political vision or thought.

The third of the evils complained of in the memorial is over centralisation. While decentralisation is the principal political cry of the west, the concentration of all administrative power at Tôkiô (we cannot help wishing the old name of Yedo had been retained) seems to be one of the main aims of the present Government. In a country like Japan, where the means of communication are, and for many years must remain, most imperfect, no more faulty policy could be pursued. We make no doubt that much of the existing discontent is due to it. Under the *Bakufu* administration the revenues of each daimiate were for the most part spent within the daimiate itself. The *daimios*, or their councillors themselves looked after and had an interest in maintaining in an efficient state, the roads, dikes, bridges, and irrigation works of each province. The complaints of the farmers were attended to and redressed on the spot by officials who had at least local experience. The taxes were assessed with leniency, and the officers of the *daimio* were forced by public opinion to remit them largely in times of distress. A good deal of kowtowing had to be done and not a few kicks had to be stomached with as good a grace as might be, but the kowtowing was easy work, the kicks were generally more or less avoidable, the peasant was accustomed to look upon both as ordinary incidents of life, and neither as a rule cost him much money or—the grand thing—lessened either his dinner on his appetite. Now every local demand or complaint must be forwarded to Tôkiô, and months must elapse before they are entertained, while the chance of the one being accorded or the other redressed is probably much smaller than under the old régime. The taxes are assessed and collected without ruth by officials sent down from Tôkiô, and destitute of local sympathies, while the cry of the starving farmer is too distant to reach the ear of his rulers. There are, it is true, a *Kenrei* and his staff in each province, but he is little more than a clerk deputed from a Tôkiô bureau—they are clerks of a clerk, and both are frequently changed. Their principal function would seem to be teach the farmer contentedly

'Pauperiem pati,'

always a thankless and commonly a dangerous task. The fact is there is no vigour whatever in the local administration. The Tôkiô wire-pullers do not see the results of their vagaries. The *Kenrei* has no power to effect improvements and is too frequently changed to feel much interest in effecting them. The different provinces differ much from each other in their soil, their productions, the wants and the customs of their inhabitants The *Kenrei* should be a man with sufficient local knowledge and experience, and a certain proportion of his staff should be local men. Much more authority should be vested in him, and he should, under the advice of a Council General of Notables, have almost entire control of public works within his jurisdiction. In all this there would be nothing newfangled ; it would simply be a bringing back of what was good under the old system unaccompanied by the evils of the former régime. Such reform, instead of weakening, would lend fresh strength to the central Government, and would, as if by magic, cause three-fourths of the prevailing discontent to disappear. Let the Government put away their distrustful timidity and make the experiment ; we are sure the result would be such that they would congratulate themselves on the confidence they had placed in the good sense and intelligence of their countrymen. The complaint against the existing military system we must confess we do not quite understand. There must either be conscription or voluntary recruiting, and we should have

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

thought conscription was peculiarly the resource of a despotic Government. The author of the Memorial seems here to be labouring under some confusion of ideas, and his mode of treating this portion of his subject is neither clear nor satisfactory. The organisation and maintenance of the naval and military forces of the Empire are topics which we do not think we can usefully discuss, as they require a special knowledge of the country and its resources which no foreigner can pretend to possess. We feel, however, no hesitation in declaring our opinion that anything like a large naval or military force would involve an utterly useless expenditure. The military needs of Japan do not go beyond keeping internal order, and performing efficiently the police of the surrounding seas. No western power is in the least likely to attack her, nor has she anything to apprehend from China or Korea. Some day she may have, probably will have to deal with Russia. In such an event she must depend upon the friendliness of her allies, for alone it would be absurd for her to pretend to cope with the forces of an Empire stretching from the shores of the Baltic to those of Kamschatka, from the unknown barriers of the Frozen Ocean to the classic waters of the Euxine.

The mismanagement of the Finances is the next subject that engages our author's attention. He prefaces his observations by the very true remark that from this evil all nations have for a long time had to suffer, and that in countries not blessed with a limited form of Government the people are as much as possible kept in ignorance of the state of the exchequer. The reason, of course, is simple enough. Those who spend the nation's money are not commonly anxious to give an account of or justify their expenditure, and can only be forced to do so by the agency of some such more or less representative body or council as forms the very essence of a limited government.

How far the taxation of the Japanese people is excessive in degree or evil in method we are not competent to judge. Nor can foreigners be otherwise than ignorant of the extent to which the mode and cost of collection increases the severity of the burden and diminishes the net return. The principal source of revenue in Japan, as in all Asiatic countries, is the land tax. An Asiatic Government is, as it were, a great landlord, and too often acts as a mere landlord acts, treating a Kingdom or an Empire as the latter might an estate, simply as a source of income, too often spent upon premature improvements or untimely embellishments more calculated to flatter its pride than benefit its *administrés*. How far the Memorial is justified by facts in the blame it throws upon the Government for having entrusted the public funds to certain banking establishments, we are not in a positition to state. Necessity, in all probability, forced the Government to adopt this course, at all events at the beginning of the new régime, but it is a course fraught with danger, and should be discontinued as soon as possible. It has led the Government into various mercantile speculations, to assume indeed the position of a trading firm, and in thus travelling out of its proper sphere it has not only seriously injured the internal and external trade of the country, but has, as might naturally have been anticipated, had to encounter serious loss.

One praise cannot but be awarded to the Government. It has withstood with unexampled firmness the temptation it must often have strongly felt largely to over-issue its inconvertible paper money. Much more, however, is in circulation than is healthy, notwithstanding the praiseworthy self-restraint of the Government, and the time must come when the retributive economical punishment will have to be endured. That punishment indeed seems very near at hand. The internal trade is far from flourishing and the external trade apparently benefits no one. Coin is being driven out of the country, most of the gold *yen* have found their way to the foreigner's melting pot, and the costly labour of coinage has been in a great measure thrown away.

The financial question, however, is for too large a one to be capable of adequate treatment within the limits at our command, and we must take leave of it with a few remarks upon the expenditure. The sums lavished upon public works are, we conceive, far in excess if the real wants of the country. A solid stone bridge is in every away preferable to a wooden one, but until a certain pressure of traffic is felt the wooden one had better be retained. Railways, telegraphs, and lines of mail steamers are doubtless good things, but common roads and irrigation works—in a word, all such improvements as are immediately necessary for the development of agriculture and the transport of produce—are in the present condition of Japan infinitely better things. The crowds of engineers whom the Imperial Colleges—and none in the world, we take leave to say, are more efficiently organised and administered or likely to turn out better trained men or larger number of them in proportion to the resources at their command—will in a year or two send forth annually, would ruin a much richer Government in finding employment for them. The wisdom of keeping up a number of expensive European Legations is more than doubtful, and almost the whole of the enormous sums spent upon attempts at colonisation, upon mining enterprises and upon fostering particular industries for which the country is not yet ripe, have been utterly wasted. A ruinous eagerness to spend money has been too often shown, and schemes are constantly being projected and more or less carried out without due consideration as to their necessity or advisability. The result is that the country is miserably poor, only too patent a fact to any one travelling in the interior, and the only remedy that the Government seem desirous of applying is the suicidal one of a high import tariff. Such a remedy would kill the export trade, for foreign merchants could not afford to carry it on if they were not enabled to a great extent to pay for the produce they speculate in with the goods they import. Economically America, whose example is so often held up to admiration, is very differently situated from Japan. The latter country is a very small fraction of the earth's surface and with very limited resources. The United States form a continent practically unlimited in extent, and which, it is very probable, could bear the most vigorous application of protective principles without suffering more than a temporary inconvenience.

The grievances of the *samurai* are less prominently put forward in the Memorial than we should have anticipated. The difficulty of knowing what to do with them is very great, but the question is purely a domestic one and should be approached by the foreign critic with a befitting diffidence. That anything like the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

exclusive power they formerly possessed should be accorded them is not to be thought of for a moment. We fear the problem they present is insoluble, and that the difficulties of the situation must be tided over as best they may until a new generation shall have grown up, not bred in the ways of Bushidom. We are not inclined to criticise unfavourably either the cession of Saghalien which was unavoidable, or the abstention from war with Korea, which we are convinced would have been a fatally foolish policy. The Formosa expedition was probably nothing more than a mode of asserting the sovereignty of Japan over the Loochoo Islands. Whether the pretensions of Japan have a good historical foundation may be doubtful, but the group is geographically a part of the Japanese Empire and the latter could not afford to allow it to be considered as Chinese territory.

The revision of the Treaties is a matter of less importance, to our mind, than is usually supposed—of less importance at all events for the moment. The two principal questions involved in it are the alteration of the tariff and the abolition of the exterritorial jurisdiction. The right to revise the tariff is, we think, one that cannot in justice be withheld from the Japanese, but the latter are bound to approach the question in a fair and liberal spirit. That they would show a different temper if their demands were patiently discussed and the treaty powers were at one among themselves we see no reason to apprehend, though no doubt the negotiations would require great tact and moderation on both sides. As to the exterritorial question, the Japanese Government appears to have lost its interest in it. It seems to rest contented with the power of annoying foreigners in a number of petty ways—a power it exercises without stint. No serious attempts are made to introduce those reforms in the judicial and legal systems which, it must be perfectly well known, are absolutely indispensable preliminaries to the question being entertained by the Treaty Powers. The procedure is involved, vexatious and altogether inadequate to meet the wants of the country. The Japanese complain of their so-called tribunals almost as loudly as the unlucky foreigners who appear before them can do. Definite attainable civil law hardly exists. A few edicts have been issued, but the foundations of the legal edifice are not yet laid. We see no reason why one of the foreign codes—say the Italian as the best of all existing ones—should not, at all events so far as ordinary contracts are concerned, be at once adopted. With such a code and an irremovable judiciary, we believe justice would be fairly administered, and if some change were introduced into the penal code and improvements made in the prison system, the present generation—as we once before remarked—may at least be enabled to bequeath to their children a confident hope of emancipation from their present restraint. The subject is one of great interest and importance though scarcely calling for immediate action—if we may judge by the mode in which the Japanese themselves treat it. We hope at some future time to recur to it—there is hardly any subject upon which foreigners entertain notions less well founded in fact and reason—but our space forbids us to dwell upon it at present.

Finding fault is an ungracious and thankless though an easy task. We too often rail at acts of the Government without any knowledge of the pressure which circumstances bring to bear upon them. It is perhaps some relief to find Japanese committing the very offence we impute as an occasional one to ourselves. We may indeed, not without complacency, boast that we are readier to take the difficulties that beset the Government into considerations than their own countrymen are. The Memorial of the *Risshisha* shows that the errors of the Government are clearly discerned and keenly resented, but as we said at the outset, the peculiar nature of the embarrassments which from the first have surrounded them does not appear to be recognised by the author of this party-manifesto. To suppose that all the intelligence and patriotism of Japan is locked up within the bounds of Tosa, Satsuma, Chôshiu and Hizen is monstrous, and a Government founded upon such an assumption necessarily rests upon a most insecure foundation. Neither three or four clans, nor six or seven men have any right to arrogate to themselves permanently the Government of the country. As leaders of the Revolution the party actually in office were forced to assume the position they now hold, but nothing compels them to retain it, and the condition of the country is such as not only to permit of but to call loudly for the inauguration of a representative system. The four clans we have named constitute a sort of *imperium in imperio*, a kind of domination the remainder of the clans are not likely to view with approbation or endure with patience. A change must ere long come either from within or without the oligarchy of the day, and the Government will be wise if it takes in hand itself the effectuation of a change that can neither be avoided nor long delayed. Once the more intelligent classes are admitted to a share in the Government the petty rebellions that are so constantly interrupting the progress of the country will cease. Under the actual system they appear to be unavoidable. The farmers, perhaps, have no very decided political tendencies or aims, but the *samurai* are still numerous enough to form a power in the state, they are for the most part unoccupied, they cannot forget their former importance and they cannot but see that their class, less than any other, has participated in whatever benefits the Revolution may have conferred upon the country. The administration is wholly in the hands of a small section of the *samurai* class; the remainder must either contentedly accept their exclusion and endorse by their silence a policy they disapprove, or adopt some means of altering a state of things which daily becomes more and more intolerable to them. But how is either a change of Government or a change of policy to be effected under the present régime? There are no constitutional means available, and the expression of public opinion is almost prohibited. A representative assembly is the only escape from this impossible situation, and the country is quite ripe for such an institution. No doubt it would not be a panacea but it would at least restore quiet and pave the way to such a limited despotism—if one may use the phrase—as Japan must be contented, for some time to come, to live under.

Seldom, if ever, in the history of the world has so splendid an opportunity been afforded for the display of political genius as that presented by Japan during the last eight years. A docile, intelligent, laborious people, trammelled by no political traditions, torn by no religious dissensions, possessing a long established and adequate

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

administrative system and vexed by no neighbours, a happy climate, a varied and fairly fertile country and an admirable geographical position; here are all the elements of a flourishing and powerful state only waiting for the creative touch of genius to spring into existence. But the Hour has come and is slipping by, and the Man—him we do not see; and we cannot but fear that this beautiful and interesting country must shape its future destinies under the fatal guidance of a succession of political mediocrities.

MISTAKEN ADVOCACY.

WE do not for a moment doubt the thoroughly honest intentions of the *Gazette* in its defence of the Japanese Postal Authorities, while the testimony that it bears to the good offices of Her Majesty's Minister in his endeavour to afford every aid to extricate them from the dilemma, into which they have been plunged by the excessive zeal of one of their foreign subordinates is only just and becoming. But we do wish that it would not continue to wield useless cudgels. Finding that there is no one else on whom to exercise them, it now falls foul of the British Government, which is, it states, solely responsible for the present awkward position in which certain people find themselves. In the earnest desire to defend the rash action of some of the employés of the Japanese Post Office, it takes the unpatriotic course of abusing its own Government, taking it to task in a most amusing manner for not yet having communicated any instructions to its agents in Japan relative to the admission of this country into the Postal Union.

While, as in all honesty it is bound to do, it completely repudiates the scandalous accusation of the *Tokio Times* that Her Majesty's Minister had engaged in a base intrigue in order to obtain a subsidy for the P. and O. Co., it expatiates in two leading articles on all sorts of imaginary wrongs which it supposes to have been inflicted by the British Government on that of Japan. The former is charged with having acted in a manner unworthy of a Great Government; with seeking to withhold from that of Japan its Treaty rights; with having treated the latter with injustice, neglect and churlishness; with having caused much trouble; promoted great ill-feeling, etc., etc., etc. A terrible array of charges, enough to crush any less powerful Government, but which our own may possibly manage to survive, though we will not answer for the consequences if Mr. GLADSTONE, Dr. KENEALY or Mr. DE MORGAN should get hold of the *Gazette*. At the present day, when it must be well aware that the British Government is occupied with difficult matters, such as the Eastern Question—though it does not of course compare in importance with the question of Japan's Postal Interests—the *Gazette* should considerately refrain from adding to its embarassment by thundering out denunciations against its neglect in telegraphing the admission of Japan into the Postal Union. Such thunderings doubtless shake it to its centre, but what would be the feelings of the *Gazette* if one fine morning it discovered that it had unwittingly wrought the destruction of its own Government, and that England lay gasping for mercy at the feet of Mr. FARR and the *Tokio Times*.

We must confess our surprise that our contemporary, usually so moderate and careful in its remarks, should have shown itself so utterly regardless of consequences as to bring these accusations against its own Government, and that before committing itself to this course, should not have been able to see through the mist of interested statements by which it has allowed itself to be misled. Under the impression that it is fighting for the Japanese Government it is really devoting its best energies to advocating the cause of certain employés of that Government, who are the very men who are to be blamed for any trouble that may have arisen, and who are causing all this fuss and pother. Now had the *Gazette*, before so rashly accusing its own Government with wilfully obstructing the carrying out of the Treaty of Berne, and with keeping back from a nation what was justly her due, taken pains to carefully study that Treaty, it would have seen that countries, entering the Postal Union, do so *subject to an ulterior understanding on the subject of the cost of sea conveyance*, and that it is provided by the Treaty that "whenever a transit takes place by sea over a dis-"tance exceeding three hundred nautical miles, within the "district of the Union, the office by or at the expense of "which the sea service is performed shall have a right to "a payment of the expenses attending this transport." It is easy therefore to understand that some negotiation on this point was necessary, and (as shown in our article of the 7th instant) it is precisely because negotiations on this and similar points had to be conducted in London, after Japan had signed the Treaty at Berne, that the Japanese Post-Master General, MR. MAYESHIMA, declined the offer of Her Majesty's Minister. The *Gazette* therefore wastes its sympathy in pitying "the humiliation of the "Japanese Post-Master General," and may rest assured that no sore feeling exists on the part of the Japanese Government, except what has arisen by the misrepresentations and offensive advocacy of the *Tokio Times*, of which it is heartily ashamed.

The simple fact is that the Japanese Government have no wish that the Treaty of Berne should come into operation until the points that we have referred to are settled, and that it is by no means well pleased to find that it has been hurried forward, without due time being afforded it for consideration, by the indiscreet and precipitate action of its foreign employés. It knows full well,—as our contemporary might also have known if careful attention had been given to our article of the 7th instant—that all this talk about withholding acknowledgement of rights from Japan, apparent hostility to Japanese, wrong, injustice and ill-feeling has no foundation whatever. It recognises the source whence it emanates, and see that it is only the outcome of the soreness felt by those foreign employés who find they have failed to carry everything before them. The *Gazette* has been led into a wrong track. We trust it will see that those whose cause it advocates are not worthy of the sympathy bestowed on them. At least let it be just to its own Government.

We regret to learn that the recent destruction of property at Hashima is likely to put a stop to the prosecution of the works, and we hear that the mine has been so far abandoned, at any rate for the present, that the machinery is in course of removal. We sincerely sympathise with those who are the sufferers through the gale of the 24th ultimo, more especially with those who have lost such property as cannot be replaced.—*Rising Sun & Nagasaki Express.*

SPIRIT OF THE JAPANESE PRESS.

A Plea for Patent Laws.

(From the Hôchi Shimbun, 17th July.)

It is a very difficult task to invent, but easy enough to imitate anything that has been invented.

Original invention can only be accomplished by a naturally acute mind after a vast amount of trial and experience. There are consequently few inventors in the world but plenty of imitators, and it is only just that the interests of the former should be considered inferior to those of the latter. If there were no advantages to be gained few would labour. Such is the nature of man.

The granting of the right of monopoly of the use of any particular invention, is in order that the inventor may receive due reward for the expenditure of energy that his invention may have cost him, and that others may be encouraged to make similar exertion. Without a Patent Law, there is nothing to prevent a man of ordinary talents, though mayhap of better means, from imitating an invention that has taken years of perseverance to perfect, and thus depriving the original inventor of his just reward.

Men naturally prefer ease to labour, and the only inducement they have to use their energies is the hope of receiving reward for their labour. Without hope of reward, but little progress would be made in arts and sciences, and people would live content as long as they could procure their daily food, and the whole social condition would become as stagnant as water in a pond.

In all civilized countries Patent Laws exist and are strictly enforced. They are considered quite as necessary for the public welfare as the laws of copyright. Our Government has lately enacted the latter, but with regard to Patent Laws nothing has yet been done. Now what can be the reason of this? There are other professions equally as deserving of encouragement as literature, which ought to have similar protection. Ever since the enactment or the laws of copyright, we have been expecting our Government to take up the question of the Patent Laws, and from what we hear, we think its consideration cannot be long delayed. We will bring forward for the guidance of the Government the opinions of western writers, on the fairness and justice of such laws.

By some it has been urged that the granting of a monopoly to inventors is wrong from an economical point of view, while others maintain that a man should have the perpetual monopoly of his own inventions. Neither of these views are temperate in expression. It is time that inventors ought to have the power of protecting their own inventions, but such protection should only extend over a certain number of years. Although there are various kinds of inventions, the principal may be classed under four heads. Firstly, inventing new machinery; secondly, improving upon machines already invented; thirdly, application of chemistry to manufactures; fourthly, discovering new modes of producing chemicals.

Now it is only just that right of monopoly should be granted to promoters of such inventions as the above. By such means only can the inventor rely on reaping any advantage, and encouragement be given to others to work with all diligence to improve art and science. In the constant change that is going on in the world the effect of Patent Laws is most important. But if a perpetual monopoly of a patent be granted it will not prove so beneficial to the public as a limited right. But in the granting of a monopoly there is nothing but what is just and unselfish. The benefit is after all not so much to private individuals as to the public at large, and for that reason we hope to see Patent Laws shortly enacted.

In a teafiring godown on the Concession there happened on Thursday the curious accident of a child's falling over its mother's head into the firing pan in front of her. The child was a good deal burnt.—*Hiogo News.*

H. I. H. Prince Arisugawa, the brother of the Commander-in-Chief, takes his departure in the *Hiroshima Maru* for Yokohama. Since his arrival here the Commander-in-Chief has been indefatigable in the busy operation of inspecting the various departments connected with the war. As we stated in our last issue, the Hospitals have received a considerable share of his attention, and in fact wherever good was likely to result from a visit, there we have found the Prince untiring in his exertions. On Thursday last, Akunora, the dock at Tategami, and Takasima were all visited in turn, and the arduous duties of the day, were we hope somewhat relieved at the latter place of call, where a sumptuous repast was prepared for his reception.—*Rising Sun.*

BRITISH CONSULAR TRADE REPORT FOR HIOGO AND OSAKA, FOR THE YEAR 1876.

H. B. M.'s Consulate Hiôgo and Osaka,
Hiôgo, June 28th, 1877.

Sir.—I have the honour to furnish you with a Report on the Trade of the ports of Hiôgo and Osaka for the year ending 31st December 1876, accompanied with the following Returns :—

Hiôgo.

1.—Return of the Import Trade.
2.—Return of the Export Trade.
3.—Return of all Foreign Shipping entered and cleared.
4.—Return of the duties collected on Imports and Exports, and of Shipping dues.
5.—Return of the Import and Export of Treasure.
6.—Return of Foreign Firms and Residents.

Osaka.

7.—Return of the Import Trade.
8.—Return of the Export Trade.
9.—Return of the duties collected on Imports and Exports, and of Shipping dues.
10.—Return of the Import and Export of Treasure.
11.—Return of Foreign Firms and Residents.
12.—Return of all Foreign Shipping entered and cleared.
13.—Statement showing the total of the trade and shipping of the Ports of Hiôgo and Osaka.

Hiôgo.

The trade of Hiôgo for the year 1876 has been as follows :—

Imports.....	$3,748,967
Exports	$3,401,230
	$7,150,197

showing a decrease of $1,017,822 on the trade of 1875. The comparative tables for the two years give the following figures (exclusive of Treasure).

Imports.		Exports.	
In 1875.....	$5,354,917	In 1875.....	$2,813,102
In 1876.....	$3,748,967	In 1876.....	$3,401,230
Decrease of.....	$1,605,950	Increase of.....	$ 588,128

The Import trade has thus continued to diminish. The Export trade on the other hand shows a fair increase, which is attributable to an increase in the chief articles exported from this port, principally in Tea, which has been exported considerably in excess of the previous year. I append a comparative Table of the Trade of Hiôgo as rendered by the Custom House Returns, shewing the principal items of Import and Export for the years 1875, and 1876, by which it will be seen where the decrease in the Imports and increase in the Exports have occured.

Comparative Table of Trade of Hiôgo shewing principal items of Import and Export for the years 1875 and 1876.

Description of Article. Imports.	1875.	1876.
Cotton Manufactures.....	$1,359,256	$1,167,641
Woollen do.	916,004	885,175
Woollen & Cloth do.	870,367	222,580
Metals	333,437	184,207
Arms and Ammunition.....	2,056	—
Miscellaneous Foreign.....	1,112,753	762,557
Miscellaneous Local, or Eastern Produce.....	761,044	526,807
Total.....	$5,354,917	$3,748,967
Exports.	1875.	1876.
Silk	$ 12,129	$ 40,464
Tea.....	1,645,998	1,695,583
Copper.....	208,218	127,424
Wax	93,277	131,119
Tobacco.....	38,018	20,412
Camphor	56,119	121,846
Dried Fish.....	124,314	167,423
Miscellaneous	635,029	1,096,959
Total.....	$2,813,102	$3,401,230

Following upon the plan adopted in my former Reports on Trade of Hiôgo, I add a Table of the Imports and Exports (exclusive of Treasure) as shown in the statistics of Trade compiled in the Hiôgo and Osaka Chamber of Commerce and which comprise the business done at the two ports.

Imports.		Exports.	
In 1875.....	$5,726,797	In 1875.....	$3,092,405
In 1876.....	$4,675,900	In 1876.....	$3,464,400
Decrease of.....	$1,050,897	Increase of.....	$ 371,995

Which denotes a decrease in the business done at the Ports in Imports of $1,050,897 and an increase in Exports of $371,995, as compared with the business done during the previous year.

The cause of the difference in the figures as given by the Returns furnished by the Custom House and the statistics of the Trade of Hiôgo and Osaka as published by the Chamber of Commerce has already been explained in my reports for the two previous years, and I will therefore but repeat that the Imports as stated by the Chamber of Commerce give the value of the goods which have been disposed of during the year, whereas the Customs Returns give with fair correctness the quantity of goods which have been laid down during the same period. In Exports, also, the excess as shown by the Custom House Returns over those of the Chamber of Commerce is to be accounted for by the fact that a quantity of goods are shipped coastwise by Japanese only, of which of course the Chamber of Commerce has no cognizance.

Tea to a considerable quantity which finds no market in Hiôgo, or which is not offered for sale on the spot, is shipped by native merchants to the Yokohama market and thus tends to augment the quantity of this staple which passes through the Custom House. This will also explain the contradiction in the figures rendered by the Custom House Returns and those of the Chamber of Commerce statistics in the exportation of Tea. The first states that this article was exported in 1876 to the value of $1,695,583, and the latter renders the same article as having been exported to the value of $1,496,000 only.

Imports.

According to the Custom House Returns, goods to the value of $3,748,967 were imported into this port during the past year, showing a decrease of $1,605,959, as compared with the previous year. Cotton Manufactures show a decrease of $191,615 as compared with the previous year; Woollen Manufactures a decrease of $30,829; Cotton and Woollen Manufactures a decrease of $647,787*; Metals a decrease of $149,220; Miscellaneous Foreign a decrease of $350,196, and Miscellaneous Local a decrease of $234,237.

As stated in my report of last year, the numerous steamers running under Japanese flag between Osaka and Yedo, continue to bring down large quantities of foreign goods which find their way into all parts of the district, and are a serious source of competition with the goods imported by foreign merchants direct from Europe and America, and who cannot afford to dispose of their goods at so cheap a rate as the Japanese importers are able to do, whose goods are chiefly purchased at clearance sales, etc. The Chinese also continue to remain formidable competitors with the foreign import trade: they purchase goods generally at auctions in China and are thus able to effect sales to native purchasers at a lower rate than can be obtained from the foreign importer.

Before proceeding to comment upon the items of the trade of Hiôgo for the year 1876, I would remark that I have as upon former occasions availed myself of the Returns compiled by the Chamber of Commerce which have been courteously placed at my disposal. These refer to the quantities of goods delivered to the consumer, and afford when compared with similar statistics of former years, a somewhat more exact estimate of the business actually transacted during the period under review, than can be gathered from the Custom House Returns, also appended to my report, which include stocks that have not yet been disposed of.

The Import trade that passed though the hands of foreigners during 1876 shows a very serious decline in the quantity and value of almost every description of goods. During the first seven months of the year, stocks accumulated to a considerable extent, especially as regards cotton manufactures, and the limited amount of business transacted, judging from the low prices current, must have resulted in heavy losses. In the latter part of August, however, an improved demand set in and importers were able to clear off a large quantity of goods at advancing rates. It soon became evident, however, that the native dealers had bought too heavily, as a reaction speedily took place, great difficulty was experienced in getting contracts fulfilled and the temporary activity above alluded to was succeeded by less animation even than had previously prevailed. Towards the close of the year, political disturbances in some parts of the country aggravated to a marked extent the depression in the Import trade, by restricting the purchases of the native dealers to the supply of their immediate wants.

Although the past twelve months have proved unsatisfactory to the resident foreign merchants, it appears, however, that the actual consumption of imported goods in this district has by no means diminished. The facilities now afforded by the numerous Japanese steamers plying upon the coast for the cheap transit of cargo, has led the native traders to avail themselves more extensively than before of the greater choice of goods in Yokohama, and they have bought largely in that market. These importations do not appear in any statistics to which foreigners have access, but I am informed that they have recently borne a large proportion to the purchases made from foreigners on the spot. It would appear, therefore, that the Yokohama returns must be considered as including at least a moiety of the goods consumed in this district.

The following articles have formed the most prominent items in the trade of the year 1876.

Grey Shirtings.—The consumption of these important goods continues to fall off, the figures being 254,865 pieces, against 360,358 pieces in 1875, 485,407 pieces in 1874 and 565,000 pieces in 1873. It is difficult to account for this remarkable decrease, unless it be that the country people are becoming more prosperous, and able to afford the use of silk and other fabrics. The greater part of the goods sold has been imported from Shanghai by Chinese and has consisted of inferior cloth; in fact there is now scarcely any demand for the better qualities which at one time were readily saleable. The market has been exceedingly dull throughout the year, with the exception of a temporary activity in October, during which month 80,000 pieces were disposed of.

Turkey Red Cambrics.—The deliveries amount to 50,700 pieces, showing a slight decline only upon the previous year. Of these 13,800 pieces were sold during the month of October. Prices upon the whole have been eminently unsatisfactory and importers of good English made cloth have sustained serious loss.

Black Cotton Velvets.—These goods form an exception to the general rule to which other imports have been subject, the deliveries amounting to 22,340 pieces against 16,500 pieces for 1875. Increased consumption has not, however, had the effect of improving the market value, which has averaged throughout the year at least one dollar per piece less than that ruling during the previous twelve months.

Victoria Lawns.—The consumption of these fabrics has also increased, representing 61,690 pieces against 44,600 pieces for 1875, although a considerable decline is shown as compared with 1874. Prices declined steadily throughout the year.

Mousselines de Laine.—Total deliveries for the year are returned at 185,225 pieces, valued at $1,041,000, showing a decline of 16,114 pieces, and $48,671 as against 1875. The business in these goods is still confined to German and French houses, and plain colours have been most in demand. The value of staple quality reached its

* This considerable decrease in the Cotton and Woollen Manufactures is explained by the fact that in the Customs Returns of 1875 Mousselines de Laine were entered under the head of Cotton and Woollens, whereas in 1876 this article, together with Lustres, appear in the Returns under Woollen Manufactures, their proper heading. The apparent decrease in Cotton and Woollen Manufactures is therefore much less than a comparison of the Returns for the two years would show, viz.,—$423,224 instead of $647,787 as stated above.

Original from UNIVERSITY OF CALIFORNIA

highest point of 21 cents per yard during the month of October, after which date a rapid decline took place until the end of the year.

Black Orleans.—The demand shows a great falling off as compared with last year, and prices have been correspondingly unremunerative. A large proportion of the supplies has consisted of very common manufacture imported by Chinese from Shanghai.

Cloth.—The market for this commodity has been exceedingly depressed, and holders have been able to effect sales only by submitting to a considerable sacrifice. A large quantity is undoubtedly used for the clothing of the police and troops, but this is imported by the central Government under special contract and appears therefore in the Yokohama returns.

Iron.—A fairly large business has been done, the deliveries of all descriptions of Iron being returned at 44,520 piculs. Prices have, however, ruled upon a low basis throughout the year. The value of small nailrods which was at $4.25 per picul in January, gradually declined until the limit of $3.35 was reached in September. Since that date a slight advance has been obtained, but at the close of the year $3.70 was the highest quotation current.

Sugar.—This has continued to form an important article of trade, the deliveries for the year being 54,170 piculs, or 11,500 piculs more than during 1875. The business has been entirely in the hands of Chinese, and the importations have been almost exclusively confined to Formosa produce. Judging from the low prices current during the greater part of the year, the trade cannot have been of a remunerative character.

Kerosene Oil.—A falling off in consumption is to be noticed in this commodity, deliveries being 58,333 cases against 73,872 for the previous year. This may perhaps be attributable to an advance which took place towards the end of the year, when prices, which had previously been steady at $2.40 to $2.60 per case, went up to $3.90, in sympathy with increased cost of production in America.

Exports.

The business of the year shows an increase of $371,995 as compared with 1875, the figures being $3,464,400 for 1876 and $3,092,405 for 1875. The prevailing articles exhibit a larger value—Wax, Camphor, Rice, Mushrooms, Isinglass and Curios, whilst a decrease may be observed in Tea, Tobacco, Copper, Seaweed and Cattle.

Tea.—This continues to form by far the largest article of produce from this district, and contributes the sum of $1,496,000 to the total value of Exports. Direct shipments registered at this port were 6,470,624 lbs., in addition to which 7,700 piculs were forwarded to Yokohama to be packed and shipped thence, giving a total weight of 7,497,224 lbs. against a total weight of 7,648,960 lbs. in 1875. This, however, does not represent the total produce for foreign consumption, as the native dealers have in addition shipped a considerable quantity for sale in Yokohama, the returns of which cannot at present be procured, and which form a portion of the statistics at that port.

A much lower range of prices has ruled throughout the year than was current in 1875.

The following table shows the comparative value of good medium Tea for the past three years.

Month.	1874. *$ per picul.*	1875. *$ per picul.*	1876. *$ per picul.*
January	34	35	26
February	34	35	26
March	34	34	26
April	34	None	None
May.....	None	35	30
June.....	35	33	19
July	36	32	20
August.....	36	31	19
September	37	31	21
October	37	29	22
November	36	28	21
December	36	27	20

It will thus be seen that, with the exception of a temporary rally when the new season's crop came in, there has been a constant tendency towards lower prices since July 1875. This is attributable entirely to the fact that the Formosa Oolongs, which are somewhat similar to Japan leaf, are now entering into competition more largely with the latter in the American market. The consumption of Tea in the United States, although increasing, does not keep pace with the production on this side, and unless some fresh outlet is speedily discovered, prices must continue to decline.

A very limited business was done between the beginning of the year and the advent of the new crop, purchases during this period not exceeding 5,000 piculs. The first arrivals of new Teas took place on the 4th May, and for a few days afterwards high prices were paid. These were not, however, long maintained, the market being very fully supplied, and during the remainder of the year purchases were made at rates showing a decline of from $7 to $13 upon those ruling for the corresponding period of 1875. The bulk of the crop was brought up before the end of October, after which date the selection of the leaf was poor, and the demand in consequence languid. The quantity of Tea brought to market was considerably less than had been generally expected, the deficiency being due either to a partial failure of the third crop, or to the fact that the prices offered in the interior were not sufficiently remunerative to induce the farmers to pick the leaf late in the season.

Copper.—Shipments for the year amount to 5,823 piculs only against 11,898 piculs in 1875, 17,532 piculs in 1874 and 24,428 in 1873. The decline in the export of this metal is remarkable, and points towards its entire disappearance from the list of exports. A large proportion of the produce of the district is doubtless absorbed by the Mint, which has during the year been issuing a quantity of copper coin, but this alone cannot account for the fact that foreign purchases have fallen from 1,470 tons to 345 tons within three years. Prices have ruled between $22.25 and $24.50 during the twelve months, giving an average of the equivalent of $80 per ton; when to this figure has to be added duty, freight, and other charges, it is clear that under ordinary circumstances no export of the metal to any European market can take place.

Tobacco.—The demand for this article likewise continues to fall off, the export for 1876 being 2,576 piculs against 5,416 piculs in 1875 and 9,649 piculs in 1874. The heavy losses sustained by foreign merchants consequent upon the careless preparation of the leaf by the native growers, to which I have drawn attention in my previous Reports, have had the effect of restricting the trade, although there continues to be a ready sale for sound Japanese tobacco in London at fairly remunerative prices.

Vegetable Wax.—A stimulus has been given to the export of this article, by a largely increased consumption in London and moderate cost on this side. Shipments are returned at 14,516 piculs, against 10,056 piculs for the previous year, and prices have ranged between $8.50 and $10.50 per picul. It is to be feared that the result of recent operations may not be satisfactory, as advices from home report heavy stocks and declining prices towards the end of the year.

Camphor.—The supply of this article has remained very steady during the last three years, the export for 1876 being given at 8,050 piculs. It is now usually bought under contract before arrival, and is chiefly produced in the province of Tosa. Prices have advanced during the year from $12.50 to $15.50 per picul.

Rice, which was entirely absent from the statistics of 1875, has again taken its place amongst the articles of export, having been shipped during the past year to the extent of 160,828 piculs or nearly 10,000 tons. The business, however, although passing through the hands of foreigners, is said to have been solely on native account, and there are consequently no means of ascertaining its value with any degree of accuracy. The nominal quotations of from $1.95 to $2.30 per picul which have ruled throughout the year, show a loss as compared with corresponding London values.

Mushrooms and Isinglass show an increase of value to the extent of $137,500 as compared with 1875. These commodities are, however, almost entirely in the hands of Chinese.

Dried Fish was exported to the extent of 9,240 piculs, valued at $167,423.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Seaweed has been shipped off to China to the amount of 24,361 piculs, valued at $71,296.

Sulphuric Acid has been exported to a large amount for sale in China, 6,415 piculs, valued $34,442, in 1876, against only 537 piculs and $3,004 in 1875. This sulphuric acid is obtained from the Mint in Osaka and is exported entirely for the China market.

Fans.—The trade in Fans at this port during 1876 shows an increase upon that of previous years as regards quantity, the export reaching to close upon 4 millions, but the value not exceeding much that of 1875, say $95,000, by far a large portion of these goods consisting of Fans costing from ninety cents (Mexican) to two, dollars per 100. Notwithstanding, however, that the goods cost much less than in 1875, the trade in the main was unsatisfactory to foreigners, the American market being largely overstocked, and the position of importers being weak.

Contracts for 1877 have been placed at some 30 % reduction on former prices, and it is probable that there will be a large falling off in the number of Fans sent away.

This gradual collapse in this branch of trade must be solely attributed to the fact of the Japanese dealers underselling their own contracts; at the time enabling them to dispose of larger quantities of Fans, but ultimately recoiling upon themselves, as foreigners have consequently, in order to protect themselves, only been able to enter into new contracts at extremely low figures or leave the business alone.

From this suicidal way of doing business the Japanese have reduced their receipts quite one half during the last three years. And this heavy reduction must either point to extraordinary profits having been made in previous seasons, or else to the price of labour having declined very much in the country.

The Fan trade is still almost exclusively confined to American firms, there being but a small market for these goods in Europe.

The chief remaining articles exported comprise Drugs to the value of $10,830; Ginseng $31,517; Lacquer Ware $18,186; Porcelain $15,391; Fat and Lard $8,998; Flour $6,901; and Sundries to the value of $57,152.

Shipments of cattle continue to fall off, and it is probable that the increasing native consumption of meat has commenced to affect the supply in this district.

Shipping and Navigation.

British vessels to the number of 125, showing a total of 127,891 tons, entered and cleared from the port of Hiôgo during the year 1876. This gives an increase of British shipping as compared with the previous year of 16 vessels and 41,309 tons. 84 British steamers of 49,936 tons entered in, and cleared from this port during the past year. Two were bound with rice cargoes for the United Kingdom and one with tea to the United States direct.

Three British sailing vessels cleared for the United Kingdom direct, with cargoes of rice, and three with general cargoes. It will be observed that the number of British steamers, generally of large tonnage, which visited this port during 1876 is equal to nearly one half of the number of sailing vessels which entered and cleared during the same period.

American shipping shows the entry and clearance of 67 vessels and 114,199 tons, being a decrease of 97 vessels and 65,269 tons, as compared with the previous year. The above number of vessels and tonnage for the past year includes the numerous calls at this port of the steam-ship *Nevada*, which gives a total of 53,500 tons.

German shipping shows a decrease of 6 vessels and 716 tons against 1876. 18 vessels of 4,744 tons entered and cleared during the past year.

One Russian steamer of 498 tons visited this port in 1876, and two Chinese steamers of 3,180 tons entered and cleared from this port during the past year.

No other foreign merchant vessels touched at this port in 1876.

The visit to this port during the year of the yacht *Sunbeam*, R. Y. S., owned and commanded by Mr. T. Brassey, M.P., is an interesting fact to be recorded, as being the first yacht from home which has visited this port.

Currency.—The following Table of the amount of all coins produced at the Imperial Mint in Osaka for the year ending 31st December 1876, has been courteously furnished me by the Commissioner of the Mint.

Denomination.	*Weight in Ounces Troy.*	*Number.*	*Value in Yen.*
Gold.....	41,334·97	149,442	771,384·00
Silver.....	4,193,348·63	28,166,889	4,823,718·35
Copper	23,334,918·55	88,158,954	1,018,302·85
Total....	27,569,602·15	116,475,285	6,613,405·20
Trade Dollar included in the above Table.	1,325,672.08	1,514,932	1,514,932·00

Exchange.—Sterling exchange here is influenced almost entirely by the rates ruling in Yokohama, the difference greater or less never being more than one half per cent; that being cost of transferring coin from one port to the other.

During 1876 the fluctuations in sterling were more sudden and severe than has been the case for many years; Bank Bills, six months' sight, ranging from 3s. 9¼d. to 4s. 6½d. per dollar, a difference of about 20 per cent. The great rise which took place in August was in consequence of an unexpected demand for silk, consequent on the failure of the crop in Europe. Although such a sudden rise may be often beneficial to such Importers as have large stocks on hand, I am of opinion that business generally is better when Exchange keeps steady, merchants then being able to work on a solid basis.

On Shanghai exchange is regulated chiefly by the sterling value of the tael there, as against the sterling value of the dollar here, and during 1876 ranged from about 72¼ to 77¼ taels per 100 dollars, or say a difference of about 6¾ per cent. The average or general rate ruling is from 74 to 75.

As regards local currency I may mention that all the purchases of Exports, such as Tea, Camphor, Wax, etc., are made, though ostensibly by Mexican dollars, in reality by Japanese paper money, occasionalty gold or silver *yen*, the custom being for the foreign merchant to give a cheque in Mexican dollars on one of the foreign banks here against produce when purchased, which cheque is immediately brought by one of the native banks for Japanese currency, most frequently *satsu* (paper).

The reverse process is adopted when natives buy Imports; then native bank-orders for Mexican dollars (purchased in exchange for *satsu*) are handed to the foreign merchant in exchange for goods.

The value of *yen satsu* (paper) alters everyday; during 1876 it fluctuated from 4 per cent. discount to 5 per cent. premium (according as the rate was in Yokohama) against Mexican dollars. From its portability it is generally preferred by the natives to gold or silver.

Mexican dollars seldom or never find their way out of the Treaty ports, in fact I may say that even in Osaka they are now uncurrent.

Railways.—The railway from Kobe to Osaka and the branch line to Ajikawa (together 22 miles) was worked with regularity and freedom from accident, and the works maintained efficiently.

At Kobe moorings for vessels lying alongside the jetty were laid down, and some minor works completed. A Dock was commenced at the Osaka Station for the accommodation of water borne traffic, which, when completed, will enable goods to be transported by boat direct to and from that station, in place of Ajikawa as heretofore.

On the extension from Osaka to Kiôto (27 miles), the works were rapidly pushed forward to completion in anticipation of the state opening, and the first portion from Osaka to Muko-machi, within 4 miles of Kiôto, was opened on the 24th July last, and the remaining 4 miles to a temporary station (Omiyadori) on the 5th September, the terminal station at Kiôto (a large two storied brick building with granite dressings) not being quite finished.

The most important works between Osaka and Kiôto are the fine large bridges over the Jusho, Kansaki, Ibaraki, Oda and Katsura rivers, which are all crossed upon wrought iron girders in 100 feet spans of the Warren type, and consist of 5, 13, 2, 1 and 12 of these spans respectively. There are also numerous smaller

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

bridges, culverts and flood openings, and the works are generally heavy, consequent on the country passed through being subject to large floods at irregular intervals.

The whole of the works have stood well and given satisfaction, and will bear favourable comparison with works of a similar nature in other parts of the world.

No new works of any magnitude are at present contemplated. It is, however, much to be regretted that the line has not been continued to Otsu on the shores of Lake Biwa. The distance is but small, and the cost of construction would be amply repaid by the extensive traffic which the line would not fail to secure in the large quantity of produce arriving from the Western Districts, and which has now to traverse the distance about 10 miles from Otsu to Kiôto on pack horses or carts.

The traffic carried over the Kobe, Osaka and Kiôto Railway during the year 1876 has been as follows:—

The total passengers numbered 1,140,836 and the amount received for the same was *yen* 273,086. The sum paid for the carriage of passengers' baggage, parcels, etc., amounted to *yen* 9,675, and for goods freight, *yen* 21,869. There were piculs 374,948 conveyed.

The Railway from Osaka to Mukomachi was opened on the 24th July, and through to Omiyadori station for Kiôto on the 5th September 1876, for the conveyance of passenger traffic only. Goods freight was not carried between Osaka and Omiyadori during 1876.

On the 8th July the Railway Pier at Kobe was completed, so that vessels could moor alongside and load and unload their cargoes into and from the Railway trucks: since that date to the end of the year 118 vessels, mainly steamers of large tonnage of the Mitsu Bishi Company have been accommodated at the pier.

Roads.

The old road between Kiôto and Otsu on the shores of Lake Biwa, which probably was the worst road in Japan, has been converted within the past year into what there is little doubt is one of the very best. It is fully 30 feet wide and has been constructed at a cost of *yen* 35,000: a tax I am imformed is to be levied on all vehicles to cover expenses. It is clear that the intelligent men of Japan have fully recognized the enormous advantages commercially and politically of good roads over bad ones, and it is to be hoped before long the Kiôto and Otsu road will prove to have been but the first steps in a system which shall gradually embrace the whole Empire.

Industries.

Mochi (Birdlime).—The following extract from the Hiogo news respecting the manufacture, etc., of Birdlime in Japan, is of sufficient interest to be inserted in this Report.

"Although Birdlime may be obtained in small quantities "in other countries, still Japan may perhaps be considered "the only country in the world in which it is regularly "manufactured on a large scale, and is an article of some "commercial importance, the production of which gives "employment to some thousands of people.

"The Chinese characters used to express the word "*mochi*, sometimes called *tori mochi* to distinguish it "*mochi* (rice cake), give an excellent idea of the nature of "the article, and may be freely translated 'bird catching "'sticky substance.' "It was first manufactured at a "place called Yoshino in the province of Yamato and the "manufacture has spread thence over the whole of southern "Japan, being limited in locality by the habitat of the trees "from which the article is made. The date of its discovery "it is certainly difficult, and perhaps altogether impossible "to obtain, some placing it 500 years back and some only "300; it is however certain that within the last 20 years "the quantity that has been brought into the market has "been perceptibly affected through the destruction of the "trees, by denuding them of their bark for its manufacture. "The Japanese have made some attempt to arrest this "destruction by leaving in a particular manner a certain "amount of bark on the trees, with a hope that they "might serve a second time, but it is found that the article "made from this second bark is of very inferior quality.

"Osaka is the great centre of the *mochi* trade, large "stocks of it may be found anomalously enough in the "hands of the *kane-butsu-ya* (dried fruit merchants) who "have their head-quarters in and about Tema. Its pre-"sent value is about *yen* 13 to *yen* 16 per picul (133⅓ "lbs.). The best kinds, which are distinguished by be-"ing free from bark, of a dull whitish colour, extremely "viscid and having a grumous consistency, come from the "provinces of Yamato, Kishiu, Tosa, Awa and Iyo, an "inferior quality being made in Satsuma, Choshiu, Bungo, "Ise and Mino, the two latter places being the northern "limit of its manufacture. All found north of these "provinces is imported from Osaka and places south of "that port. The best kinds are said to keep good for "*any* length of time.

"The principal tree from which this birdlime is made is "a dark evergreen having its habitat in the southern half of "Japan; it grows high up the shady sides of deep mountain "glens, and is frequently used by the Japanese as an orna-"mental shrub, in fact it may be seen in the ornamental "groups in front of the Osaka Railway Station. Its bark is "of a greyish brown color and roughish texture; the leaves "are opposite, smooth, dark green, rather more pulpy than "the English holly leaf, ovate, accuminate in form, have "an unbroken linear edge, a very short petiole, and almost "imperceptible stipules. Its efflorescence is a panicle, "centripetal in its development, having small, white, wax-"like diandrous and monopetalous florets which are also "slightly cruciform. The manufacture of birdlime extends "over a period of several months commencing about June, "when the bark of the Mochi tree is stripped and mace-"rated in water for about forty days, after which it is "collected and beaten in a mortar exactly in the same "manner in which rice is cleaned; the pestle however is "of a different make, being shod with iron, the flat under "surface of which is armed with spikes projecting down-"wards. When the pulpy mass under the pestle becomes "glutinous, it is taken out and washed in water. This is "done to remove as much as possible of the rough outer "bark, and the pulp is then again pounded and treated in "a cauldron with hot water, on the surface of which it "floats. During this treatment it undergoes frequent "manipulation at the hands of the workmen, for the pur-"pose of disengaging the remaining particles of bark, "which sink to the bottom of the boiler. This is the "most difficult part of the process, as considerable skill "and experience are required in the workman to keep "the stuff from adhering to his hands. After this it is "again washed in cold water, and the pounding, boiling "and washing are repeated until the material becomes "sufficiently clean and pure. During the above process, "about nine-tenths of the weight of the raw material is "lost, 250 catties of the latter not turning out more than "25 of good birdlime.

"The uses to which this article is put by the Japanese "are more extensive and diverse than one would suspect, "its principle one being of course, for the snaring of birds "and animals. By its means animals as large as monkeys "are caught. When they once get the stuff upon their "paws, they soon cover themselves with it, and so ex-"haust themselves in trying to get rid of it that they fall "an easy prey. Birds also as large as ducks are taken, "and by a very ingenious process. The young shoots of "the Fuji (wisteria) which attain considerable length and "are strong, light and flexible, are gathered, dried and "knotted together in one continuous length. This is "smeared with birdlime, and floated out to sea, when "very often in the morning, as the writer has witnessed, "on the Eastern coast of Choshiu, the hunter is reward-"ed with several birds. This is a very inexpensive "method of bagging wildfowl, as the tackle will serve "any number of times, till the birdlime dries, when "is easily replaced. Small birds are caught in various "ways; some by means of a decoy bird, concealed near a "patch of tempting food, which is plentifully planted with "little splinters of bamboo, like large needles, the upper "half of which is covered with lime; others are caught "while on trees, by means of a long slender bamboo, the "top of which is anointed with the lime and then steal-"thily thrust against their feathers. Rats are easily caught "by spreading a small quantity on a piece of board or "paper and placing it near their holes. It is spread upon "a bamboo leaf and universally used throughout Japan "during summer, as any one who likes may easily see, for

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"catching flies or other insects. The writer has even "been shown a flea trap made for its service and used by "the Japanese in bed. This trap looked more like an "English toast rack without a handle than anything else. "Simply a piece of board with the lime spread over its "upper surface, while over this, semicircles of bamboo "were fixed at some distance apart to prevent the bedding, "etc., from getting smeared with the lime. Should the "vivacious insects happen to get on to this during their "nocturnal frolics, their fate is as surely sealed as that "of a little fish in the embrace of an octopod.

"Another use of birdlime is for medical purposes. In "certain diseases of the eye it is taken in small pills or "dissolved in hot water. It is also used for those com- "plaints of the pelvis which the Japanese call senki; "it is considered one of the best cures for flesh wounds, "cuts, &c., and is almost universally used in the manufac- "ture of plaisters.

"Both Water and Oil are used in its manipulation to "prevent its sticking to the fingers, but it is generally "handled with a stick. It can be purchased at any green- "grocer's (*yawoya*) store throughout Japan. It might "be as well to mention that a very inferior quality of "birdlime is made out of wheat by most of the *fuya* "(makers of wheaten food); it likewise soon loses its pro- "perties and becomes useless."

General Remarks.

The factory of the Japan Paper Making Company mentioned in my last report as being in course of erection, has been completed during the past year, and manufacture of "half stuff" or pulp for paper making has been carried on since the middle of October last.

Being outside of the settlement some difficulty was raised by the Governor of Hiôgo to the introduction of gas in the factory, and the question remains still in abeyance, but it is contemplated, should permission to use the gas made by the Hiôgo Gas Company not be shortly obtained, to erect apparatus on the Japan Paper Making Company's own premises for supplying the necessary light. The production of "half-stuff" will then I am informed be nearly three times the present return of $1\frac{1}{2}$ tons per day.

Employment is given to 89 women and 39 men, exclusive of foreign superintendents, and when the factory is working night and day, about 200 women and 70 men will be in receipt of steady employment.

It was at first contemplated to export the produce of this factory, and the addition of 1,500 or 1,600 tons of stuff would have had to be made to my trade returns; but it appears that a new market for this material has been found in the country itself, as by taking "half-stuff" from this Factory the native owned paper mills can largely increase their outturn of paper, and a large proportion of the factory's production will therefore be sold to a mill in Osaka, and probably shortly to another in Kiôto.

Some slight faults in erecting the machinery, etc., having been discovered during the first few weeks' work, the Factory is at present stopped.

The Recreation Ground alluded to in my last Report has been partly laid out in walks, and a large space has been covered with turf which is used for cricket and games of foot-ball, whilst croquet and other games are played on an adjoining piece of turf. Neat summer houses have been erected, and the ground so far as it is finished, has a very pretty appearance, and is much resorted to by the foreign community in this port.

No public works of any importance have been undertaken here during the past year. This model settlement continues to be well lighted with gas at night; the streets are kept methodically clean, and the municipal police maintain efficient watch in the foreign quarter.

On the 5th February, 1877, His Imperial Majesty the Mikado, accompanied by the Japanese and Foreign Ministers, opened in state the Railway between Hiôgo, Osaka, and Kiôto.

The number of the British community at Hiôgo, exclusive of children, amounted on the 31st December 1876 to 162 persons, which is about the same number of British residents as last year.

Osaka.

The Foreign trade of Osaka continues to decrease, and chiefly so as regards exports, which in 1874 amounted to $566,537, in 1875 to $225,021, and in 1876 to only $99,722.

Imports.		*Exports.*	
In 1875	$605,510	In 1875	$225,021
In 1876	$406,089	In 1876	$ 99,722
Decrease of	$199,421	Decrease of	$125,299

The decline of the foreign trade of Osaka commenced from the opening of the Railway to Hiôgo, which, as observed in my previous Reports, has caused foreign trade to centralize at Hiôgo. Almost all the foreign merchants who, previous to the opening of the Railway were established and carried on business at Osaka, have removed to Hiôgo. There is not a single British firm left at Osaka. The Foreign residents have diminished from 79 in 1875 to 44 in 1876. The British Residents in Osaka, who in 1875 numbered 24, diminished to 16 in 1876.

No foreign merchant vessel visited Osaka during the past year.

Industries.

The Paper Mill can manufacture 100 reams of paper per day of the size of the *Osaka Nippo Shimbun* (newspaper) at the price of two *yen* per ream. At present it is making paper for Government use only.

The Glass Factory continues to make glass articles of various descriptions window glass, however, excepted.

Sulphuric Acid.—The Mint is now manufacturing about two and a half tons of Sulphuric Acid per day. Ink is also made at that establishment.

Shirtings of an inferior quality are manufactured at Kawachi near Sakai, and at Temma Wakamatsucho (Osaka).

Shoes are made in accordance with Japanese ideas of this article, viz., extremely cheap but of corresponding inferior quality. Boots and shoes imported from Europe can no longer find a market in Osaka.

Drawers and Singlets.—About 400 dozen of these articles can be made in Osaka, and are sold at about $2\frac{1}{4}$ *yen* per dozen. The importation of these goods is also lost to the foreign importer, owing to the cheap rate at which they can be locally manufactured.

Hats were made last year to a considerable extent, and sold at a low price, but they were so badly finished that the rim after a little wear fell down flat, owing to the want of stiffness, which could not properly be attained. Felts have been attempted, but as yet without success.

Indigo is manufactured on a large scale of 5 or 6 qualities. The prices range from *yen* 6.50 down to 30 cents per catty.

Slate pencils of chalk of a very white and good quality are made at Osaka at the rate of 1,000 boxes per day, price 6 cents per box of 120.

Soap is also made at Osaka but the quality is reported as not very good.

Saddlery and Military Equipments are made at the Arsenal on a large scale, and finished in a workman-like manner.

No improvements worth mentioning have been undertaken at Osaka during the past year.

The Exhibition at Kiôto, and the Museum at Osaka have again this year attracted a fair number of visitors.

I have the honor to be
Sir,
Your most obedient, humble servant,
(Signed) A. A. ANNESLEY.

SIR HARRY PARKES, K.C.B.,
&c., &c., &c.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley, for the abovenamed Pills, for wind in the stomach, from which I suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable Pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

January 13, 1877. 13ins.

Correspondence.

IWASAKI YATARO *vs.* CAPTAIN P. H. COLOMB.

TO THE EDITOR OF THE "JAPAN MAIL DAILY ADVERTISER."

SIR,—Possibly I ought to rest satisfied that, in the above matter, those who differ from me have nothing better to say in support of their opinion than what is said by "A Britisher" in your paper of last Saturday, and to leave his exceptional logic and angry observations to be appreciated by your readers without my assistance.

But, as some points which he makes may mislead the public mind, I ask leave to reply to them.

1.—As to the meaning of "a vessel in motion," I abide by the law and the dictionary. The construction which your correspondent puts upon the phrase is his private discovery, which I have no desire to appropriate. I quite agree with him that it is "ridiculous" to say that a vessel in uncontrolled motion through *force majeure* is to be treated as one under well controlled "weigh" (? way). But since I said nothing of the kind, and since this idea is his own proper invention, its absurdity does not concern me.

What I did say was that a moving ship is bound, in case of collision with an anchored ship, either to pay damages or to prove her motion and the collision to have been inevitable; and in this both law and common sense are on my side. Your correspondent says that when the accident is inevitable no burden (of responsibility) is on the colliding ship, and he produces this phrase as if it were a powerful argument, whereas it merely begs the question, which relates to the very inevitability that he boldly takes for granted.

2.—Your correspondent seems to make a stronger point in referring to the Judge's charge that the defence was not bound to prove *absolute* inevitability (as I said) but only such inevitability as proper care and skill could not deal with. It is very difficult for me to distinguish between something that proper care and skill cannot prevent and something inevitable. But since such learned men have found this fine distinction, I must conclude that my failure is owing to some natural incapacity. However, in this case, the question did not go so far, but hung on the point whether the necessary care and skill were exercised.

Your correspondent insists that they were; and, if I understand him, that defendant was quite right in relying on his one anchor and its treacherous stock; that its breaking was the misfortune of the *Chiri Maru* rather than that of the *Audacious*; that the drift leads (which defendant's witnesses classed among the "usual precautions") were in use—though the evidence taken is very far from clear on this point—; and that, in short, everything proper and possible was done on the *Audacious* to prevent and check drifting.

If "A Britisher" should fall into my drain-trap through a defective cover which had not been looked at for months, I doubt if his heirs, or a British jury, would call it inevitable accident, or would discharge me from moral and pecuniary responsibility on my pleading ignorance of its condition and that I had done all that the rules of my establishment permitted to save him from suffocation. But upon such questions there is perhaps room for difference of opinion. I insist that in the case in hand the duty of proving inevitability lay wholly on the defendant; that it was *not* proved by him, and that it was no part of plaintiff's duty to disprove it, though your correspondent implies that it was. And I appeal not only to the evidence, but to defendant's practical acknowledgment of liability before the trial, in support of this position.

3.—If your correspondent had felt strong in his case, he would not have thought it worth while to misquote my statement that "other men-of-war near had each two or more anchors down", by prefixing to the word "*other*" the definite article, in order, after so changing its sense, to denounce it as an untrue statement. I knew perfectly well that the *Atalante* had only one anchor down, but I knew also that the *Talisman* had three down, and that the *Tennessee* was moored, which facts not only make my statement exactly correct, but upset defendant's testimony that "men-of-war never moor except in tide-ways and rivers." I will trust your readers to characterise arguments of this sort.

4.—"A Britisher" revives the point that many of the Mitsu Bishi steamers formerly belonged to the Japanese Government and that there was some mystery about their transfer which defendant's Counsel was bound to explore, in doing which his offensive attacks upon plaintiff's character might be justifiable.

In reply to this I have only to repeat that this Government has (as I have shown) publicly and explicitly recognized the existence of the Mitsu Bishi Company, and Mr. Iwasaki's control of it, and its ownership of the *Chiri Maru*; and, if I understand International comity, it is obligatory on foreign Courts to accept these official acts of this Government respecting its own property and its own subjects as conclusive, and impertinent to question or to criticise them.

No one can reasonably doubt that the course pursued by the defence in this respect was taken less to promote justice than to obstruct it by creating a personal prejudice against the plaintiff. But it may be admitted that this mode of defence is fully consistent with the pitiful appeal that defendant's purse should be spared on the ground that his Government would not indemnify him, which appeal the Judge had to caution the jury to dismiss altogether from their minds.

5.—Your correspondent states that defendant's Counsel not only treated Mr. Iwasaki with singular lenity but took special pains to exonerate him from all blame on account of the proceedings taken.—Lenity is probably a comparative grace. In past times it would have been considered lenient to twist a witness' thumbs—now it may be lenient merely to blacken his character; though why the merits of a suit like this could not be discovered without that process it is hard to see. But, as to the exoneration for which defendant's Counsel is given such credit, here it is, quoted from your report: "Mr. Dickins "said he was sorry so much time had been taken up with so fri- "volous a case, one that never ought to have come into Court." (a favourite opening with the learned gentleman.) "He wanted to "exonerate the plaintiff, who had acted in ignorance, from all "blame, and no doubt his advisers had acted with perfect good "faith, but under an erroneous impression which they ought to "have corrected...before they took measures which have detained "one of H. M.'s ships for so long a time. They were clearly charge- "able with a gross error in judgment."

Now if, instead of this language, Counsel had said "Plaintiff is "too great a fool to know what he is about in this matter; his no- "tion that he has any claim upon H. M.'s ships or officers for injur- "ing his property, is absurd, and his action upon it purely vexa- "tious; and, though he has been honestly advised to make this "claim, his advisers are dunderheads like himself," would not these words have signified exactly what the others did, and would it not be somewhat hyperbolical to call them exonerative, or even civil?

6.—But the consideration of greatest moment to your correspondent appears to be that all but about "ten" foreigners in Yokohama believe that "according to the principles of Western law," the official declaration of the Japanese Government that the Mitsu Bishi Company exists and owns the *Chiri Maru*, is so untrustworthy that it may be treated in a foreign Court with contempt and derision.

Please be good enough to count me among these "ten," and record my protest against any such notion of Western law, and any such application of it to the acts of the Government of this country. For I hold that in such matters the acts of every Government are entitled to credit and respect, and that whoever denies this right to Japan must renounce it for his own nation, which I, for one, am not disposed to do.

7.—Your correspondent unfairly twists my remarks on the attitude of the defence and of some of this community in regard to this case into "reflections upon British justice." I need only reply that the fairness and expedition with which business is generally despatched in H. B. Majesty's Court, and in the other foreign Courts here, have no greater admirer than myself, and that I have no sympathy whatever with the peculiar views of the writer who not long ago assailed, through your columns, under the title "Justice in Yokohama," the judgments of two of these Courts, one of them being the British Court. I may add too that in this particular case neither the plaintiff nor any one else has much reason to be content with the way in which, according to your correspondent, his claim was "fixed and decided within a forthnight."

8.—Your correspondent's experience in Japanese Courts probably sanctions the contrast he draws between their mode of dispensing justice and that of H. B. M.'s Court. The delays and evasions which foreigners almost universally encounter in the Japanese Courts are indeed notorious, and are very exasperating; and they amply justify the general reluctance of foreigners to accept Japanese law, as they are so often urged to do. But they in no way justify our treating the Japanese unfairly. On the contrary we owe it to ourselves all the more that they should find in the proceedings of our officials such impartiality, courtesy, and despatch as would make them ashamed of what we have to complain of in their own Courts. And I repeat that this case, which has excited unusual interest among the Japanese, afforded such an excellent opportunity for a telling example of prompt and dignified justice in a foreign Court that it is a real misfortune that defendant's Counsel should have so entirely succeeded in producing from it a contrary effect.

I leave to my opponent whatever advantage his inuendoes and such expressions as "silly," etc., can give him, being myself persuaded that if he had thought his cause really good he would have felt such manifestations of ill-temper to be unworthy of it.

If "A Britisher" fairly represents the majority of this community, I am willing to remain

"ONE OF THE MINORITY."

Yokohama, July 17, 1877.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Yokohama, July 21st, 1877.

SIR.—In the printing of my letter of the 14th in your last issue have occurred errors and omissions for which I am chiefly to blame and which I must ask you to correct as follows:—

For "the question, as is shown" read "the question is, as is shown."

For "under way" read "under way under sail or steam."

For "intimation" read "insinuation."

For "justices" read "justice."

For "*punctum acu*" read "*punctum acre.*"

For "fixed and decided" read "heard and decided."

For "in the other, two months" read "in the other two, months....."

For "however, the defendant" read "however that may be, the defendant....."

To "One of the Minority's" last letter my first letter is a sufficient answer. The gentleman is evidently angry and mistakes indulgence in his temper for a refutation of my arguments. I have no objection whatever to his pursuing that course as long as he chooses, but under such circumstances I decline to follow up the discussion.

Yours obediently,

"A BRITISHER."

Law Reports.

IN H. B. M.'s COURT AT KANAGAWA.

Before RUSSELL ROBERTSON, Esq., Consul.

Monday, July 16th, 1877.

GEORGE HODGES *v.* FRANCIS A COPE.

Mr Cope was charged with having on the 10th day of July, 1877, unlawfully obstructing George Hodges by threatening to do him grievous harm bodily and otherwise, Mr Hodges being an officer of the peace, to wit, a constable of this Court, and in the due execution of his duty as such constable.

Mr Cope denied the charge and declared it to be false and malicious.

Geo. Hodges, sworn:—Between four and half-past four on the 10th instant I went to No. 95, Mr Cope's office, for the purpose of serving on Mr Cope a judgment order, in a case in which he was defendant. The order stated that Mr Cope was to pay within ten days from the 24th June the sum of $14.12½. When I arrived at No. 95, Mr Cope was in conversation with Mr Jaffray. I had no intention of communicating my business to Mr Cope till he was disengaged. Upon going into the outer office, Mr Cope said in a very offensive way "What do you want? have you got a paper for me?" I did not answer at once and he asked a second time. I said I had a paper, and gave it to him and he deliberately tore it up, stating at the same time, "Here, you can go and tell your Consul and your Judge that this is the way I serve their papers." I then told him that I had a distress warrant and that I should have to put it into effect unless the amount stated in the order was paid at once. He said it was past four o'clock and that anything I did would be illegal; that I could do nothing on his premises after four o'clock. I said I was responsible for what I did, and proceeded to take possession in the usual way. Mr Cope ordered his Japanese to close the office. I told him that if he would not listen to reason I should have either to place a man in charge or lock up the premises and take the key myself. He said I could do what the—I liked. They continued to close up the place and at that moment Mr Bishop came in and I again said I should have to leave a man in charge or take the key. He said that if I did anything of the kind he would use a shot-gun at me. After a short time, at the suggestion of Mr Bishop I asked Mr Cope to promise me not to take anything out of the office, and if he would do that I would leave him in charge. He said he had no intention of removing anything except two race cups. On that promise I left the office in the charge of Mr Cope, whose language throughout was most ungentlemanly and offensive.

Defendant had no questions to ask.

To the Court:—I exhibited the decree to Mr Cope. It is usual to give this with the other papers. I entered the Metropolitan police when eighteen years of age, and during five years' service, in which I had many times to do work of this description, I was never once reprimanded by inspector or commissioner for exceeding my duty.

Robert Bishop, sworn:—I issued a warrant of execution against Mr Cope and knowing it to be a very unpleasant thing, being a small amount, it struck me that by going round to Mr Cope's I might lessen any unpleasantness. I found Hodges there before me, and told Mr Cope I was not on official business, but that I would do what I could for him. Mr Cope had just returned to his office when I saw him first, and appeared to be somewhat excited, but of this I took no notice. I tried to reason with him but he appeared to be unreasonable. I said I had not come to act against Hodges but that I would give him certain hints which might be of value to him. Mr Cope, who was talking in a bombastic manner about locking up the place and taking the key with him. After some talk I took his word of honour that he would pay up in the morning and that nothing in the meanwhile would be removed without Hodges' knowledge. I then told Hodges that it would be safe to leave the premises as they were.

To Mr Hodges:—I do not think you are a man to give offence directly; but indirectly, by your perseveringly quiet manner, I believe it possible.

To Mr. Cope:—I saw you first in your office. You had already written to me during the afternoon to say that you would pay up on the following morning.

To the Court:—I forgot to mention that during talk something about "shot gun" fell from Mr Cope's lips. I am not quite certain, but by Hodges' answer I presume a threat had been conveyed. Hodges said "I have been under fire before now and that won't keep me from my duty." It might be that "shot gun" was mentioned casually in conversation between us.

Mr Cope said that he could only deny all the charges except that of tearing up the paper, and continued:—I read the paper and tore it up as I consider it my right to do with any paper after it comes into my office. I never obstructed Hodges in the execution of his duty; on the contrary, I went out for ten minutes to give him time to take possession. I never used the exppression that he could do "what the—he liked." I am not in the habit of using such language. And the only remark I made about shot-gun was to Mr Bishop in answer an observation of his. In consideration of the letter I had sent during afternoon I was very much annoyed at the summary manner in which the proceeding had been carried out. I again most distinctly deny that I threatened or obstructed Mr Hodges in the execution of his duty or used any threats against him.

His Honour said he considered the charge had been clearly sustained by Mr Hodges' evidence alone. The superior officers of the Court must protect their subordinates in the execution of their commands, and considering how justice would have been administered had the case been the reverse, the present charge could not be overlooked. Mr Cope was therefore fined $10 and costs, or in default 10 days' imprisonment.

Before H. S. WILKINSON, Esq., *Acting Law Secretary.*

Wednesday, July 18th, 1877.

R. *v.* G. P. HANSEN.

A motion was heard this morning, in which Mr Dickins for the prosecution, the Hongkong and Shanghai Banking Corporation, sought to recover their costs from the prisoner.

Mr Ness appeared for the prisoner.

When the prisoner was first arrested a certain amount of money over $700, was found on his person, which was impounded, and the prosecutors now applied that out of it their costs should be reimbursed.

After some discussion the following order was made by consent.

ORDER.

It is ordered by consent that the taxed costs of the prosecution be paid by the prisoner: that of the sum of $177 82 now in the hands of H. B. M.'s Consul belonging to the prisoner the sum of $100 be paid to the prosecutor on account of costs; and that the prosecutor lodge an undertaking that he will not levy on the balance of $77.82, but that the same shall remain in the hands of H. M.'s Consul for the benefit of the prisoner on his discharge.

Friday, July 20th, 1877.

W. HOWLES *v.* E. C. KIRBY and others.

A motion was heard yesterday morning, made by the defendants, all of whom were represented by Mr Dickins. Mr Kirkwood appeared for the plaintiff.

It will be remembered that this case was heard with a jury in May last. The verdict returned was for the defendants. Plaintiff appealed, and succeeded in obtaining an order to prosecute his appeal as a pauper. It was to upset this order that the motion was made yesterday.

After considerable (two hours') discussion His Honour upheld the motion in the following judgment and order:—It is admitted that the plaintiff is in receipt of an income of $150 per month, and I do not think that he is, therefore, in a position to say that he is not worth $25, or that he is so poor as to entitle him to appeal *in formâ pauperis.*

It is ordered that the order *ex parte* of the 5th of June, 1877, giving the plaintiff leave to appeal *in formâ pauperis* is discharged, and that the plaintiff pay the costs of the motion.

IN THE KANAGAWA SAIBANSHO.

Before ASAINA KANSUI, Esq., Vice-President.

Wednesday, July 18th, 1877.

SCHULTZ, REIS & Co. *v.* TSUCHIYA YUICHIRO and another.

Plaintiff claimed the compulsory delivery of a document illegally in the possession of defendants.

In answer to the Court plaintiffs said they had not received any letter with regard to the necessary payment of native witnesses, which was now stated should be 50 cents per diem each.

Having nothing to add to their complaint, plaintiffs called two Japanese merchants who gave evidence to this effect:—The plaintiffs claimed the compulsory return of a duplicate receipt for $2,000 in the possession of defendants. The witnesses had applied for this document on the part of plaintiffs, and had been told by defendants that, knowing the paper was urgently required as important testimony in a suit pending in the Saibansho, they considered it to be worth at least $1,000, and offered to give it for $500, finally accepting an offer of $300 which the witnesses on their own responsibility made. The negotiation fell through, however, on account of the defendants refusing to accept a chit for the $300 in the absence of ready money at the moment.

Whom the original owner of the receipt had been, or how the defendants had obtained possession of it did not transpire, and the Court at this stage of the proceedings adjourned till this morning at 10 o'clock.

Thursday, July 19th, 1877.

(Continued from Wednesday.)

Defendants, Tsuchiya and Hanjiro, were now examined in the absence of the two witnesses of the previous day, and at the conclusion his Honour informed Mr Reddelien, who represented plaintiffs, that the substance of the evidence given was as follows:—Tsuchiya said that in August, 1875, he received from Kimura, a Japanese in the employ of Messrs Kniffler & Co., ten documents which he required as evidence in a case then being heard in the Saibansho. These documents had all been returned to Kimura, as Tsuchiya had certified in a letter to the Court a few days ago, and Tsuchiya deposed that he was not in the possession of the receipt in question. A receipt from Kimura for the documents lent was produced in Court.

His Honour further stated that Tsuchiya had been absent in the country for some time and that Hanjiro had been looking after his affairs, and enquired if plaintiffs from this fact had not inferred that Hanjiro had the receipt in question?

Mr Reddelien replied that he had gained all his information from his two witnesses. He knew that Tsuchiya had been employed by Von der Heyde & Co., but was not aware on what terms.

Hanjiro said he had represented Tsuchiya in Court on one occasion and remembered noticing a document of the description of the receipt in question. When asked about it he had said he remember-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

ed something about it and would look over Tsuchiya's papers in order to find it. Upon instituting a search, however, Hanjiro could not find it. Tsuchiya returned from the country just then and Hanjiro made repeated enquiries with regard to it and asked if Tsuchiya was certain it was not in his hands. Tsuchiya said he knew nothing about it and was quite sure he had not seen it.

Thus, his Honour observed, the result of this evidence is that Tsuchiya denies having ever had the document, and Hanjiro said he thought it existed but found that it did not. When this was finished plaintiffs' two witnesses were recalled, and in answer to the Court stated that they had no documentary evidence to support their statements, but three merchants named Shimada Bunjiro, Tanaka Yoshibei and Midzutani Seiroku were present when Hanjiro told them Tsuchiya had the receipt in his possession.

On the evidence as is stands the Court said no decision could be given, and Mr. Reddelien requested that these three men should be called.

His Honour said an endeavour would be made to bring them together, and the Court accordingly adjourned till this morning at 10 o'clock.

Friday, July 20th, 1877.

(Continued from Thursday.)

This hearing was opened, after Mr Reddelien had been informed of their presence, by the Court interrogating two of the three witnesses for whose evidence the case had been adjourned. The third, Midzutani Seiroku had promised to appear during the forenoon if his health permitted. He had been ill for some time.

After examining these two witnesses His Honour informed Mr Reddelien that their evidence amounted to very little and did not advance the case in the least. In consequence an adjournment for the production of the deposition of the third witness, Midzutani Seiroku, would be advisable.

Mr Reddelien acquiesced in this proposal and the 24th instant was named for the next hearing. He wished to make a few remarks, however, and stated that in the evidence of the previous day it had been said that Kimura lent several documents to Tsuchiya which were returned on a receipt being given. Now Mr Reddelien had looked over all his papers and had found that these did not at all relate to the present case. Mr Reddelien then inquired what was the custom of the Court with regard to documentary evidence and whether such was usually copied and put on the records?

His Honour replied that it was not the rule, but in important cases documents were sometimes copied. Usually, but not always, was the stamp of the Court affixed to papers put in as evidence.

Adjourned till Tuesday, the 24th instant, at 10 a.m.

MEMORANDUM BY DR. WILLIS ON THE SUBJECT OF HIS VISIT TO TAKATA, KASHIWASAKI, NIIGATA, SHIBATA, AND WAKAMATSU, TO RENDER MEDICAL ASSISTANCE TO WOUNDED JAPANESE.

I attended personally to the requirements of 600 wounded men, and gave directions regarding the treatment of about 1,000 others. Of these numbers 900 were of the Mikado's army and 700 of the Aidsu clan.

I performed thirty-eight amputations, varying in magnitude from removal of a finger to amputation of the thigh at the hip-joint. Of those operated upon, about one-half recovered. I extracted twenty-three bullets, and removed dead bone from upwards of 200 patients The wounds were almost exclusively gun-shot injuries. I saw a few instances of spear wounds and sword cuts, but no instance of a bayonet wound.

As far as time and other circumstances would permit I instructed the native doctors in the treatment of the wounded.

I found the sick men of the Mikado's army lodged in temples at the various stations I visited. They were provided with all the ordinary wants of Japanese, and appeared to be cared for as far as could be expected, considering the imperfect discipline and want of knowledge that exist amongst the native doctors and attendants.

The wounded men of Aidzu clan were lodged in seven villages around the chief town Wakamatsu. When I first visited them they were in a deplorable state of filth and wretchedness, and excepting a ration of rice, nothing else was allowed them. By representing their condition to the authorities at Wakamatsu I was enabled to obtain necessary supplies, and was assured at the same time that for the future the wants of the sick would be regularly provided for. The wounded of the Aidzu clan included old men, women and children.

I made out lists of the sick of the Mikado's army that might return to their homes before the severe winter set in. During next spring, all the sick will return to their respective provinces. They were to be assembled from the various stations to pass the winter at Kashiwasaki.

On my journey from Yedo to Takata an incident occurred which illustrates a difficulty that may attend a foreigner travelling in Japan, even when his journey is undertaken at the instance of the Japanese Government. About twenty miles from Takata there is a mountain-pass with a guard-house under the charge of the local Daimio. On my attempting to pass through this barrier as I had already done through other barriers, several of the guards rushed out, and in a loud and menacing tone of voice ordered me to take off my hat, and by placing hands on my shoulders attempted to force me into making obeisances. I disengaged myself from the hands of the guards and passed through without making the obeisances which it was attempted to force me into. I demanded an apology from the chief of the guards for the conduct of his subordinates, and the permission to pass unmolested through the barrier. I could, however, obtain no redress. The chief of the guards justifying the conduct of his subordinates, I declined to proceed any farther on my journey until I received the satisfaction demanded, and sent a letter to that effect to Takata. The following night two officials arrived from Takata. They expressed the regret of the treatment I had received The chief of the guards was called upon to make a formal apology to me. The next morning I passed through the barrier a second time, to establish my right of doing so, when a second apology was tendered in front of the guard-house. I hereupon expressed my satisfaction, and requested that no further steps should be taken in the matter, as I considered the rudeness shown me arose in a great measure out of ignorance. I have reason since to know that the chief of the guards is grateful to me for interceding on his behalf, otherwise he would have lost his position for his conduct on the occasion. With characteristic heroism he had expressed his readiness,—should it be found that in the zealous discharge of his duties he had overstepped the bounds of propriety,—to put an end to his existence by harakiri or disembowelling.

At Shibata I was called upon by a Karo or Councillor, who thanked me in the name of his Daimio for my services to his master's retainers. At Niigata, one of the chief officials administering the government of the place paid me a complimentary visit. At Shibata, a Karo of the Daimio of that place and a retainer of his Imperial Highness Ninwaji no Miya, the Commander-in-chief of the Mikado's army, visited me and expressed, in the name of their respective masters, their obligation to me for the services I had rendered.

I had occasion frequently to observe the significant absence of wounded prisoners, and, as often as opportunity served, I pointed out the inhumanity of a wanton sacrifice of life. I expressed my sense of disappointment at not having it in my power to bear testimony to the clemency of the Japanese Government towards its opponents in the present struggle. I was told by way of excuse that the Aidzu prisoners reviled and insulted the Mikado's authority so offensively that it was found impossible to spare even the lives of the wounded. The retainer of the Commander-in-chief promised, however, that he would state fully to his Master all that I had said regarding humanity in war and the compassion shown to wounded opponents in other countries. On the following day his Imperial Highness the Commander-in-chief sent me word that he wished to see me as soon as I had completed my attendance upon the wounded. I stipulated that, in the event of my visiting his Imperial Highness, I should observe no other ceremonies than those that would be due to the presence of a personage of similarly exalted rank in Europe.

On the occasion of the interview, the Miya sent his chief doctor and an escort to accompany me to his place of residence, which was within the castle of the Daimio of Shibata. The Miya expressed his concern for the fatigues that so long a journey must have imposed upon me. He asked me if I had anything interesting to communicate. I said that what I deemed most interesting I had already fully explained to his retainer; whereupon he remarked, "we have well considered that matter." After some complimentary and general conversation, during which inquiries were made about the wounded, I took my leave.

The Miya is twenty-four years of age, although he looks older, with an agreeable expression of countenance. Besides the Miya there were present two nobles of the Mikado's Court, the retainer of the Miya already spoken of, a Satsuma General, and the Miya's chief doctor. Shortly after my return home I received a letter written at the instance of his Imperial Highness and signed by the two nobles who were present at the interview, requesting me to continue my services for another month, to visit Kashiwasaki once more, and to render medical assistance to the wounded men of the enemy as well as to those of the Mikado's army. I explained that all I could do in the matter was to submit the letter to my Minister, whose orders I was bound to obey. In the meantime, however, until I heard from him, I would do my utmost to carry out the requests contained in the letter received, and to that end I would start the following day for Aidzu's chief town, Wakamatsu. A guard of thirty-four men of the Daimio of Shibata was ordered to accompany me. On my arrival at Wakamatsu I found that about four-fifths of the town had been burnt on the occasion of its capture by the Mikado's army. The most central buildings of Aidzu's Castle alone remained. All the dwellings of the official class included in the outer moat had been burnt. The buildings which still stood were composed of wood and plaster. They were riddled with round shot and rifle bullets. The castle was commanded, at the distance of half-a-mile, by a hill, upon the summit of which the Mikado's forces had erected a battery.

In the most central building there was an immense collection of armour, old matchlocks, spears, bows, and arrows. Out of this collection the soldiers of the Mikado's army appeared to select such articles as they fancied. I was told that some of the suits of armour were over three hundred years old. I found by experiment that a rifle bullet would pass through the strongest helmet, though proof against revolver shots. Judging by the size of the oldest armour there is no degeneration in Japan of the physique of the soldier class within the last 300 years.

Along my journey I had occasion to observe the immense extent of hilly country as compared with plain land. Judging by what I have seen of the main island of Japan generally, I am of opinion that more than five-sixths of it are covered with hills, which often assume the proportions of lofty mountains. In some places the hills are clothed with timber, but, as a rule, they are bare, giving to the landscape an appearance of dreary grandeur. Many of the hills are evidently volcanic. About half-way across the island there is a large active volcano. The country around the base is covered with ejected lava stones to the distance of five or six miles. Eighty-four years ago there was an eruption which, it is said, caused much loss of life and property.

After leaving the great Yedo plain, the track of my journey to

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

the opposite coast lay between mountains, where sometimes the level ground expanded into valleys some twelve miles in breadth, while it often became so narrow that it degenerated into a mere mountain pass. My journey from Takata to Niigata lay along the sea shore. Up to the Niigata plain, a distance of sixty miles, the country is almost uniformly hilly. The hills close to the shore are of no great height, and some are well wooded to their summits. In the Aidzu country the hills form a thirty to fifty miles in extent round the valley in which Wakamatsu stands The valley itself is about twenty-four miles long by twelve miles broad; and so completely is it hemmed in all sides by hills and mountains that it might almost be the bed of a great lake. The rale land in the different parts through which I passed was very fertile, and seemed capable of producing in perfection all the vegetable products of a temperate climate I was, however, especially struck by the richness and depth of soil of the Yedo plain, which, speaking roundly, extends inland some fifty to sixty miles. As far as I could judge, the Niigata plain is to the west coast what the Yedo plain is to the east. On comparing its extent and richness, and the importance of the town of Niigata itself, with any other place that I saw on the west coast, I cannot forbear expressing my conviction that it is at present by far the most suitable site for foreign residence and trade in that part of Japan.

It is impossible not to remark the variety of useful plants which grow on the same soil. The Japanese might be supposed to have borrowed both from Asia and Europe all the vegetable productions that are most necessary to man. The Japanese have several varieties of the grain crop, suited to different soils and temperature. Their upland varieties of rice would, I believe, be found superior to those of almost any other country. The root crops occasionally reach a prodigious size. In the Aidzu country, carrots and turnip radishes are to be seen over a yard long. Fruits, in certain places, seem capable of enormous development. I weighed at Niigata several pears that reached a couple of pounds. It must, however, be acknowledged that Japanese vegetables and fruits, although abnormally developed by a system of forcing by strong manures, on that very account, in flavour and excellence, fall far short of the same productions grown in Europe. After emerging from the Yedo plain, I found patches of ground planted with the Irish potato. It is considered, however, an inferior article of diet. It appears to be quite free from disease. Along the track of my journey, I met with most of the commoner species of English road-side plants. Trees sometimes attain an immense size. I measured a cedar that was thirty-nine feet in circumference at the base, and several *kiaki* trees were over thirty feet in girth, at the distance of a yard from the ground.

Everywhere amongst the hills there was a noticeable absence of animal life both domestic and wild, though some of the hills appeared well suited as pasture land for different kinds of cattle. Birds of all sizes were scarce in the interior, owing in great measure, I believe, to the numbers that are snared for food, especially where fish is unprocurable.

I failed to discover the existence of any mines along the track of my journey. I heard of the existence of coal, iron, and copper at several places, though up to the present they had not been turned to any useful account.

The rivers in many places become, in the dry season, mere gravel beds; whilst, in the rainy season, they swell into large rapid streams. In some places, the bed of the river is above the level of the surrounding country, necessitating strong embankments to confine it to its course. Last year, in consequence of the unusual fall of rain, many of the rivers burst their embankments, causing much loss of property. In several places, houses had been swept away or severely injured by the inundations. The rivers appear to be fairly stocked with fish. I saw salmon caught in large numbers in the Niigata River. The average size is from ten to twelve pounds. I saw some specimens that weighed as much as twenty pounds. All the larger rivers of Japan appear to have bars across their outlets into the sea. I had an opportunity of sounding the depth of the Niigata River for eight miles up its course; it varied from twelve to thirty feet. I was told that at the bar across its mouth the depth of water was only six to eight feet at high tide, and that the largest Japanese junks, if fully laden, require to lighten their cargo before crossing the bar. It is plain that Niigata cannot be made a shipping port for foreign vessels by any ordinary outlay of money. In summer it is, however, the great port of call on the west coast for native junks passing north or south.

During my journey I had frequent occasion to observe the great local changes of temperature. The climates of the east and west coasts of Japan on the same parallel are remarkably different. In winter, the snow sometimes lies ten to fifteen feet in some of the valleys on the west coast, putting a stop for weeks together to all communication. Several of the mountain passes are blocked up with snow during the entire winter months. The cold in some of the highland regions I passed over was intense. In some places, the wind swept up the valleys with extreme keenness; in other places, I was surprised by the comparatively genial character of the atmosphere. On rounding the base of a mountain I not infrequently came upon snow lying deeply on the ground, though none was to be seen on the other side. After leaving the Yedo plain there is a sudden fall in the temperature of from ten to fifteen degrees. The country assumes the character of highlands, in which mosquitos do not exist, even during the hottest summer months.

The western sea is so violent during the winter that native junks scarcely ever venture out upon a cruise; and even the fishing-boats, as a rule, are beached during the stormiest months. On the western coast I saw the wrecks of three steamers, the property of Japanese Daimios. I was told that, north of Niigata, a fourth foreign-rigged vessel had been wrecked. All these wrecks had been occasioned through stress of weather. Gales of wind appeared to be of constant occurence along the west coast; and judging in the case of foreign vessels the navigation of the Japan Sea will be found so difficult and dangerous as practically to close the west coast to shipping operations during that season of the year. For miles inland the air is filled with the sound of breakers that beat the coast in all weathers.

Whatever may have been the origin of the Japanese people, they are at present a homogeneous race. There are, however, some local differences which I noticed. In parts of the Province of Echigo the people are much handsomer than in any other part of Japan that I have yet seen. Some of the women, even of the lower orders, are almost as fair-skinned as Europeans; and this is the more remarkable as it is only in this province that women act as coolies along the public highways. The strength of the coolie class seemed very different in different places. In one of the silk districts in the Province of Shinano, where the people seemed very prosperous, comparatively, six coolies carried my litter running; whilst in the Aidzu country, where the coolies were weak, sixteen of them seemed quite unable to put forth the same amount of strength.

I went to see the oldest inhabitant at several places where I stopped on the road. I made careful inquiry about the extreme span of human existence in this country. I saw an old woman of the small shopkeeper class, who was stated to have attained 100 years of age. She was certainly the oldest-looking person I had ever seen. She remained in bed constantly during the cold weather. Her faculties were nearly entirely decayed. As a rule, Japanese appear to die of the extremest decrepitude when they attain the age of from 80 to 90. Amongst the nobility and gentry I am told that instances of extreme old age very rarely occur amongst the men, though women of all classes reach a goodly old age. From what I have seen, I am of opinion that the population of Japan is quite as large as the wealth and industry of the country can at present support. There can be no doubt that of late years the country has been growing in material prosperity, more especially in the silk districts. I was told that the price of silk had risen sixfold during the last ten years, and that the amount of ground under silk cultivation had doubled during the same space of time. I saw large tracks of ground in the Provinces of Musashi, Kodsuké, and Shinano, where mulberry-trees had been planted within the last few years, and in some places the hill-sides were being gradually covered with mulberry plantations. It appeared to me that there was hardly a limit to the amount of silk that Japan might produce, seeing how well the hill-sides suit the growth of the mulberry plant.

From the general attention that was being bestowed upon silk as an article of commerce, and the stimulus that was being communicated by money to the silk districts, I look forward to a yearly increase in the amount produced of this most valuable staple In every part of my journey I met with samples of foreign goods, both of cottton and woollen manufacture. I was told the demand for such articles was steadily on the increase.

I started on my journey from Yedo on the 5th of October last, and returned to that city on the 28th of December. The journey, which is over 600 miles, was accomplished by riding in a kago, or walking, according to circumstances.

In conclusion, I may from my own experience, bear testimony to the bravery and hardihood with which the invading forces of the Mikado bore hardships and privation, which were almost more cruel than the weapons of the enemy. All possible efforts were taken to protect me from privation, and yet the severity of the cold was so intense, and the poverty of the food so trying, that my servants and assistants nearly all broke down under it. After a long day's work the only refuge would be a house open to the blasts of the wind; the only comfort rations of rice and stale fish, which we ate all huddling round the imperfect warmth of a charcoal brazier. But even this was luxury compared with what the fighting men of the Mikado had to put up with.

(Signed) W. WILLIS.

Yedo, January 23, 1869.

INTELLECTUAL WOMEN.

(Saturday Review)

The question which used to exercise French wits, as to whether ink stains might not be thought ornaments to a lady's fingers, has long ago been decided. It is one of the questions to which, as British Hegelians are fond of saying, you cannot answer "yes" or "no." It implies more than is explicitly stated, and is settled by the formula that women may read and write without neglecting the simple and obvious duty of washing their hands. No one expects a man of letters or a philosopher to go abroad with the mark of his vocation upon him, and to put the problem in the old shape was to insinuate that literary ladies were less careful than men in their dress and habits. We may grant that this particular sneer is out of date, and yet it does throw light on the great cross of intellectual women, and on the chief snare that besets them. The world has not loved them, nor even behaved with ordinary fairness in its judgment of them. If women followed their naturals instincts, if all their talk was personal, and if all their interests lay in their dress, their admirers, their rivals, and their families, they were sneered at as frivolous and mindless. And when they turned to the things of the mind, they were condemned as prigs, pedants, *précieuses*, and blue-stockings. The reason of these latter charges is found by the advocates of the fair in the jealousy of man. But the real cause is to be discovered in that eagerness of converts which impelled some of the *précieuses* to be as slovenly as the most grubby old *savant*, and which still urges clever women into provoking extremes of intellectual abandonment.

Ladies seldom take up intellect as a habit of life very early in their career. Their girlhood has, up to the present enlight-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ened decade, been passed even as the girlhood of the most frivolous sister. They have never had their time to themselves; but, in the nursery, school-room, and drawing-room, have been forced to walk in the prim paths laid down by early governesses, French grammar, the piano, Mrs. Markham's England, and a comparative study of the mountain heights of South America do not awaken, arouse, and stimulate original thought. A woman has gone through her girlish years, and had her round of dances, flirtations, country visits, and proposals, before she has a chance of discovering that she too has a mind, and likes to read history, or philosophy, or mathematics as the case may be. By the time the discovery is made, the slow battle of freedom has also probably been won. The despotism of father or of brothers has been fought down, and only ancient aunts from a country town fire the distant and random gun of remonstrance, and wonder what Matilda will do next. Matilda, feeling that the time is short, makes progress with desperate energy, and her whole being is absorbed in her new pursuits. Nothing can be more disagreeable to the old friends of the intellectual woman. They soon notice that she takes no interest in their conversation about their neighbours' incomes and bonnets. What the intellectual woman loses in their esteem she does not gain in that of men interested in the same pursuits as herself. This is not because they are jealous, as is fondly supposed; but because, when they meet the opposite sex, they wish "to forget their barren knowledge awhile." They have a hundred other interests, which came to them in their youth. Cuneiform inscriptions, the Popes of the Renaissance, chemistry, or Greek, or poetry, or novels, are the business of their working hours, and "intellectual hygiène" demands that they shall sometimes forget them. But to forget them in the presence of the intellectual woman is to insult her bitterly, and to "think her not worth talking to." Very few ladies attain Miss Martineau's pretended dislike of "shop." In her sublime conceit, that worthy woman posed as a mistress of her subjects, and she was only vexed when young barristers, mere amateurs, tried to draw her out about education and the gratifying diminution of crime. She soon let them know that she was not as other intellectual women, though it is not even now possible to guess how her neighbour at dinner was to approach her in conversation. The majority of her sisterhood still terrify the weary by their zeal in season and out of season. This ardour of the convert is perfectly natural and excusable; but it answers to the ink stains on the fingers. Intellectual women, *seriæ studiorum*, have discovered a sort of safety valve, an outlet for their pent-up knowledge, which is adequate, indeed, but not otherwise useful. They have fastened on the examination system with a ferocity of enjoyment which is likely to perplex a much examined race of men. What the male student seems chiefly to pine for at present is respite from examinations. At school he was always passing, or failing to pass, into a higher form; and when he reaches the Universities he grumbles that his valuable time is wasted and his unique power frittered away by tests derived from the benighted Chinese. To hear a young and illustrious don speak of the "examination system," one would think he was denouncing the baby-farming system, or the coolie system, or clerical fellowships, or some other flagrant abuse. He does know what a sweet boon papers of questions are to ladies who cannot elsewhere find a free outlet for their opinions about the divorces of Henry VIII., the tactical errors of the French at Creçy, the origin of trial by jury, and a hundred other delightful problems in history, arithmetic, logic, and kindred sciences. Persons whom one would naturally expect to turn their knowledge and talents to more practical purposes simply revel in passing every examination of which they can hear at every local centre coloured on the map of England. Thus institutions which were intended to test the knowledge of the young become a restricted from of publication, in which a very great deal of knowledge, cleverness, and enthusiasm is scattered to the winds and the waste-paper basket. The zeal for passing examinations might be ascribed by the cynical to emulation; but, as a rule, the results of these competitions are not blazoned abroad in such a way as to please conceit. Diffidence about approaching a larger public, more than love of display, crowds, examination rooms. It is plain that their popularity indicates a mere moment in the history of the devotion of women to study.

It is provoking to be attacked at a picnic with questions as to the date of Papias. The deck of a yacht is not precisely the spot on which to start a hunt after the real nature of the Absolute. The gentleman who complained that his partner in the waltz insisted on "drawing" him as to the relations which may be presumed to exist between Time and the Unconditioned had good reason to grumble. Comte's opinions about the characteristics of the architecture of Positivist cathedrals are too recondite to be discussed over soup and fish. At a boat-race a young man's fancy does not turn to thoughts about the Stone age in Egypt. Advanced ladies are apt to bring these and similar matters on to what novelists still call the *tapis* just when one would least expect them. It is rather absurd to carry on a conversation in such circumstances in the serious spirit of Socrates and Diotima. And it is difficult to put the questions by without being accused, when opportunity serves, of superciliousness or rudeness. Every one has not in such a juncture the audacity of the man who explained the word "idea" to be the Russian term for female idiot. It is not given to every one, when asked out of season what sort of book so-and-so is, to reply that it is a small pink book. Even where the impudence exists, the brutality need not be present. The science of snubbing is one which ought never to be practised under the temptations to which we have referred. We must wait till things find their level, till the studies of men are approached by women early in life, and are gradually assimilated, not pounced upon by a sudden effort and made the one absorbing interest of existence.

The friends of the higher education of women may declare that the present position of the eager seeker after knowledge is merely the discomfort of a stage of transition. That "we do indeed live in an age" is almost the only point about which all comprehensive theorists are agreed. When they go further they are found to differ among themselves as to the precise character of this period; but there is a certain consensus of opinion on the side of the idea that we live in an age of transition. The intellectual woman of the moment finds herself deep in this vale of rapid change, and she has to take the consequences of the situation. But the friends of the higher education aim at bringing up a sort of young ladies who shall be intellectual from the beginning. Their eyes will open on the tree of knowledge, even of mathematics and the dead languages, at an age when their aunts were still in the bond of the use of the globes, and the gall of elementary musical exercises. Thus science, in the eyes of the new generation of girls, will have none of the temptingness of the forbidden, the occult, the unfamiliar. When the apple is always within reach, and free to be plucked, the apple will no longer be snatched at in season and out of season. Knowledge will be gradually assimilated, not greedily devoured. There will be no more mistakes about what is essential and what is merely accidental. Lectures on *omne scibile* will no longer be crowded by feverish takers of exhaustive notes. Examinations will cease be be regarded as delightful excitements and charming opportunities of display, which the jealousy and selfishness of men have too long reserved for their private enjoyment. When study becomes more or less a thing of course among a certain number of women, and offers a career, ladies will take the thing with as much coolness and leisure as public schoolboys and undergraduates do at present. In the next generation the position of intellectual women will be secured, and the fretfulness of enthusiasm will have been worn off.

This is a hopeful and a not improbable theory or prophecy. Looked at with the eyes of calm approbation, and of criticism as nearly as possible impartial, the whole scheme shows one or two weak points. It will always be difficult to get as many side interests into the lives of women who devote themselves from youth to study and education as men engaged in the same pursuit enjoy. Athletic sports, which are always either blamed or praised too much, do some good by diverting attention from the strain of intellectual ambitions. All the free life and adventurous existence of the student keeps the mind open and fresh. It is hard to see how the advocates of the higher education of women propose to secure for them advantages of this sort. Their spirit of emulation is far keener than ambition among young men. Their concentration is almost febrile. Their very conscientiousness comes out strongly in their pursuits, and they grudge themselves every holiday and the most simple pleasures. Too much stress may be laid on these characteristics by theorists who expect a learned generation of women to be the mothers of a race of turnip-headed Englishmen with a native tendency to water on the brain. Still a survey of the surface at least of the whole question seems to show that the learned life is only for a rare woman here and there, peculiarly favoured by circumstances. This is a thing that ladies need not regret. "The meanest creature that lives, a spider or a toad," said Hazlitt, "has its mate or fellow, but the scholar has no mate or fellow." Not many women would choose to be scholars with the certainty of this loneliness before them.

REUTER'S TELEGRAMS.

LONDON, 18th July, 1877.

MOVEMENTS OF THE RUSSIAN ARMY IN TURKEY IN ASIA.

The Russians, having received powerful reinforcements, have proceeded by forced marches into Armenia.

MOVEMENTS OF THE RUSSIAN ARMY IN EUROPEAN TURKEY.

The Russian troops have arrived at Yonisaghra and Rasgrad, cutting up the Railway lines along their route.

LONDON, 17th July, 1877.

It is generally reported that Mr. Disraeli is anxious to resign his appointment in the Government on account of ill-health.

MOVEMENTS IN ASIATIC TURKEY.

The bombardment of Kars has been discontinued, the Russians having withdrawn their siege Artillery.

DEFEAT OF THE TURKS.

The Russians attacked the Turkish forces at Nicopolis and completely defeated them.

The Russians have occupied Pleova (? Plevna) and the Russian vanguard has crossed the Balkans.

ARRIVAL OF THE ENGLISH MAIL.

London, July 4th.—The Turks are retreating from Rustchuck. The Russian cavalry has reached Tirnova.

London, 5th July.—A Turkish despatch has been received stating, that renewed attacks upon Beila and Tutukai have been repulsed.

The English Press considers the Russian campaign in Armenia a complete failure.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

London, June 23rd,—Suleiman Pasha has effected a junction with Ali Saib Pasha, and is marching on Cettigne.

London, 24th June.—A despatch received from Prince Gortschakoff, dated the 30th May, and replying to a letter from Earl Derby to Count Schouvaloff on the 6th May, in which Earl Derby defined the interests of England in the East, promises to respect them so long as England remains neutral and states that Russia will not interfere with the Suez Canal or Egypt, nor will she extend the seat of war elsewhere beyond the limits of necessity. The acquisition of Constantinople, it is further stated in the despatch, is not included in the views of the Czar, as the future of Constantinople, being a question of common interest, cannot belong to any one European power. As regards the passage of the Dardanells and the Bosphorus, these, writes Prince Gortschakoff, are points which should be settled by the European Powers in concert on equitable, efficient and guaranteed bases. The despatch adds that the Czar has resolved to obtain guarantees for security of the Christian subject of the Porte and Russia, and also against any recurrence of the disturbing effect of Turkish misrule.

London, 25th June.—The Russians have, after severe fighting, occupied the heights of Matchin. The Turks have evacuated Tultcha, and have retreated in good order to Hirsova. An official Turkish despatch indicates that it is the intention of the Turks to abandon the Dobrudscha and make a determined stand at Trajan's Wall.

According to Russian official despatches, the erection of siege works and the bombardment of the northern forts of Kars continue. A sortie of the garrison of Kars on the 22nd instant was repulsed by the Russians. The Turkish troops have invested the garrison of Bayazid, whither reinforcements are being sent. Severe fighting took place on the 21st and 22nd inst., at Delibaba Pass. The Russians eventually fell back on Zeidekan. Both sides lost about 2,000 men.

The Czar has returned to Ployesti.

London, 28th June.—According to an official Turkish despatch, the Russians, intending to occupy Soghanli attacked the Turks at Zewin, but were defeated and compelled to fall back, having lost 3,000 men, whilst the Turks only lost 400 men. The Russians are preparing to renew the attack. A Russian attempt to cross the Danube at Totrakan (query, Turtukai) has been defeated by the Turks.

London, June, 26th.—According to official Turkish despatches the Russians unsuccessfully attacked Batoum on the 23rd instant. The Turkish Commander of the garrison, on the 24th, attacked and completely defeated the Russians. Darkness only prevented his occupying the enemy's entrenchments.

The Russians on Sunday commenced a terrific bombardment of Rustchuk, the English consulate there being destroyed. The Turks are replying vigorously. Colonel Wellesly, military attache to the British Embassy at St. Petersburg, has been coldly received at the Russian headquarters at Ployesti.

Suleiman Pasha's army has reached Spush, after fighting its way through Montenegro, and is concentrated in the vicinity. Prince Nicholas has harangued his troops, praising their bravery and declaring that decisive fighting is now coming on.

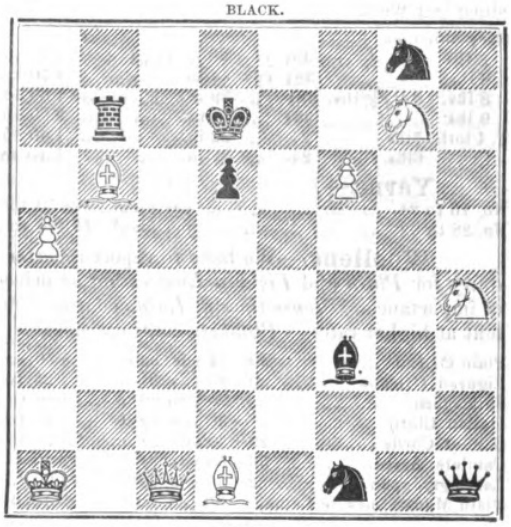
Both Houses of the Roumanian Legislature have been closed.

Allahabad, 20th June,—Captain Butler, 9th Regiment, is deputed on a mission to Merve.

According to an official Turkish despatch, Ahmed Mukhtar Pasha attacked and defeated the Russian division, on the 21st instant, at Hiliatz, in the district of Delibaba. The Russians retreated in disorder.

An official Turkish despatch states that the Montenegrins have evacuated Cettigne.

London, 27th June.—In yesterday's sitting of the Hungarian Chamber of Deputies, there was a debate upon the Esatern policy of the Government.



The President of the Council of Ministers declared that the Austro-Hungarian Government would neither occupy territory nor mobilize the army, but would not tolerate the neighbouring territory being occupied by foreign powers. The Turks have evacuated Hirsova, which the Russians have occupied. Thirty thousand Russian soldiers have already crossed the Danube. The Turkish batteries at Rustchuck have partially destroyed Giurgevo.

PROBLEM.

By Dr. Gold.

(From the Westminster Papers.)

BLACK.

WHITE.

White to play and mate in 3 moves.

Solution of W. P.'s problem of last week.

White.	Black.
1.—B. to B.'s 4th.	1.—R. takes B.
2.—Q. takes B., ch.	2.—R. takes Q.
3.—R. mates.	

Correct answers received from Naruhodo, Yokohama; and W.H.S. and F.S., Tôkiô.

Naruhodo:—There is a variation of the solution of C.W.'s problem, as under, which will fully answer your enquiry:—

White.	Black.
1:—R. to Q. R.'s 7th.	1.—K. takes R.
2.—Q. to Q.'s 5th, ch.	2.—K. to Q. Kt.'s 3rd,
3.—R. to Q. Kt.'s 7th,	or to Q. R.'s 5th.
or Q. to Q. B.'s 4th, mate.	

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of al kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—There is little change to report in our market. A slightly quieter tone is prevailing, still a moderate business continues to be done. There are no variations in quotations to note since last week.

Grey Shirtings:—					White Shirtings:—		
7 lbs.	38½ yds.	30 in.	per pce.	$1.40 to $1.75	60 to 64 reed 40 yds.	35 in.	per pce. 2.20 to 2.40
8 lbs.	38½ yds.	44 in.	,,	1.70 to 2 30	Turkey Reds 24 yds.	30 in.	2—3 lb. per lb. 0.67½ to 0.77½
8 lbs. 4 to 8½ lbs.	38½ ,,	39 in.	,,	1.60 to 2 40	Black Velvets		7.00 to 8 25
9 lbs.	38½ ,,	44 in.	,,	2.00 to 2.60	English Drills 14/15 lbs.	40 yds,	30 in. 2.40 to 2.75
T. Cloth 7lbs.	24 ,,	32 in.	,,	1.40 to 1.62½	Taffachelass	12 yds,	48 in. 1.70 to 2.15
,, 6lbs.	24 ,,	32 in.	,,	1.10 to 1 25			

Yarns.—

No 16 to 24	per picul.. $28 50 to 32.00	No. 38 to 42	...per picul...$35.00 to 40.00
No. 28 to 32	per picul.. $31 50 to 34.75	Reverse Twist 16-24	,, —

Woollens.—We have to report a better feeling in this market since our last. There has been some enquiry for *Plain* and *Figured Lustres* but as prices offered are still very low, they have not led to any transactions of importance. *Mousselines de Laine* continue improving, and plain goods have found buyers to a certain extent at higher rates. *Blankets* continue saleable.

Plain Orleans	40—42 yds.	32 in.	5 50 to 7.00	Figured Mousselines de Laine	30 yds.	30 in.	0.24 to 0.28
Figured Orleans	29—30 yds.	31 in.	4 25 to 5.25	Multicolored ,,	30 yds.	30 in.	0.28 to 0.36
Shimagoro	30 yds.	30 in.	4.00 to 5.25	Cloth, all wool plain or fancy	48 in.	to 52 in.	0.80 to 1.20
Italian Cloth	—30 yds	32 in.	0 22 to 0.31	Presidents	54 in.	to 56 in.	0.60 to 0.65
Camlet Cords	29—30 yds.	32 in.	5.75 to 6.00	Pilots	54 in.	to 56 in.	0.45 to 0.55
Camlets Asstd.	56—58 yds.	31 in	16 50 to 17.50	Union	54 in.	to 56 in.	0.60 to 0.75
Lastings, Japan	22—30 yds.	32 in.	12 00 to 13.00	Blankets, scarlet & green	6 to 8 lbs.	per lb	0.40 to 0.48
Plain Mousselines de Laine	—30 yds.	30 in	0.16½ to 0.18				

Sugar.—There has been no change in *Formosa* Sugars since our last, though we have to report a decline in White kinds. Stocks of all sorts amount to 80,000 piculs.

Sugar:—Takao in bag	per picul..	$4.90 to $5.00	China No. 4 Kook-fah ... ... per picul... $7.30 to $7.70
,, in basket	,,	$4.85	,, No. 5 Kong-fun ... ... ,, ...$6.70 to $7.10
Taiwanfoo in bag	,,	$4.90	,, No. 6 E-pak ... ... ,, ...$6.00 to $6.40
do. in basket	,,	$4.80	Swatow Brown ... ... ,, ... None.
China No. 1 Ping-fah	,,	None	Daitong ... ... ,, ... $4.80
,, No. 2 Ching-pak	,,	...$8.40 to $8.80	Japan Rice ... ... ,, ...$2.10 to $2.40
,, No. 3 Ke-pak	,,	...$8 00 to $8.30	Kerosene Oil ... ... ,, ...$4.00 nominal.

Kerosene Oil.—Although no sales have been reported, the stock has been gradually reduced, and is now estimated at under 30,000 cases in first hands. The bulk of the stock is held at $4.

EXPORTS.

Silk.—Transactions have been very fair during the week, and the advance quoted in our last report has not only been fully maintained, but even exceeded in several instances. At the close a somewhat weaker feeling is, however, noticeable.

Settlements amount to 300 bales of Hanks, 20 bales of Oshius, and 25 bales of Filature Silk, making a total of 345 bales.

The total export since July 1st is 711 bales, against 1,024 bales for the same period last year. The stock consists of 600 bales old, and 200 bales new Silk.

		In London at 4s. 1½d. per lb.	*In Lyons at f. 5.20 per kilo.*
Hanks, Good No. 2	$560 to 580	20/9 to 21/6	57.50 to 59.50
,, Good all round No. 2½	$530 to 540	19/9 to 20/	54.50 to 55 50
,, Medium No. 3	$490 to 510	18/4 to 19/	50.50 to 52 50
,, Common to inferior No. 4 & 5	$440 to 470	16/7 to 17/8	46.00 to 49.00
Oshius, Good	$530 to 550	19/9 to 20/8	54.50 to 56.50
Hamatski	$420 to 460	15/11 to 17/4	44.00 to 48.00
Filature Silk, best	$700 to 720	25/7 to 26/3	71.00 to 73.00

Tea.—A steady and rather extensive business at firm rates has been done during the course of the week, settlements for the period amounting to 3,200 piculs. Prices generally are stiffer, and in fact medium and lower grades show an advance of about $2 per picul, but which has rather startled buyers and most of them are consequently holding off for lower rates.

To-days prices close as under, the market ruling very irregularly.

Common	$10.00 to $13.00	Fine	$25 00 to $28.00
Good Common	$14.00 to $16.00	Finest	$29.00 to $32.00
Medium	$17.00 to $19.00	Choice	$34.00 & upwards.
Good Medium	$20.00 to $23.00	Choicest	—

EXCHANGE AND BULLION.

Exchange.—The past week has been unusually dull, and rates remain unchanged.

Rates close as follows:—

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omissonto renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

Thus far the attempts recently made by the Government to bring about a compromise with Saigo have failed, and fighting between Imperialists and Satsuma forces has continued with varying success. Saigo Yorimichi is to proceed to Kiushiu, and it is reported that he is invested with powers to offer terms of peace to his brother. But such is the present spirit of the insurgents and their commanders, and so sure do they appear to feel of eventual success—on what grounds it is impossible by merely reading the native papers to determine—that they are more likely to reject than to accept any such offer? How can it be foretold that the insurrection is about to be crushed. Such reports have been constantly made since its outbreak, and telegrams falsely asserting that it was terminated have again been officially sent to the Japanese Legation, London, and furnished to the foreign press. The Imperialists, by their own confession, know nothing of Saigo's whereabouts or of any of his movements, and they are only able to guess at the numbers of their antagonists. This constant talk of peace when there is no sign of its approach grows wearisome, and the country looks for deeds not words. In spite of the constant report of victories in the native papers, when they occur they are evidently fruitless. Certain strong positions have been captured, but others are at once occupied by the insurgents. Besides we hear nothing of the defeats sustained by the Government, and they have been neither few nor unimportant. The *Akébono Shimbun* did venture to hint at the repulse that Generals Miura and Miyoshi met with, the true account of which is the following. On the 17th and 18th instants the 3rd and 4th battalions of the Imperialists under these commanders were attacked by a strong body of Kirino's troops, and after a hard fight the latter succeeded in capturing 5,000 bags of rice, 100,000 rounds of ammunition, besides a large amount of money that had been sent to pay the troops. The battalion under Miura lost fifty-two killed, that under Miyoshi sixty killed, while some hundreds were wounded. Now this is not by any means the only reverse that the Government troops have recently encountered, nor the worst. The Government then is doing itself infinite wrong in the eyes of the world by circulating such telegrams as that published in the *Pall Mall Gazette* of June 30th, "Tranquillity nearly restored." At no time since the outbreak has the Government been in greater anxiety to send forward troops than during the past ten days, every available biped that could carry a musket and pull a trigger having been shipped off. No one doubts for a moment that if the spirit of the country could be roused on its behalf, the Government could crush the Southern Army in few days. But the spirit is wanting, and refuses to be forced into existence; and so we suppose the wretched strife must go on; the miserable specimens of humanity who have lately been made to do duty as soldiers be made more miserable by wounds, or go to swell the frightful death-roll that the end of this civil war will show. And how or when is it all to end?

With reference to the recent levies which have been sent to Kiushiu, a Japanese gentleman in the South writes as follows:—"After a recent engagement in which his troops encountered these new recruits, Kirino said 'There is evidently something wrong in Yedo. The new troops run better, fight less and are worse armed than any we have met before. The rifles are all muzzle loaders, and the ammunition is bad. We only want breech loaders." The native papers recently admitted that when brought to action the new troops were utterly useless, throwing away their arms and running off panic stricken.

Kawaji has resumed his functions as Chief Superintendent of Police. Thus it is pretty clear that he is going no more to the field. His resignation has been a clear gain to his antagonists, as he was one of the most able and certainly one of the bravest of the Imperial Commanders. Not only has the Government lost the benefit of his service, but those of about a thousand picked men whom he drew off the field, and who returned to Tôkiô with him. Yamada is now the only General of marked ability that the Government possesses.

It is well known that many of the Imperial troops have suffered much from having to wear leather boots or shoes which have galled their feet in a terrible manner during the hot and wet weather that has prevailed in the south. In consequence they were permitted to wear straw shoes or *waraji*. On one occasion when they were making an attack on a strong position occupied by a body of Kirino's men, the road to be traversed lay over an extremely narrow ridge or razor-back, which rose almost perpendicularly from the valleys on either side. This road had been carefully planted with strong bamboo spikes and sharp nails, concealed by a thin covering of earth, so that when the troops charged over it they wounded their feet shockingly, while many either fell over the precipice, or were picked off by the sharp shooters posted on the surrounding hills. This is said to be a common ruse of the insurgents, and many men are in hospital disabled by wounds to the feet caused by these spikes.

Since the famous *Quaker City* excursion to the Holy Land immortalized by Mark Twain in his "Innocents Abroad," we cannot call to mind any expedition that has been organised in America or elsewhere combining exploration or scientific research with all the delights of a pleasure trip. We do not place the mammoth tours engineered by the world-renowned Cook in this category. We have seen "the lambs," as they are profanely called by the self-dependent traveller, in flocks on all parts of the Continent, under the guardianship of their ever watchful but much enduring shepherd. On one occasion we found a stray lamb who from some cause had missed the fold, and was rapidly becoming a prey to all the wolves of *voituriers* and hotel waiters in Lyons, when he bleated out his woes to us, and we had the unspeakable privilege of restoring him only slightly shorn, though horribly terrified, to the rest of the flock. But we could never think of calling these excursions pleasure trips (who ever saw a Cook's tourist enjoying himself?) nor should we dream of looking on them as in any way useful to the cause of science (will a Cook's tourist ever write even the mildest account of his mild travels?). From a pamphlet, however, just placed in our hands, entitled "Final Announcement of the Woodruff Scientific Expedition," we learn that a thoroughly organized scientific expedition around the world has not only been projected by Mr. James O. Woodruff and General Macaulay of Indianapolis, but that it has the hearty commendation of the Governor of that State, and has moreover received such endorsement and encouragement from all parts of the country, that it is now confidently announced that the expedition will start upon the proposed voyage on the 1st October next. The purpose of the expedition will best be explained in the words of the pamphlet.—

> The purpose of the expedition is to visit points of general and special interest on a route around the globe, to study the arts, archæology and present condition of the better known countries, and the geology, fauna and flora, as well as the history and character of the people of those less known, and to make collections in the various departments of science.
>
> To this end the expedition will be absent two years, and will afford opportunities for seeing the greater part of the world under far more favorable circumstances and at less expense than could possibly be done on a smaller scale or by individual enterprise, and the expedition also will enable schools, colleges, and museums to form collections and preparations of rare, or beautiful or typical forms to a greater extent, and at less cost than has been hitherto possible.
>
> In addition to educational and moral care and guardianship, those who go as students will enjoy all the comforts of a pleasant home, safety, security for health, books, music, exercise, and such an opportunity for extensive travel and observation as could hardly be obtained in any other way.

The vessel selected for the purposes of the expedition is the steam ship *City of Merida* of the New York, Havana and Mexican Mail S. S. Line, a screw of some 1,500 tons burthen. She is to be commanded by Commander Philip, U.S.N., and be in charge of other experienced Naval Officers. The membership fee for the two years is $5,000, not at all an extravagant sum, but this does not allow for the cost of excursions not included in the plan of the route. Those who enter as students must not be less than sixteen years of age. They will be subject to certain discipline, and for them a systematic course of instruction has been arranged. The scientific part of the expedition will be entirely in the hands of men of established reputation, among the list of whom we see many good names. To them is left sole control of the educational work and scientific examinations which are the chief object of the expedition, and it is evident, as the announcement states, that "earnest and thorough work is intended." The vessel is being fitted with due regard to the storage of the large collections of specimens that it is hoped will be made. The route to be pursued is first from New York to St. Thomas and Barbadoes, thence to the mouth of the Amazon. The voyage will then proceed leisurely to various ports of Brazil, through the Straits of Magellan to the Gulf of Penas and up to Valparaiso. The Society and Navigator Islands will next be visited, and thence to Fiji, which it is hoped will be reached by the 1st April, 1878. The expedition will then proceed to Australia, and thence, visiting on its way the Caroline and Solomon Islands, to Takao in Formosa. After remaining here some time the vessel will visit all the principal ports of Japan and China, always allowing time for excursions into the interior of those countries. Leaving Canton she will proceed to Manila and thence to the islands of Zebu, Samar, Lyete, and the islands of the Soo Loo sea, where a month will be allowed for scientific excursions. Zamboanga, Mindanao and the island of Bassilan are to be explored, and then the steamer will make for Macassar in the island of Celebes, where guides and interpreters are to be taken for the exploration of Borneo. Two months will be devoted to this work, those who choose remaining on board the vessel and visiting the Spice Islands. After collecting the various exploring parties the vessel will proceed to Java and thence to Singapore and Bangkok. Passing through the straits of Malacca, and touching at Penang and the Andaman Islands she will go on to Calcutta, which point it is intended to reach in February, 1879. She will then proceed by Ceylon and the Laccadives to Bombay, whence, if time permit, a voyage will be made up to the head of the Persian Gulf so that excursions may be made to Bagdad and Nineveh. The next point will be Aden and thence through the Red Sea to Suez, which it is expected will be reached about May 1, 1879. Going on to Alexandria and Jaffa, opportunity will be given for excursions in the Holy Land, and rejoining the ship the party will proceed to Greece and Sicily. The principal places of interest in Italy, France and Portugal will then be visited, after which the vessel will proceed to Plymouth where she will remain until October 1st, 1879, and then return to New York. It is estimated that the distance to be traversed is about 50,000 miles, and every care has been taken to visit different countries at the season of the year most favourable to health. Altogether the programme is a very taking one, and if the voyage be carried out, as the management guarantee, to the letter and in the spirit of the scheme presented, the student, whatever be his powers of application, cannot but become possessed of "greater experience and wider observation than many who have fairly earned renown as travellers."

Those of our readers who had the privilege of making the acquaintance of a fine artist and accomplished gentleman, Mr. Frank Dillon, during his two years residence among us, and of inspecting the series of clever sketches made by him in that period, will be glad to learn that the exhibition of these works in London has met with singular success. But few persons there can do more than admire the beauty of the scenes and the perfection of the execution, but his friends here can also bear testimony to the admirable choice of subjects and their singular fidelity to nature. Mr. Dillon is the first artist of any eminence who has visited this country and devoted any time to the study of its natural characteristics. Monsieur Chevalier certainly came in the suite of the Duke of Edinburgh, but the sketches he made were necessarily very few in number, limited in subject and hasty in execution. Now Japan is a country that cannot be learned and copied in a few weeks. The range of subjects is so wide, the peculiarities of folliage and architecture so marked, and the experiences of the artist so widely different from those to which he has been accustomed, that it is only by long residence and intimate knowledge that truthful records can be obtained. Although Mr. Dillon pursued his labours in the most unwearied manner during the two years he passed here, and had special advantages afforded him for the prosecution of his studies, he expressed to the writer on his leaving for England, his great regret that he could not make a more prolonged stay, as he felt that the studies he had made were only just beginning to show him the rich field that Japan offered to an artist. A less conscientious artist than Mr. Dillon might have done much more than he accomplished in the same period, but the singular charm of Mr. Dillon's drawings, independent of their artistic merits which are very high, is their perfect truthfulness. In very sketch, begun and finished on the spot that its represents, there is no affectation of prettiness, no mere picture making. Those who know Japan will renew their pleasure by once more gazing on scenes which they can immediately recognise as familiar, while strangers to the country can feel assured that are looking on Japan as it is.

We are happy to see that the Mitsu Bishi Company announce the re-establishment of their line to Hakodate, which has been sadly interfered with since the war broke out in the South, as one of their steamers is advertised to leave for that port on or about the 1st proximo.

The following extract from a London paper will show in how high a degree Mr. Dillon's sketches are appreciated there :—

JAPANESE SCENERY AND CUSTOMS.

All lovers of beautiful natural scenery and bright and charming colour are under a deep debt of gratitude to Mr. Frank Dillon, for the admirable series of drawings now on view at Messrs. Agnew's Gallery at Waterloo-place. The collection represents the fruits of a visit paid by this accomplished artist to Japan, in the years 1875-76, and the work has been executed, Mr. Dillon tells us, in the hope of conveying "some idea of the scenery, architecture, and peculiarities of climate, which render that country so attractive and interesting." We are further reminded that most remarkable changes and vicissitudes are taking place in all parts of the country. The old landmarks, old civilisation, the native dress, are all being altered with marvellous rapidity, and the Japan of to-day is not the Japan ten years ago. Impressed with the desirability of preserving some record of the wonderful country in its most characteristic features, it has been the aim of the artist to portray those details which savour of the state of civilisation now rapidly passing away, and present us with a brief pictorial of Old Japan. To have placed before us such an admirable series of illustrations of all that appeared most noteworthy to a true artist of a country of which we know so little, but concerning which we are all so anxious to know more, is not alone an artistic treat; it is almost in the nature of a revelation, and the result of a very careful examination of the one hundred drawings here exhibited, leads us to express a hope that before the collection is dispersed Mr. Dillon will arrange to reproduce, by means of engraving or lithography, and publish in a collective form, the entire series, which would constitute a most invaluable illustrated history of Japan. We are not aware that any artist of eminence has until now visited Japan on such a sketching tour as that undertaken by Mr. Dillon, and he has been opening up quite a new and unexplored mine of pictorial treasures. All who have studied or carefully examined the art-workmanship of Japan must have become convinced that this art-loving people possess in their landscape surroundings, in their flora, and in the climatic influences on Nature existing in their country much that was art inspiring; none can glance round the present collection of drawings without feeling that there is indeed much to stimulate a genuine and true love for what is beautiful in Nature, in the graceful foliage, the gorgeous tints, and the magnificent natural scenery, depicted in the present Exhibition. The Collection is one which will amply repay the visitor for his pains; indeed, we have not derived more pleasure from the inspection of a series of drawings for a very long time.

Among our translations of the present issue will be found the memorial of the *Seikensha* of Tosa, which was prepared for presentation to the Mikado at the same time as the drawing up of the *Risshisha* memorial, or shortly after, and we presume met with the same fate. It is at the best but a weak composition, and compared with the memorial of Kataoka is scarcely worth the perusal. Still it has its value in showing the universal feeling of distrust in the present administration, a feeling which the unprejudiced observer cannot but remark the members of the Government do nothing to remove and everything to promote.

By a Notification from the *Kenrei* of Kanagawa we learn that one of the bridges at Hodogaya, which was in a dangerous condition, has been closed for repairs. We should like to direct the attention of the *Kenrei* to the last bridge on the causeway leading from Yokohama to Kanagawa. This is a most dangerous structure, and has been the cause of more than one carriage accident. It was apparently intended only as a temporary means of passing the creek it crosses, but for months it has had to do duty for the old bridge which was removed as being unsafe, and there are no signs that it will be dispensed with until it falls though or is bodily carried away by some vehicle failing to turn the sharp corner which leads to it.

Quietness has prevailed in the Silk market lately. The political news received here by telegraph has perhaps, to some extent, caused buyers to be strictly on their guard, notwithstanding that native dealers are fully alive to the position of affairs, and display a willingness to accept a reduction of twenty to twenty-five dollars on the highest quotations. Even though there has been a considerable decline in the price of silk up country, most of that in possession of the dealers here must lay down much over quotations, and a consequent loss stares them in the face. Still they show a disposition to meet buyers, no doubt owing to a desire not to lose the advantage of a high dollar exchange, which is now at a premium of six per cent.

Some few days ago Mr. Nomura Yasushi, the *Kenrei* of Kanagawa, received a letter from the Japanese Consul at Amoy, dated the 3rd instant, reporting that cholera had broken out at that port and that the death rate in consequence was very high. The *Kenrei* at once put himself in communication with the Consuls, with the object of obtaining their assistance to enforce quarantine regulations on all foreign vessels arriving from Amoy. The *Kenrei* suggested that all such vessels should be compelled to anchor outside the Light-ship, where they should be boarded and inspected by medical or health officers, and he further proposed to remove all persons or goods suspected of being infected to a lazarette which he purposed to establish on Saru-shima, an island in the neighbourhood of Yokosuka. Since these proposals were first made, however, the *Kenrei* has abandoned this intention of establishing a lazarette on Saru-shima, in favour of some location near Tomioka. We understand that in 1873 a draft of quarantine regulations was agreed upon by the Foreign Representatives at Tôkiô. These could no doubt be put into force at the present time should occasion demand, and it is certainly advisable that in such a matter the Japanese Government should act with the Foreign Representatives, as it would clearly be useless for quarantine regulations to be enforced on vessels under the Japanese flag unless the foreign shipping be equally bound to observe them. Hongkong, Shanghai and the China coast ports are interested in this question to as great, or perhaps greater, an extent than we are, and it would obviously be unnecessary to subject vessels arriving here direct from Amoy to quarantine regulations, if vessels from that port are allowed unrestricted freedom to visit other Chinese ports. More recent telegraphic information has been received from the Japanese Consul at Amoy, to the effect that the mortality from cholera has been great, and that while the epidemic shows signs of subsidence at that port, it is reported to be spreading in the interior. The *North China Herald* of the 7th instant stated the rumours of the outbreak of cholera at Amoy to have been much exaggerated, and our latest files from China make no mention whatever of such an epidemic. Let us hope, therefore, that no quarantine regulations will be rendered necessary here, and that we may be spared the infliction of such a scourge as cholera amongst us.

The unusually long continued dry and hot weather was broken up yesterday by a violent storm of wind and rain. It began to blow about 9 a.m., but the wind did not attain any great force until shortly after mid-day. It then blew in gusts with great violence until evening, but about 6 p.m. the glass was steady and soon afterwards began to rise, thus showing that the worst was past, though the wind continued to blow with considerable force until after 10 p.m. Everything indicated that we had been on the Northern semicircle of a typhoon travelling from East towards the West, the centre passing South of us about 4 p.m. There was a novelty in this typhoon coming in from the Eastward, a fact which has perhaps never before been observed in Yokohama by foreigners. The O. & O. Co.'s str. *Gaelic* has no doubt borne the brunt of the typhoon, while it is most probable that the French Mail steamer *Volga* has entirely escaped.

H. M. S. *Egeria* picked up her anchor and steamed outside the shipping before the storm was at its worst, as the berth she had among the shipping was apparently not a desirable one, and all the men-of-war in port sent down their yards and spars and got up steam. The Italian corvette, *Cristoforo Colombo*, was moored with a shackle, and about 2 p.m. dragged her anchors but fortunately did no damage, and having steam up was enabled to let go other anchors and safely ride out the storm. Soon after noon a junk, laden with bamboos, which was lying off the French hatoba, commenced to drag her anchors and shortly afterwards drifted ashore. Her position was then a perilous one, and as there were three men and a boy on board who could not swim, great anxiety to get them off safely was manifested by those on shore. Dr. Wheeler and Messrs. Glennie and Pagden, assisted by some Japanese, made strenuous efforts to take off a rope to the junk, but could make no head-way against the high sea running. The junk was all this time breaking up, and soon after the mast went over the side, the small portion of the vessel to which the crew clung drifted slowly in shore, and was soon near enough for the host of eager hands to assist her crew in landing. A great deal of commendable gallantry was shown on this occasion.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Farther up the bund the steam dredger which has been lying off the mouth of the creek for so long was observed to be in danger. She had dragged her anchors until she lay within a few yards of the bund opposite to Messrs. Carroll & Co.'s, and it appeared at one time as if her crew might easily have stepped ashore. After considerable difficulty a line from her reached the bund, and a hawser was passed over, by which those on shore endeavoured to haul the dredger's stern into such a position that the crew might land. All this was unavailing, and the wind veering towards the South, drifted the dredger towards the French hatoba, off which she took the ground, heeling over considerably on the port side. All the buckets and dredging gear were carried away. Preparations were then made to get the crew ashore by the line which led to the bund, which was eventually accomplished successfully. This was in a great measure due to the prompt assistance which some foreigners were ready to give, as one after another the Japanese crew of the dredger dropped off the line by which they attempted to land and fell into the fearful surf rolling in. Indeed one man, who so fell, would doubtless have been drowned, but for the prompt and gallant way in which Mr. Pitman plunged into the sea, and heedless of the wreckage which was dangerously dashing about, seized the man, who was then senseless, by the hair and dragged him ashore. The *Hanada Maru*, late *Augusta*, drove on shore near Benten during the afternoon, and became a total wreck. The *Tensho Maru*, late *Kebon Dalem*, belonging to the Mitsu Bishi Company, also went ashore near the Mitsu Bishi Iron Works, but has fortunately not sustained much damage, and can easily be repaired. The bund has, of course, suffered very considerably, and the whole of the sea wall from the Mitsu Bishi Iron Works to a point near the Lighthouse Department has been swept away. The large sheers which had only just been erected by the M. B. Iron Works were carried away, together with the new wharf on which they stood. Much timber was also washed away from the Iron Works, but this will probably be all recovered. We hear of no other casualties among the shipping. Of course the Bluff and Settlement present the usual appearance of damaged plaster, broken tiles, prostrate fences, and torn shrubs and trees, but the damage done is but trifling after all.

We have been favoured with the following particulars of the progress of the storm :—

Reading of Weather Glasses during gale on 26th July.

From the "Japan Mail Daily Advertiser."

Monday, 23rd.

We must evidently look to home papers for a true account of the progress of war in the South, as the following, clipped from the *San Francisco Bulletin*, will show :—

London, June 30th.—The *Pall Mall Gazette* says: A telegram received to-day from an official source states that the Insurgents in Japan have been dispersed, and a portion of them driven into the Province of Bungo. Tranquillity is nearly restored.

From the *Hôchi Shimbun.*

Kita-Shirakawa-no-Miya, having returned from Prussia, will start for Kiôto to-day by land, for the purpose of having an interview with His Majesty the Mikado at Kiôto.

The Government has enlisted three thousand recruits at Tottori in Inshu.

From the *Nichi Nichi Shimbun.*

The assemblage for the purpose of making speeches opened by the *Risshisha* is very popular. Itagaki very often speaks. On the 23rd of June about two thousand men assembled, consisting of *samurai*, merchants and farmers.

The old style of fencing has again become very popular in Tosa.

Tuesday, 24th.

H.M.S. *Egeria* reports fine calm weather throughout the passage down from Hakodate. The *Audacious* and *Modeste* were both lying in that port when the *Egeria* left.

The *Suminoye Maru* will take down 500 troops and 50 horses to Kiushiu to-day.

From the *Nichi Nichi Shimbun.*

A rebel who was taken prisoner has confessed that those now in arms against the Government number in all only 9,840.

From the *Akébono Shimbun.*

A reporter at the seat of war announces that large numbers of rebels at Kajiki, Chosa and Kokubu are surrendering themselves daily.

As news was received that there were large numbers of rebels at Ishuin, about one thousand police, who were stationed at Gamo, were sent to that town on the 4th instant, when five hundred of the rebels surrendered themselves immediately, and it was expected that five hundred more would shortly follow their example.

From the *Hôchi Shimbun.*

Twenty medical men of Osaka are to be sent down to Kagoshima, for service in the hospital that the Government has recently erected there for the treatment of the poor.

Heavy rain having continually fallen since the 11th instant at Shimonoseki, that town has suffered considerably.

From the *Chôya Shimbun.*

A telegram sent from Kiôto at 10.20 a.m. on the 21st instant, says that a report had been received from Owake *ken* to the effect that the Imperialists succeeded in capturing the rebel entrenchments at Kaji and Ohara on the 16th instant, and have since stationed themselves in favourable positions at Yukawa and Uchimura, in Hiuga.

Wednesday, 25th.

The *Nagoya Maru* brought the sad news of the death at Nagasaki, on the 15th instant, of Captain Bax of H.M.S. *Sylvia.*

The Lotus plants growing in Shinobadzu-no-ike, the large sheet of water just below Uyéno, Tôkiô, are now in full bloom and attract a large number of visitors daily.

From the *Mainichi Shimbu.*

A telegram despatched from Osaka at 4.05 p.m. on the 22nd instant, announces that at 2 a.m. on the 22nd instant a reconnoitring party was sent by the Imperialists toward Takasaki but on their way they encountered a body of rebels. A desperate struggle ensued, and by 2 p.m. the rebels were defeated and put to flight, being pursued as far as Takasaki. The Imperialists then retired to their former position. One of the rebel commanders was killed and several field pieces and rifles were taken.

Another telegram despatched from Osaka at 0.20 p.m. on the 21st instant, says that Lieut.-General Miyoshi has reported that on the 17th instant at 6.30 a.m. a large number of rebels advanced by the Takahara-kaidô towards the town of Takahara. The first attack was made by a body of rebels, numbering about thirty, upon one of the Imperialists' positions. Another body of rebels advanced towards Nojiri where there were but few Imperial troops, and an attack also was made upon Kobayashi. The rebels fought throughout the day in a most desperate manner, freely exposing themselves, and defying all efforts to repulse them, until Government reinforcements arrived in the afternoon, when the rebel right wing was turned and they fled to Takasaki, being pursued for some distance by the Imperialists. The latter had 64 men killed and wounded, while several tens of the rebels were left dead on the field, and four prisoners were taken.

A report from Lieut.-General Miura says that 8 p.m. on the 19th instant a body of over eight hundred rebels attacked the Imperialists both in front and on the flanks at the same time, the rebels fighting desperately, especially those forming the left wing. At midnight the rebels retreated along the Takano-kaidô. The Imperialists pursued them for about ten *cho* but then returned. The Imperialists lost 34 men killed and wounded.

From the *Osaka Nippô.*

H.I.H. Arisugawa-no-Miya, Commander-in-Chief of the Imperial Army in the South, left Nagasaki in the *Teibo Kan* on the 17th instant, in order to return to his headquarters at Kumamoto.

From the *Nichi Nichi Shimbun.*

The rebels has become greatly disheartened, and a prisoner has given the information that Beppu, Hemmi and other rebel commanders stand with drawn swords in the rear of their troops, in order

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

to cut down any who show signs of cowardice or a desire to take to flight when engaged with their opponents.

From the *Hôchi Shimbun.*

The following is the result of the census taken on the 1st January, 1874:—

Of the Imperial blood	32
Kuazoku (Nobles—*Daimio* and *Kuge*)	2,891
Shizoku (Higher *samurai*)	1,883,265
Sotsuzoku (Lower ,,)	7,246
Priests, Buddhist	198,435
,, Shintô	8,914
Nuns	7,680
Heimin (Commoners)	31,514,841
Inhabitants of Sagahlien	2,374
Total	33,625,678

This shows an increase of 325,003 on the returns of the previous year.

Thursday, 26th.

We learn from the Agent of the Great Northern Telegraph Co. that the Singapore and Penang Cable, recently interrupted, has been repaired and is now in working order.

A subordinate official in the Navy Department, named Shimamura Kageshige, accidentally killed his female servant on the night of the 24th of last month. The girl had entered his service that very day, and being unacquainted with the premises could not find her apartment in the dark, and stumbling about the house led her master to suppose that a burglar had effected an entrance. He attacked the supposed robber with a spear, with a fatal result to the unfortunate girl. Shimamura was tried for this mishap, and having satisfactorily proved that the girl's death was purely accidental, he was fined forty *yen*, which sum was handed over to the family of the deceased.

From the *Hôchi Shimbun.*

News having been received of the launching of a Japanese man-of-war which has been built in England, an official of the Navy Department has been sent to Kagoshima to consult with Admiral Kawamura, the Vice Minister of the Navy, as to bringing the vessel out to Japan.

From the *Akébono Shimbun.*

H. E. Okubo, the Home Minister, will leave Kiôto on the 26th instant for Tôkiô, travelling by sea, and thus preceeding the Mikado.

From the *Nichi Nichi Shimbun.*

It was reported that H. I. H. Higashi-Fushimi-no-Miya would land with the troops under his command on the coast of Hiuga, but for some reason he is said to have landed at Kagoshima.

From the *Chôya Shimbun.*

The telegraph cable between Awomori and Hakodate, which was broken last year, has been repaired.

The headquarters of the Imperialists, hitherto stationed at Kumamoto, were removed to Kagoshima on the 24th instant.

On the 24th instant 200 police recruits from Awomori *ken*, 253 from Aitchi *ken*, 105 from Ishikawa *ken* and 17 from Iwate *ken*, arrived in Tôkiô.

From the *Mainichi Shimbun.*

A telegram despatched from Osaka at 5.30 p.m. on the 24th instant, announces that a desperate engagement took place upon Uchiyama on the 20th instant. A body of Imperialists also advanced upon Sushira-goi. By dawn of the 22nd instant the Imperialists succeeded in driving out the rebels from their positions both at Uchiyama and Sushira-goi, and then captured Nojiri, afterwards taking up a position upon Funamatsu-yama. A reconnoitring party which was sent out, discovered that the rebels were at Soye-no-hara.

A telegram despatched from Sashiki at 5.20 p.m. on the 24th instant, says that the 2nd, 3rd and 4th Divisions of the Imperial Army, with one battalion of police, made a general advance towards Miyako-no-jô at dawn of the 24th. During their march the Imperialists had several engagements with the rebels, in all of which they were successful.

Friday, 27th.

A telegram to hand from Kiôto early this morning, announces that the Imperialists succeeded in capturing Miyako-no-jô on the 24th instant, after a desperate engagement from 5 a.m. to 2 p.m.

From the *Chôya Shimbun.*

Some time ago it was arranged, by agreement with the Chinese Government, to send one million *koku* of rice to China, but the outbreak of the war in the South interfered with and delayed this project. Now nearly the whole amount required has been collected at Osaka, most of it having been obtained from the province of Omi, a fact which has caused an advance in the price of rice at Kiôto.

The Imperialists have advanced into the country some 16 *ri* from the town of Kagoshima, and Kirishima-yama, which is an important strategical point, is now within their lines. Rebel prisoners admit that though they have seen Kirino from time to time, they have no idea as to the whereabouts of Saigo.

From the *Hôchi Shimbun.*

A notification has been issued by the *Anzaisho*, to the effect that His Majesty the Mikado will leave Kiôto on the 28th instant for Tôkiô, travelling by sea. The Empress is to accompany His Majesty.

From the *Akébono Shimbun.*

Hitherto only Government messages were permitted to be sent by the telegraphic lines between Kagoshima and Yashiro, but now private telegrams may be sent.

Saturday, 28th.

Last night Captain Brinkley's house at No. 3, Toriizaka, Tôkiô, was burnt to the ground.—*Japan Gazette.*

From the *Akébono Shimbun.*

A telegram despatched from Osaka at 11.25 a.m. on the 25th instant, announces that the rebels made an attack upon the Imperialists at Akamatsu and Kuragine, but were repulsed.

A telegram despatched from Kiôto at 3.50 p.m. on the 25th instant, announces that at 7 p.m. on the 22nd instant the rebels advanced upon Mera and Madote-goi, and a desperate struggle ensued, but the rebels were finally beaten and pursued to Ogawa, of which town the Imperialists took possession.

The position of the rebels is getting more and more confined. There are no insurgents now in Bungo, while Osumi and Satsuma are in the hands of the Imperialists, who have possession also of one-third of Hiuga.

From the *Hôchi Shimbun.*

Major General Saigo will shortly proceed to Kumamoto and thence to the seat of war, in order to inspect the various Imperial camps.

The *Saikai Shimbun* of Nagasaki says that Saigo Takamori had intended to commit *seppuku* at the time he drew off his men from Kawajiri, but was prevented by Kirino from so doing. The *Saikai Shimbun* professes to have received information that Saigo committed suicide not very long ago.

Merchandise, &c.	$ 547.52
Total	$7,490.26

It is not generally known, we believe, that before Herr von Brandt could obtain the assurance he required from the Tsungli Yamên respecting the negotiations on the likin question, he was put to the trouble and expense of a journey to Tientsin. That is, he was compelled to put this pressure on the Chinese Government; and it was only in deference to the earnest advice and representations of the Grand Secretary Li Hung-chang, that he consented to return. When he arrived in the Capital again, he found that his show of determination had had the desired effect, and the result we know.—*Shanghai Courier.*

A fire took place in the shell manufactory at the battery at Hotai, in Dai-koku-machi beyond Decima, which might have proved a serious affair for Nagasaki, as we understand a powder magazine is close at hand, and the wind was blowing strongly at the time. As it was two men were injured and the rest of the assistants fled. Shells were exploding for nearly an hour, and it wonderful that no more damage was done.—*Cosmopolitan Press.*

BRITISH CONSULAR TRADE REPORTS.

IN passing under notice the Trade Reports for Nagasaki, Hiôgo and Osaka, and Kanagawa for 1876 we cannot but regret that Messrs. FLOWERS, ANNESLEY and ROBERTSON have confined themselves almost solely to statistics of the trade at their various ports, without, as heretofore, branching out into subjects which made readable and interesting essays of what must otherwise be a very dry record of figures, which, though extremely valuable, possess interest for business men alone. No one has any right to demand that more should be done by these gentlemen than is done, when the results of their labour prove the thoroughness with which their duties are carried out, but if we express a slight disappointment at the absence of fuller remarks on subjects which they have special opportunities of becoming acquainted with, they must remember that they are to blame (especially Mr. ROBERTSON) for having accustomed us to amusing and instructive descriptions where they are called upon to do no more than accurately note the movements of trade.

Turning first to Mr. FLOWERS' report of the trade of Nagasaki, we find that the Import Trade which has for some years been gradually decreasing, again shows a lamentable falling off from that of the previous year, the total value of imports for 1875 exceeding that of 1876 by $461,891, an enormous difference in a port like Nagasaki. The supposition that the large purchases made in former years, much in excess of native requirements and thereby causing the accumulation of large stocks in the interior, are the cause of the apparent falling off, however correct it may have been in accounting for the decrease of the trade in several preceding years, can scarcely hold good in the present instance, as such stocks must long since have become exhausted. Mr. FLOWERS is therefore forced to the belief—and his views entirely coincide with those we have always expressed—that to the severe taxation to which the people are subjected, and the heavy land tax, all the more hard to meet since its collection in money has been decreed instead of in kind as formerly, is the diminution of trade to be attributed. Let any one take the trouble to turn to the article on Rice in our issue of the 14th instant and continued in our present number, and it will be seen that we have there endeavoured to show how the farmers suffer under the exactions of the Government in collecting the tax on rice lands in currency instead of in kind. Both the mode of collection and the weight of the taxation are killing to the energies of the agricultural class, the real bread winners of the country, and not only are they unable to save anything, but in too many cases are reduced to starvation point.

Mr. FLOWERS also shows how ruinous to trade is the system of centralization pursued by the Government, which is also one of the great grievances complained of by the movers for reform. Take the appeal of the *Risshisha* and compare it with Mr. FLOWERS' remarks, and it will be seen that both the latter and the writer of the Memorial hold precisely the same views with regard to the evils of centralization. "Taxation absorbs too much of the surplus earnings of the country, and a fair share of the revenue is not devoted to the carrying out of useful practical improvements, likely to increase the national wealth and productiveness." Thus writes Mr. FLOWERS. Schools and agricultural experiments, says the writer of the Memorial, are all very excellent things in their way, but when such ideas are carried out to an extravagant extent at the expense of the people, their only effect is to stir up much ill-will. The present Government only succeeds in rendering bankrupt the dwellers in cities while the farming classes are reduced to utter poverty.

As we remarked in our review of the *Risshissha* Memorial, there can be little doubt that a great portion of the evils at present existing on the country result from centralization. The farmer has no means of making his troubles heard or of getting his greivances redressed. His hardly earned gains are wrung from him by officials who neither sympathize with his troubles nor listen to his complaints, and it is therefore little wonder that the population of the interior have no money to spend in buying even the commonest foreign goods.

Now if we turn to Mr. ROBERTSON'S Report for Kanagawa, we find that the same unsatisfactory state of things prevails. The Import Trade of 1876 falls below that of 1875 by $3,112,029, though the actual falling off is only $260,805, as there is a decrease of articles on Government account amounting to $2,498,251. Still the same conclusion is arrived at that we find in the former report, namely, that the capital at the command of most of the native merchants is so extremely small that they are unable to purchase as fully as in former years.

The Osaka Trade Report shows the same falling off, there being a decrease of $1,605,950 in the Returns of the year 1876 as compared with the previous year. Mr. ANNESLEY, however, seems to think that the consumption of foreign goods in that district has by no means diminished, but that owing to cheap steamboat freight, native traders have availed themselves more extensively of the facilities afforded them to buy in Yokohama. He also points out that the Chinese are enabled to become formidable competitors with the foreign import trade, by purchasing goods so cheaply at auctions in China as to enable them to effect sales to the natives at prices far below those of the foreign importer.

With regard to export trade, the figures in the Nagasaki report still show a decline, though the falling off is far less than in imports. Thus we have a reduction last year on the preceding one of $199,630, which again was less than the trade of 1874 by $533,572, altogether anything but a satisfactory showing.

Although Tea shows a considerable increase in quantity there is a sad decrease in its value of $138,116, owing to the fall in value which has everywhere taken place. We have always asserted that in view of the United States being the only market that will take Japan Teas it was absurd to suppose that the fictitious prices that they once commanded could be maintained as the supply increased. At the prices ruling a few years ago there was nothing that promised such rich returns to the native cultivator as tea, and hence in every district plantations were laid out and the means of supply enormously enlarged. But with such increased supply has naturally come the fall in value, and until the production is checked by prices that make the cultivation of the common grades impracticable for export purposes, there can be no hope of a

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

paying trade for either grower or buyer. Mr. ANNESLEY remarks that there are already signs that further development of this industry has been checked by the present low prices.

In his Kanagawa Report Mr. ROBERTSON shows that the Export of Tea for 1876 fell considerably below the export of 1875, there being a decrease of 18,421 piculs in quantity and of $1,340,280 in value. He also calls attention to the evils arising from over production, and states that many native merchants have decided to abandon tea culture in some districts, and use the land for other and better paying crops. We had occasion some time ago to call attention to an experiment that was about to be made in the south to prepare Black Tea under Chinese supervision. Experts to whom samples had been previously submitted formed the opinion that the experiment would not be attended with success when it was sought to produce such tea in any quantity. The tea was in most cases very inferior to China Blacks, and where at all equal, so much higher in price as entirely to preclude its introduction into the market. Mr. ROBERTSON, we see, takes the same view, that no encouragement can be held out that this will prove a successful branch of industry.

Mr. ANNESLEY has also to report decrease at Kobe in this article of produce, and takes occasion to remark that the demand in the United States does not keep pace with the production on this side. Unless the Japanese will recognise this simple fact and limit their production it is useless for them to look for higher prices.

But it is at Osaka that the most marked falling off in Trade is to be noticed, and it is not cheering to learn that it continues to decrease. In 1874 the Exports amounted to $566,537, in 1875 to $225,021, and in 1876 to only $99,722. In Imports the decrease since 1875 is about $200,000. The foreign residents have dwindled down from 79 in 1875 to 44 in 1876, and there is now not a single British firm left in the place, all having removed to Hiôgo since the opening of the railroad.

But it is needless for us to follow out all the items of these reports. After their perusal one cannot feel that the foreign merchants of Japan have any very brilliant future before them. The golden dreams in which so many of us indulged ten years ago have faded like other visions, and we have awakened fully to the stern and ugly facts that we are an unwealthy community struggling for a living in an impoverished country. It is no good disputing the truth. It is not merely the common everyday talk of "hard times," and "things dull" which can always be heard from grumblers when business is at its best. We are not only in a very bad way at present, but the future seems unpierced by any ray of hope. Until a more liberal policy prevails in the Administration of this country it is, we fear, useless to hope for any lasting improvement. The commerce of Japan is evidently languishing, and although these Reports are everything that a Trade Report should be, and are compiled with the care which always characterizes them, to use Mr. FLOWERS' own words and to apply them to the whole, they necessarily strike one as very unsatisfactory to those who are looking and waiting for the revival of business.

New York newspapers state that Bret Harte the distinguished author, will possibly be nominated for the mission to China. It would be a most commendable appointment; the only question is whether Mr. Harte could afford to accept it.—*China Mail.*

THE GOVERNMENT AND RICE.

II.

AFTER four years of persistent pressure on the provincial Governors, and through them on the people under their administrations, it is doubtful if the Government has been able to carry into effect its decree for the reform of the land-tax in more than five or six out of the thirty-three *Ken* into which the Empire is now divided. It can scarcely be supposed that this state of affairs was foreseen at the time the decree was issued. The payment of the land-tax in money is so obviously preferable, abstractly considered, to the payment of it in kind, that it would be somewhat harsh to blame the administration for taking a sanguine view of the immediate practicability of their measure. But the result of the attempt to force it into operation has been to confirm in the amplest manner the misgivings of those, who both then and since, declared the measure to be premature. The poverty and backwardness of the farmers forbade the immediate realization of the Government scheme, and the mode in which it was attempted to coerce them into compliance with so precipitate a change, has been productive of an amount of suffering and discontent which it will require some years to assuage.

Government being not an abstract science, but an empirical art, it is sufficient condemnation of any particular administrative measure to say that it is both unpopular and impracticable. And if any further confirmation of the unfavourable criticism passed on the measure in question were required, it will be found in the expedients which have called been in to avert, if possible, the necessity of acknowledging how completely it has miscarried. The establishment of a special bureau, a branch, in fact, of the Finance Department, for the purpose of buying up in the market rice which the Government refuses to receive direct in the shape of taxes, is an arrangement of so roundabout and clumsy a character as almost to justify the incredulity with which the mention of it has been received by a portion of the foreign press. But its clumsiness is perhaps the least objectionable characteristic of the device. What is much more important to observe is that it may be easily diverted into an aggravation of the very evil it was ostensibly designed to palliate. Instead of relieving the burdens of the much oppressed farmer, it is only too likely in the long-run to increase them. For there is no economic fact more abundantly established by experience than this, that when Governments allow themselves to turn traders there is an uncontrollable tendency impelling them to use the advantages of their position to make themselves monopolists. If the Government go into the rice business at all, they will inevitably find themselves endeavouring to get it all into their own hands. That the Japanese Government has embarked in the rice trade out of greed for the profits of that branch of business is not for a moment to be supposed. It is only too certain that it has been reluctantly drawn into it as a direct and necessary consequence of its previous mistaken legislation.

And it is to be feared that the present unsatisfactory position of the Government with respect to the rice trade has been brought about not merely by one mistaken law. It has been equally rash in its interference with the rice dealers as with the rice growers.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

A year ago, the Ministry of the Interior, a department which seems to consider itself invested with the attributes of an all-wise Providence, issued a decree imposing restrictions on the inland trade in rice. Individuals engaged in that business were forbidden to enter into any speculative transactions. They were enjoined to form themselves into joint stock companies, to petition the Ministry of the Interior for leave to commence operations, and to report to that department all the details of the business transacted by them. The business of the retail rice-dealer was, to be sure, not affected by this law. Rice actually in hand may be sold or bought by any one, but rice to be delivered at a subsequent date can only be bought or sold by one or other of these compulsorily formed companies. It is illegal for any individual trader to enter into a time-bargain with respect to rice.

It is difficult to imagine what sort of idea or train of ideas can have suggested such a startling interference with individual enterprise and the freedom of trade. There were, no doubt, instances of men without capital trying to make their fortunes by speculating on the rice-exchanges; and to a certain extent such transactions partook of the nature of gambling. But the same element of uncertainty and chance is more or less present in all the larger operations of trade; and it is not within the power of any government to lay down the line where safe commercial enterprise ends and rash speculation begins. In the rice trade, as in other trades, each individual is a better judge of his own interest than the government can possibly be for him. And if it be really true that it was for the purpose of keeping out this so called gambling element from the rice markets that the law in question was enacted, the object will be attained at a very disproportionate expense; for any restriction on the freedom of the rice dealers operations must necessarily re-act on the price of produce and diminish the returns of the farmer. So far from being an evil, the speculations of the corn-dealer in anticipation of an advance in prices have been shown over and over again as regards European countries to be a positive benefit to the people at large; and the validity of that demonstration is in no way affected, as regards its applicability to this country, by the fact that here the staple cereal is rice instead of corn. Indeed the arguments by which that economic truth is established receive an indefinite accession of strength when the condition of this country is taken into account. The agricultural population is, as a rule, below that of European countries as regards its standard of wealth, and there are few farmers opulent enough to be able to afford to store their surplus grain against the contingency of unfavourable seasons. In spite of the popular odium which attaches in Japan to the trade of the rice-dealer, a feeling of which the last traces have not even yet died out in Europe as regards the corn-factor, it requires but the exercise of ordinary intelligence to see that, whether in years of plenty or years of scarcity, his interests are in the end identical with those of the consumers no less than of the producers of the commodity in which he deals. It is essential, however, to the working of that beneficent law that the fewest possible restrictions should be imposed by law on the free play of his sagacity, his avarice, or his enterprise, and it is here that the decree we are criticising must operate injuriously, apart from any question of the Government's turning it to its own advantage in its capacity as a competing rice-dealer.

But can the Government, or rather that branch of of the Government which can manipulate the rice market whenever it chooses to do so, namely, the Finance Department, exempt itself from the suspicion that the returns furnished by the compulsorily established rice-exchanges will inevitably be used for the furtherance of profit in the rice transactions in which it has unfortunately decided to engage? To imagine that it can do so would be to ignore the most ordinary tendencies of public opinion; and it is only too likely that a persistence in the present confused course of departmental legislation with respect to this question of the rice trade will before long result in counteracting the good effect which was produced in the minds of the agricultural population by the reduction of the land-tax. It will be well for the Government to avoid giving any grounds for the suspicion that it is endeavouring to make up the diminution, which that measure effected in its revenue, by grasping at the monopoly of the profits of the rice-trade.

SPIRIT OF THE JAPANESE PRESS.

The Daishin-In.

("Osaka Nippo," 15th July.)

No slight amount of anxiety and grief is caused to the upholders of the rights of the people by the fact that "the *Genro-In* had its "powers curtailed, and its administration changed at the whim of "the Cabinet, so that it became essentially the same as the *Sa-In*. "The *Daishin-In* met with the same fate directly after its establish- "ment and was put under the control of the Judicial Depart- "ment."* They argue that a constitutional Government can never be established as long as such an anomalous state of affairs exists.

On the present occasion we shall deal only with the *Daishin-In*, and as far as that department is concerned we cannot see that it presents any obstacles to a liberal policy. Though the *Daishin-In* may rank below the various other Government Departments, it still has power over the Judiciary, and therefore cannot be said to be under the control of the Judicial Department, and were it to continue to make such progress in its Administration as it has hitherto done, there is no doubt that the Government would soon raise it to the level of other departments. We have frequently expressed our views on the subject of Legislative and Representative Assemblies, but we have hitherto refrained from touching on the Judicial question. The upholders of "peoples' rights" however seem to have a great objection to the 49th notification of the *Daijô-kuwan*, and make it an excuse for urging their views.

The notification above referred to was issued on the 6th July, and was to the effect that should the Minister of Justice not agree with any decision laid before the *Daishin-In*, he is empowered by the *Kenji* (Board of Examiners) to demand a further consideration of the case or to order a fresh trial to be instituted. The movers for "peoples' rights" say that if the Minister of Justice has power to upset the decisions of the *Daishin-In*, the constitution of that institution as made known by the Notification No. 9, issued on the 19th February, 1877, is worthless.

The firsh clause of the Regulations of the *Daishin-In* says "The "*Daishin-In* receives appeals in both civil and criminal cases, and "has the power to reverse erroneous judgments given in any Court "from the Supreme Court downwards. It is its duty to maintain a "uniform system of law throughout the county." The third clause says "When a case is referred to another court for trial, should "the judgment given not agree with the opinion of the *Daishin-In*, "the latter shall give a final decision."

Now the upholders of "peoples' rights" say "What then is the "Minister of Justice? He is merely the head of an executive de- "partment, a civil officer only and possessing no judicial powers. "If then he possesses the privilege of upsetting decisions given in "the various Courts by those whose sole duty is to deal with legal "matters, what is to prevent the chief of any other department "or any new legal official from exercising similar powers? When "the executive officials have the power of approving or disappro-

* These remarks occurred in the *Risshisha* Memorial.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"ving the decisions of the *Daishin-In*, it is evident that the "executive body has control over the Judicial."

Such views might be correctly held in a country possessing a constitutional form of Government, but as yet, though there may be signs that she is progressing toward it, Japan is far from such liberal institutions. Such views therefore do not suit Japan at present. In countries where the limited form of Government exists the judges are elected and the laws enacted, indirectly, according to the will of the people. Accordingly the people for the most part acquiesce in the decisions given in their Courts. But with us it is quite different. Here cases are decided by judges whom the people have had no voice in selecting, and according to laws which they have taken no part in enacting. Everything is decided by the arbitrary will of the Government. Thus it not infrequently occurs that the people are discontented with the decisions given. But this is natural as they have not yet arrived at that stage when they are capable of judging for themselves whether justice has been done them, nor can they be entrusted with the power to appeal or demand a fresh trial. The Government has duly considered all this, and has decided that it would be better to entrust such powers to the head of the Judicial Department, which is closely connected with the *Daishin-In*, rather than to the people or the judges. This step has been taken by the Government in the full belief that it would tend to the welfare of the people, and that they might receive their full measure of justice.

Moreover the Notification No. 49 does not give to the Minister of Justice the power of ordering the *Daishin-In* to renew its decision. It only gives him the power of ordering the *Kenji* to request the *Daishin-In* to consent to a further consideration of the case. It is not therefore at all binding, for it does not follow that the *Daishin-In* must necessarily consent. It says only that the request is to be made, leaving to the *Daishin In* to do as it pleases with regard to reconsidering the disputed decision.

Taking all things into consideration, the *Daishin-In* may be said to have advanced in power. Its officials like those of the Army and Navy rank as *Sônin*,† from the 9th class, showing that it is the wish of the Government to make the *Daishin-In* in all respects equal with the other Departments, for increase of rank of its officials means increase of its judicial powers.

But as to the Legislative Assembly, the *Genro-In*, alas! we must wholly agree with the views expressed by the champions of "people's rights."

Letter from the Ogura Company residing in Corea.

("*Chôya Shimbun*," *July* 8, 1877.)

Fusankai is the place where Japanese subjects reside, and though the place is small and confined, it has pretty well assumed the appearance of a commercial town. There are two streets called Bentenchô and Honchô respectively. On the seashore are numerous godowns, with a line of houses behind them. The office of the Japanese Consul (管理) is at the top of Honchô, and looks on the sea, right and left are fine pine woods, while in front lies spread out the island called Bokutô (?), presenting thus a splendid prospect. At this office are transacted diplomatic, domestic, judicial and police affairs, but there is no appearance of a great pressure of work.

Since last spring the stream which runs through the settlement has been cleaned out and the streets cleared of dirt. Great attention has been bestowed on the wells, and arrangements made for clearing away all kinds of filth in times of pestilence, and in all matters great improvements have been effected by the efforts of the Consul, Mr. Kondô. There is a small hill on the seashore, called "Dragon's-tail Hill," from which the view is very fine, but the Coreans who come ashore use it for various purposes, the consequence being that it is filthy to the last degree, and the stink is so strong as to be injurious to health. The Consul, taking this to heart, has cleared away the filth, and has begun to convert it into a public promenade for the residents.

About seventy-five miles to the north of Fusankai lies a place call Têkeup, where every year a large fair is held during the space of thirty days in the second and tenth months according to the old calendar. They call these the Têkeup fairs. Merchants assemble from all the eight provinces of Corea at these fairs, and Japanese goods are principally exposed for sale; they say that the number of spectators and purchasers is enormous. It is also said that a great fair for the exchange of merchandise with Chinese subjects is held twice a year at Ichiu and Chanshiêng in the province of Piêngan-tô.

The commerce of the Coreans passes for the most part through the hands of the officials, who trade under the name of agent of the governor of such-and-such a city. Most of the men who deal in gold dust are such agents.

Produce.—The best gold dust comes from Tanchion and Shontayasan in Hankiêng-tô, Niyonwon in Piêngan-tô, Honchion in Kangan-tô, and Hanan in Kiêngsan-tô, and a little is also said to be produced in Chênla-tô.

Quantities of cotton, fans and bullock's hides are produced in Chênla-tô. The best ginseng comes from Kaiwhon and Rionshon in Kiêngki-tô while the best bullock hides are considered to be those which are produced in————.

Coal is said to exist a Kirchiu in Hankiêng-tô and at Urusan and Changki in Kiêngsan-tô. Tiger skins come chiefly from Fwanha-tô. There are silver mines in Chênla-tô.

Great strictness is observed in Corea with regard to questions of religion. Some ten years ago French missionaries came into the neighbourhood of Kanghwa and began to teach their doctrine, but on account of a disposition in the people to band together and obstruct the Government, the officials drove away some (missionaries) and slew others. There are at the present time about thirty or forty Buddhist priests chiefly of the Zen sect in the neighbourhood of Fusankai. At Chindzu in Kiêngsandô these is a large monastery containing about three thousand monks. If they are all like this it must be something wonderful.

Inside the settlement is a building which was formerly a Buddhist monastery called Tôkôji. Previously to the Restoration of the Mikado it was an agency of the monastery of Saisanji in the island of Tsushima, and a new abbot was sent thence every three years. It is said however that the monastery had very little work to do, beyond examining the composition and interpreting the meaning of the letters sent by the Coreans and by the Government, and at present there is no such work at all. This ex-monastery is under the jurisdiction of our Consulate, and is said to be used now and then as temporary quarters for our naval forces. Up to the present moment no Japanese monastery has been provided.

About three hundred and sixty yards north of this ex-monastery is the Japanese cemetery. In former days the prince of Tsushima had the Japanese settlement enclosed, and protected by a guard, and the Coreans gave the name of Poppei (a corruption of *bampei*, guards) to the cemetery, from the circumstance of its being situated alongside.

The oppressive character of the Corean Government in its dealings with the people is such that they seem most like mutual foes, nor have the people the slightest idea of such a thing as a 'right.' Being ensnared by an oppressive system, they habitually resign themselves to their poverty, and take their hard circumstances quietly. If, which seldoms happens, there be a wealthy man, the Government urgently commands him to make them a present of money, and to such as obey the command they grant a patent of rank. But if he refuse, the district officials put pressure upon him, and in some cases go so far as to inflict punishment. For this reason the people preferring rather to lie down in poverty than to be punished for being rich, make idleness their chief occupation. The whole nation is stupid and ignorant, and the only matter in which they excel is cunning. In commerce they all make a practice of fraud and treachery, nor do they feel any shame when reproached therefor.

The heartlessness of the government is indescribable. Although crowds of people were dying of hunger by the roadside during the famine of last year, they took not the slightest heed of their sufferings. And because the spiritless and powerless people never took it into their heads to brandish bamboo-spears and wear mat-banners (figurative expression for an insurrection of a pauper population), and to reproach the Government for not giving them help and succour, the Government were perfectly at ease in their own minds and pretended to be glad that the people were enjoying the blessings of peace, and patting well-filled bellies. It is impossible to describe in language the unfortunate condition of the people who are born under such a government. It suggests a doubt whether the Creator is not sometimes unjust.

The Coreans as a general rule are very particular about forms of salutation, and they will spend the whole day talking with pen and paper (*i.e.* writing down what they want to say in Chinese, which is understood by the Japanese). Our people are very much annoyed with their long visits. Although they are very polite in their pen and paper talk, their manners are extremely bad, for some of them sit cross-legged, and others converse standing.

† *Sônin* is the rank accorded to officials who are appointed by the Cabinet in other Departments, and are not considered below officials of the 7th class.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Servant and master sit down together in the same company, and no distinction seems to be observed between noble and mean.

It is probably owing to the famine of last year that there are so many thieves. Cases of shoplifting are extremely frequent, and they surpass even the "Little-boy Rat" (nickname of a famous thief) in the practice of that art. They will take a pen in the right hand, and put down the language of the most honoured sages, while with the left they are practising the style of "Little-boy Rat." One has to keep a sharp lookout.

All the men are lazy, and the women work to support the men. In Occidental countries men and women have equal authority, in Japan the men are absolute, while in Corea the women exercise all the power, so wonderful are the species of rights. Every man has a wife and a concubine, rich men from three to five of the latter, while many noble officials have six, seven or even ten.

If, as seldom happens, a benevolent person among the population builds a house called a depôt, and distributes food to the poor in seasons of scarcity, they coolly devour what is given them without the slightest expression of gratitude.

According to Corean law no woman may enter the Japanese settlement, but since the famine of last year many women have come in secretly at night to beg for food. * * * *. In consequence of the crews of our vessels and our residents taking pity on them, and giving them food, it is difficult to get rid of them, and an institution is growing up like that of the "sheep" at Yokohama. This state of things having been discovered by the Corean officials, policemen have come in from Tongkua, and arrested five women. It is said that according to Corean law they will be decapitated, a dreadful thing indeed.

There is a hospital in the Japanese settlement under the charge of Mr. Yano, a naval surgeon. Japanese and Coreans are equally attended to, and great success has been obtained in the treatment of epidemic disease, such as that which has been prevalent this year. The Coreans are much astonished, and think that there must be something supernatural in the treatment.

There was a Corean patient who had a paralysed arm from the effects of rheumatism during a long period of years. This man applied to the hospital for treatment. The chief of the hospital passed a current through his arms by means of an electrical machine, and the limb which had been useless for so many years, recovered its powers again. The patient was astounded and said: "This man is Shinnêng (Chinese god of medicine) come to life again;" and in the excess of his joy he became as one mad.

As to the dress of the Coreans, the men look like Shintô priests dressed in *hitatare*, the women being dressed like servant-girls in Europe. They wear tight sleeves and wide plaited trowsers.

A great many Corean beggars come into the settlement to ask for food. Some die by the roadside. The Japanese have agreed together to give them raw and boiled rice; the Ôgura Company gave a quantity of corn (wheat or barley). The Coreans say "the merchant of the eastern capital is good."

The Corean wild animals are the tiger, leopard and wild cat, which has hair like the tiger and is shaped like the *tanuki* (a species of wild dog). There is also a tree-mouse and an animal like the kangaroo of Australia. Its forelegs are short, its hind legs long, with a sack in its belly, into which it puts its young. The Corean name of this is unknown to us.

A horrid murder was committed the other day in the city. A widow-woman had an only son, a young lad of seventeen or eighteen years, whom, by the advice of some friends, she married to a girl living in the same neighbourhood. As soon as the new wife became a member of the household, however, the mother-in-law treated her with extreme cruelty, perpetually finding fault and never giving her enough to eat. At last the unfortunate girl complained to her husband, and he immediately espoused her cause; but as he was still quite a boy, and under the thumb of his mother, he was only able to help his wife by smuggling food into the house, purchased with his own money, and then giving it to his wife to eat on the sly. When the old virago discovered this, of course he was greatly enraged; but the boy was loyal to his bride, and continued to protect her in every way. At last one day things came to a crisis; and during the absence of her son, the woman beat her daughter-in-law well-nigh into a jelly and then killed her. The next thing was, of course, to hide the body; and this she attempted by putting it down a well. But what was her horror to *find the well too narrow*, and that she was utterly unable to force, press, or squeeze the corpse down, further than the shoulders! Then there was no further concealment; and the attention of the neighbours was soon attracted by the sight of the dead girl's head and bust appearing above ground. The murderess fled for her life, taking her son with her; and up till now nothing whatever has been heard of the wretched woman. Chinese law deals severely with any woman whose cruelty causes the death of her daughter-in-law.—*Shanghai Courier.*

THE MEMORIAL OF THE *SEIKENSHA* OF TOSA.

With the utmost reverence do we present the following Memorial to His Imperial Majesty the Mikado.

It is said by an ancient writer "that confidence is necessary in "all things. The confidence of a people in their rulers is like a root "to a tree, oil to a lamp, or water to a fish. No tree can live with-"out a root, no lamp burn without oil or fish live without water." None the more can a government prosper or even exist unless it commands the confidence of the people whom it governs. Ten years have passed since the Restoration of Your Majesty was effected, and yet the foundation of Constitutional Government has not been laid. Changes are made day after day, month after month in the Administration, and the people are kept in a constant state of bewilderment not knowing what may happen next.

An insurrection occurred in Saga (Hizen) a few years ago. This was followed by risings of the *samurai* of Chôshiu and Higo, and last year outbreaks took place among the farmers of Miye and Ibaraki. Again at the commencement of the present year the *samurai* of Satsuma took up arms against the Government. An expedition has been sent to chastise them, but though seventy days have elapsed and ten thousand precious lives have been sacrificed, the Government has not been able to put down the rebellion. Not only do the *shizoku* and the *heimin* keep their hands in their pockets, refusing to come forward to assist the Government, but they grieve not to hear of the defeat of the Imperialists, and rejoice over every victory gained by their opponents. This all arises from the people having lost confidence in their Government.

When we seek to know the reason of this, we find that such a state of affairs arises from the fact that although Your Majesty endeavours to act with the utmost benevolence towards the people, they cannot appreciate it. Their minds are turned in the wrong way, and they think only of their private interests making merely an empty show of loyalty.

Be the present Administration good or bad there can be no doubt that it is constantly undergoing changes. This is why the people lose confidence in the Government and why such frequent and deplorable revolutions take place. If the affairs of the nation be not put in order, so that the foundation of Your Imperial House, and of Your Majesty's Government may be firmly laid, we cannot foretell what calamity may befall us.

Now although those who have made the present rebellion be utterly destroyed, should unscrupulous officials be permitted a place in the Government, and should the Administration be subject to constant changes, and the construction of new buildings be largely indulged in, the Treasury will soon become exhausted, the Government and the people be alike impoverished, and never ending disturbances be the unhappy results. How much more dangerous is this prospect when the rebels are far from being destroyed.

It is our opinion that the present designing officials should be dismissed so that a Government may be formed that shall gain the confidence of the people, and place Your Majesty's throne on a solid base.

Saigo Takamori, the Commander of the rebel forces, is a man who rendered signally meritorious services in bringing about the Restoration, and in establishing the present administration, and for these Your Majesty was pleased to confer on him the office of *Sangi* and the rank of *Taisho*, but in a fit of displeasure he threw aside his honours of rank and office, and returned to his native province. There were evident signs that he was forming a conspiracy, but Your Majesty in your benevolence overlooked them, and permitted him to remain unmolested. The higher officials also suspected his designs but they were so occupied in looking after their own interests, that they neglected to adopt the measures that were necessary. They cared not in the least whether their acts were beneficial to the nation, but acted as they deemed might best suit the times. It cannot be said that Saigo is right in opposing the Imperial Authority with a large armed force, but he must certainly have some cause for acting as he has done. In such a case, should Your Majesty be pleased to appoint only wise and honorable men to the various offices, and dismiss those who corrupt and cheat the Government as at present, Saigo will lay down his arms and submit to any punishment that may be awarded to him. But should it prove that even though the demanded reforms be carried out, Saigo still continues the war, on the issue of a Proclamation by Your Majesty, the *samurai* throughout the country would come to the assistance of the Government. The *samurai* of Tosa would give our most zealous aid. Under such circumstances, however strong might be the power of Saigo and his Satsuma men, they could be put down in the space of a month. In this way the people who now detest the Government would have cause to feel favourably towards it.

Original from UNIVERSITY OF CALIFORNIA

But if Your Imperial Majesty continues to carry war against Satsuma without giving consideration to the views we have here laid before you, the people will be called upon to suffer terrible hardships. What excuse then will Your Majesty be able to make to the Spirits of Your Imperial Ancestors and to the Nation?

Though we hold no high rank we present to Your Imperial Majesty this, our earnest prayer, just as it springs from our hearts, and as it is in behalf of the happiness of the whole Nation, we trust Your Majesty will favourably consider it.

BRITISH CONSULAR TRADE REPORT FOR HIOGO AND OSAKA, FOR THE YEAR 1876.

H. B. M.'s Consulate, Hiôgo and Osaka,
Hiôgo, June 28th, 1877.

I.—RETURN OF IMPORT TRADE OF HIÔGO FOR THE YEAR ENDING 31st DECEMBER, 1876.

Imports from England and other Countries.

TRADE WITH JAPAN.

Japan is one of the natural markets for the products and wares of the United States. Of the civilized industrial nations of the world the United States is the nearest. She is only 6,000 miles distant, while England is 12,000, and other industrial European countries are from 9,000 to 11,000. The United States has the advantage also of two lines of steamers to Japan, so that there is no bar to trade for lack of direct steam transportation, as there is in the case of South America. Nevertheless, look at the position of the United States in the trade of the Empire. Of the exports of Japan we take only 17 per cent., and of her imports we furnish only 4 per cent. England, 6,000 miles further away, takes 35 per cent. of the exports and supplies 62 per cent. of the imports. The English have scrutinized the market of Japan closely, and have sent there the things that can be sold. They have made a thorough and sustained effort to capture the market and have succeeded. The Americans, in their free and easy style, are waiting for the Japanese to come here as buyers. They will never come. And that is not the way a trade is secured.—*New York Times.*

The entrance of Zimbrackasaka into the Greek Cabinet as Minister of War, is regarded as a warlike symptom. He is a Cretan, and at the time of the Cretan insurrection directed the military operations of the Cretans.

JAPANESE TALES.

SHINTOKU MARU.

The gods had been very good to Noboyoshi. There was nothing that he lacked of this world's goods. Many an acre of rich rice plain, many a fertile farm in Kawachi were his, while his store-houses at Odaki were full of pure and costly goods, and solid store of shining *Kobang*, and other gold and silver coin. Through all the country round he was known a Noboyoshi the rich, and by the still better title of Noboyoshi the liberal. Not an eye but brightened when it saw Noboyoshi, not a voice but was lifted in his praise. When harvests failed it was he who comforted the needy farmer, and kept away from his door the dreadful shadow of hunger until the earth grew kinder. When the frequent scourge of fire came and swept away all a poor neighbour possessed, Noboyoshi's hand was swift to give back what the flame had taken. For twenty *ri* round Ashikarazan there was no one on whom misfortune had fallen but had cause to bless him, and to thank the Gods for having entrusted their wealth to so worthy a steward.

But for all this Noboyoshi was not entirely happy. Although he had been married many years no child had been given to him to cheer his path of age and to inherit his name and wealth. The prime of his life was passing, and daily more and more did he and his wife lament the loneliness of their house. In vain had they fasted and prayed, and made costly offerings at the shrines. The Gods in granting everything else had hitherto witheld this one most earnestly desired blessing.

But Noboyoshi was a pious man, and reviled not the Gods in that they answered not his prayers. Neither did he at all cease from his devotions and religious duties, but rather prayed with greater fervency, saying "Peradventure, if I fail not in prayer the Gods will take pity on my great loneliness, and give me a son who shall live after me." And then he made a vow before the shrine of Kasuga Dai Miōjin, saying, "Grant me only this one request, and I will, for one hundred nights, walk a hundred times from the *miya* to the *toriye* and offer the richest offerings at thy shrine."

His prayers at last were answered, and in twelve months from the accomplishment of his vow his wife bare to him a son, who was named Shintoku-maru.

And now indeed Noboyoshi's cup of happiness seemed full to running over. The one desire of his life was accomplished, and he well might deem himself the most favoured of men. From childhood he had encountered no single grief, and now he could say that no one wish of his had ever been ungratified. It seemed as though affliction altogether passed him by, and trouble could not find him. And so for seven more happy years time went on, and the boy grew lusty and strong. A child of singular beauty of face and form, and giving promise of equal graces of mind, in whose development all the parents' care was centered

But clouds oft times obscure the brightest skies, and the sun of no man's life shines undimmed from its rolling up until its setting. And black clouds were now rising that were to darken Noboyoshi's life, and break in withering tempest above his head. The evil years that happen to all, but which had hitherto left him undisturbed by their malignant influence, had at last come round even to him, and he was to learn the bitter lessons of grief. His son was seven years old and he forty-two* when the loved mother and wife died, and father and son were left alone with their first great sorrow.

For two years Noboyoshi lived a secluded life. The care and education of his son were his only solace, and the boy was well worthy all the love and tenderness with which his father surrounded him. But at last Noboyoshi found that a woman's care was necessary in the household, and took to himself a second wife, by name Otama, a selfish and ambitious woman. In the course of a year she bare to him a son who was called Goro. And thus time ran on for another five years, until Shintoku-maru was fifteen; a handsomer youth than could be found anywhere in the province; beloved by all, and looked upon as in every way worthy to be the successor to the wealth of his good father.

Now, although his step-mother, Otama, had never dared show anything but kindness to Shintoku-maru, who was as dear to his father as the apple of his eye, she hated him in secret, being jealous for her own son, to whom but a small portion of the inheritance would fall. But from her husband she carefully concealed her hate, only pondering in her mind how she might get rid of her step son, and put Goro in his stead.

Now Noboyoshi, though not yet an old man, and still hale and strong, began to count the fleetly flying years, and grew anxious to see his son settled in life and the inheritance safely secured. Shintoku-maru had shown no disposition to make ill use of the wealth that would be his. He was loving and obedient, and there was no reason to fear that he would waste his inheritance in riotous pleasures as he grew older. But the fond father could not but see the temptations that would certainly surround a youth so greatly gifted by nature and fortune as Shintoku-maru. "It is better that he should marry young," said Noboyoshi. "A beautiful and loving wife will guard him from ill even better than I, and perchance I may see my son's son before I depart." Nor had Noboyoshi far to seek for her who should be worthy to be bestowed on Shintoku-maru.

At Kamiyama there lived a friend of Noboyoshi, the head man of that neighbourhood, whose one daughter Otora-no-hime was as fair as the Goddess Benten. As good as she was fair, she was the darling of her parents and the boast of the province. Ah! she was a sight to make sick hearts rejoice, this little maid. Just budding into womanhood, for she was the same age as Shintoku-maru, her face to look upon was like the cherry blossom when it first opens in the early year, the quick blood flushing a tender pink through the curd-white skin, while her dainty mouth resembled a pomegranate flower resting on flakes of pearl. Her did Noboyoshi seek in marriage for his son, and with joyful readiness did her parents give their consent, and allow the betrothal to take place. When at the celebration of this ceremony the youth and maiden for the first time met, the delight was mutual, and scarcely could they bear to think that two weary years must pass before they could become man and wife, for the years that fly all too fast in age, lag sadly to the hopes of youth. With much gaiety and mirth and revelry were these two betrothed at the house of Otora's parents, and then Noboyoshi returning home with a heart overflowing with joy and thankfulness, told his wife Otama of this crowning happiness, and thanked the Gods that the wealth they had given him would be worthily inherited. And for many days there was nothing but feasting and rejoicing.

*

Now when Otama knew that there was no hope that her son would inherit the estates, or share them with Shintoku-maru, but that only the small portion of wealth set aside for him by his father would be his, her hate waxed more and more hot against her step son. And ever brooding over her jealous spite at last she hatched a fear some plan, for the offspring of hate and jealously are a hellish brood, and fill the heart so that no good thing can dwell there. Murderous are they all and cruel beyond belief. And now had these spirits of evil wholly taken possession of Otama, each in its own nature tempting her with some scheme for the removal of the object of her hate. Baffling all suspicion by extreme showing of kindness, she secretly, and with much careful and wicked thought, determined how she would carry out her deadly intent, and thus did she proceed to compass the destruction of Shintoku maru.

*

An hour after midnight when all the household is wrapped in heavy slumber, wearied out after a day of more than ordinary revelry, does Otama cautiously seek a distant apartment. Here secure from all disturbance she proceeds to perform various mystic rites. Arraying herself in ghostly garments of white and hiding her shoulders in the night of her hair, which released from all restraint falls in snake like locks adown her form, she takes from a box a hammer, a hundred sharp nails, and a small figure of wood, roughly carved in semblance of a human

* The Japanese consider that the unlucky years, *warui toshi* or *yaku*, of a man's life, are when he arrives at the age of 7, 25, 37, 42 and 61.

shape. On her head she places a square piece of wood, such as women use for reeling silk, at each corner of which is fitted a lighted candle, and then carrying a glittering knife between her teeth, she silently opens the doors and goes forth into the dark cold night.

How gloomy and hushed and still! The moon is hidden behind thick clouds and melancholy rain is falling quietly. But for this the vengeful woman cares nought. The demon of hate has her in full possession; her face is as that of Her who siezes upon the souls of the dead, and her eyes flame with blood red light. Onward she goes swiftly and unflinchingly, through dismal fields and by silent and unfrequent ways. She has no fear of the evil spirits of the woods and hills, for nothing more evil than herself can be abroad this dreary night. No sound disturbs the horrid stillness, but the lonely dripping of the rain in the standing pools, the distant bark of fox or blood-curdling cry of wandering night-bird. And now she has reached a thick grove of mighty trees, where the spirits of night might dwell, so heavy is it in its blackness. The flaring candles on her head only serve to show the depths of darkness amid the moss grown trunks, with here and there a ghostly glimpse of some grey monument that marks a grave. So silent is the place that her almost noiseless footsteps wake a chorus of soft and mysterious echos more terrible than silence, more startling than sound. But steadily she passes along the stone paved avenue, and ascends without a quickening of the breath the three long and steep flights of steps, which passing under three *toriye* lead to another and smaller grove. Within this grove there stands a noble shrine. In front of it a pond of large extent, with dreadful water as of ink, into which the rain is dripping with melancholy sound from the trees that overhang its blackness. Straight onward advances Otama to the door of the shrine, and then with hands uplifted and bowed head, in an unshaking voice puts up her murderous prayer.

"O Thou who knowest well a woman's heart; who knowest that to serve her son a mother will contend with death itself; as I am a woman and a mother bear with me. O thou most mighty One hear now my voice and grant my dreadful prayer. My son is even as nought in his father's eyes. Shintoku maru only is his darling. To him alone he gives his wealth of love. To him alone he leaves his vast estates. My son is but as an outcast and a beggar before his brother. But shall not the child of the living find as much favour as the child of the dead? I living need my child. Give then the living to the living and the dead to the dead. Let Shintoku join his mother in the ghostly land. Grant that he die; die quickly. To-morrow—Aye, to-night! to-night! that my son may have justice and my soul have peace. But if in asking that his life be taken from him, I ask too much, grant that he may be smitten with some disease that shall wither his youth, destroy his beauty, and make him loathsome in the eyes of all. Let his fair skin be disfigured, his flesh become corrupt, his joints knotted and his whole body bowed and crooked with pain, so that man or woman may no more look upon him and that he may no longer dwell among the haunts of men. And if thou grant my prayer and strike him dead, or smite him sore with leprosy this night, then will I quickly returning present unto thy shrines and temples many a costly gift. I vow unto thee tablets of gold, silver and copper to adorn thy *toriye*: also seven gold and silver lamps of noble workmanship and rare design; with many curtains of the five colours, and tens of flags of costly crape. To this, thy favorite shrine also I vow a shining roof of copper richly gilt, and dances in thy honour once a year. This and more will I do and ever be thy constant worshipper if thou but hear and answer me. But if, returning to my home this night, I find that he who has destroyed my joy, his father's darling, but my deadliest bane, still lives to curse my life and rob my child, then do I vow, that with my darling son locked fast within my arms I will return, and plunge with him into the dark cold pool that lies before Thy gates. And ever from that time my ghost shall haunt these silent groves and fright away thy willing worshippers, so that fearing to come anigh thy favorite shrine, deserted it shall fall to swift decay, and snake-haunted grass shall grow above its ruins. O Mighty One! swift to reward and to punish, foolish though I seem, hearken unto me! Hearken and favourably receive my prayer."

Thus prays she and listens for some sign that should betoken the presence of the God. But there is nothing but the moaning sigh of a coming wind through the tall pine tops, and the plashing of the heavy drops shaken from the weeping trees. So with a quick sharp drawing of the breath she leaves the shrine, and making her way through tangled brake and sodden grass to a spot where stands a mighty camphor tree, whose girth seven men can scarcely span, she kneels down at its foot. Then with her knife she scoops a hole in the soft earth among its gnarled roots, and drawing forth the wooden image from her bosom places its head downwards against the tree and proceeds to hammer nails into every part of it, commencing from the feet. "Ninety-six, ninety-seven, ninety-eight! Ninety-nine, thou shalt pierce his heart, and the hundredth for his throat to be his death if my prayer has been heard. Now ninety-nine to his heart." And the nail is driven in with remorseless blow.

Ah! ye cruel gods! what is this that falls clammy and warm upon the murderous hand? The moon breaks out from the clouds that the rising wind is dispersing, and by its clear rays Otama sees the crimson blood flowing from the last driven nail deluging her hands, and bespattering the rank grass. Then does the furious strength that has upheld her so long fail her, and a horror as of death cast its mantle over her. A cold vapour seems to enshroud her and the hair of her flesh stands up for fear. In her deadly terror she lets fall the hammer and the last nail, and is fain to clutch the tree trunk for support. But the faintness passes and with returning consciousness she knows that her awful prayer has been answered. Why then shall she delay to finish what she has begun? There is only left to drive the last nail in the throat and Shintoku-maru will be for ever removed from her path. With trembling hands she searches for the hammer and nail, but the friendly grass hides it, and daring to make no longer stay she buries the mutilated and blood bedaubed figure in the hole at the foot of the tree. Then removing and casting far away into the dark undergrowth her head covering, and washing the thick blood from her guilty hands in the inky water of the pool, by the moon's fair light she makes her swift and shuddering way back to the home she has so foully cursed.

The first faint streaks of dawn are showing in the East as she enters the house. Hastily throwing off and concealing her white garments she regains her own room, and creeping in beside her sleeping child lies down to wait the coming of the day.

(To be continued.)

Law Reports.

IN H. B. M.'s CONSULAR COURT.

Before RUSSELL ROBERTSON, Esq., Consul.

Wednesday, July 25th, 1877.

REGINA *v.* MARTIN HALLIGAN.

Prisoner was charged with assault and threatening the chief officer of the *Countess of Kintore* with a knife.

Richard Yeaman, sworn:—I am a chief officer of the British ship *Countess of Kintore*. On the morning of March 1st I was washing decks, and when the hose pointed toward Halligan, some water fell on his boots. He threw a scraper and it struck me on the breast. He then drew a knife and cut me on the arm. The two men at the pump took the knife from him and threw it overboard, and when the captain came on deck prisoner was put in irons.

To accused:—You cut me with a knife.

To Court.—We left London on the 23rd January. He was not in a fit state then to go to sea. The water only touched his boots.

Charles Stewart, able seaman, sworn:—On the morning mentioned Halligan was told to scrape some pitch off the deck. The mate was handling the hose and told me to pump away. Halligan looked round and seeing the hose pointed at him he moved on and sat down where the pitch was in front of him. The mate again pointed the hose at him and some water went over his boats. Halligan got up and threw the scraper at the mate. It hit him on the chin. He then drew his knife and I cried to the chief officer to look out while I ran and took possession of the knife. The mate then ordered him to take a grease pot and go aloft. When the captain came on deck the accused was called from aloft and put in irons.

To the Court:—Halligan was hardly fit to creep along the deck when he threatened the mate.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

John Saurey, able seaman, sworn, deposed.—Last witness and I were at the pump on the morning of March 1st. The chief officer, Mr Yeaman, had the hose and was washing the decks, the accused meanwhile being engaged in scraping pitch off the deck. Mr Yeaman directed the hose towards Halligan when he rose and went further off, sitting down again to his work. Some water reached him, however, and splashed his boots. This displeased him and he hit the mate with a scraper and then jumped up and put his hand to his knife. My shipmate (last witness) saw the action and went behind him and took Halligan's arm and wrenched the knife from him and threw it overboard. He and I were sent to pump and then to go aloft. At that time he could hardly go aloft on account of pains in his legs. At eight o'clock we went to breakfast when the captain asked us if the man was fit to go at large. We all said he was not and he was then put in irons. I did not see him for a few days. He was considered to be a prisoner till we came here I saw the man with a knife in his hand but did not see him inflict any wound. I saw the mate throw the knife overboard. The mate had a slight scratch on his wrist but whether it was a cut or a graze I do not know. In my opinion it was right to put him in irons.

Thomas Norie, sworn:—The commencement of this business took place on March 1st. I came on deck in the morning and happening to cast my eyes on the main topmast I saw Halligan standing in the rigging, greasing the topmasts. I called the chief officer aft and asked what Halligan was doing up there. He said "he drew a knife on me this morning." I saw a large scratch on his arm which was shown me. I said it was a serious matter and I should have been told at once, and he should not have punished the man on his own responsibility. I ordered the man on deck. He came and sat down on the quarter deck. I then called the watch and put this question to them "Do you think this man safe to be at liberty on board ship to day, after drawing a knife on his officer? They one and all answered "No." He was then put in irons and lodged in a side cabin in the saloon. After a few days he complained of his wrists being sore.

Adjourned till 2 o'clock.

In the afternoon the chief officer was recalled and said he had never abused or struck the prisoner.

The Captain was also recalled and stated that no regular supply of water was given to prisoner. He had it at his call, but was actually forced to wash once a week. The allowance of fresh water was three quarts to each man per day. No extra water was supplied to sailors for washing. Prisoner became filthy through his own negligence and want of exercise. If he had been well and strong he would have been confined rigorously and his irons would never have been taken off.

His Honour now interrogated the prisoner whether he had heard all the evidence given. Prisoner said that being deaf he had not.

The evidence was therefore read over to prisoner, who said he had not cut the mate with a knife. The water was played over him wilfully by the mate and prisoner flung the scraper at him. During confinement the irons were removed when he felt them weigh down his limbs and hurt him. The usual food was given him but the captain said it had been agreed that his wages should be cancelled for the remainder of the voyage. He had not been treated as a sick man.

His Honour said Mr Yeaman's evidence night have been fuller and ought to have comprehended the facts which were afterwards elicited from other witnesses. For instance what he had said with regard to the cut received by him, implied it had been made by the knife, whereas it had been done by the scraper. The drawing of a knife against his officer was of course a serious affair and should not have been overlooked. But in His Honour's opinion the captain had almost overreached his duty, and the four months' incarceration inflicted on the prisoner more than satisfied justice. With regard to wages it was ordered that they should be allowed in full and no deduction made for the period in question. As for the mate's statement that when masthended the accused was as good a man as when shipped, this could by no means be held to exonerate him from blame, the man being sick at the time.

The case was dismissed, but not before the Court expressed an opinion that the accused had been dealt with unnecessarily harshly. He was then told to return to the hospital, where he has already been for some time.

IN H. B. M.'s COURT AT KANAGAWA.

Before H. S. WILKINSON, Esq., Acting Law Secretary.

Thursday, July 26th, 1877.

CHANG CHOW *vs.* N. O. HARDWICK.

The defendant did not appear.

The plaintiff stated that defendant had ordered a suit of clothes from him and had not paid for them, stating he had no money. The cost of the suit was $20.

Judgment was given for the full amount claimed and three dollars costs.

AWOKI YOSHIRO *vs.* W. CURTIS.

JUDGMENT SUMMONS.

The plaintiff did not appear until an hour after the appointed time, and as he did not give a sufficient excuse for not appearing at the proper hour, His Honour adjourned the case till the 24th of August at 10.30 a.m.

Friday, July 27th, 1877.

JOHN HARTLEY *v.* NISBETT, master of the British steamer *Teviot*.

A claim for $140, short delivery of 35 bottles Quinine.

Mr Reddelien, appeared for L. Kniffler & Co., Agents of the *Teviot*.

Plaintiff produced the bill of lading, invoices and other documents in connection with the goods in question.

Mr Reddelien said that he had filed no answer to the petition. His defence was that the case had been delivered in like condition as when received.

Mr Reddelien admitted the bill-of-lading produced, and plaintiff was then examined.

John Hartley, sworn:—On the 6th June I went to the hatoba and saw the case X 31, one of those in the bill-of-lading, with the hoop iron broken on one of the corners, the top of the case slit. In the presence of the captain of the *Teviot*, Messrs Kniffler & Co's clerk, my own Japanese shipping clerk and the Chinaman delivering cargo from the *Teriot*, the case was opened and examined. The contents were counted and sixty five small bottles of quinine were found. It was the damaged end of the case that was opened and there the deficiency in the bulk was manifest. The captain asked to see the invoice and after perusal he returned it to me. I then called his attention to these other cases out of the same steamer which were damaged. He examined them but finding the deficiency insignificant I made no claim. After the quinine case was closed Captain Scott came forward and demanded his Chinaman to explain why he had landed a case so damaged, I returned to my office, but before doing so I told the captain that I would prefer this quinine to its price and remarked that it might be on board ship amongst the coolies. He replied "I dare say you would". I sent a letter on the following day, covering my claim, to the agents. On the 11th June I received a letter from L. Kniffler & Co saying that the captain would not pay the claim on the ground that the damage was not done on board the ship. I went over and demanded personally payment of the claim, first to Kniffler & Co. and then to the captain who was leaving port that day, but said he would not pay the claim. I have no more direct evidence to give but I can witness to the usual mode of packing quinine, several thousand ounces of which I have imported during the past year. They are always packed as this case was, and have hitherto arrived in good condition. It is neither customary nor necessary to pack such a goods in a tin lined case. Tin lined goods are used for goods liable to damage by heat or sea water. As to the value of the quinine, I sold on the 16th June 200 ounces at $4 an ounce. I am offered $4.25 per ounce for the balance of the pillaged case in question. I have also sold 400 ounces at $4 and $4.15.

To plaintiffs:—I have had claims against ships loaded by Gellatly Hankey, Sewell & Co, London. There have been frequent claims for quinine as well as other merchandise. I think the case was sufficiently secured. The value is not declared in this case, being under £100. At the time these goods arrived I was offered $4 per ounce.

To the Court:—The fracture on the hoop iron not being bright I inferred that the case had not been newly opened. It was landed on the evening of the 5th.

Plaintiff's Japanese shipping man then give evidence. He said he had been seven years in plaintiff's employ. He received the cargo out of the *Teviot*, six cases being damaged. The hoop on the quinine case was broken, and the centre board of the lid damaged. It appeared to have been done recently. The Chinaman was quite satisfied that the case was damaged. Witness opened the case on the 6th, and found 65 bottles of quinine intact. There was space in the corner of the box. Several cases landed yesterday ex *Lorne* were in splendid order.

Defendants called as witness their shipping clerk Victor Koche who was sworn and said:

Having heard that the case in question was damaged I examined it on the hatoba. One hoop was broken, but did not look to me as if the case had been opened. Captain Scott expressed the same opinion. Thirty-five bottles were found to be short, but this was not evident till they were counted over, leading Captain Nisbett to suppose that the case might have been so shipped. This was his reason for refusing to pay the claim.

To plaintiff:—In my opinion the case should have been tin lined.

Adjourned till 2 p.m.

In the afternoon this case was resumed.

David Scott, sworn, stated:—I saw this case before it was opened. The hoop on one corner was broken and the centre board was split half way down, the nails appearing to be of the same colour. I could see no appearance of new nails. The hoop was rusty and might have been broken without force. I did not see the case when opened. If the mate receiving the cargo had noticed this broken hoop he should have made some remark about it. It did not appear to be a recent break.

To plaintiff:—The nails taken out might have been replaced. The case was stained. It had not been opened when I saw it. I did not wait to see it opened. The Chinaman who delivered cargo ex *Teviot* was paid by me. He told me in answer to my enquiries that no notice of damage was made on the boat note.

To the Court:—This case was in the same state when brought on shore as when inspected. It was an ordinary case for carrying the goods, and quite a sufficient package for the purpose.

Gustav Reddelien, sworn:—On the 6th June I had the same kind of quinine on hand and up to the 18th no higher price than $3.50 could be obtained. On that date the Government buying for the army prices went up. We have taken the precaution to name the article by its right name and to declare its value; a necessary precaution, for it is unreasonable to hold the captain responsible for damages if no such declaration is made.

To plaintiff:—I do not know in what kind of cases our quinine arrives.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

JUDGMENT.

In this case the plaintiff claims from the master of the steamship *Teviot* the sum of $140, the value of 35 ounces of quinine short delivered from that ship. It is admitted that the case originally contained 100 ounces, and that when delivered and opened it contained only 65 ounces. It was taken for granted throughout the case that the loss was caused by theft of some one. The defence set up is:—

1st.—That the goods in question were insufficiently packed for goods of such a value as quinine.

2nd.—The contents ought to have been declared so that proper care might have been taken.

3rd.—That the case might have been plundered before it came on board; that it was delivered outwardly apparently in good order.

As to the first ground of defence the bill-of-lading contains a clause that "The owners of this steamer will not be accountable "for Gold, and Silver, Bullion, Specie, Jewellery, Precious Stones, "or Precious Metals, or beyond the amount of One Hundred Pounds "on any one package, unless the bills-of-lading are signed for such "goods, and the value declared therein." The master has here fixed the limit of value beyond which he will not be accountable, and it is admitted that the package was not of that value—that it was valued for considerably less than £100, and it is not one of the articles named in the exception. The master's own condition having been complied with in this respect he cannot complain that something more was not done. I am of opinion therefore that the second ground of de ence must fail.

As to the third ground of defence, I find as a fact that the case was not delivered in apparent good order. This is abundantly shown by the refusal of the plaintiff's servant to receive it as in good condition and by the subsequent survey. The defendant having acknowledged to have received the package in good order externally and having given no evidence of fraud or mistake in the procurement of this acknowledgment he is bound by it, and not having delivered it in good order externally the only possible inference is that it was damaged while in the charge of the ship. And as the damage to the case was no doubt done at the time of the theft, I find as a fact that the theft was committed while the case was in charge of the ship. There is no exception in the bill-of-lading of loss by theft, and judgment must therefore be for the plaintiff.

As to the value, I find that on the day the quinine ought to have been delivered the market value was $3.50. The only evidence given by plaintiff, that is, the only evidence I can receive as given at the proper time, was that on the 16th, eleven days after the day the case was landed the price was $4. Mr Reddelien's evidence is that he had the same kind of quinine and that up to the 18th not more than $3.50 could be obtained. I take $3.50 therefore to have been the market value on the 5th and 6th. This, for 35 oz., makes $122.50.

Order:—Let the defendant pay to the plaintiff within 10 days from this date the sum of $122.50, and $9 costs.

IN THE DANISH CONSULAR-GENERAL COURT.

Before E. de BAVIER, Consul.

Saturday, July 21, 1877,

Messrs. KOLVIG AND VAN TORP, *Assessors.*

This was a case in which Kogijiro, a carpenter, sued Mrs Stibolt as executrix of her husband, the late N. Stibolt, for $831.75, the balance of an amount owing by the deceased at the time of his death, for work done and materials supplied.

Mr G. P. Ness appeared on behalf of the plaintiff.

Mr J. W. Hall appeared on behalf of the estate, as agent for Mrs. Stibolt.

His Honour said that it was his duty to attempt to bring about an amicable arrangement.

Mr Ness remarked that he would only be too happy; he had done his utmost to bring about an amicable arrangement, but had failed.

Mr Hall said that he should be glad if some arrangement could be arrived at. But no demand had been made for payment until the case was entered in the Court, and no attempt at an amicable arrangement had been made by the plaintiff. The defendant pleaded not indebted.

Mr Ness was surprised at Mr Hall's statement. He himself had demanded payment, and had also had three intervivews with Mr. Hall upon the subject,

His Honour said the hearing would have to proceed; and Mr. Ness then opened up his case. He stated that the deceased Mr. Stibolt had been in the habit of taking contracts and afterwards sublet ing them to the plaintiff; and at the time of his death he was indebted to the plaintiff, who was the most respectable carpenter in Yokohama in the sum he now claimed.

The plaintiff was then examined at length; and his evidence was to the effect that he had had considerable business transactions with Mr. Stibolt, and that sometimes large sums of money were owed him by Mr Stibolt. It was customary to pay carpenters in advance, except when there were large contracts, and the parties had continual transactions one with the other. He had asked Stibolt for payment, but had always been put off with promises that when there was plenty work he would be settled with altogether. He asked Mr Stibolt for a promissory note, but Mr Stibolt was too ill to give it to him.

A Japanese in the employ of defendant was examined but he knew nothing nothing of the transactions between plaintiff and Mr Stibolt.

Mr Hall asked when it was that the plaintiff found out that Mr Stibolt owed him the amount he now claimed.

Mr Ness replied for the plaintiff, and stated that he had called on him, Mr Ness, a few days prior to the death of Mr Stibolt; but Mr Stibolt was so ill the plaintiff could not apply for the amount due.

His Honour said he thought the plaintiff's statement that he and Mr Stibolt never balanced accounts, was a sufficient answer to the question.

To Mr Hall plaintiff stated that he knew at the time that Mr Stibolt died that he was indebted to plaintiff for a large sum. He remembered being present with Mr Hall at an interview with Mr Stibolt a few days before the death of the latter, and also telling Mr Hall that the amount due to him, plaintiff, was entered n a small book which he showed at the time, telling him that Mr Stibolt had signed for the amount mentioned in it, but that there was also another claim.

At this stage the procedings were adjourned till Thursday next, at 10 a.m.

IN H. I. G. M.'s CONSULAR COURT.

Before E. ZAPPE Esq., Consul.

Saturday, July 31st, 1877.

HOSHINO EIJIRO *versus* H. LOTZ.

This case was resumed this morning from the 21st instant. Several witnesses were examined, viz.: Carl Leitz, Carl Bruck, Brumer Livers, Carl Falck, and a Japanese *jinrikisha* man. The foreigners stated that it was entirely the fault of the *jinrikisha* man that the collision took place. The ponies were not going fast, being at a slow trot at the time

The jinrikisha man stated that the ponies were driven very fast, and that the trap had not any lanterns lighted. After the evidence produced was taken,

The case was further adjourned for the productionadditional of evidence, until Monday next.

IN THE KANAGAWA SAIBANSHO.

Before ASAINA KANSUI, Esq., Vice-President.

Tuesday, July 24th, 1877.

SCHULTZ, REIS & Co. *v.* TSUCHIYA YUICHIRO and another.

Plaintiff claimed the compulsory delivery of a document illegally in the possession of defendants.

(Continued from 20th instant.)

Midzutani Seiroku was present this morning and said:—Bunjiro had asked me to inquire of Hanjiro whether he did not have amongst Tsuchiya's papers a receipt for $2,000. Hanjiro after a few days showed and gave me a document which was a copy of such a receipt, and I gave this to Bunjiro. I was then requested by plaintiffs to get the original receipt, but as this did not exist among Tsuchiya's papers they told me to get another copy. Hanjiro first wanted to know what plaintiffs wanted with it, and while speaking to Bunjiro on the subject several other people came and endeavoured to force me to give up the original receipt and threatened to call the police in if I did not. A hot debate then ensued and in the end all parties being excited it was resolved to call a meeting. This was arranged to take place on the following morning in a tea house, but not being directly concerned in the matter I did not attend.

After hearing this evidence, the Court adjourned and judgment was deferred *sine die*, plaintiffs to be informed of the date when decision will be delivered.

Wednesday, July 25th, 1877.

D. SCOTT *v.* WING CHEONG WO.

This was a claim for $29.42.

Plaintiff stated that this was a bill for landing cargo belonging to defendant.

Defendant said that for a long time his goods had been landed by plaintiff whose charges had at times varied a little, but this time too much so with regard to several items. When the bill had been first presented defendant had grumbled and told the bill collector to take it back to plaintiff and get a reduction of at least $2. The collector had never presented the bill again.

Plaintiff said he had taken $2 off to endeavour to bring the other to terms, and had sent the bill in at least a dozen times for payment. Defendant refused to settle, and plaintiff was now forced to sue him. Plaintiff produced in Court several bills for landing charges from the M. M. Co. and asked the Court to compare the rates in these with his own charges. The M. M. Co. charged six cents per package all round.

After hearing defendant's statements which it was considered unnecessary to interpret, his Honour informed plaintiff that a verdict had been returned in his favour and defendant persuaded to sign an agreement, promising to pay the amount of $29.42.

Plaintiff explained to the Court that this suit had not been prosecuted for the sake of two dollars. Defendant was a leading and influential Chinese merchant, and if allowed to go without paying this bill, his example would induce other merchants and importers of his nationality to endeavour to do likewise.

Thursday, July 26th, 1877.

H. GRAUERT (as agent for the German ship *Madagassger*)

v. MIYAZAKI HAMPEI.

This was a claim for $2,800. It appears that the defendant and others chartered from the plaintiff the German vessel *Madagassger*, to proceed with general cargo to Hakodate, and from there to proceed to Shanghai with a cargo of seaweed, but they did not carry out the charter-party.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

The case was resumed this morning from the 23rd instant.

On account of the illness of Mr Asaina Kansui, Vice-President, Mr Sasaki Kayenoshi, President of the Court, took the chair and conducted to-day's hearing.

The case having been adjourned for the evidence of the alleged principal in the charter-party, Murakawa Yahei, head of the house of Maruoka in Yokohama was examined. At first he pleaded total ignorance of the whole matter, but gradually it was elicited from him that he *had* heard of the *Madagassger*; that he believed some one wished to charter her; that a meeting had taken place at which the parties in the transaction met, but that at the time he did not know what their business was; and finally the admission was made that he had been present at the signing of the charter-party as were also two other persons.

During the delivery of this evidence

His Honour said that it was a matter of fact that the contract existed, but wished to know if plaintiff could prove by his witnesses that it was signed by Miyazaki Hampei for Muruoka?

Mr Grauert said he could and remarked that a witness present in Court had said he was going to Hakodate in the ship for Muruoka, and had asked Mr Grauert for an introduction to the captain.

This hearing occupied over two hours, but very little of the evidence was interpreted and an adjournment was called for the attendance of the two persons who were present with last witness at the signing of the charter-party. It was thought possible to find these men within seven or eight days.

Adjourned *sine die*.

A PHONETIC FIELD-DAY.

(Saturday Review.)

Our Phonetic friends have been holding what it is now fashionable to call a Conference. In reading the report of the meeting of the would-be reformers of spelling, one is constantly reminded of that Lay in which Macaulay describes the gathering of the force of Lars Porsenna. A proud man was Mr. E. Jones, B. A. (of Liverpool), upon the trysting day. Mr. Tito Pagliardini was ranged beneath his eye, and Mr. Baxter Langley and many a proud ally. Among the conveners were "Mr. J. M. D. Meiklejohn, Professor of History and Art of Education, University St. Andrews, on the ground that there is a *primâ facie* case for inquiry." Also, *sans phrase*, Mr. Edwin Chadwick, who knows about drains, and Mr. Condy, M.A., appear among the philologists. Exeter added, in the person of Mr. Clapp, a representative of her School Board, and indeed there is no doubt that School Boards are sincerely interested in anything that can facilitate education.

Whether the phonetic reform of spelling is the best way of making matters easier remains to be seen. Mr. Max Müller had asked, in an article republished in an unknown tongue "by the benevolence of Mr. John Coltman of Newcastle-on-Tyne," whether there was "no statesman in England sufficiently proof against ridicule to call the attention of Parliament to what is a growing national misfortune." Mr. Lowe has written to say that he is that man, that statesman. He has been informed that "there are thirty-nine sounds in the English language. There are twenty-four letters. I think that each letter should represent one sound, that fifteen new letters should be added, so that there should be a letter for every sound, and that every one should write as he speaks." At present Mr. Lowe finds that boys "from the sixth standard" are "unable to read aloud tolerably, and have no idea of the pronunciation of the language." Perhaps a more funny set of arguments was never put together. For example, a boy from the sixth standard very likely expresses himself naturally thus:—"Ere's a statesman as isn't afeared of reticule, 'e hisn't," Of course when that lad comes to read Mr. Lowe's note in the newspapers aloud he blunders overs it. And the remedy is to be the introduction of fifteen new lettters, which will perhaps express the clicks, grunts, and nasal accents of the rustic, while the worthy lad meanwhile is "to write as he pronounces." A learned Frenchman has been contributing to the *Temps* a series of articles on the fine part of reading aloud; but he is not so revolutionary as to propose to introduce "zey zeying" into literary language. Meanwhile Mr. Isaac Pitman was immensely gratified by Mr. Lowe's letter. Mr. Pitman really seems to be a person who is easily pleased. He says that there are thirty-eight sounds in English and twenty-six letters, whereas Mr. Lowe gives a different calculation. Then Mr. Pitman went on to talk about "the 102 letters and combinations representing 269 sounds"; and this they call facilitating education. By way of showing how phonetically-minded people agree among themselves, a letter was read from the Bishop of Exeter. The Bishop did not, of course, go so far as a statesman who is proof against ridicule; "he said it was essential to have no new letters, and only a few critical marks." We are not certain that the Bishop has got rid of a lingering fondness for the look of accentuated Greek.

Mr. Lowe was not present at the meeting, or he might have refuted Mr. Storr. That gentleman "hoped the Conference would give no encouragement to the suggestion that any changes of accepted pronunciations were involved in the reform advocated." Now Mr. Lowe, unless we misunderstand him, would let pronunciation be a free fight, every man writing as he pronounces. Thus, for example, a dandy would write that "Mistaw Lowe is a statesman insensible to widicule." But Mr. Storr does not at all see the good of this kind of change. In fact, the free-fight stage of spelling is over, and the forms which best adapted themselves to their environment have survived. Certainly these forms often do not seem the fittest; we grant that; but we hold that to provoke an insurrection among boys "of the sixth standard," to stir up a wordy war, and to fall back on the diplomacy of a Royal Commission, is not a scientific way of dealing with language. But if Mr. Whitney and Mr. Max Müller agree—*συνωμοσαν γὰρ οντες εχθιστοι τὸ πρίν*—that spelling is a matter of legislation, why, the sooner Mr. Lowe moves a few resolutions on the business the better. He may divide the Liberal party a little more; but that has ceased to be a very important consideration.

We do not observe in the printed report of this Conference that the chairman, Professor Sayce, said very much, or committed himself to the accents of Dr. Temple, the new letters of Mr. Lowe, or the combinations of Mr. Pitman, whose alphabet seems admirably calculated to express the ravings of the inspired speakers at a Shakers' meeting. Mr. Sayce's opinion must necessarily be received with the deference due to his learning, when he talks about philology. He declarged that English spelling "cultivated an unphilological habit of mind. The philologist wanted to trace the changes in sound from generation to generation Spelling like ours concealed them." Now, of two evils, we prefer that philologists should be thrown out now and then with the sound of *ea* in tea in Queen Anne's time, rather than that we should undergo an irruption of pedantry, and of alphabets named "Jones-Burns," "digraphic," "Pitman," and "mixed," at the present moment. Mr. Max Müller says that "language is not made only for scholars and etymologists"; and we may add that all the disorder of arbitrary spelling cannot be introduced to please philologists. At one time French ladies and gentlemen sounded words in a very affected way, which one may see imitated in old comedies and satires. Does Mr. Sayce think that the courtly scholars of the period should have written as they pronounced? Or is it necessary that, because the editor of the *Tobermore Trumpet* may sound *wh* like *f*, therefore he should print in his leaders "fat is the matter wid her Machesty's meenisters"? Where, in fact, does Mr Sayce draw the line? All varieties of sound in words are interesting to the philologist; but what a hideous chaos English literature would be by this time if spelling had not hidden the difference! In fact, just as speech is granted us to conceal our thoughts, spelling is useful to cover the infinite and infinitesimal varieties of sound which in spoken language may be given to each word. Philologists may, as a rule, learn what they want from rhymes, just as we know from Latin verse what the quantity of each foot was.

Great Anna, whom three realms obey,
Doth sometimes counsel take, and sometimes tea,

is the kind of hint that rhyme gives in abundance, and let that suffice for philologists. We will venture on an *argumentum ad hominem* with the Professor of Comparative Philology. How does he like Mr. Macarthur's scheme? Mr. Macarthur, as a teacher near Glasgow, has a peculiar right to be heard about the pronunciation of English. The Glesky pronunciation is jest rideeclous, to put it phonetically. And he writes a poem of Lord Byron's thus:—

The Destruction of the Accirian.

The Acirian came down like a woolf on the fold,
And his cohorts wer gleeming in purple and gold.

How does Mr. Sayce like it? What would Mr. Oppert think of the Accirian, or would he prefer the alternative generously given by Mr. Macarthur, and read "Acirian"? Really at the bare notion of such reforms one turns—still to quote Mr. Macarthur—

As cold as the spray of the roc-beeting surf.

Perhaps Mr. Macarthur would spell the name of a famous ancient city "Earache"; or would he go the other way about, and dignify a painful but unromantic malady with the primeval name of Erech?

One would imagine that the absurd caprice and whimsicality of all these systems and schemes would strike even their authors, and that a Conference would break up in laughter. What sort of ear has the man who wants to spell "goods" *guodz*? How can any one hope to know how Mr. Fry, Mr. Macarthur, and the rest pronounce

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

when they are at home? Only people who live with them would be able to understand their letters and their printed works. The reformers are only united in dislike of established custom and usage. As soon as any serious attempt was made to please them, they would split off into a hundred sections, like other schismatics. The vestment would be rent into as many fragments as the ancient Covenant, and Mr. Pitman would be found maintaining that he and a pupil, like Davie Deans and his friend, composed the true church of spelling. A little band would go with Mr. Macarthur into the wilderness near Glasgow. Only too many Scotch persons would form a congregation in the neighbourhood of Aberdeen, to help Mr. Alexander Bain to maintain the position of the late Dr. Clarke of Marechal College, that "life is a drém." Shurli, sèd I, màn is but a shàdo, and life a drem." How could the convivial view of existence be better stated in Scotch? Only in the border counties the phonetic speller would have to write that "Life is a drawm," for that is how they pronounce it in the Peebles district. While these secessions took place, scholars who have, rather hastily we think, lent their names to this movement, would return to quiet collegiate cloisters, and add to the knowledge and wisdom of the world.

Phonetic spelling is merely one of the many fantastic shapes of modern individualism. It is like spirit-rapping, like conscientious objections to vaccination, like the morbid desire to marry one's deceased wife's sister, like Miss Cobbe's patent religion. To most of these crazes one or two distinguished men have given a kind of support. Is it necessary to say that the phonetic people have "drawn" Mr. Gladstone? They quote this text from the ex-Premier:—"The difficulties of spelling are enough to drive the learner mad." Surely that is stated rather too strongly, unless all educated people are either mad, or gifted with a power of menta resistance to maddening influences which we had thought unusual.

The reformers have one argument on their side to which we would willingly accord the most respectful attention. They complain—especially the politicians among them complain—of the difficulty of teaching children to read. This is not a matter over which we are inclined to make merry, though it may be thought perhaps that the difficulty is somewhat exaggerated. But some of the reformers seem to have a remedy which is at least less objectionable than the arbitrary revolution of written and printed English. Mr. Curwen said at the Conference—and we have heard the statement before—that, if children were taught phonetically in the lower "standard," they "could afterwards be taught the arbitrary (that is the usual) spelling." Thus, children, *ex hypothesi*, would learn easily and quickly, first on a system, next in the wonted way, and no ridiculous anarchy would be brought into our books and letters. But even that does not satisfy the reformers who issue the programme of the Conference. "Difficulties and objections would disappear if the new spelling could be taught to children for reading and writing; if children could pass easily from reading the new to reading the old spelling, and if the new spelling could be easily read by adults. Children would not be required to write in the old spelling, and adults would not be expected to write in the new spelling." How excessively condescending on the part of the children! They would not turn Mr. Lowe out of office, if he were in, because he had not mastered the fifteen new letters. They would not try the brain of Mr. Gladstone, which has already, it seems, suffered such a strain from the old spelling, by making him take up the new. Old spellers would be a kind of Jotuns, an expiring alien race, retired to lonely corners of the hills, to read Wordsworth in the old spelling. Where is the end of this nonsense to be? or are we all to lisp like babies of two years old, to write in words of one syllable, and adopt, not merely the spelling, but the grammar of young costermongers and ploughboys? These measures would save ploughboys and costermongers a world of trouble; but we think that, when all was done, philologists would still be far from happy.

The *Sir William Wallace* was spoken 17th June, Lat. 35.20 S. and Long 96 43 E., from London for Yokohama.

We learn from the Manila *Comercio* that the British ship *Mary Shepherd* was lost on the night of 20th June off the Coast of Lubang, Mindoro. The Captain and three of the crew were drowned. The chief mate and 16 of the crew arrived at Manila in the *Isabel*. The *Mary Shepherd* was on her voyage from Mauritius to Manila in ballast.—*China Mail.*

The heaviest dew fell last night that we have ever seen in Shanghai. The stars were shining brightly, and the moisture fell in such large drops that umbrellas were put up upon the Bund. The phenomenon of apparent rain without a cloud being visible had a most curious effect.—*Shanghai Courier.*

REUTER'S TELEGRAMS.

LONDON, 24th July, 1877.

The British Ministry has explained that the troops which have sailed are only for the purpose of increasing the Garrisons in the Mediterranean.

LONDON, 23rd July, 1877

The Russian troops have occupied Lovatz and the Chipka pass.

The British troops are proceeding to Malta and Gibraltar. Their eventual destination is believed to be Gallipoli.

FIGHTING IN AMERICA.

Desperate fighting has taken place at Pittsburg, and United States troops have been despatched to restore order.

LONDON, 21st July, 1877.

The available Turkish troops in Constantinople have been ordered to proceed to Adrianople.

The Head Quarters of the Russian army have been removed to Ternova.

Suleiman Pasha's Army has embarked at Antivari.

Abdul Kerim Pasha has been dismissed the Army.

The Russian Forces are advancing on Philippopolis.

The Russian (Query Turkish Forces) have been defeated at Plevna.

The British troopships have been ordered to hold themselves in readiness for sea.

RAILWAY STRIKE IN AMERICA.

A formidable Railway strike has occurred in America, the military firing upon the people.

London, 12th July, 1877.

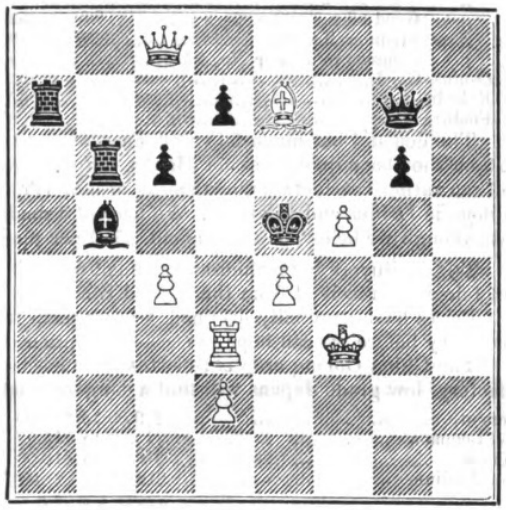
THE BRITISH MEDITERANEAN SQUADRON.

Four ironclads have been despatched to reinforce the Mediterranean Squadron.

THE ADVANCE OF THE RUSSIANS ACROSS THE DANUBE.

The Russian troops have arrived at Selvi.

90,000 men of the Russian army have crossed the Danube at Sistova.



BOMBARDMENT OF EUPATORIA.

Several Turkish ironclads have bombarded Eupatoria.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—There is no new feature noticeable in our market. *Yarns* continue in moderate demand, *Shirtings* are quiet and other articles unchanged. The native currency has further declined, and as the dealers have great difficulty in procuring Mexican dollars, deliveries are proceeding very slowly.

Grey Shirtings:—

7 lbs.	38½ yds.	39 in.	per pce....	$1.40 to $1.75
8 lbs.	38½ yds.	44 in.	,, ...	1.70 to 2.30
8 lbs. 4 to 8½ lbs.	38½ ,,	39 in.	,, ...	1.57½ to 2.40
9 lbs.	38½ ,,	44 in.	,, ...	2.05 to 2.60
T. Cloth 7lbs.	24 ,,	32 in.	,, ...	1.40 to 1.62½
,, 6lbs.	24 ,,	32 in.	,, ...	1.10 to 1.25

White Shirtings:—

60 to 64 reed 40 yds.	35 in.	per pce.	... ...	2.20 to 2.40
Turkey Reds 24 yds.	30 in.	2—3 lb. per lb.	...	0.67½ to 0.80
Black Velvets				7.25 to 8.25
English Drills 14/15 lbs. 40 yds,	30 in.	... ...		2.40 to 2.75
Taffachelas	12 yds,	43 in.	(noml.)	1.70 to 2.15

Yarns.—

No. 16 to 24	per picul...	$28.75 to 31.75	
No. 28 to 32	per picul...	$31.50 to 34.75	
No. 38 to 42	per picul...	$35.00 to 39.50	
Reverse Twist 16-24	,, ...	—	

Woollens.—There has not been much doing during the past week, business having been greatly interfered with by the constant falling of native exchange, which also renders deliveries very unsatisfactory. Prices remain as last quoted.

Plain Orleans	40—42 yds.	32 in. ...	5 50 to	7.00
Figured Orleans	29—30 yds.	31 in. ...	4.25 to	5.25
Shimagoro	30 yds.	30 in. ...	4.00 to	5.25
Italian Cloth	—30 yds.	32 in. ...	0 22 to	0.31
Camlet Cords	29—30 yds.	32 in. ...	5.75 to	6.00
Camlets Asstd.	56—58 yds.	31 in. ...	16 50 to	17.50
Lastings, Japan	22—30 yds.	32 in. ...	12.00 to	13.00
Plain Mousselines de Laine	—30 yds.	30 in. ...	0.17 to	0.18

Figured Mousselines de Laine	...30 yds.	30 in...	0.24 to	0.28
Multicolored ,,	...30 yds.	30 in...	0.28 to	0.36
Cloth, all wool plain or fancy	.. 48 in. to	52 in...	0.80 to	1.20
Presidents	...54 in. to	56 in...	0.60 to	0.65
Pilots	...54 in. to	56 in...	0.45 to	0.55
Union	.. 54 in. to	56 in...	0.60 to	0.75
Blankets, scarlet & green	6 to 8 lbs....	per lb ...	0.40 to	0.48

Sugar.—The market is quiet, with a decline to report in value of *Formosa* Sugars, other kinds being unaltered. Stocks of all sorts amount to 80,000 piculs.

Sugar:—Takao in bag	per picul...	$4.80 to	$4.90
,, in basket	,, ...		$4.75
Taiwanfoo in bag...	,, ...		$4.80
do. in basket...	,, ...		$4.70
China No 1 Ping-fah	,, ...		None
,, No. 2 Ching-pak	,, ...	$8.40 to	$8.80
,, No. 3 Ke-pak	,, ...	$8.00 to	$8.30
China No. 4 Kook-fah	per picul...	$7.30 to	$7.70
,, No. 5 Kong-fun	,, ...	$6.70 to	$7.10
,, No. 6 E-pak	,, ...	$6.00 to	$6.40
Swatow Brown	,, ...		None.
Daitong	,, ...		$4.15
Japan Rice	,, ...	$2.10 to	$2.40
Kerosene Oil	,, ...	$3.75 to	$4.00

Kerosene Oil.—The market is quiet with a tendency to lower rates, but no transactions have been reported, as dealers offer prices which holders are unwilling to accept. Quotations are purely nominal at $3.75 to $4.

EXPORTS.

Silk.—The following is our report per American mail, dated 24th instant:—

Since the 11th instant a very fair business has been done in Hanks at an advance of $20 to $25 per picul. Latterly, however, the few buyers who have still the command of the market, seem to have been less disposed to take every bale which arrived here, and prices close in consequence somewhat weaker, reductions of about $10 on the quotations given below having, in fact, been obtained this morning. Native dealers are not very willing sellers, as their silk still lays down here at considerably over Yokohama rates, though we hear that some purchases have been effected lately in the up country markets at a decline of about 15 dollars per picul. Some old Oshius and Filature Silks have been bought at the prices noted below.

Settlements amount to 600 bales of Hanks, and 75 of Oshius and Filatures,—in all 675 bales.

The total export since 1st of July is 844 bales (including that by the outgoing French and American mails), against 1,024 bales for the same period last year.

Stocks are estimated at 500 bales old Silk and 300 bales new Hanks.

		In London at 4s. 1½d. per lb.	*In Lyons at f. 5.20 per kilo.*
Hanks, Best No. 1 & 2	$580 to 600	21/6 to 22/2	59.00 to 61.00
,, Good No. 2	$550 to 570	20/5 to 21/2	56.50 to 58.50
,, Good all round No. 2½	$530 to 540	19/9 to 20/1	54.50 to 55.50
,, Medium No. 3	$490 to 510	18/4 to 19/1	50.50 to 52.50
,, Common to inferior No. 4 & 5	$450 to 480	17/ to 18/	47.00 to 50.00
Oshius, Good	$520 to 540	19/5 to 20/1	53.50 to 55.50
Kakeda, best	$620	22/10	63.00
Filature Silk	$650 to 720	23/10 to 26/3	66.00 to 73.00

The demand has much fallen off since, and at the close dealers are very willing sellers at reductions of $15 to $20 on the above quotations for Hanks. Purchases have been effected to the extent of 100 bales. Arrivals have been rather considerable, and stocks of new Hanks are now about 600 bales. Nothing of importance has been done in Oshius and Filatures. We hear of a small transaction in new Kakedas, but the price is not deffinitely known, though we believe it to be about $550 per picul.

Tea.—Buyers have almost suspended operations for the present, as taking into account the tenor of recent telegrams received from the United States, the demands of native holders are quite absurd.

Prices have nominally declined $1 per picul from *Fine* downwards, but a much heavier reduction will be necessary before we can hope to see a resumption of trade.

The China Oolong crop is reported as much larger than that of last season, and should the quality be satisfactory, low grade Japans will find a dangerous opponent meeting them in the American markets.

Common	$ 9.00 to $12.00	Fine	$24.00 to $28.00
Good Common	$13.00 to $15.00	Finest	$29.00 to $32.00
Medium	$16.00 to $18.00	Choice	$34.00 & upwards.
Good Medium	$19.00 to $22.00	Choicest	—

EXCHANGE AND BULLION.

Exchange.—The business of the past week has been again extremely limited, with slightly weaker rates for Sterling Bills.

Rates close as follows:—

STERLING—Bank 6 months' sight	4s. 1d.	ON SHANGHAI—Bank sight	75

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of al kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to look up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World

May 17th, 1873. tf.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded.* This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omissonto renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTH.

August 2nd, at No. 85B., Main Street, the wife of CHAS. J. STROME of a son.

DIED.

On the 29th instant at his residence No. 66, Main Street, THOMAS DAVIS, aged 39 years.

Notes of the Week.

We publish elsewhere an important Reuters' Telegram, which is just to hand as we go to press.

Judging from reports in native papers the Imperial troops are gaining nothing but a succession of victories, and the Satsuma forces seem to retreat as fast as their antagonists approach. It may be so, but we shall be very much surprised to learn that the kind of victories reported are likely to bring the war to a speedy termination. This kind of strife may be carried on for years, causing but little comparative loss to the insurgents while the drain upon the Imperialist resources is frightful. The battles of July alone show a loss to the latter of over two thousand killed and seriously wounded, while those suffering from slighter wounds and illness amount to four thousand more, so that fully six thousand men have been incapacitated during last month. The guerilla tactics of the insurgents protect them from any such loss, and while they may be unable to hold their own in the open field, they are strong enough to be able to carry on the present style of fighting indefinitely. Certainly commanders such as Yamagata and the best informed among the Japanese do not look for a speedy termination, unless the attempted compromise should be successful. Before styling the announcement that an attempt at compromise has been made 'a fable" the *Tokio Times* would do well to consult a source which as everyone knows is always open to it. The selected adviser of the Japanese Government, of Formosan notoriety, has openly said that he trusted that a compromise would shortly be effected, and further bloodshed spared. He certainly ought to know, considering the object of his recent visit to the members of the *Daijô-kuwan* at Kiôto; his consultation lasting an entire day with General Saigo the younger (whom since the Formosan *fiasco* the selected adviser always patronisingly terms his protegé) at the Mint at Osaka, and the subsequent interview at Nagasaki with H.I.H. Arisugawa-no-Miya, the Commander-in-Chief of the Imperial forces. The *Tokio Times* well knows (or it is inexcusable if it does not know, considering the close bonds of fellowship existing between it and the special adviser) that a compromise has been attempted and so far failed. This is to be regretted, for if the special adviser had succeeded in bringing it about, he would have atoned in some slight degree for the grievous wrongs and heavy losses he had caused to the Japanese Government since they began to listen to his mischievous counsels. The chief event of the week has been the return of the Emperor from Kiôto to Tôkiô, since which nothing has been published regarding his movements.

A telegram was recieved this morning from Shanghai, announcing that the *Oceanic* arrived under sail off the Saddle Islands yesterday morning, whence she telegraphed to Shanghai for assistance. The steamer *Amoy* was sent down to her with as little delay as possible, and took the *Oceanic* in tow for Hongkong, where she will be docked, and her repairs effected, it is supposed, in time to despatch her to San Francisco about the end of this month.

On another page will be found a translation on the "Question of Extra-territoriality" in which the writer argues that in their desire to get rid of the extra-territoriality clause the minds all the thinking portion of the public are turned to the revision of the criminal law. The writer fully recognises that until there is some guarantee that the legal reforms, which have from time to time supposed to have been adopted, shall be properly carried out, it is useless to hope that foreign powers will permit their subjects to come under Japanese jurisdiction. How far there is any chance of such guarantee being possible may be judged from the notice that has just appeared in the *Hôchi Shimbun* and *Nichi Nichi Shimbun* (the Government organ) authorising the application of torture *(gômôn)* to those who are being tried for participation in the present rebellion. Unwilling to believe that the Japanese would continue a practice which has been discarded by every nation that wishes to lay any claim to be called civilized, most foreigners have been unwilling to believe that it was still resorted to in this country. A notification, certainly somewhat ambiguously worded, was published in June 1876, which in our eagerness to put faith in the sincerity of Japanese progress, was construed into an announcement that the practice of torture was abolished. But these bright hopes have received a fatal blow in the unmistakable notification published in the journals referred to. We have neither time nor space at present to give that consideration to the subject which it demands. We can only hope in all earnestness that the Japanese Government will hasten to take away so foul a stain from their national character, for they may rest assured that nothing will work them more harm in the world's opinion, while they must give up all hopes of abolition of the obnoxious clause as long as they persist in clinging to the horrible, savage and demoralizing practice of torture.

Original from UNIVERSITY OF CALIFORNIA

The "Voice from New Japan" may esteem himself fortunate—we presume it emanates from a "he" although it bears a wonderfully shrill resemblance to that of some scolding vixen—that he is *Vox, et præterea nihil.* Voices making use of the offensive expressions to which this ill-bred "voice" resorts are apt to bring the bodies to which they unfortunately appertain into serious trouble, so that the unlucky possessors, suffering from the consequences of their tenant's rashness, are fain to ask themselves in the words of one of Tennyson's "Two Voices"

"Thou art so full of misery
Were it not better not to be?"

The *Tokio Times* should adopt for its motto "Fie! foh! fum!" for in the most trifling matters does it detect British interference and British diplomatic pressure, and British hostility to Japan, and British this and British that, pretending to have as keen a nose as the giant in smelling the blood of an Englishman. "Hath Britain all the sun that shines?" and does this rouse the writer to a pitch of hysteric jealousy? But as there be some men "that are mad if they behold a cat" so there are some rare papers that become harmlessly insane when they allow the little mind they have to run on England and the English. Now it might reasonably be supposed that any one possessing a particle of common sense or fair judgment would either have refrained from further remarks on the subject of the Postal Treaty, when the falsity of those to which it had already given utterance has been so fully exposed, or in a manful way have retracted the invented accusations. But no; again and again does the *Tokio Times* return to this thread-bare and by no means interesting subject, with a persistency that that can only be explained by lack of any other subject, to expatiate upon and consequent necessity of padding. We should have refrained from devoting so much space to the explanation of this matter of Postal Arrangements, had not the wounded feelings of certain individuals who had presumed without authority to speak in the name of the Post Office Department prompted them to enlist in their cause so willing a champion as the "Fie! foh! fum!" journal, and to hoodwink one of our daily contemporaries also into believing that they had been sorely wronged. It was therefore due to the community that we should show them from what source all the stir and talk arose. We shall not refer to the subject again, no matter what may be twaddled about "wrong and injustice" to the Japanese Government. The fact is that the Japanese Government, instead of so regarding it, warmly approves the course pursued by the British authorities as being that which it expressly desired. Until certain arrangements have been completed in England it has not, and never had, any wish that Japanese Mails should be forwarded by British Mail packets. It does really seem rather hard that in a simple matter of this kind the Japanese Government cannot be permitted to manage its business in its own way, without having to be subject to the impertinently proffered advice and dictation of the *Tokio Times.* The *Gazette* also should have taken steps to find out the true position of affairs before permitting itself to be made use of, and finding itself compelled to resort to the expedient of blaming its own Government in order to uphold the cause of some petty officials of the Post Office. It can hardly be pleasing to the Japanese Government to be lectured by the *Tokio Times* for making "needless confessions" when in fact it had made none, there being none to make. All that they have done has been to correct in their own interests the errors and presumption of one of their subordinates.

It is the chief aim of the *Tokio Times* to mislead the public into believing that it is the chosen mouth-piece of the Japanese Government, and that it always speaks by authority. But the Government have already had good cause to wish to be relieved from any such assumption, and have no desire to be defended by such sorry and dangerous advocacy. We believe, and trust, that the incident that gave rise to all the fuss "will not soon be forgotten" by the schemers who set afoot the unnecessary agitation. "Any unpleasant" feeling that may arise from it will certainly be confined to themselves and be the result of well merited disappointment.

The effect of the gale of the 26th appears to have been very widely felt and to have been attended with great destruction of property and considerable loss of life. Full accounts of the extent of the storm have not yet reached Yokohama, but from what has been ascertained up to the present time, the main force of the gale was felt on the coast between this and Owari. All the villages and towns on the sea coast seem to have suffered much and accounts are constantly being received of houses washed away either by the sea or the swollen streams, causing much misery and loss of life. The fishermen and junk traders have suffered greatly, many boats having been destroyed and nets carried away, while large tracts of land have been devastated by the encroachment of the sea. Traffic along the Tokaido was greatly interfered with an account of bridges being carried away, but, as far as Odawara at least, such damages have been so far repaired that carriages may again proceed uninterruptedly. One of our contemporaries states that on one point of the coast south of Noshima some sixty persons were drowned. The German barque *Madagassger*, the Danish barque *Catharina* and the American 3 masted schooner *Roving Sailor*, from Hakodate, were totally wrecked in the neighbourhood of Noshima, with some loss of life, Captain Bryant, in the last named vessel, succeeding only with the greatest difficulty in saving his wife and three children by means of a rope carried ashore. The survivors of the wrecks were brought up to Yokohama by the German corvette *Elisabeth* which was sent down for that purpose. Several Japanese vessels are also supposed to have been lost. A Japanese steamer, the *Setsu Maru*, is known to have gone on shore some miles distant from the place where the *Roving Sailor* was wrecked. Further accounts of its devastating effects will doubtless continue to reach us.

It is pleasant to remark the grateful terms in which the survivors of the wrecks acknowledge the thoughtful kindness and attention shown them by the Japanese at the scene of the disasters. Not that in the present case anything more has been done to succour the shipwrecked crews and to endeavour to alleviate their sufferings than on any former occasion Looking back through the record of wrecks and marine disasters, —and it is a terribly heavy one—we can find no single instance in which the kindness of heart which is so marked a characteristic of the Japanese people was not borne testimony to in like manner. No matter that the poor villagers of the coast have but little to give beyond their sympathy and kindly help. To men who have lost everything but barely saved lives, a cup of water, or a handful of rice, some simple remedy to soothe the smarting wound, or cotton gown to hide the naked body, when offered with every mark of sympathy, delicacy and unselfishness, are valued as the costliest gifts, and call up in the recipients the keenest sense of gratitude. Nor is it only to the living that their kindness is shown. The dead cast up by the sea, bruised out of human shape against the jagged rocks, or dreadful in decay, still receive from the kindly villagers and local authorities a fitting respect, every care being taken to preserve any article or record by which they may be in the future identified, after which they are buried with all decency. To what extent this kindness and propriety is carried the writer is able out of his own experience to bear full testimony, having been present at the scene of one of the most fearful wrecks that has ever taken place on the Japanese coast. He can never remember without the deepest feeling of gratitude the kindness and courtesy received from the highest official down to the lowest villager, and the tender and respectful way in which they one and all performed the forlornest offices that man can be called upon to render. And there is no reason to suppose that in all similar cases their aid is not as readily and kindly given as on this occassion.

Now this excellent trait of the Japanese character is recognised by us all, and shows them in marked contrast with the conduct of any of their neighbours when they find a shipwrecked crew at their doors. Take China, where in most parts a wreck is looked upon as a godsend, affording rich opportunities for liberal plunder, and where the unhappy crew

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

instead of receiving aid or sympathy may think themselves fortunate if they are not called upon to do battle with their fellow creatures for the lives that the sea has spared. In the recent case of the wreck of the French mail steamer *Meikong* in the Red Sea, the crew and passengers had to look after themselves, abandoning the wreck to hundreds of armed Arabs, intent on plunder, and who it may be presumed were restrained from committing personal violence on the ship-wrecked unfortunates by the knowledge that they had saved nothing worth the stealing. In Japan we do not recollect any case where wrecking has occurred, the natives seeming intent only on rendering all the aid in their power, and the local authorities always taking prompt measures to protect personal property and cargo.

All that go down to the sea in ships and do business on the great waters can never look with other than kindly feelings on those who, they know, always stand ready to give them helping hands and kindly aid and sympathy whenever misfortune shall drive them on their shores. No men are more ready to risk the life that is threatened by a thousand perils, such as few classes of landsmen are called upon to undergo, than sailors, and no profession can show fuller record of noble self-sacrifice and heroic deeds. To risk the deadliest danger to save the life of some poor drowning soul seems as natural to them as the simplest duties of their daily life. And then talk to them of thanks or reward! Why, to suppose that a hope of either has urged them in the least degree to noble effort is an insult to their manhood. Do the daring fishermen of Deal or the brave volunteer crews of our life-boats pause to consider, before risking their lives to rescue the crews of vessels foundering off our storm-swept coasts, what meed of public praise will be theirs? Are they tempted to deeds of bravery by heavy salaries or prospect of large reward? The only thanks they can hope to receive are those sobbed out by the saved; the only reward is too often the watery grave from which they did what they could to save others.

While it always affords us unmixed satisfaction to bear testimony to the uniform kindness with which those who suffer shipwreck on their coasts are treated by the Japanese, we have been led to making these latter remarks by a letter which has appeared in the columns of one of our contemporaries. It is fair to suppose that it is written by a sailor if there be any faith to be placed in the *nom-de-plume* that it bears. In speaking of the scene in the harbour during the gale of the 26th, when a number of Japanese were rescued only with the greatest difficulty from the wreck of the *Augusta* and the dredge after she went ashore at the French hatoba, the writer complains of the absence of even the simplest means of saving life from wrecks, and makes a few suggestions that might perhaps with advantage be taken into consideration by the native authorities. So far, so good. But now come the following ungracious remarks (the italics being our own):—

"This amount of trouble and exertion would not have been required from the foreign community, *to save the lives of a few natives*, were the proper appliances supplied by the authorities. Why should foreign members in this settlement peril themselves year after year, on like occasions, when the simple means of saving life are within easy grasp of the authorities, and as it is *generally their own countrymen who are imperilled*, why not provide efficient means to save them? Foreigners rarely get any thanks for their pains in such cases as those of yesterday, and always do the harsh part of the work themselves for native benefit."

Now had the letter been signed *Lowdah* and written by a Chinese sampan-man, who, like the rest of his class, would not put out an oar to save a drowning wretch sinking within his reach, it might have been excusable. But as it stands we cannot pass it over without indignant protest. So then are we to loaf at the Club, idly skimming the newspapers, or watch from our room in luxury of dressing gown and slippers, the drowning struggles of a *few natives* because the authorities have not provided some life saving appliances which might or might not be available? Are we to come to such a pass that "to save the lives of a few natives" we really cannot undergo any serious trouble or exertion, and giving them our pitying sympathy to the extent of saying "poor devils," light a fresh cigar and leave them to their fate? Are the men of this community to become so flabby, and vain, and heartless that rather than wet their feet, or ruin their good clothes, or soil their hands with a coil of rope they would allow a "few natives" to perish before their eyes? If such dire necessity again call for foreign aid must it be left to the women of the settlement to put their hands to the life lines, and shame the men by undergoing "the trouble and exertion to save the lives of a few natives" of which the writer of this letter so peevishly complains?

Then he asks why foreign members of the settlement should peril themselves on such occasions, when the simple means of saving life are within easy grasp of the authorities. Because in spite of the writer's apparent heartlessness, every man in the foreign community finds his greatest pleasure in saving the life of a fellow creature, when opportunity offers, and because there are never wanting those who will run any personal risk to place the "simple means of saving life within easy grasp" of a perishing mortal. When a coal lighter filled and sank off the creek Mr. Dowson did not hang back from diving in among a crowd of some forty or fifty drowning coolies because they were not his own countrymen who were imperilled, and the authorities had provided no life buoys. When Mr. Pitman, Dr. Wheeler, and others plunged into the raging surf and dangerous wreck the other day to pull out senseless and drowning men, they did not pause to consider what thanks they would get from the authorities, and sneer at exertions because made only "for native benefit." It is well that the Japanese should know that views such as this writer expresses are not those of the community or of any portion of it. By the letter we see that there is at least one exception, but we should be sorry to believe that any other of its members would not put forth every power, and employ all available means to save lives because the objects of the exertions were only a "few natives." When wrecks are cast upon their coasts and half-drowned and starving men are thrown on their compassion, it would seem hard were the Japanese to say, "Every year wrecks take place on our shores, and every year we are put to trouble and loss in rescuing and feeding the foreigners. Let them supply our coasts with life-boats and rockets, and other paraphernalia. They are only a few foreigners and we do not see why we should be called upon to exert ourselves for foreign benefit. Besides we rarely get any thanks for anything we do." In the place of such churlishness we know, and all seafaring men know, the kindness that makes no distinction of persons and asks neither thanks now reward. And in this matter of thanks too, if thanks must be had for doing the plainest act of duty, the writer is wrong. We know of few cases in our own experience or that of friends, where the amplest and most courteous acknowledgements have not been made by the Japanese authorities for even the smallest relief afforded to any of their people in distress. At the present time the local authorities are using every exertion to discover the names of those who were most prominent in rendering assistance in the recent disasters in the harbour, in order that they may express their sense of the obligation.

We have no desire to say a word against making all possible preparation to meet such calamities as those referred to. By all means provide life-boats, life-buoys, grappling hooks and every other life-saving apparatus, but if the storm comes before we are ready for it, in the name of our common humanity don't let us begin to talk about "trouble" and "thanks" and those in danger being only a "few natives" and not our own countrymen, but strip to our work and be thankful that we have the ability and the strength to be of use, and that on such an occasion we can do something in return for the many favours that our shipwrecked countrymen have received at the hands of kindly natives.

Amidst the sad records of loss of life and destruction of property occasioned by the storm of the 26th ultimo which reach us from so many quarters, it is a relief to find that the heavy rain which then fell averted, in many parts of the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

country, the danger of a failure of the rice crop. The want of sufficient water to irrigate the fields was in many cases leading to disputes among the farmers as to the use of what little was left in the ponds and ditches, and the drying up of wells in some districts was the cause of great distress. As yet the weather this summer has been altogether quite exceptional, and chiefly remarkable for the small quantity of rain which has fallen. Visitors to Japan during the early summer were wont to take away with them on their welcome departure from this port, the fixed idea that the chronic state of Yokohama was one of moisture and mouldiness. Past registration, too, recorded the fact that June was only second to September in being the wettest month of the year, for Dr. Hepburn's tables show the average rain-fall in June for seven years to have been 11.3 inches, and last year Mr. Joyner recorded a fall of 10.87 inches. Dr. Veeder has kindly informed us that in June this year the rain-fall during the whole of the month was only 2.47 inches, of which the greater part, 1.73 inches, fell on the night of the 14th, and that no rain at all fell after the 18th, a remarkable circumstance, as the last ten days of June are generally the rainiest part of a very rainy month. Dr. Veeder further states, that the quantity of elastic vapour in the atmosphere during the whole of this dry weather, was always sufficiently great to warrant the expectation of rain, but he observed, at the same time, that the highest atmospheric currents set in steadily from the west, probably from the dry plains of China, and were therefore capable of absorbing the moisture which would otherwise have fallen as rain. This condition lasted until the storm of the 26th ultimo, when a change was observed, the approach of the storm being indicated twelve hours in advance by cirrus clouds moving in an easterly direction.

We are extremely glad to hear that the Japanese Government are so fully aware of the value of the meteorological observations that they intend to establish an observatory at Kaga Yashiki under the superintendance of Dr. Veeder, for which a complete and valuable set of instruments have been ordered. That the expenditure thus involved is a judicious one no person will venture to dispute, as the meteorological observations which the Government will be able to make at Tôkiô, Sapporo and the various light-houses on the coast, will form a valuable addition to similar information which is collected in other parts of the world.

The numerous friends of Captain Brinkley will sincerely sympathize with him in the recent severe loss he has sustained by the burning of his residence at Toriizaka, Tôkiô. The house was only just completed and furnished with great care, while there are scarcely any grounds in the capital laid out with such excellent taste. But the worst of the misfortune is the loss of all the manuscripts, notes and memoranda compiled during the past three years, and which are the result of many years of the closest study and application. Those who know the extent of Captain Brinkley's attainments in Japanese literature will understand the value of such labours, and the irreparable loss he has sustained by their destruction.

The *Gonrei* of Kanagawa *ken* has notified that a fee of 20 *sen* must be paid by foreigners applying to the *Kencho* for a passport to Hakone and Atami, a trifle which will doubtless be willingly paid by all who desire to avail themselves of the privilege granted. In the case of British subjects this fee must be forwarded through the Consulate at the time of making application for a passport.

We cannot repain from expressing great surprise at the apparently unnecessary interference of the French Minister with the liberty of the *Echo du Japon* in notifying it that an article that had appeared in its columns—only an extract by the way—was offensive, and that it must not publish similar articles in future. It is hard enough to find matter day by day, in a community as limited as ours, to fill a morning paper, and surely M. de Geoffray need not have been alarmed lest an article, that had been permitted to appear in Paris, might create a revolution among his compatriotes in Yokohama. We cannot but look upon the whole proceeding as extremely ill judged and arbitrary. Certainly M. de Geoffroy has not commenced his duties in a way to render himself popular with his countrymen, while it is quite possible that in his haste to be exercising his powers he has exceeded them. In any case we extend to our contemporary the sympathy to which it is evidently entitled as the victim, as it seems to us, of a singularly harsh and uncalled for measure.

In an article on the Insurrection in Japan in the last *Pall Mall Budget* occurs the following curious passage:—

> But there are signs that English popularity is not increasing in that country, and that, justly or unjustly, most of the grievances are attributed to us. If it is necessary to reduce the pensions of the Samurai, the reason assigned is that treaties prevent the Government from raising the funds it requires by Customs duties, as in other countries. The Japanese papers point out that while the Customs in England produce over £20,000,000, or more than one-fourth of its revenue, those in Japan amount to only about £350,000, or less than one-thirtieth of its receipts. It is, however, probable that if a free revision of the commercial treaties were permitted to Japan, the fiscal advantage would be comparatively small; but the refusal by foreign countries to permit it to act in this matter as it thinks best is a continual sore. When rice reaches an unheard-of price, foreigners, and particularly the English, are blamed and foreign trade is said to be ruining the people.

Now in a journal that is one of the very few that has given any attention to Japanese affairs, and that has attained such a deservedly high reputation for its general correctness and ability in its treatment of any subject, it is surprising to find a statement so incorrect as the above. Neither the Japanese people nor the Japanese Government are unjust enough to attributed their grievances to any action of England. Although it suits the "Fie! foh! fum!" style of journal to enunciate such absurd views, the Japanese nation is far too sensible to attribute to any one nation in particular the grievances referred to. They know full well that England has no more to do with the "*samurai* question" or a rise in the price of rice than any other country. But there are certain foreigners who have been for some time in the employ of the Japanese Government—unhappily for the latter—who fear that at no very distant day the failing means of the Government and pressing necessity for retrenchment may deprive them of the emoluments they have so long undeservedly enjoyed. These men cry out that the Customs' duties should be raised in the hope that their positions may be continued, and that they may derive thence a fresh source of supply. In their ignorant selfishness they will not see that the imposition of higher duties would simply extinguish the little trade there is, neither do they care as long as they can secure a continued engagement at an increased salary.

With regard to the remarks made in the same article or the presumed antagonism of the foreign press we may have something to say on a future occasion. Certainly no Yokohama journal has any but a sincere and disinterested wish to see the Japanese Nation advance upon the road of progress opened to them.

Application was made at the end of last month to the authorities at Tôkiô for permission to make a further display of fireworks on the Sumida-gawa. Such permission does not appear to have been granted as yet, but it is probable that a second display will take place during this month, of which due notice will be given.

In our daily issue of the 31st ultimo we drew attention to the fact that Her Majesty's Minister had received a telegram from the Governor of Hongkong, announcing that it had not been considered necessary to establish quarantine regulations in that colony, and that favourable news had been received from Amoy about the cholera epidemic. We are glad to be able to state that the Minister of Foreign Affairs has now concluded that as yet there is no need for quarantine regulations in Japan, and we sincerely hope that we may long be exempted from the necessity of them.

From the "Japan Mail Daily Advertiser."

Monday, 30th.

Their Majesties the Emperor and Empress arrived in Yokohama this morning at half past six from Kiôto by the *Hiroshima Maru*, and landed shortly afterwards at the Admiralty jetty under a salute from the men-of-war in port. At 8.15 Their Majesties proceeded to Tôkiô by a special train. The native town and Kanagawa were decorated with flags at an early hour, and the ships in harbour were gaily dressed.

The steamer *Atholl* left Singapore for Hongkong on the 21st instant.

From the *Mainichi Shimbun*.

A telegram despatched by Police Inspector Murata at Owake *ken* at 4.30 p.m. on the 28th instant, announces that the rebels made an attack upon the Imperialists at Kuragano and Gohonmatsu. At the former place they were readily repulsed, but at the latter, though fired upon by the Imperialists from three sides they succeeded in holding their ground. After seven hours a desperate sally was made by four companies of the troops of the Kumamoto garrison who finally succeeded in driving back their assailants. About sixty of the Imperialists were killed or wounded. The rebels seem to have no more lead and are firing balls of bell metal.

From the *Chôya Shimbun*.

The troops under Lieut. General Takashima having gained so many victories, became somewhat careless, and have recently been continually beaten by the rebels. They are now defending themselves against the rebels advancing from the South.

The third Division of the army has been continually fighting ever since the battle of Yamaga, and has consequently suffered considerably, but the troops forming it remain in good spirits and health.

From the *Hôchi Shimbun*.

Hitherto red glass has not been manufactured in Japan, but one Kawajima of Asakusa, Tôkiô, now succeeds in making red glass of good quality.

From the *Nichi Nichi Shimbun*.

Their excellencies Iwakura, *Udaijin*, and Mayejima, Vice-Minister of Home Affairs, will start for Kiôto at the commencement of next month.

From the *Akébono Shimbun*.

A notification has been issued by the *Anzaisho* that on account of the return of the Mikado to Tôkiô, a Bureau for the Southern expedition, being a branch of the Army Department, will be established at Osaka.

Tuesday, 31st.

We are informed by H. M.'s Consul, that Sir Harry Parkes has received a reply to a telegram sent by him to Governor Hennessy, to the effect that he (the Governor) had not found it necessary to establish quarantine regulations at Hongkong, and that the latest news from Amoy was favourable. We trust this news may serve to allay any apprehension which may exist as to the spread of cholera from Amoy.

Through the courtesy of Captain Briscoe of the P. & O. steamer *Malacca*, we have been favoured with the following particulars of the storm on Thursday last.

Malacca, Thursday, July 26th, 1877.

Time.	*Barometer.*	*Wind.*	
9.00 a.m.	29.90	N.N.E.	
2.00 p.m.	29.67	E.N.E.	
2.45 ,,	29.60	N.E. ½ E.	Blowing hard with thick rainy weather.
3.45 ,,	29.58	E. by N.	
4.45 ,,	29.55	E. by N.	
5.30 ,,	29.53	E. ½ S.	
7.00 ,,	29.52	E.S.E.	Hardest blow.
8.00 ,, rising	29.57	S. E.	Very heavy rain.
10.00 ,,	29.66	S. by E.	
11.00 ,,	29.70	South	Squally.
Midnight	29.70	,,	

The P. & O. steamer *Sunda* left Hongkong on Sunday, the 29th instant, at 2 P.M.

The Japanese men-of-war in harbour and the Fort at Kanagawa were illuminated last night in honour of the Mikado's return to the capital.

The storm of the 26th did considerable damage on the coast near here. We already know that its force was severely felt about Oiso and Odawara and shall doubtless soon hear of destruction and perhaps loss of life at places more distant. At Yenoshima the sand of the beach leading from Katase has been carried away to such an extent, that about two-thirds of the distance is covered by the sea, the depth of water close up to the *toriyo* of the foot of the main street being about four feet at high water. During the greater part of the day communication between the mainland and island can only be kept up by boats, and even at dead low water dry walking is scarcely possible. This makes it very incovenient for the pilgrims and others who visit the island in such numbers at this time of year, and as the residents estimate that it will be eighteen months before the sand silts up sufficiently to make a causeway as formerly, the proprietors of the tea-houses propose erecting a wooden staging by which visitors may reach the island dry shod. This will be no slight undertaking, and the cost will be considerable. The beach at Katase is covered with enormous quantities of kelp which the sea has thrown up far beyond the usual high water mark, which is now being busily collected and carried away to be used on the fields.

The fishermen of Katase and Yenoshima were great sufferers by the storm, and sad to say, the waves invaded the precincts of the cave at the latter place and completely washed away the shrine of Benten Sama which used to stand there. A word of advice to those who drive to Katase. It seems to be the invariable practice at the tea-house there to make the most exorbitant charge for stabling, etc., with the hope that the bill may, in some instances, be paid without question. In one case a sum of *yen* 2.75 was demanded and *yen* 1.75 accepted when the amount asked for was objected to. It would be well for visitors to know that the proper and reasonable price to pay for ponies stabled at Katase is half a *bu* per feed, and for bettoes one *bu* and a quarter per day. Bearing these rates in mind an easy calculation can be made of the proper amount due for the accommodation afforded.

We much regret to have to report an accident, serious so far as delay is concerned, but happily not so to the safety of the vessel, to the O. & O. S. S. *Oceanic*. The vessels of this Company have been so free from even slight accidents during the two years and upwards that they have been running across the Pacific, that even a slight derangement of the line causes surprise. The *Oceanic* arrived here on Saturday last from San Francisco, after a rapid passage of 17 days 22 hours from that port, and she left here on Monday afternoon (the 23rd inst.) in continuation of her voyage to Hongkong. On the morning of the 26th inst. she was spoken by the M. B. S. S. *Tamaura Maru* in lat. 31. 7 N. Long. 131. 5 E. about 23 miles to the northward and eastward of Cape Satano-misaki (or Chichakoff). She then reported that she had lost her propeller on the night of the 25th, and requested the *Tamaura Maru* to tow her into some port. This the latter, being so much smaller a vessel was unable to do, and all she could promise was to report the accident immediately on her arrival at Kobe. This was done, and on information being given to the senior naval officers at each port, the U. S. S. *Kearsage* from Kobe, and H. B. M.'s Sloop *Lily* from Nagasaki immediately left in search of the disabled vessel. Unfortunately, in consequence of the lines between here and Kobe being down, owing to the late typhoon, the news of the accident did not reach here until yesterday evening. Mr. Center, the General Agent of the Company in the East, immediately took the necessary steps to afford assistance, and the M. M.S.S. *Tanais*, having been chartered for the service, will leave this evening to render any aid possible. The *Oceanic*, when last seen, was on the starboard tack with all sail set, before a North Easterly wind. It is therefore to be presumed that Capt. Parsell was endeavouring to run either to Tasman or Odomari bay, with a view of getting out of the current and anchoring. It should therefore be easy for the *Tanais* to find the *Oceanic*. Unfortunately, owing to the great length of the *Oceanic* (about 440 feet), there is no dock either at Yokoska or Shanghai long enough to take her in, and it will therefore probably be necessary for the *Tanais*, should she fall in with her, to tow her to Hongkong. This, however, as the *Tanais* is a powerful steamer, will not take many days, and as the *Oceanic* has a spare screw, and also spare blades on board, we may hope that the delay consequent on the accident, will be reduced to a minimum.—*Japan Herald.*

From the *Hôchi Shimbun*.

No fighting has taken place in the neighbourhood of Kagoshima since the engagement of the 23rd of last month. On the 13th instant Shimadzu Saburo returned to Kagoshima, and the people are gradually returning to their homes in the town.

There are about 170 patients at the Kagoshima hospital. The Imperialists have their hospitals at Miyanojô, Oguchi, Taniyama, Kajikawa, Tarumi, Sakura-shima, O-shima and Toku-shima.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

From the *Nichi Nichi Shimbun.*

A telegram despatched by Lieut. Colonel Tanabe announces that the Imperialists, after entering Miyako-no-jô, made an advance upon Teradzumi-mura and Kajiyama and dispersed the rebels from their positions there. The Imperialists intend to advance upon Obi.

From the *Akébono Shimbun.*

During the storm on the 26th instant the Kise-gawa was flooded, and the bridge which crosses the Tokaidô and five houses were destroyed. Three persons were drowned.

The Kano-gawa rose to the extent of fifteen feet and a great deal of damage was done in consequence.

From the *Chôya Shimbun.*

So severe a shock of earthquake was felt in the province of Jôshiu (Hitachi) on the 25th instant, that the walls of many of the godowns were cracked, and the tiles fell from the roofs of the houses. At Zenkôji in Shinshiu, at 4 p.m. on the 24th instant, a violent hail-storm took place, so that for one hour the darkness of night prevailed.

The Government is considering the advisability of establishing, as soon as the present war is over, thirty-six military stations in various parts of the country, each to be garrisoned by one regiment of troops.

SECOND NATIONAL BANK.

(Dai-Ni Koku-ritsu Ginko.)

Statement for the week ending 28th July, 1877 :—

Total Amount of notes (dollars) received by us from the *Shihei-rio*		Dols. 1,200,000
On hand	807,980	
In circulation	392,020	
	Dols. 1,200,000

	Dols. 392,020	

Wednesday, 1st.

The German frigate *Elisabeth* returned to her anchorage at 9.30 p.m. last evening. She has brought up the survivors of the wreck of the Danish barque *Catharine* numbering ten; the whole crew of the American three-masted schooner *Roving Sailor*, except the mate who stayed behind to take care of the cargo; and she reports having found the German barque *Madagassger* entirely broken up and strewn among the rocks. The *Catharina* fared but little better. She lies between Nosima-saki and Inaboyé-saki on a very rocky shore, and is in consequence badly injured. Those of her crew who were saved were more or less injured by being cast agsinst the rocks.

The *Roving Sailor* lies on shore with her bow high between two rocks, about a mile further north. Captain Bryant, we hear, on finding it impracticable to save his vessel from going ashore, headed her for the most favourable spot on the coast, and thereby has saved his crew, together with his wife and children who were with him.

The *Elisabeth* has seen nothing of the Japanese steamer said to have been lost.

A slight shock of earthquake occurred at 1.40 p.m. yesterday.

From the *Mainichi Shimbun.*

A telegram despatched from Osaka at 1.15 a.m. on the 31st ultimo, announces that at 3 a.m. on the 29th ultimo the second division of the Imperialists advanced toward Takaoka, and after first taking the rebel positions at Yawagase-mura and Hashidani-zaka, captured the town of Takaoka by 8 a.m. After the town was taken the Imperialists were reinforced by two regiments, and continue to hold the position.

From the *Hôchi Shimbun.*

The Imperialists made a general assault upon Takajo on the 28th ultimo and captured the town.

Among the Ministers who returned with the Mikado were Their Excellencies Sanjô, Itô, Tokudaiji, Iôjô, Yanagiwara (member of the *Genro-In*) and the Vice Minister of the Imperial Household.

H. E. Okubo will remain a day or two longer in Kiôto on matters of business.

From the *Chôya Shimbun.*

The rebels having been beaten in battle after battle, and Miyako-no-jô having been taken from them, the people think that the rebellion is nearly over. But Major General Saigo is of an opinion that peace cannot be restored before the end of September, while Yamagata, the Minister of War, does not think that the war will be over before the end of November.

From the *Nichi Nichi Shimbun.*

A telegram despatched from Kiôto at 8.40 a.m. on the 29th ultimo, announces that a report had been received from Kawamura, the Vice Minister of the Navy, who is now at Miyako-no-jô, to the effect that Oyama with two regiments entered Obi on the 29th ultimo and all the rebels at that place surrendered. Six field pieces were taken there. The troops which advanced on the Yamaguchi-kaidô and those under Lieut. General Soga have united at Noda, and are now but a short distance from Miyazaki, another important rebel position.

Thursday, 2nd.

Kobe fortunately escaped the typhoon of the 26th ultimo, though during the afternoon the weather was very threatening, with the barometer extremely low. Some violent gusts of wind from the West were experienced but the weather cleared up as the wind gradually worked round by North to East.

From the *Mainichi Shimbun.*

A telegram despatched from Sashiki at noon on the 31st of July, says that one battalion of Imperialists under Major Iguchi arrived at Obi on the 28th ultimo. The number of rebels who surrendered themselves at that place up to the 29th ultimo were eight companies of eighty men each. Five hundred stand of small arms, six field pieces, and large quantities of provisions were captured.

The fourth division of the Imperialists arrived at Sarugawa to-day (the 31st) and this is the only river which now separates the Imperialists from the rebels in the town of Miyazaki.

From the *Mainichi Shimbun.*

On account of the return of the Emperor to Tôkiô, Major General Saigo has been sent to the seat of war as an envoy for the purpose of inspecting the troops and enquiring into the health of the officers.

The following letter has been forwarded to H. I. H. Arisugawa-no-Miya by the Prime Minister, at the command of the Mikado :—

"To Arisugawa Takahito, Commander-in-Chief of the Expedition of Chastisement:

"The troops under you having bravely and successfully fought against the rebels, their power has been destroyed, thereby proving that you have performed your duty as Commander-in-Chief so ably as to deserve Our special acknowledgment. As We are now about to return to Tôkiô We send Saigo Yorimichi to you as a Special Envoy to convey Our thanks for your services, and Our hopes that you will retain good health during the hot weather, and zealously continue your labours for the restoration of peace.

"July 1877."

From the *Nichi Nichi Shimbun.*

Kirino and Kishima are in Hiuga. Saigo has his head-quarters at Takahara.

Kuroda left Kobe in the *Gembu Maru* on the 26th ultimo and arrived at Kogoshima during the afternoon of the 28th. The *Tonden-hei* (Yezo militia) who are now in Tôkiô will be despatched to the South immediately the expected order to that effect is given.

Major General Saigo left Kobe at the end of last month and has since arrived at Kokubu in Satsuma.

From the *Chôya Shimbun.*

A telegram despatched from Kobe on the 29th ultimo, says that the troops under Higashi Fushimi-no-Miya left in the *Kumamoto Maru* for Kagoshima.

A telegram despatched from Osaka at 1.55 a.m. on the 21st ultimo, says a report which left Ôwake *ken* on the 28th ultimo announces that the Imperialists dispersed the rebels from Itadoyama and Ogiyama. They have also taken possession of the rebel positions on Kuroyachi-toge. The rebels fled towards Odzusa-toge. About ten of the Imperialists were killed or wounded, but the losses on the side of the rebels is not known. A variety of articles of war were taken.

Friday, 3rd.

H. E. Okubo, the Home Minister, returned by the *Tokio Maru* yesterday morning.

Our translation of the regulations for the treatment of prisoners implicated in the present rebellion is taken from the *Nichi Nichi Shimbun*, the semi-official organ, though the whole matter is verbatim the same as that published in the *Hôchi Shimbun* yesterday, from which our evening contemporaries took their translations. There is no doubt about the nature of the torture (*gô-mon*) which is permitted to be used, if any reliance is to be placed on the authenticity of these regulations, but as neither the *Nichi Nichi* nor the *Hôchi* state by whom they have been issued, but simply confine themselves to the term "It is said," we hope, for the sake of humanity and justice, that the statement they make is erroneous as regards the permission to torture the unfortunate prisoners under examination.

From the *Nichi Nichi Shimbun.*

Permission has been specially granted to the temporary *Saibancho* of Kiushiu to apply torture (*gô-mon*) to those who are being tried for participation in the present rebellion, and the following regulations for the treatment of the various prisoners have been issued:—

Art. 1.—The following may be acquitted and released:—1.—Those who have entered the Imperialist lines by mistake or without providing themselves with a passport. 2.—Those who have drawn *jinrikishas* for the rebels, have directed them in the road they wished to travel or rendered them trifling services. 3.—Those who have sold refreshments, etc., to the rebels. 4.—Those who were arrested on suspicion, but who have cleared themselves of the charges brought against them.

Art. 2.—The following are to be warned, and placed in the custody of their relatives: 1.—Those who were compelled to act as spies for the rebels, but who left them when occasion offered and gave themselves up to the Imperialists. 2.—Those who under fear or compulsion furnished the rebels with supplies of provisions or munitions of war. Those who were compelled by the rebels to join the *Kiodô, Chimbu* and other *Tai*, but otherwise rendered no service to the rebels.

Art. 3.—The following are to be placed under official surveillance:—1.—Those who were compelled to act as guides or spies for the rebels and rendered them service in such capacity. 2.—Those who freely supplied the rebels with provisions or munitions of war. 3.—Those who voluntarily joined the *Kiodô Chimbu* and other *Tai*.

Art. 4.—The following are to be closely confined: 1.—Those who have joined the rebels and voluntarily acted as guides or spies for them. 2.—Those who took up arms for the rebel cause though they did not actually fight. 3.—Those who have, during times of confusion, taken advantage of the opportunity to set fire to houses or seize property in order to aid the rebels. 4.—Those who have raised recruits for the rebel ranks. 5.—All members of the *Shigakko* (Private School) and other parties of Kagoshima *ken*, and who have marched out with the rebels, whether they have borne arms against the Imperialists or not, are included in this Article.

From the *Nichi Nichi Shimbun.*

Upwards of 3,470 wounded men of the Imperial Army were received at the Osaka and Nagasaki hospitals from the 8th February to the 7th July, as follows:—

	Received in Hospital.	*Discharged Convalescent and fit to return to duty.*	*Died.*
Officers	132	36	10
Non-Commissioned Officers	459	69	21
Privates	2,336	290	168
Police Inspector	1	—	—
Police Sergeants	86	40	—
Police Constables	396	183	26
Commissary Department	13	7	1
Doctor	1	1	—

Servants	7	3	—
	3,470		

Saturday, 4th.

The Dutch Government having given instructions to its various representatives that to-day shall be observed as a day of mourning for the death of Her Majesty the Queen of the Netherlands, the flags of the Consulates of all nationalities and the men-of-war in port will remain at half mast as a token of respect.

Captain Bryant bought in the wreck of the *Roving Sailor* at auction yesterday for $2,000. The wreck of the *Catharina* was sold to a Japanese for $725.

From the *Mainichi Shimbun.*

A telegram despatched from Osaka at 4.10 p.m. on the 1st instant, says that a report has been received from Major General Yamagata announcing that a large force of Imperialists, after numerous engagements at various points, succeeded in capturing the town of Takaoka on the 31st ultimo. They then marched against the important town of Miyazaki, which they also succeeded in taking possession of. The Imperial troops were then ordered to march immediately towards the castle town of Sadowara, with the expectation of making an attack on the follow morning (the 1st instant).

Another telegram, despatched from the same place on the same day, says that a report has been received from Lieut. General Tani to the effect that at 3 a.m. on the 27th ultimo the Imperialists commenced an attack upon Itadoyama and very soon succeeded in carrying the position, afterwards taking Jônokoye and Kurotsuchi-toge in succession. The rebels fled towards Adzusa-toge.

A telegram despatched from Osaka at 7.50 p.m. on the 2nd instant, announces that on the 31st ultimo at 7 p.m. the Imperialists captured the castle town of Sadowara. Fighting still continued beyond the town.

From the *Nichi Nichi Shimbun.*

His Excellency Kuroda arrived at Kagoshima in the *Gembu Maru* on the 28th of last month, but it is since reported that he returned to Kobe on the 1st instant. This is very likely accounted for by the repeated Imperial successes over the rebel forces, so that his services are probably no longer required at the seat of war.

The rebel commander Sakurada Sôjirô, a prominent *samurai* of Higo, is strongly of the opinion that the rebels having lost all chance of gaining their object should surrender themselves, while Ikebe Kichijiro, another prominent *samurai* of Higo and a rebel commander, says that they should fight it out to the very end. Thus the opinion of the rebels is somewhat divided. Saigo is said to take no notice of these dissensions.

From the *Akebono Shimbun.*

The number of civil cases brought before the Tôkiô *Saibansho* from January 1st to June 30th was 1,167.

From the *Hôchi Shimbun.*

It is rumoured that the Government Telegraphs, which have hitherto been under the Department of Public Works, will be transferred to the jurisdiction of the Home Department.

H. I. H. Higashi Fushimi-no-Miya proceeded from Usuki to Nagasaki on the 28th of last month.

A person returning from Satsuma says that the prospects of the harvest in the neighbourhood of Kagoshima are not at all bad this year. A fair crop is expected unless some unforseen calamity happens, though it will be more deficient than it would otherwise have been, on account of the farmers having been taken from their labour in the fields to act as coolies in the war.

THE FUTURE OF JAPAN.

OUR review in a recent issue of the Memorial of the *Risshisha* naturally suggests the question what the destiny of the country, of which the later and most singular history is there summed up and the present condition ably criticised, is to be. The problem is a difficult one, and we think impossible of anything like an adequate solution. Foreigners cannot be in possession of sufficient or sufficiently precise data even were these procurable, upon which to found an accurate forecast of the future, and no Japanese publicist or statesman is well enough acquainted with the philosophy of Western civilisation to be able to tell what the present striving after imitation or assimilation of that civilisation by the more cultured classes of his countrymen will lead to. Nor have we any precedents to assist us. No Asiatic country has ever attempted what Japan is now attempting upon so extensive a scale as we see here practised. From an unexampled isolation Japan has passed over almost without transition into an intercourse unexampled in the East with the people of the West. She pretends in a dozen years to take over and make her own, not only our arts and sciences, not only the externals, but ever the spirit of our civilisation. Other countries have adopted the railways, telegraphs, postal systems, etc., and even the laws of Western Europe, and this has often been regarded as a signal proof of political if not moral advancement. We do not, for our part, lay much stress upon this as indicative of any real or permanent progress. Common experience teaches us that individuals of very ordinary intellect find no difficulty in appropriating the creations of genius, and the discoveries of a Newton, a Davy or a Kischoff soon become the common property of ordinary mankind. What is true of individuals is, in this case at least, true of nations, and we know of no reason why one race of men should not within a comparatively short time, if they have the will and the circumstances are not unfavourable, be enabled completely to make their own the arts and sciences, more especially the mechanical sciences, of another and higher-placed, or even inherently higher, race. But there is much more in Western civilization than the material exterior of it, so patent to those who do not possess it, and who too often imagine that what they see is all they need see, or attempt to make themselves familiar with. The present civilisation of Europe depends much upon, perhaps could hardly exist without, the various material means at its command, but is not itself mainly or in any considerable degree a result of the evolution or employment of those means. The great and important thing is the cultivation of the individual mind, and this will be accomplished only by the gradual education of successive generations. How much the thought and conduct of an ordinary Englishman is due to the past history of his country is not commonly recognised, but a little consideration will show that by far the greater part of his reflective and active life is the outcome of the political and literary history of England. We may, indeed, go much further back, and trace the origin of all modern philosophy, science, art and literature to the incomparable intellect of ancient Greece, and in the extraordinary political wisdom of the Romans find the beginnings of all modern political forms. Twenty centuries have been required to bring nations of Western Europe to their present condition, and the question how long it will take the people of Japan to attain a similar level, is one of the most interesting the present age, crowded as it is with perplexing and important problems in every department of knowledge, offers to our consideration. We do not for a moment believe in any essential inferiority of race; the tendency of modern science is to do away with the notion of racial inferiority often so complacently entertained by people of Aryan origin with regard to nations of a different descent. The path of the Japanese will be unhindered by nearly all the causes which have so greatly delayed and still impede the advance of Western Europe towards a more perfect social and political condition, and there do not seem to be any difficulties of a serious nature peculiar to Japan. Hence the progress of this country may be much more rapid than has been the case in Europe; whether it will be so depends partly upon political events which cannot be foreseen, but mainly upon the recognition by the Japanese themselves of the true spirit of the civilisation they would adopt, and this recognition must take a considerable time even under the most favourable circumstances. The literature of the West must become tolerably well understood, the superior reasonableness and freedom of modern society must be comprehended, the true meaning of liberty known, the necessity of a real religious feeling recognised, an immediate improvement in the position of women effected; a national literature developed, and partly through this, partly in other ways, the mass of the people be allowed and induced to share the responsibilities attaching to the administration of the government, before anything more than a mere imitation of the essential aspects of western civilisation shall become possible. Turkey, though so long in close contact with civilised Europe, has understood none of these things, and though long since in possession of railways, telegraphs, iron-clads, post offices and an Europeanised staff of officials, can hardly be said to have yet definitely emerged from barbarism, while even Russia, from similar causes, has only yesterday, under the guidance of an enlightened Emperor, left behind her for ever the mediæval obscurity her nobles would have preferred she still dwelt in. We do not think that Japan can obtain the average European level until four or five generations at least shall have passed away. Japan has been often termed the Britain of the Far East but the simile is an untrue one. Great Britain is in the very centre of the civilized portion of the universe, and separated by an insignificant channel from the European continent, that in these days hardly impedes communication. Japan in rather on the outskirts of the world, in a naturally isolated position that entirely negatives any hope she may entertain of ever having much weight in the councils of the ruling nations of the earth. Her soil is not fertile, and two-thirds probably of her area consists of mountainous regions unfit for any purpose but that of growing timber. Her mineral wealth has been much exaggerated and is not probably such as to form one of the main resources of the country. Her harbours seem to be few, her navigable rivers fewer, and the volcanic contortions of the ground make the means of communication difficult, while these, from the expenses of construction and maintenance, are and must remain necessarily infrequent. She possesses neither iron nor coal in such large quantities, or in such proximity, as would place her

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

in an advantageous position for manufacturing purposes compared with that which at no distant period will be assumed by China. Some special industries she probably will retain, and those may be capable of considerable development, but she is and must continue to be mainly an agricultural country. The production silk at least might be very largely increased, and it would be well if the Government subsidised efforts in that direction rather than fostered the various mercantile speculations which have resulted in such heavy losses to itself and the country. Nor can there be much doubt that with time, and under intelligent supervision, cattle rearing might be much extended, and sheep grazing pass from an experiment into a regular agricultural industry. Many of the hills are clothed with a good, sweet, though sparse, grass, and the coarse bamboo grass which covers the greater part of the hill ranges within fifty miles of Yokohama might be burnt off, and replaced by a useful native or introduced herbage. With regard to the exportation of rice we should prefer to see it decrease rather than increase. There are many countries more fitted for rice growing than Japan, and one reason, it should always be remembered, why so much rice can now be exported, is the regrettable one that a large proportion of the peasantry are too poor to be able to use it otherwise than as a luxury. We confess, too, that we never view the heavy toil of rice cultivation, especially when women are employed in preparing or planting the land, without some pain, and should be glad to see it replaced by corn—a substantially more productive crop, and one requiring less labour and yielding a much superior food. The replacement of endless rice marshes by a succession of corn fields, too, would, we are persuaded, prove a sanitary boon to the dwellers in the valleys, over which, so often as the evening draws on, we see the heavy and often poisonous mists hang like a grey pall.

From what we have said it will be understood that we do not regard this country as possessing the elements of either great wealth or great power. The future we look to, if the Government shall become in accordance with the genius and wants of the people, is a moderate one, of which a happy contentedness rather than a brilliant show should be the characteristic. Surely this should be the first aim of whatever Government controls the destinies of Japan ; should circumstances, or the development of national genius, or the appearance of a great ruler or statesman lend her increased dignity and give her a more effectual voice in the council of nations, she will thus be better enabled to maintain the position her good fortune may have aided her to attain.

What we have said pre-supposes a fairly good Government, and here the future seems very uncertain indeed. The present system cannot last, and must be replaced sooner or later by a more tempered despotism either monarchical or oligarchical. We say advisably a despotism, for the intellectual and economical situation of the masses of the people altogether forbid the idea of a representative government, in the sense of a government of the people by the people, being realisable for some generations to come. Very strenuous efforts are made by the present Government, for which too much praise cannot be awarded, to provide cheap instruction, but the result of these efforts will not be apparent for a considerable time, and will be of less effect than might be expected owing to the difficulties of the written character, which renders all but the lowest class of literature a sealed mystery to the ordinary peasant. We are not in the least anxious to see the present Government as a Government overthrown, for there is no guarantee whatever that their successors would be a whit more liberal in their policy. What we do wish to see is a Government established on a broader basis, in which a larger and larger portion of the Japanese public should by their representatives take part. We fully recognise the new danger that such a change as the one we advocate would in all probability bring about, but the advantages that would attend it would, we think, far more than counterbalance the possible perils that might ensue from it. The actual position and relative strength of the various political parties in Japan at the present moment are difficult to estimate. The merchants and farmers, for the most part, refrain from any expression of their political opinions, and only the *shizoku* (if we except the small body of so-called men of letters) seem to have any definite political aims. Among them the old clan rivalries seem still to some extent to exist, but how far this fact destroys unity of action it is impossible to say. The *shizoku* are the only class having any political experience whatever, and the destinies of the country must for a long time be more or less within their control, unless their strength is nullified by intestine divisions. They form rather an element of danger than of strength to the state, and as it is impossible to extirpate them, the wisest course would seem to be to admit their right to a share in the Government, and thus use forces that might be hostile to order in the preservation of order. Thus the peril would be reduced to a minimum, and the generation or two that must elapse ere *shizokudom* ceases to have a real existence would be tided over in safety.

But, as we have already indicated, it is impossible to foretell what an oligarchy will do. The action of a despot may often be more or less correctly foreseen, for at all events we have always the preservation of his dynasty before us as the chief object sought to be attained with more or less intelligence, according to the calibre of his mind. Oligarchies, even, are commonly more or less guided by tradition, but the Government of Japan has no traditional policy whatever, unless it be that of annoying foreigners upon all possible occasions. The country is greatly unsettled, and the result of the disaffection with the actual state of things may be a succession of Government, similar to the present one, overturned one after the other by the show or reality of rebellion. Nothing worse can be imagined, and should this take place Japan may sink to the level of a South America Republic, from which she may find it hard to rise again. But whether the present Government continue in office or not, so long as the present system obtains the element of uncertainty and caprice involved in it makes all calculation as to the future wholly unreliable. We have endeavoured to show what the country might become under a good Governmental system; what it will become under the actual system we have not an idea that we care to commit to paper.

The *Standard* hears that in consequence of the strong feeling displayed in certain quarters against allowing British officers to be employed by other Powers, the Foreigh Office has decided that, in any case where an officer may be serving a Power which enters into hostilities against one with which England is on friendly relations, the officer must either resign his foreign appointment or his commission in the British service.

THE TEA SEASON 1876-77.

AT a corresponding date last year we laid before our readers a review of the preceding Tea Season, and we now propose to give a brief *resumé* of the Season of 1876-77.

The date of opening of the Season was much the same as in the previous year, musters of small parcels being shown in the market as early as April, while by the second week in May the leaf had commenced to arrive in heavy parcels.

Prices then current for grades to hand were :—

"On Fine" light liquor but rather lacking strength ; leaf somewhat rough.	$33 to 35 ₱ picul.
"Fine" fair good cup, a fair leaf,	36 to 37 „
"Finest" fresh liquor, good leaf,	38 to 41 „
"Choice" full fresh liquor, handsome leaf,	42 to 46 „

For Good Medium grades the prices were somewhat irregular, but comparison with the opening rates of the season 1875-76, showed an average reduction of $6.00 per picul.

Settlements for the month of May amounted to 17,000 piculs, prices declining somewhat towards the end of the month. The Tea commenced to show a falling off in quality, which was certainly inferior to that at the corresponding period in the former season. During June a brisk business was done, and Common grades made their appearance in the market. Prices grew steady, and at the close of the month were as follows :—

Common	$12 to $14	Fine	$26 to $31
Good Common	15 to 18	Finest	33 to 37
Medium	19 to 21	Choice	40 & upwards.
Good Medium	22 to 25		

For a brief period at the opening of July prices grew firmer, but buyers soon withdrew. The first crop becoming exhausted there was a drop towards the close of the month of from $3 to $4 per picul, and the second crop commenced to arrive. The settlements from the opening of the season to the end of July amounted to 39,000 piculs. In August the business was much checked by an advance in exchange, being for a time in fact almost entirely suspended, and the market became very weak, Mediums being purchasable at $16 to $17 and Good Mediums at $18 to $20. It also became apparent about this time that the export from Yokohama would show a decrease upon that of other years. This was proved at the end of the following month, September, when settlements to that date showed only 72,000 piculs against 84,000 at the corresponding date of the previous season, a deficiency that increased as the season advanced.

Business during the remaining months of the season calls for no special comment. The quality of the leaf gradually fell off, and buyers were guided in their operations entirely by telegraphic instructions from the American markets. At the close of December prices ruled as follows :—

Common	$10 to $12	Fine	$25 to $28
Good do.	13 to 15	Finest	32 to 36
Medium	16 to 18	Choice	Nominal.
Good do.	19 to 22		

From this date to the close of the season prices were dependent entirely on the requisitions of buyers.

According to native accounts the total settlements for the season were :—

Yokohama	118,300
Kobe	60,000
Nagasaki	8,000
Total	186,000 piculs.

The total for 1875-76 was 215,000 piculs, thus showing a falling off in 1876-77 of 29,000 piculs, a statement which is borne out by the returns of Total Export, which was as follows:—

Yokohama	16,177,272 lbs.
Kobe	6,520,527 „
Nagasaki	987,817 „
	23,685,616 lbs.

against a Total Export for Season 1875-76 of 26,333,198 lbs., thus showing a decrease of 2,647,572 lbs., the decline in Export being almost solely from Yokohama.

The following estimate of the production of Tea in the various districts where it is a commercial product, and which comes to the Yokohama market, is made up from figures obtained from the most reliable Japanese sources :—

Yamashiro	Piculs	16,000
Inshiu	„	20,000
Gôshiu	„	5,000
Suruga	„	23,000
Ise	„	16,000
Mino	„	12,000
Shimsôa, Kadsusa	„	6,000
Echigo	„	3.000
Yamato, Kawachi, Iga, Kishiu	„	4,500
Tamba and Tôkiô	„	1,800
Kiushiu	„	11,000
	Piculs	118,300

This does not include about 30,000 piculs estimated as the consumption of Tea by natives in the eastern provinces, and produced in above districts.

The Kobe market received from same province	60,000	piculs.
The Nagasaki market received from same province	8,000	„
Making total available for Export...	186,300	piculs.

Viewing the quality of the crop as a whole we cannot regard it other than unsatisfactory. There was the same want of care in preparation to which the attention of the Japanese has been so often directed, and which has doubtless had much to do with the disfavour with which former consumers in America have lately regarded Japan Tea. The character of the leaf also showed signs of deterioration in the shrubs, arising probably from overpicking. The late parcels were very imperfectly made up, and the admixture of much low class leaf rendered them difficult to fire properly. And with regard to the firing there is a point which cannot be allowed to pass unnoticed. There seems to a fashionable demand for brilliant teas, or in other words teas fired with much artificial colour. Nothing is more likely in the long run to destroy the popularity of Japan Teas, and when the consumers find it out and weary of it, this highly coloured rubbish will contribute in no slight degree to swell the amount of unsaleable stock in the United States markets, and react unfavourably on sound pure Teas.

A feature of peculiar interest was developed during

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the past season, namely, an experiment made by certain Japanese merchants—it is stated under Government support—of exporting from Tôkiô to New York, on their own account, teas fired and packed in foreign style. As might with almost perfect certainty have been foretold, the result has been anything but satisfactory to the experimentalists or their backers, owing to the firing and packing being unsuited to the general trade, and the teas very dusty, a fault from which Japanese teas have hitherto been singularly free, and the absence of which first brought them into notice and open rivalry with China Oolongs. These teas are reported to have lost very heavily, realising $120,000 less than they would have fetched had they been manipulated and handled by foreign hands. Just as in the case of the silk-worm egg shipments to Italy which were obstinately made in opposition to the soundest foreign advice, this experiment of direct Tea shipments has failed, and is not likely to be repeated, or at any rate not with the assistance of the Government.

And now a few words as to the prospects of the present crop. In the early arrivals there was visible great improvement in style and leaf, and prices were 4 to 5 dollars below those of last season, standard Good Medium ranging from $21 to $22, and it was fondly hoped that the Japanese were going to listen to the advice that had been honestly tendered them and mend their ways. But wo regret to say that the excellence then noticed has not been maintained; the quality is rapidly falling off, while strange te say prices have advanced. Up to the present date settlements are slightly in advance of those at a corresponding period last year, but at the moment of writing business seems to be completely checked.

Advices from America seem to regard the figures of export as infinitely more important as a point of guidance than an apparently low scale of prices. The American markets can take only a certain amount, and if buyers, in their haste to purchase, force this forward regardless of quality or cost, the future of Japan Tea is gloomy in the extreme, especially as accounts from China report a full crop of Oolongs of good quality and at moderate prices. We believe that the present season will again show a marked decrease in the Export, a decrease that it is to be feared will continue from year to year unless the growers of Tea will attend to the oft repeated advice to produce less common stuff, and to the development of those standards which the experience of the last few years has proved to be most in favour with American consumers. Since the demand for Japan Teas set in, the planters have sought for quantity not quality, and with over-production has come serious deterioration from the former excellence of the leaf. We touched on these important points last week, and can only repeat that unless the growers and dealers set themselves earnestly to work to amend these errors, the Tea will gradually fall into disrepute, the demand cease to a large extent, and the trade in one of the very few wealth-giving productions of the country lapse into insignificance.

It is a curious fact that, as a rule, the telegrams which reach us by the Southern route tell us of Turkish victories, while those which come by the Northern cable give glowing accounts of the triumphant advance of the Russians. A correspondent draws attention to this, and expresses much innocent wonder as to the reason of it.—*Shanghai Courier.*

SPIRIT OF THE JAPANESE PRESS.

The Extra-territoriality Question.

(*From the "Chôya Shimbun."*)

In our leaders of the 2nd and 3rd instant, we pointed out the objections to the arguments for a revision of the code which are so much in vogue with the public at the present time, and we repeatedly enumerated the reasons for which this measure, however plausible it appears, is inconsistent with the custom and feelings of the people.

Now the reason why the mind of the public is so earnestly turned to the revision of the criminal law is after all nothing else than their desire for the abolition of extra-territoriality. For this reason we will proceed a stage farther and discuss the results to society if the Government succeeded in the object of revising the laws, and whether they will be able to do so. We shall then have completed our examination of this question.

If a foreigner commits an offence in this country, he cannot be arrested by our police, nor tried before our courts; he must be sent before his own country's Consul, and punished according to the laws of his own country. And not only so, but when a difference occurs between a Japanese and a foreigner, the suit brought by our countryman against the foreigner cannot be tried in the Courts of the Empire of Japan, but must be referred to the Consul of the defendant. It is unnecessary to say that the person who holds the office of Consul is fair and impartial, gives fair and impartial judgment, and is uninfluenced by favour towards his own subjects. Still the consequence is that it cannot be denied that most of the judgments are given against us, and in their favour. And suppose a Japanese defendant is dissatisfied with the judgment, and wishes the case to be tried again, he must appeal to a Superior Court which holds its sittings far away in China. Is not this a very hard state of things? The Japanese Government is obstructed by this barrier of extra-territoriality in its endeavours to maintain the honour of our civilization beyond the seas by a keen sighted revision of the laws. Not only is it impossible to try by Japanese law those foreigners who are resident in this country: we have no authority to try between Japanese and foreigners in which the foreigner is defendant. Under these circumstances, how can our Government meet those of foreign countries on a footing of equality? But if the amendment of our laws enabled us at once to put a stop to extra-territoriality, not only would it be a great glory to the flag of Japan, but the people would be saved from much unfair treatment in matters of intercourse with foreigners.

However, no ditch can be made without water, and except a nation gains power, it cannot easily by any laws which its Government may frame at the moment, place itself on a footing of equal rights in its intercourse with foreign powers. Laws are founded on national customs, and their modifications naturally follow changes in the sentiments and habits of the people. Their revision should not be conducted merely in accordance with the ideas of one or two officials. Is not this the very reason why countries differ amongst each other in the stringency of their laws? Suppose, then, that the Code Napoleon is taken as a perfect code of laws, that it is translated, a clause added here and expunged there, and that it is then introduced in such countries as Anam or Siam. Would there be no danger of its being found inconsistent with the customs of those countries, and would they be able by its introduction to procure the abolition of extra-territoriality? If legal reforms are introduced without respect to the progress which a people has made and in spite of their involving the destruction of their national habits—what is the good of it? for such laws, however admirable in themselves, cannot be carried into practice. If the national rights are to be maintained and developed by laws which have no practical force, what is to hinder even Anam and Siam from hastening to borrow English or French laws, and then procuring the abolition of extra-territoriality? We need not show that such an attempt would be useless.

It is not simply from the want of a perfect system of laws that the nations of the East are for the most part under the control of the white races of Europe and America, that they have lost their independence and are unable to try foreigners residing in their country by the laws of their country. It also depends on the fact that their national power is too weak, and that they are therefore unable to maintain their rights on a footing of equality as against foreigners.

If, therefore, without regard to our national strength we fix our attention solely upon our laws, and endeavour to obtain the satisfaction of at once abolishing extra-territoriality, is this in any way different from expecting to drive away a disease by means of me-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

dicine alone without taking any other steps for the care of the patient's health? We are strongly of opinion that this is impossible. Moreover, as we cannot impose on foreigners the laws which suit our customs, we borrow from them, and it is thus borrowed law which we propose to apply to them. Is not this an indication of our deficiency in national strength? Alas! we fear that it is impossible by means of our legal treaties alone to reconcile the subjects of foreign powers to submit to our jurisdiction! We should be sorry to guarantee any such results.

This want of legal rights, however, in our relations with foreigners is not only from time to time the source of inconvenience to us in the matter of jurisdiction, but it prevents us from holding the position of an independent country. No one who is animated with a spirit of patriotism can remain contented while the disgrace of extra-territoriality rests upon this country. If the spirit of the entire country were roused, it cannot be doubted that it would at once break down this obstacle. The fact is, however, that what brought this disgrace upon us was the want of strength to oppose foreign countries, and not merely the matter of legislative enactments. Until we have developed our strength, we cannot wipe out this disgrace. Alas! what method must we take in order to abolish extra-territoriality?

Military Organization.

("Chôya Shimbun," 31st July.)

A military establishment is all-important in preserving peace and order in a country and in protecting the dignity of a nation from the encroachments of foreign powers. But should mistakes be made in its organization and handling, the evils that may arise from it cannot be foretold.

The histories of all countries in all ages show that Emperors, Kings, and Rulers have ever endeavoured to control the military power, and to use it for forwarding schemes of personal ambition in carrying on wars with foreign powers which have eventually resulted in the bankruptcy of their own country. Moreover they have often used the army to oppress the people they pretend to govern, and soon by abuse of military power brought the country to a state of anarchy.

These are important points to consider with regard to a military establishment, but there are minor questions, which must not be contemptuously thrust aside, but rather require careful consideration.

Military law differs much from civil law, and is much more strict in its bearing and minute in its teachings. These laws all who serve in Army or Navy are bound to obey, and those who violate them are tried by court martial. The rule exists in all countries that men in either service committing even an ordinary offence are punishable by martial law. In England some exceptions may exist, but Parliament yearly takes the question of the Mutiny Act into consideration in order to improve the military ordinances, and is a proof of the importance which laws effecting the military system assume in England.

Military regulations then being of such importance require in all cases to be strictly observed. The Japanese Government has discovered this fact and seeing that the military system, as formerly composed, was no longer in harmony with the changed condition of the country, ordered a general conscription. Now some maintain that it is yet too soon to have recourse to such a system and that there is no reason for discarding the *samurai*, but looking at the present condition of the army it must be admitted that on the whole there has been a change for the better. Since the *samurai* of Satsuma broke out into rebellion in the spring of the present year, the Government formed a body of troops called *Battô-tai*, composed solely of policemen. This corps did good service at Tawarazaka the very first time they were brought into action. Since then the Police have been embodied into the Army and sent into the field. They have been enlisted in various parts of the country and are called *Shinsen Riotan*—ostensibly they form a Police force in the service of the *Naimusho*, but in truth they are neither more nor less than troops. The fourth article of the regulation of the *Shinsen Riotan* lays down than those who enter this body are to receive the status of policemen, and to be treated as such. The public now say that the services these men are called upon to perform are in no way those of Police, but argument on this point is useless as the Government was forced to this measure when it had nothing else to resort to. At the present time the Insurgents' power is weakening, and struggle as they may, it will not be long before they find themselves unable to offer further resistance to the Government. The question which gives rise to the greatest anxiety, and which requires the most careful thought on the part of the Government, is how to provide for the people inhabiting the districts which have been desolated by the war, when the conflict is over, so that further hardships may not be caused to them by the men composing the *Shinsen Riotan*. As the greater portion of these men are *samurai*, should strict obedience to military law not be rigorously enforced, they may inflict serious evils upon the people and set the law at defiance.

Of course Army officers have taken all this into consideration and provided against any such contingency, but knowing how important it is for the sake of the people that the military class should be kept in due subordination we have ventured to speak thus.

The return of the Mikado.

("Mainichi Shimbun," 31st July.)

His Majesty the Mikado returned to Yokohama a few days ago in the midst of the hot weather. He was received on his arrival by the *Daijin*, *Sangi*, Ministers and Vice-Ministers as well as by the local officials. Great numbers of people also went to greet him at his landing.

When the Emperor went to Kiôto last January the whole country was in a state of profound tranquillity, and it was expected that His Majesty would visit the tomb of his ancestors and return to the capital in about twenty days. But the insurrection unexpectedly broke out in Kiushiu and the rebels making an advance on Kumamoto it seemed as though they would spread throughout the country. This was the cause of great grief to His Majesty, who endeavoured by every means to bring about a peaceful settlement, but the insurgents refused to listen to reason, and opposing all officials both civil and military have fallen into the trap which they laid for the destruction of others. All other means failing, His Majesty despatched an army against them under H. I. H. Arisugawa-no-Miya as Commander-in-Chief, with Yamagata, Kuroda and Kawaji as his advisers.

The rebels, who did not even know that there was an Emperor, then manufactured all kinds of arms and endeavoured to take Kumamoto, being joined by the *samurai* and *heimin* of Hiuga, Osumi and Satsuma, and a general rising took place. The *samurai* of Akidzuki and Fukuoka, thinking, that as the Government had its hands full, it would be a fine opportunity to declare themselves, also took up arms against the Government. The *samurai* of the southern portion of the province of Bungo also joined, siezing the goods of the people upon the plea that they were needed for the rebel army. In Chôshiu also, the adherents of Mayebara broke out against the Government, and thus whenever the rebellion was suppressed in one place it broke out in another, and in Kiushiu, since February last, it has exceeded anything before experienced in the country.

The insurgents in Akidzuki, Fukuoka, Bungo and Chôshiu, who seem to have no object in aiding the rebellion, were too small in numbers to cause much trouble to the Government. Those who were most to be feared were the *samurai* of Tosa, who number several thousands. The members of different societies are all men who fought during the former civil war, and their ideas are far in advance of the *samurai* of the first named provinces. Their societies are presided over by men whose ideas are greatly at variance with the present system of the Government. The Government regarded them with suspicion, and knew well that if it resorted to any harsh measures, they would rise at once like Satsuma. Thus since February last one-third of the country has been either in open rebellion or on the verge of it.

Great must have been the anxiety of the Emperor. The rebels of Akidzuki, Fukuoka, and Chôshiu have, however, been entirely suppressed, and the remainder have been driven back from Kumamoto, Kagoshima and Miyako-no-jô so that they have lost most of their ground. The heads of the various Societies at Tosa, knowing the critical condition of matters in Japan, have endeavoured to give no further cause for alarm. Thus the Emperor has been happily enabled to return and for this we must rejoice with all our hearts.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley, for the abovenamed Pills, for wind in the stomach, from which I suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable Pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, Henry Allpass.—To the Proprietors of Norton's Camomile Pills."

JAPANESE TALES.

SHINTOKU MARU.

PART 2.

The evil shadows of the dreary night are swept aside before the new born day, and in her many-coloured autumn robes besprinkled thick with diamonds of the rain, the earth beams forth in new and wondrous beauty. Now shining in burnished splendour, now half hiding his blinding radiance behind lattice bars of pearl and gold, uprises the sun, and the fair earth takes on a golden veil; but though it blushes like any bride at coming of her groom, while all her glorious raiment and her crystal gems shine with a softened beauty through the gauzy mist. Far in the west and in the lonesome shadows of the hills the spirits of gloom still hold their sullen court, while up the mountain sides some scattered remnants of the ghostly armies of the darkness retreat slowly and unwillingly before the morning beams. In straggling bands, with steady course the crows come flying across the dappled heavens, cawing a welcome to the sun's new light, and making their way to their favourite haunts among the gnarled branches of the twisted firs. And now from many a quiet hamlet and peaceful farm house, deep embowered in dell and thicket of dark *kiaki* and sombre *tsugi*, where burn flashes of scarlet and crimson maple overtopped by verdant plumes of waving bamboo, and to whose very doors the sea of ripening grain ripples in waves of golden green, the blue smoke rises in slowly swelling clouds, and dressing the trees in its tender azure, goes up like vapour of incense offered to the God of day.

To such a fair morning did the household of Nobuyoshi awake; a morning that shortly seemed a bitter mockery in its fairness to the blackness of the misery that the cruel jealousy of its mistress had wrought in the desolate night that had passed. Worn out with wicked passion and with the labours and terrors she had undergone, Otama had fallen asleep, and even the urgent importunities of her little son to be taken to his brother failed to arouse her. For the child Goro loved his half-brother far above father or mother, and was never happy when separated from him, while Shintoku Maru was always ready to aid him in his childish sports, and to bestow on him the affectionate care which the little one demanded. It was Goro's custom every morning to ask to be taken to his Shintoku's room, and then either arouse him from his slumbers or lie down by his side until he awoke. On this sad day, failing to get any response from his mother and tired of waiting, he pushed aside the panels and ran off joyfully to find his brother. All was quiet and Shintoku was apparently still sleeping, for the outer shutters were unclosed and the room was dark. Running to his side, Goro called him by name and tried to rouse him, but Shintoku moved not, as was his wont, to clasp his little brother in a close embrace, and there was a sound as of smothered moans and sobs. Goro, with much ado, made shift to partly push back one of the outer shutters, and the morning sun streamed in on the pile of quilts where Shintoku lay, the bed clothes drawn up and entirely concealing him. Calling "Brother! Brother!" the little one pulled down the quilt that covered Shintoku's face, and stood for a moment as though fascinated. Then with shrill screams of terror he fled from the room. Aroused by his piteous cries the servants came rushing to him, but flying to his father, Goro, pale with fright, threw his arms around him, and clung to him for protection. Then when his fear had somewhat abated he told how some one was lying in Shintoku's bed, his face covered with a hideous mask and bearing no resemblance to his brother. Nobuyoshi, angry at what he supposed to be some prank of the boy, and yet astonished that he who had always hitherto been so thoughtful and kind should wantonly affright a child, at once arose and went to his son's room, followed by his servants. Quickly casting off the coverings, he sees something that resembles a human form, but in the corpse-like face with its purple scars and livid stains and lipless mouth, and in the swollen and knotted limbs, the miserable father can trace no likeness to the son who seemed to have inherited the beauty of Narihira.*

* A Japanese of olden time famed for personal beauty; so that at the present day "as beautiful as Narihira" is the common expression when speaking of a handsome youth.

At first, Nobuyoshi, stunned as with a heavy blow, felt not all the misery that had befallen him. It could not be that because of neglecting the Gods who had fulfilled his every wish, they had thus afflicted him through his innocent son.† Never had he failed in the observance of all appointed rites and duties, nor omitted to pay his vows, nor make rich offerings at the holy shrines. It was surely some passing illness that took this frightful form, that would pass away as suddenly as it had fallen on the boy.

"Summon the most famous doctors; call the saintly priests; let vows and prayers and gifts be offered to the terrible Gods; and perchance the curse may pass away from me and my house, that my last days be as fair as those that hitherto have blessed my life, and my son fulfil all the fair promise of his noble youth."

And Nobuyoshi fasted and prayed and wept and his whole household with him, for all loved the boy with exceeding love, and he was dear unto every one of them as an only son. And his friends came and lamented with him, for when evil befell Nobuyoshi, each man felt as though it had befallen himself. And throughout the country there was great sorrow for the household of Nobuyoshi.

But all in vain that the most famous doctors came and sought to cure the boy; in vain that priests with many a holy rite and unstinted offering besought the favour of the offended Gods; in vain all tears and fastings and lamentation. The state of Shintoku Maru remained as hopeless as when he was first stricken of his disease, and he that had once been the joy of all in his youthful beauty lay on his bed a thing of misery, loathsome to behold.

*

Now Otama, when she found that the Gods had granted her prayers, though in her heart secretly rejoicing at what had befallen her step-son, made semblance of much sorrow, and was no whit behind the rest in her lamentations and show of grief. Moreover, she seemed ever mindful of the condition of Shintoku Maru and tended him with unceasing watchfulness. But this she did out of fear that perhaps after all the favour of the Gods might be won by the piety of Nobuyoshi, and that the tendance of the doctors being turned to good account, in the end Shintoku Maru might recover, and thus all her vengeful schemes be brought to nought. This caused her great labour of mind, and she pondered long and deeply how she might remove the lad, and prevent all efforts that might restore him to health.

Thus it happened that Nobuyoshi, worn out with watching and fasting and grief of heart, fell into a fever, and his senses all confused through weakness lay on his bed in an outer room praying the Gods to take his life so that his son might recover his strength. Then Otama sent away all the attendants, saying that her husband wanted rest and that she would tend him, and they, wearied with long watching, gladly departed.

Now when she found that Nobuyoshi slept and all the house was quiet, she carefully extinguished the lamp, and creeping softly from the room made her way out of the house. Then gathering a number of pebbles in her hand she, by aid of a ladder, mounted to the roof above the room where her husband lay sleeping. Nobuyoshi aroused from his troubled slumbers by a strange noise above him as of heavy hail, with his senses all obscured by fever and weakness and by the darkness in which he was enshrouded, was thrilled to the heart to hear a strange and solemn voice calling three times "Nobuyoshi, Nobuyoshi, Nobuyoshi," and answered back tremblingly "Who art thou and what woulds't thou with me?"

Then the solemn voice made reply, "It is even I, Kasuga Daimio-jin, I that gave thee a son Shintoku Maru in answer to thy many prayers. Shall I not do that I will with mine own? From me he came to thee and when I will shall I not take him back? He hath in many ways displeased me sore, and thus in punishment for his offence have I with leprosy afflicted him. Why then dost thou dare tempt my wrath by keeping

† Leprosy is supposed to be a disease with which the Gods specially smite those who have neglected their service.

that which is unclean within thy house?‡ Dost thou defy my power? Know then that if thou wouldst escape ruin and deserve my favour, thou must by to morrow's earliest light prepare to send away thy son. No longer must thy house be defiled by his presence. If thou wouldst evade the evils that shall surely befall thee and thine if he remain, see that without fail thou send him forth to starve and die alone. I, Kasuga Daimio-jin, myself have come to warn thee. Let it be done even as I have said."

Again the mysterious sound of falling hail, and the wretched father, believing that now all hope of saving his beloved son is gone, answers with a heart-broken cry of despair, and when Otama cautiously comes back to the room and lights the lamp, she sees that Nobuyoshi is lying senseless on the quilts.

*

Now when the next morning had come with dark and lowering clouds, and dying leaves shattering down and flying before the gusts of moaning autumn wind, Nobuyoshi remembered, what seemed to him, a fearful dream that warned him that his darling son must be banished for ever from the house if he would escape the evils threatened by the cruel God. Wrung with grief he would have given his own body to the worst tortures could he have by such means saved Shintoku Maru, but there was no escape, no hope; and if he would save his wife and child and all his household from the divine vengeance the lad must be devoted to a lonely and lingering death. But Nobuyoshi, now as he had ever done, feared the Gods, and said, "As they have granted all my prayers shall I not bear the afflictions that they send, and do that which they command."

Then he called his *kerai* and all the principal members of his household and his friends and chief neighbours, and to them and to Orihe, his favourite *kerai*, did he tell all that had been revealed to him in his dream. And before his grief they all bowed their heads and were silent, for they could not advise with him, neither dared they say anything to comfort him.

And he said, "Not many *ri* from here is, as you know, a wide and desolate moor called Ten-no-hara. Thither go at once, taking with you boards and straw and mats, and build a small hut. Place there also food and water, and there take him, who is dearer to me than all else the world holds—than very life itself—my first born son, and leave him to the will of the Gods. From them I received him and by them is he accursed. Let them do with him as they will."

Then unwillingly and slowly did the retainers make preparation to do the will of their lord. And they got ready a *kago* and took the planks and straw for the hut, and telling Shintoku Maru of his father's wish, proceeded to take him away as their lord had commanded.

Then Shintoku Maru said. "Let me but see my father's face once more before I go forth to die alone, and I will go contented." For though he well knew the horrid fate to which he was to be devoted, he loved his father too well to doubt him even in this trial, knowing that his father's love was no less toward him now than it had been from his birth. And Orihe came and told Nobuyoshi, and he arose to go to him, but suddenly stopping he said. "Much can I endure, and much will I suffer when the Gods so ordain, neither will I murmur thereat, but on the face of my living son whom now I send to die in solitude I have looked for the last time." And Nobuyoshi went into an inner room and shut the panels and no man saw his grief. Neither did Otama show herself, for she feared lest the joy that she felt might be perceived, and she stayed within the house feigning illness through sorrow.

Then Orihe and seven other *kerai*, with servants and bearers carrying the *kago* in which Shintoku-maru was placed, set out for the plains of Ten-no-hara. A wild and lonely stretch of barren land and sandy waste overgrown with stunted grass, with here and there weather-beaten and distorted trees standing out gloomily against the chilly sky, and sheltering in their cheerless solitude some stagnant, weed grown pools. No sound of life but startled wild birds' cries. No wreath of smoke or noise of cheerful toil to mark a peasant's hut. Only the wind that swept the dismal plain, rustling the yellow lances of the withering grass. In such a spot was Shintoku Maru, till now the most favoured in the land, innocent of all evil, to be left to die.

With aching hearts and unwilling hands did the servants thereto appointed build up the hut, that was to be the living grave of one they all held so dear. No word of reproach or entreaty did Shintoku utter, but bravely and without a murmur of complaint he let himself be laid on the resting place made for him. Then they brought in food and water and placed it within his reach, and one by one bade him a sorrowful farewell. Orihe last of all lingered within the hut, and taking the hot and swollen hands of the lad between his own, whispered to him a few last words. Then, tearing himself away, he went out of the hut and commenced to fasten up the door securely.

Then for the first time did the fear of death and his great loneliness take hold of Shintoku Maru, and with cries hard to hear and let go unanswered did he entreat "Orihe, Orihe! return! return! leave me not here to die alone; you, whom I have loved so well, who have been even as an elder brother; Orihe! Orihe! return! stay if only to-night to comfort me. It grows dark and chill, and there is no hand to soothe me with its clasp. My mouth is burnt with fever but there is none to give me drink. Orihe! Orihe! return, return!"

But Orihe entered the hut no more. Only he dismissed the others, and sunk down against the closed door, his face hidden in his sleeves.

And the night was far spent when he returned and told Nobuyoshi that all was done even as he had ordered.

‡ The Japanese believe that if any one afflicted with an unclean disease such as *raibiyo* be allowed to remain in the house, the special household deity is displeased at the defilement, and that fortune and riches will depart.

Correspondence

THE LATE GALE.

To the Editor of the "Japan Weekly Mail."

Yokohama, 1st August, 1877.

Sir,—As a Japanese I deem it a mere matter of propriety that I should with the little knowledge of English I possess, attempt through your columns to express the high opinion I hold of the humane spirit displayed by our western residents when the danger of fellow-beings called for it, and also my indignation at the way in which many of my countrymen—especially the police—acted during the gale of the 26th of last month.

The events which occurred at the bund on that day have been so amply described by the newspapers here that I shall only mention so much of it as to shew that I am sufficiently justified in expressing myself on the above.

When the dredging machine commenced to drag from the mouth of the creek, the danger of the men on it—who numbered from twelve to fifteen—was evident, and willing hearts and hands were not wanting among the foreigners who, after a great deal of trouble and energy, succeeded in getting hold of the rope which was let out by the unfortunate men on board, by which finally the men were got safely ashore.

But before this was effected, which took over two hours, how admirably and with what good will they worked. What is more, some displayed manly courage by plunging themselves into the sea after some of the unfortunates who either through weakness or of the loss of presence of mind failed to laud by the ropes but dropped off into the water. Others again hauled the rope during those two long hours, urging at the same time their friends and natives to assist them. One cannot speak too highly of the conduct of the foreigners on that occasion. But my countrymen—about a half of those who were present—merely looked on and did nothing, while the Police, with only one or two exceptions—if there were any at all, for I failed to see any—seemed to be quite disinterested in the affair. I asked one of them who looked as though he was more amused at what was taking place than possessing any other feeling, to lend his hand to the rope, but he showed no inclination to do so. I then asked him to order some of the men who were looking on to lend assistance. He said yes, and disappeared, whence I do not know, but very likely to some sheltered place.

Original from UNIVERSITY OF CALIFORNIA

I made the same request to several other policemen and was treated in similar manner.

Such conduct is unworthy of men who are employed for no other purpose than the well being of the people of the places they are appointed to protect.

Now if those rescued men—some of whom might have never seen again their homes and faces dear to them, if it were not for the energy and good will of the men from other lands,—knew that there was a means of expressing their gratitude through the press, they would undoubtedly do so, but being a class that cannot know this, they are unable to take advantage of a chance of expressing their gratitude which I am sure they would otherwise gladly seize.

I am, Sir,

Yours obediently,

YOSHINO GORO.

LONDON SOCIETY.

(Saturday Review.)

We have occasionally ventured to speak of some of the characteristics of what, for want of a better name, is called "London society"; and it is with pain that we are forced to recognize that we have never known how to treat our subject properly London is like the excellent family of the Primroses, who listened with rapt attention to what fell from their aristocratic visitors. 'You may depend upon as fact that the next morning my Lord Duke cried out three times to his valet-de-chambre, Jernigan, Jernigan, Jernigan, bring me my garters.'' If any one in these days ever read the *Vicar of Wakefield*, or even knew who wrote it, we should make an apology for quoting these words at length. Revelations of the inner life of the great, such as Lady Blarney gave, are read with avidity and accepted with credulity. This is the popular style, and the fact that a new edition of a book written by the "Duke de Medina Pomar," whoever he may be, is lying on the Club table justifies the assertion. Here are fine folk indeed, pictures of all the best-known faces in society, the names being so slightly transformed as to leave the reader in no sort of doubt as to who are meant to be represented. Novelists have naturally drawn their characters from living men and women, and it would be difficult to name any book where the peculiarities of some acquaintance of the author have not been caricatured. But the license has, with few exceptions, been used with modesty and discretion. *Almack's* and the *Two Daughters* were each aimed at a particular family, and in the latter case great pain must have been inflicted. In *Lost and Saved* one of the vulgarest women of her day was supposed to have been alluded to; but our task would be endless if we attempted to pursue this train of thought. From Plumer Ward and Scott and Miss Edgeworth, however, down to the days of Thackeray and Lord Beaconsfield, the endeavour has nearly always been made to leave the portrait somewhat undefined. We may fancy we have known Lord Steyne and Becky, and that we do know Mr. Brancepeth and Lord St. Aldegonde; but in neither name nor habits is there enough to enable us assert that they have been transferred from real life to fiction. No such veil exists in the "Duke's" book; the smallest personal habits are noted down, and under his guidence was can gauge the character, the conjugal fidelity or infidelity, and the social position of every other person in the Peerage and Court Guide. Besides these advantages, their conversation is detailed at such length as to enable future ages to lay down on "ducal" authority how the best society of this generation talked. Lady Blarney and Miss Wilhelmina are nowhere. We have our own chronicler, and may be proud of him. Here is a fine sentence! "She wants me to go and talk with Lady Isabel Clanfyne, who I see has just arrived with her father the Duke of the Isles," says Miss Fetherstone at an evening party. This is modern conversation capitally hit off, just as we might say, "There is Mr. Montagu Corry who ascends the staircase supporting the arm of the present Prime Minister, Lord Beaconsfield. Both are members of several well-known clubs." It is indeed notorious that in good society no allusion is made to any one unless the chaperon is mentioned at the same time. One sentence we must especially quote, because the "Duke's" expression raises a most interesting question: —"There she is, riding in as hand-ome a carriage as you would wish to look at," says the Marquis of Belgrave. Not long ago the *Court Circular* announced that the Queen had been "riding" in a carriage and the next day there appeared a contradition to the effect that the Queen had not been riding but driving. So here is a sad dilemma! The Queen is on one side, on the other is the Marquis of Belgrave, or rather his author the "Duke." What is the outside world to believe, they who stand opposite the gates of Marlborough House to see a far-off vision of royalty? Fashion and not learning is the arbiter of disputed pronounciation and the use of words. It would be better that the Marquis of Belgrave should in a fresh edition give us a new set of rules, to which purists would at once subscribe. He will teach many things; he no doubt talks of "the Row," of a "talented" man, says "interesting" and Burkshire, and thinks it vulgar to eat asparagus with his fingers. Rogers said it made him ill to hear people talk of a balcony; what would he have said had he ever met a Marquis of Belgrave?

To speak seriously, the publication of this class of novel is surprising. We have not read one half of it, we do not know what the plot is, or whether there is a plot at all; but what we have managed to wade through is the coarsest, vulgarest, and most contemptible rubbish we ever remember to have seen. It is the sort of stuff that a discarded lady's maid or footman might sit down and write while waiting for the chance of place. If this book is a true picture of what it pretends to represent, London society is indeed very vulgar; but it shows, at any rate, that the *ne plus ultra* of vulgarity is outside it. Low personal details, however, seem to find, for some reason or other, increasing favour. There are four newspapers published now which are as much at a loss for news as the besieged Correspondents were in Paris. The result is a depth of trivial and petty gossip which even the *Court Journal* would shrink from publishing in the winter. One day we are told that the Duke of Teck stopped to look at *Punch* in the street, and that some member of the House of Commons spits around his seat; and to-morrow we shall no doubt hear that Lord John Manners likes plovers' eggs, and learn into which of his waistcoat pockets Mr. Baillie Cochrane puts his watch, and how many times Mr. Gladstone blew his nose when he last had a cold in his head. What can be the condition of mind of the man who is amused by this kind of rubbish we cannot conceive. Personal interest, and impulses due to sentiment and veneration, we can understand and appreciate. If Rousseau liked to snatch a piece of food on its way to Mme. de Warens's mouth, exclaiming that there was a hair upon it, and eat it himself, the action might be extravagant, but at any rate it was prompted by love, and finds a fit place in confessions. When the end of the cigar which Alfred de Musset had thrown away on the steps of the Opera House was picked up by a fervent adimirer, the homage gave the poet infinite pleasure, and is worthy of record But the Duke of Teck has neither written the *Nouvelle Héloïse* nor the lines to Ninon, and he should be allowed to stroll up Regent Street in perfect obscurity and flatten his nose against every shop-window unobserved and unsung. Privacy and retirement are nowadays mere names, and any man above the position of a hansom-cab driver has a newspaper correspondent ready to furnish the public with an account of how he washes at home, and the length of his latchkey. The same pettiness is observable in literature. In the dearth of original work there are half a dozen chiffoniers busy at the ash-heaps thrown away by any writer of merit, and what was considered worthless by its author helps to fill up a contemptible octavo. If there is a place where a man might hope to be free from persecution, it is his own house; but that appears now to be made the usual frame for his picture. If a hostess leaves her guests earlier than usual and pleads a headache as the excuse, the fact is chronicled next day in a newspaper. It is unfortunate that so much notoriety should attach to the proceedings of a certain number of persons during the months of May, June, and July; but we suppose it is rendered inevitable by the extinction of all other societies, and the consequent aggregation of all the leisured classes into one increasing centre. If they would only re-inhabit the Georgian houses which exist in half our country capitals, what a pleasant town London would be!

As it is, London society is virtually English society, and what we do and say during those three months is that by which we have to be judged. Things quite possible in old days are possible no longer. Everything is conducted in a blaze of a light, and the lookers-on always see most of the game. Those who occupy large houses and give great entertainments, and indeed those who go to them, are actors, as it were, upon a stage, and are objects of study and topics of conversation to the multitude who look on. Many a woman has a notion that in London alone are daughter is likely to marry; so poor fool, she is induced to add one more to the hundreds of persons who lead a life which has no attractions for them. If, however, she is obliged to stay at home, she indemnifies herself by finding out all she can about her bigger neighbours, and would haunt the area with the family cat could she pick up a little gossip. An eyewitness takes much less interest in a scene than the old lady to whom she story is told the following week. It is therefore a matter of general moment that the example set, and the standard reached, by London society should be as high as possible. There are great ladies left among us, but they have not the same influence as of old. They remain untouched by the stream of vulgarity which sweeps past them, but they are powerless to stem it. The number of hostesses who shut their doors to mere plutocrats is becoming smaller. If the cook is good who dishes up the "côtelettes aux larmes de veuves" and the "potage aux cris d'orphelins," very few will enquire whence came the money to pay for the services of the *chef*. The O'Mulligan is there, and he shouts out, as of old, "The champagne is good in this house;" and if that is the case why should anybody make a fuss about abstract qualities? It is surely a weak point in the novel of *St. Leon* to represent that adventurer as shunned by his friends and acquaintances on account of their suspicions of the source from which he drew his wealth. Were he now in London he might unblushingly give any account he pleased of his revenue. If he farmed a lodging-house in hell, and got a good dividend, the only difficulty would be to make a choice amongst those of his friends who would desire to associate with him in the direction of the company. Fancy any London mother objecting to Peter Schlemihl as a son-in-law because he had no shadow. "A most estimable young man, my dear," she would say, "with a great deal in him. Ah! you have perhaps heard the story that he has sold his shadow to the devil for an immense fortune. Quite true; but after all, in this foggy climate what a very useless thing a shadow is! and my Georgiana is a girl who can be trusted to make such an excellent use of wealth. Then I must say that his friend has behaved most handsomely in the matter of settlements, and the shadow will be lent my dear Peter at all the *levées* and drawing-rooms. So I really think people need not be ill-natured" Money must be obtained, and the chase after it is the most interesting of occupations. To think, to read, and to be alone, are the three pests to be shunned by those who go into the world, and those who wish to go into it. Solitude

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

is detestable; anything is better than your own company. Did your wife die last Sunday, your father on Wednesday, or was your husband divorced last month? Never mind, the milk is spilt; it is but part of nature's law that parents should die, and monogamy be in some cases insufficient, and you can get another husband or wife to replace the lost one. It would be a very different thing if the survivor had to be lowered into the pit in company with the dead, after the fashion of the country Sindbad visited. As it is, instead of two loaves of bread and a pitcher of water, dinners and balls are offered to the bereaved one, and by some people to appear in mourning at their houses is looked upon as a breach of good manners and offence against society. A season is gone in a moment, and well-bread people should die, say in August, in order not to interfere with their relation's pleasures. To die at the beginning of a season is as inconsiderate an act as to be a long time in dying. In the next world there will be no giving in marriage, so all these tiresome *contretemps* are only possible during quite a limited time. Trade, too, must be encouraged, and immoderate grief might ruin half Bond Street. Society would very likely be able to sleep a sound sleep and eat a hearty breakfast the morning before it was going to be hanged, but it would neither eat nor sleep if it knew that it was destined to spend the following day left to its own resources and alone.

REUTER'S TELEGRAMS.

LONDON, 1st August, 1877.

DEFEAT OF THE RUSSIANS.

After two days' desperate fighting at Plevna the Russian troops have been completely defeated, 8,000 killed, 24,000 wounded.

ACTION OF THE AUSTRO-HUNGARIAN GOVERNMENT.

The Austro-Hungarian Government has partially mobilized its troops.

LONDON, 28th July 1877.

An outbreak of Mahomedan fanaticism is feared in the Levant, and the Foreign Consuls demand several men-of-war for protection of the Christians.

The Austrian Ministry has summoned a Cabinet Council to deliberate on the subject of mobilisation.

The Roumanians have occupied Nicopolis.

Mr. Ward Hunt is dead.

LONDON, July 27lh, 1877.

THE WAR IN TURKEY IN EUROPE.

DEFEAT OF THE TURKS.

Suleiman Pasha's army has been defeated at Karasunar (? at the Karasu River).

EXCITEMENT IN CALIFORNIA.

Great agitation prevails at San Francisco against the Chinese and a Vigilance Committee has been formed.

LONDON, 26th July, 1877.

A Tumult has taken place in the British House of Commons. Mr. Parnell, the member for Meath, was suspended and ordered to leave the House on account of his obstructiveness.

THE WAR IN THE EAST.

A Turkish Army Corps has been concentrated at Plevna and threatens the Russian communications.

The Russian Army Reserve has been called out for military service. The war is becoming fanatic, and vindictive.

[London, date not given.]

Eighteen battalions of Russian troops have crossed the Balkans, and are reported to have arrived at Yeni Saghra unoppposed.

News has been received that some Russian troops have arrived at Rasgaad and are now engaged in cutting the railway running between Varna and Rustchuk.

The Russians have raised the seige of Kars.

Ahmed Muktar Pacha and the Governor of Kars are preparing to attack the Melikoff army.

Powerful reinforcements for the Russian army have proceeded by forced marches into Armenia.

A Turkish frigate has bombarded Simferopol.

Shanghai, 24th July, 1877.

London, 21st July, 1877.

Reouf Pacha claims having forced the Russians to recross the Balkans, but according to the latest advices this is unconfirmed, and a Russian official despatch reports that the vanguard after crossing, marched to Kezanlik, Cossacks in advance occupying Yenisaghra.

The available Turkish troops at Constantinople are ordered to Adrianople, reinforcements being hurried on to that city with all possible despatch.

The number of Russian troops reported to have crossed the Balkans was overrated.

The Russian Headquarters have been transferred to Tirnova.

Suleiman Pacha's Army has embarked at Antivaro—*(near Montenegro)*.

Abdul Kerim Pacha has been dismissed and Mehemet Pacha appointed his successor.

Suleiman Pacha has been appointed commander of the Turkish Troops in Rumelia.

Safvet Pacha has resigned.

The British Ambassador at St. Petersburg has remonstrated against the sinking of vessels in the Danube to obstruct the navigation.

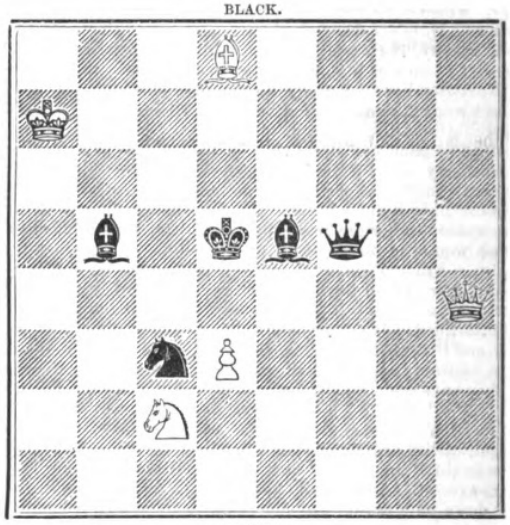
The Ministerial journals state that British interests forbid the entry of the Russians into Constantinople, and urge the Government to declare this without delay.

London, 22nd July 1877.

The troopships, *Crocodile*, *Malabar* and *Euphrates*, are ordered to be ready for sea by Wednesday 25th July.

The Russians have occupied the town of Nikopolis.

The Russians are besieging the town of Widdin.



News has been received of a repulse of the Russians at Plevna with heavy loss.

The Russians have taken Kezanlik, and are advancing on Philippopolis.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—In consequence of a further decline in the value of the native currency our market has taken a quieter turn. *Yarns* are still saleable, but the prices realised are not remunerative to importers. *Shirtings* are dull and neglected, quotations being unchanged, but nominal. There is no demand for *T. Cloths*. For *Velvets* a good enquiry continues with an improving tendency in prices.

Grey Shirtings:—							White Shirtings:—	
7 lbs.	38½	yds.	39	in.	per pce.	$1.40 to $1.75	60 to 64 reed 40 yds. 35 in. per pce.	2.20 to 2.40
8 lbs.	38½	yds.	44	in.	„	1.70 to 2 30	Turkey Reds 24 yds. 30 in. 2—3 lb. per lb.	0.67½ to 0.80
8 lbs. 4 to 8½ lbs.	38½	„	39	in.	„	1.57½ to 2 40	Black Velvets	7.00 to 8.35
9 lbs.	38½	„	44	in.	„	2.05 to 2.60	English Drills 14/15 lbs. 40 yds, 30 in.	2.40 to 2.75
T. Cloth 7lbs.	24	„	32	in.	„	1.40 to 1.60	Taffachelass 12 yds, 43 in. (nomi.)	1.70 to 2.15
„ 6lbs.	24	„	32	in.	„	1.10 to 1 25		

Yarns.—

No. 16 to 24	per picul..	$28 50 to 31.75	No. 38 to 42 ...per picul... $35.00 to 39.50
No. 28 to 32	per picul..	$31 50 to 34 75	Reverse Twist 16-24 —

Woollens.—Native exchange having risen again, deliveries have been more satisfactory. The past week has been very quiet, and prices remain unaltered, except for *Black Italian Cloth*, which has advanced in consequence of a better enquiry.

Plain Orleans	40—42 yds.	32 in.	3 50 to 7.00	Figured Mousselines de Laine	30 yds. 30 in... 0.24 to 0.28
Figured Orleans	29—30 yds.	31 in.	4 25 to 5.25	Multicolored „	30 yds. 30 in... 0.28 to 0.36
Shimagoro	30 yds.	30 in.	4.00 to 5.25	Cloth, all wool plain or fancy	48 in. to 52 in... 0.80 to 1.20
Italian Cloth	—30 yds.	32 in.	0 24 to 0.32	Presidents	54 in. to 56 in... 0.60 to 0.65
Camlet Cords	29—30 yds.	32 in.	5.75 to 6.00	Pilots	54 in. to 56 in... 0.45 to 0.55
Camlets Asstd.	56—58 yds.	31 in.	16 50 to 17.50	Union	54 in. to 56 in... 0.60 to 0.75
Lastings, Japan	22—30 yds.	32 in.	12.00 to 13.00	Blankets, scarlet & green	6 to 8 lbs... per lb ... 0.40 to 0.46
Plain Mousselines de Laine	—30 yds.	30 in	0.17 to 0.18		

Sugar.—There has been very little doing in this article during the past week, and quotations remain nominally unaltered.

Sugar:—Takao in bag	per picul ..	$4.80	China No. 4 Kook-fah	per picul... $7.30 to $7.70
„ in basket	„	$4.70	„ No. 5 Kong-fun	„ ...$6.70 to $7.10
Taiwanfoo in bag	„	$4.80	„ No. 6 E-pak	„ ...$6.00 to $6.40
do. in basket	„	$4.65	Swatow Brown	„ None.
China No 1 Ping-fah	„	None	Daitong	„ $4.15
„ No. 2 Ching-pak	„	...$8.40 to $8.80	Japan Rice	„ ...$2.10 to $2.40
„ No. 3 Ke-pak	„	...$8 00 to $8.30	Kerosene Oil	„ $3.40

Kerosene Oil.—No sales reported sinces our last and the market remains very quiet. Dealers are "bearing" the market, but holders are unwilling to accept their offers. No reliable quotation can be given.

EXPORTS.

Silk.—During the past week a fair business has been done in new Hanks, though the number of buyers has been limited. In sympathy with European markets prices have further declined, and close rather weak as follows, notwithstanding that sterling exchange is in favour of purchasers. A few Filatures have changed hands, but all book silks remain entirely neglected.

		In London at 4s. 0½d. per lb.	*In Lyons at f. 5.10 per kilo.*
Hanks, Best No. 1 & 2	$530 to 550	19/4 to 20/	53.50 to 55.50
„ Good No. 2	$500 to 520	18/4 to 19/	50.50 to 52.50
„ Good all round No. 2½	$480 to 490	17/8 to 18/	49.00 to 50.00
„ Medium No. 3	$450 to 470	16/7 to 17/4	46.00 to 48 00
„ Common to inferior No. 4 & 5	$410 to 440	15/3 to 16/3	42.00 to 45.00
Oshius, Good... (Nominal)	$500 to 520	18/4 to 19/	50.50 to 52.50
Kakeda, best ... („)	$550 to 580	20/ to 21/	55.50 to 58.00
Filature Silk	$600 to 700	21/8 to 25/1	60.00 to 69.50

Settlements are 300 bales of Hanks, and 25 bales of Filatures, in all 325 bales. The total export since 1st July is 1,126 bales, against 2,951 bales for the same period last year.

Stocks are 400 bales of old, and 700 bales of new Silk.

Tea.—The market still continues in the same condition as last reported, buyers having retired, and quotations for the present being entirely nominal though unchanged.

Settlements for the week are returned as 1,100 piculs, but what proportion of these are *bonâ fide* sales it is difficult to arrive at. Arrivals are about 4,100 packages or 2,700 piculs, and though producers are not pressing forward supplies it seems likely that large amounts will come in during the course of the current month.

The quality of many parcels shows a rapid falling off both in appearance of leaf and liquor quality in the cup.

Common	$ 9.00 to $12.00	Fine	$24.00 to $28.00
Good Common	$13.00 to $15.00	Finest	$29.00 to $32.00
Medium	$16.00 to $18.00	Choice	$34.00 & upwards.
Good Medium	$19.00 to $22.00	Choicest	—

EXCHANGE AND BULLION.

Exchange.—There is a continued scarcity of Private Bills on offer, and although there is only a moderate demand for Bank Paper, sterling rates have suffered a further drop of about 2 per cent. on last quotations.

Rates close as follows:—

Sterling—Bank 6 months' sight	4s. 0d.	On Shanghai—Bank sight	75
„ Bank Bills on demand	3s. 11½d.	„ Private 10 days sight	76
„ Private 6 months' sight	4s. 0½d.	On New York—Bank Bills on demand	95
On Paris—Bank Sight	4.92½	„ 30 days sight Private	97½
Bank 6 months' sight	5.02½	On San Francisco—Bank Bills on demand	95½
„ Private 6 ms. sight	5.10	„ 30 days sight Private	98
On Hongkong—Bank sight	¾ % dis.	Kinsatz	420
„ Private 10 days' sight	1¼ „	Gold Yen	394

MISCELLANEOUS.

In the U. S. Consular General Court at Kanagawa, Japan.

J. M. BATCHELDER,

Against

THE PROCEEDS OF THE SALE OF THE BARQUE

"CAYALTI."

TO THE FORMER OWNER OR OWNERS OF THE SAID BARQUE AND ALL OTHERS WHOM IT MAY CONCERN. GREETING.

WHEREAS an action has been brought in this Court by the above-named Plaintiff against the proceeds of the sale of the Barque "*CAYALTI*," now in the hands of the UNITED STATES CONSUL-GENERAL for Japan, praying that the said proceeds may be paid to him on account of monies advanced and transportation and supplies furnished to the crew and coolies belonging to the said Barque "*CAYALTI*."

Now therefore take notice, that unless answer be filed therein within three months from the date hereof, judgment will be taken by the said Plaintiff according to the prayer of his Petition.

Given under my hand with the Seal of said Court affixed, this 28th day of May, A.D. 1877.

(Signed) THOS. B. VAN BUREN,
[Seal.] U. S. Consul-General.

J. 1. 3ms.

NOTICE TO MARINERS.

No. 72.

China Sea.

FOOCHOW DISTRICT.

PIHQUAN HARBOUR ROCK.

NOTICE is hereby given that Captain Williams of Messrs. Butterfield and Swire's steamer the "Chefoo" observed, on the 24th May last, a rock on which a heavy sea at ¾ flood was breaking in mid channel at the entrance to Pihquan Harbour. The islet off the south end of Chinquan Island bore from the rock W. by N.; and Pingfoong Rock Point, to the west of Pingfoong Island, bore N. by E. magnetic. This information has been received from Mr. W. Handyside Tapp, H. B. M.'s Registrar of Shipping.

By Order of the Inspector General of Customs.

DAVID M. HENDERSON,
Engineer-in-Chief.

Imperial Maritime Customs,
Engineers' Office,
Shanghai, 25th June, 1877. J. 28. 6 ins.

MANUFACTURERS and Patentees of the IMPROVED-BREECH, STEEL RIFLED ORDNANCE, largely adopted in Europe and America: Inventors of the new Star ring artillery shell.

The Broadwell System is now applied to the Krupp Cannon.

The undersigned are prepared to receive orders and undertake contracts, on behalf of the Company, for ORDNANCE of any calibre, at the Company's tariff.

EDWARD FISCHER & CO.,
d. w. & m. SOLE AGENTS FOR JAPAN.

NOTICE.

London & Oriental Steam Transit Insurance Company.

THE BUSINESS of this COMPANY has this day been TRANSFERRED to THE MARINE INSURANCE COMPANY, of 20, Old Broad Street, London.

By Order of the Proprietors,
(Signed) WILLIAM HUNT,
Secretary.

137, Leadenhall Street, London.
1st January, 1877. tf.

THE

Marine Insurance Company,

20, Old Broad Street, London.

1ST JANUARY, 1877.

ESTABLISHED 1836.

Capital - - - - - - -	**£1,000,000.**
Reserve Fund - - - - -	**340,000.**

WITH REFERENCE to the foregoing Advertisement, THE MARINE INSURANCE COMPANY has this day taken over the Business of the LONDON AND ORIENTAL STEAM TRANSIT INSURANCE COMPANY, and has appointed Mr. JOHN RICKETT as its Agent at Yokohama.

By Order of the Board of Directors,

(Signed) ROBERT J. LODGE,
Manager.

THE UNDERSIGNED is prepared to accept Risks and issue Policies on behalf of THE MARINE INSURANCE COMPANY, by any first-class Steamer.

J. RICKETT, JR.,
Agent for the Marine Insurance Co.
of London.

Yokohama, February 24, 1877. tf.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of al kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded.* This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omissonto renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

The most important news of the week is the account which reaches us of the taking of Nobeoka. This is the last great Castle town that the insurgents held, and it would now seem that they have been driven from all their strongholds. At the same time their movements, intentions and numbers seem to be almost unknown to their antagonists, while the whereabouts of Saigo still remains a mystery. The fighting at Sahi seems to have been desperate, as also at Kashinokitôgi where the insurgents fought with extraordinary courage. They are said now to have retreated on Kumada. It is stated that Machida, the son of the ex-*daimio* of Sadowara, one of the chief insurgent leaders was killed on the 3rd instant. Kagoshima and the surrounding districts are reported tranquil. Many policemen continue to return from the South, but recruiting and drilling in Tôkiô are carried on with unflagging vigour, and the military arsenal of Koishikawa has taken on the five hundred workmen recently dismissed and is fabricating enormous quantities of ammunition. The *Osaka Nippô* reports that the cotton crops in the *Kinai* (the five home provinces) have this year been the finest of the past fifty years. Good accounts of the rice crops are received from every part of the country, while the condition of China, threatened with starvation from failure of crops and devastation of locusts, to say nothing of rebellion, becomes more and more alarming. The Government seems powerless to do anything to mitigate in the least degree the existing misery; and unless the reports are exaggerated, the horrors of the Shantung famine will be repeated on a large scale in many portions of the Empire.

Just as we are going to press we have received the following information. The *Genkai Maru* has brought from Tonoura 1,500 troops, most of whom have been engaged in the war since the fall of Kagoshima. The Imperialists have their opponents all but hemmed in, and large numbers of the latter are surrendering. The men left with Saigo are determined to fight to the death. As the *Genkai Maru* passed the coast near Oshi-shima brisk skirmishing was going on in full view of the vessel. The officers of the man-of-war *Seiki Kan* were on the hills watching the fight. Both sides suffered severe loss, but the insurgents evacuated their position at the close. The Imperialists are well provided with provisions and every available facility for prosecuting the war, while the Satsuma troops are badly off, and have to resort to night surprises and raids for the purpose of foraging.

As was formerly announced, the state opening of the National Exhibition at Uyéno will take place on Tuesday next, the 21st instant. At six o'clock in the morning all the officials of the various Government Departments and the local authorities will be in attendance in full dress, and at half-past seven the Home Minister and the judges of the Exhibition will arrive. The Emperor and Empress will leave the Imperial Palace at Akasaka at 8 o'clock *en route* for the Exhibition, where Their Majesties are expected to arrive about 9 o'clock, and will be received there by the Princes of the Imperial Family, the *Daijô Daijin*, the *Sangi*, and other high officers, together with the Foreign Diplomatic Body. The Mikado will be conducted to the Throne by the Home Minister and Lord Chamberlain, and will then receive an address from the Home Minister stating the object of the Exhibition, and a plan of the building with a list of the exhibits. The representatives of the various *Fu* and *Ken* will then be permitted to offer their congratulations to His Majesty, after which, conducted by the Minister of Home Affairs, His Majesty will visit the Fine Arts Department where he will declare the Exhibition duly opened. Military and Naval bands will be in attendance, and the opening ceremony promises to be interesting and imposing, but until His Majesty leaves the building admission will be only on special invitation.

The *New York World* has the following paragraph:—

"At Queen Victoria's last state Concert there was one accompaniment which was uncalled for and unmusical. At the moment when Albani was delighting the aristocratic audience with her finest notes in that thrilling song, "Caro nome,"—one of the gems from "Rigoletto"—an awful sound startled the august assembly. His Excellency the Chinese Vice-Minister, unaccustomed to European music, had indulged in a sound nap, and suddenly awakening uttered a half-snort, half-groan, which was awfully out of harmony. His Excellency once astonished the House of Commons during an interesting debate with a similar exhibition of his powers of discord."

Foreign music has certainly no charms to soothe the Oriental breast, while the general effect of Eastern music is anything but pleaing to the soul of the foreigner. Fond as the Japanese are of music,—their own—it is a singular fact that it is only with the greatest difficulty they can be taught to acquire even the simplest foreign melody played in the simplest fashion. We have inquired of Japanese gentlemen who have been long resident abroad, who professed that they preferred the opera to any other form of entertainment, whence they derived their pleasure, and they confessed that it was entirely from the pomp and glitter of the scene, the music being to them utterly incomprehensible. They could even distinguish no difference whatever in its form except that it

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

was sometimes soft and sometimes noisy. During a voyage across the Pacific the writer met a young Japanese returning from America, evidently far gone in consumption. His chief amusement, when he was well enough, was to play "Rock of Ages" with one finger on the piano, and by dint of extreme perseverance—his practice sometimes continuing for two hours unceasingly to the utter demoralization of his fellow passengers—he had achieved a certain facility in its execution. One day it occurred to the writer to play a harmonized version of the air, thinking that perhaps the full chords might give increased pleasure to the earnest performer, but strange to say they not only failed to do so, but he could no longer recognise the melody with which he had made himself so familiar in its one finger form.

The *China Mail* reports the heat in Hongkong lately to have been greater than has been experienced for several previous years. The thermometer reached 93½ degrees at 9 a.m. on the 6th instant, at 4 p.m. was as high as 94 degrees. The previous night was also exceedingly warm and uncomfortable, the minimum being 87 degrees. Last year the highest point registered was 91½ degrees. The barometer was falling at the time of writing and fears existed that a typhoon might result from the unusual heat. In view of such apprehensions the Harbour Master had issued a notice detailing the signs by which the coming of the storm might be foretold, and warning masters of ships to be prepared. The sampans were all getting into places of shelter.

We to day publish the Summary, compiled by Her Majesty's Minister, of the various Trade Returns furnished by the British Consuls at the Japanese Ports. As we so recently reviewed these Returns separately, these is no need of our doing more than calling attention to the Summary. It is more extended than usual and includes a number of tables that will doubtless be extremely serviceable for future reference.

The last American Mail brings full accounts of the outbreak of the alarming riots that have taken place in various parts of the Eastern and Western States in connection with the strikes of the Railroad employés. It does not seem, however, that the rioting has been done by the strikers so much as by those criminal classes with which all large cities are cursed, and who are only too ready to sieze on any pretext that may afford them an opportunity for a raid against law and order and indulgence in pillage, murder and destruction of property. The strike commenced at Baltimore in connection with the Baltimore and Ohio Railroad, the cause of the trouble being a reduction in wages to the extent of 10 per cent. This reduction had been made on several of the other roads and it was announced or believed that it would be gradually carried into effect throughout the country. The course is forced on the managements by the general falling off of business in all branches of trade, the diminution in values and reduced earnings. On some of the less prosperous roads a previous reduction of 10 per cent. had been carried into effect some time ago. In doing this the railway companies have been only following the action of other corporations and individual employers, who are compelled to adjust the rate of wages to the changed condition of business. Commencing, then, practically in Baltimore, in a marvellously short time—showing that there must have existed some concerted plan among the employés of the different companies,—the strike spread until it embraced, at the time the mail left, the states of Maryland, Pennsylvania, West Virginia, Ohio, New Jersey and New York. At Chicago, also, it had assumed a very serious aspect and had reached St. Louis, Louisville, Columbus, Cleveland and Indianopolis. In these latter cities it had extended to all trades. From the various accounts of the outbreak there can be little doubt that it is the most serious labour riot that has ever taken place, and that it is so viewed by the United States Government. But it also presents peculiar features of savagery and a blood-thirsty spirit, which proves that the greater part of the riotous element is entirely apart from the strikers and Trades Unions. On the night of June 20, the Camden Station at Baltimore was set on fire by a mob. Governor Carroll, finding the forces at his command too weak to cope with the rioters, telegraphed to President Hayes, who ordered General Barry with guns and all his men to act without delay. The mob drove back the firemen who attempted to extinguish the flames and cut the hose. They then fired on the troops, who returned the fire, killing sixteen and wounding forty. This seemed to quell the riot at Baltimore as far as actual fighting was concerned, but traffic was almost entirely suspended. One or two passenger trains managed to leave, but only during the day time. No men were permitted to move freight or run freight engines, and it was finally found necessary to suspend all trains. In the mean time the strikers had not been idle in other places. Great alarm was felt at Cumberland, as the coal miners and others joined the rioters. The mob attacked the freight cars, and breaking them open, carried away large quantities of provisions and other property. Women and children assisted largely at these depredations, and the authorities were quite unable to guard the property. Even the prisoners who were taken were compelled to be released, as the mob threatened the gaol. On the morning of the 21st there was a terrible outbreak at Pittsburg. A body of Philadelphia militia, some six hundred strong, had been sent against the rioters in that city. They fired on the mob at the outer depôt of the Pennsylvania railroad, killing and wounding many, among whom were women and children. The mob grew so overwhelming in numbers, which are estimated at twenty thousand, and so furious, that the militia had to take refuge in the Philadelphia Round House. A body of rioters then endeavoured to seize the arms in the Allegheny Arsenal, while the larger portion besieged the troops in the Round House. Here from four o'clock in the afternoon—up to which time the *Bulletin* reports that some 350 persons had been killed and 100 wounded, though we trust and believe that this is an exaggerated account—until five the next morning did they succeed in defending themselves against the attacks of their infuriated assailants, who were armed and had also captured from the military two pieces of cannon. Failing to dislodge them, the mob proceeded to surround the building with freight cars to which they set fire, also filling cars with coke and pouring petroleum on it, so as to roast the troops out of their stronghold. By these means they succeeded in setting fire to the Round House, but as it did not burn as fast as they wished, they sent trains of burning freight cars against the building. From some unexplained reason the mob left their position for a short time and the troops, who were in great danger of being roasted alive, made a sortie, and in a solid body, with a Gatling gun in front, made for the Allegheny Arsenal. When they arrived there the Commandant refused to admit them, saying that he had but ten men, and would be powerless to hold the place against the mob. He, however, consented to take the wounded to the hospital. The troops then had to continue their retreat, closely pursued and fired on by the mob, and leaving some twelve dead where they fell. When they reached the north side of the Allegheny river they scattered and fled. In the mean time dreadful scenes were being enacted on Liberty Street, along which the railroad tracks are laid. The whole of the territory between Seventh Avenue and Millvale Station, a distance of three miles, was a mass of flame, and it was feared that the entire portion of the city south of the Pan Handle route would be swept away. Fortunately the flames were checked, but not until two Round Houses, one machine shop, Pullman's Car Company's laundry and offices, Union Depôt and Hotel; Pan Handle Railroad Engine Houses, General Offices and freight depôt, and freight depôt of Adam's Enpress Co., with many other buildings of importance, were burnt to the ground. In the Round Houses were 125 locomotives that had been housed in consequence of the strike, which were totally destroyed, together with hundreds of cars loaded with freight. The loss to the Pennsylvania Railroad Company alone is estimated at from three to five millions of dollars, while the loss of merchandise of all descriptions cannot be estimated, but will amount to many hundreds of thousands of dollars. Of course, during this time, the work of plunder was in full force, waggons even being pressed into service to enable the thieves to carry away the goods from

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

the wrecked cars. If any attempts were made to stop the pillage the mob at once fired the cars and resumed their labours elsewhere. At Reading a mob prevented all trains from leaving and tore up the tracks, set fire to freight cars, and also managed to utterly destroy the magnificent structure known as the Lebanon Valley Railroad Bridge across the Schuykill, by firing it at both ends. It was erected at a cost of $150,000, and the object of its destruction was to prevent the approach of troops. The Fourth Regiment, however, came upon the mob whilst it was busily engaged in tearing up the track, and being assailed with stones fired into the midst, killing thirty-seven and wounding fourteen. At St Louis, Cincinnati and other great railroad centres most violent scenes took place, resulting in great loss of property, as the mob in all cases managed to hold the railroad tracks, but up to date of writing few lives had been sacrificed. Irrespective of the strikers King Mob was evidently striving to mount his throne, as the Communist flag was raised in one or two places by the German portion of the rioters.

On the 25th instant it become evident that Chicago was not going to be outdone in rioting, and a dangerous mob got together. They were dispersed by a large body of police armed with clubs, but threatened vengeance. Breaking into a gun shop on the west side they took some fifty guns and a quantity of ammunition, and in the evening attacked and defeated the police, lives being lost and many wounded on both sides. After a night of intense excitement the combat was renewed with daylight. On Newbury Avenue a squad of mounted veterans with drawn sabres charged the mob, killing ten outright and wounding about a hundred and fifty. At noon the artillery came to the scene of conflict at Halstead and Sixteenth Street, and a few minutes after their arrival the booming of cannon showed that the regulars had opened on the rioters with grape and canister. A body of the mob attacked and ran off a passenger train at Twelfth Street, allowing the passengers to escape but wrecking the cars. The President had authorized the use of troops, who were, at the time of closing of the mail, proceeding to the scene.

Such is a very meagre outline of this formidable outbreak, which we have obtained from the latest telegrams supplied to the San Francisco papers. It is sincerely to be hoped that the worst has passed. The President has acted promptly and in the only way by which such dangerous combinations can be effectually quelled. A determined mob can always manage to do much mischief and create wide spread consternation and terror among law abiding citizens at the first rush. It is simple cruelty to attempt to put down such riots as these by any but the most severe measures. A mob must be awed before it will listen to reason. If the outbreak be really caused by discontented workmen, they must be looked upon not as labouring men asking for their rights, but as communists bent on bloodshed and destruction and treated accordingly. If the rioters are composed of the scum of the populace, to whom strikes, communism or any other movement afford equal chance of pillage, grape and canister constitute the only argument they are likely to listen to,and no other persuasive means should be resorted to in order to reduce them to quietude. Everywhere the citizens are being enrolled and organised as police or military forces, and it is announced that in all places, with the exception of Chicago, the better elements of society are gaining the upper hand. But that it has been an anxious time for the President and the Administration is proved by the military preparations, and by all ironclads being ordered to prepare for service. The next mail will furnish fuller particulars of the outbreak, but it is to be earnestly hoped that, although the settlement of losses has to be faced, the more alarming effects of mob violence are over.

The loss and inconvenience arising from the enforced cessation of traffic cannot be estimated, some places even being threatened with famine owing to the failure of receiving their accustomed supplies. The *New York Herald's* special correspondent telegraphs that no event since the outbreak of the war of secession in 1861 has created so painful a feeling in England. There are thousands of holders of American securities in England, and although the promptness of the Government's action is acknowledged, the effects of the strike must be calamitous to American credit abroad. It is said that German socialists largely support the strikers and are collecting and forwarding large sums of money for their benefit.

The "hoodlum" population of San Francisco, as the dangerous element peculiar to that city is termed, have not been slow in taking advantage of the general disturbed condition of the country. They had not the excuse of the oppression of railroad managers, but there was the ever present Chinaman, who, as a law abiding, hard working and peaceful member of the community, the "hoodlum" looks upon as his natural enemy.

On the evening of the 25th an Anti-coolie mass meeting was called at the New City Hall, and the following handbill distributed.

Rally! Rally!—Great Anti-Coolie Mass Meeting at the New City Hall, Market Street, at 8 o'clock p. m., Wednesday evening, July 25th. Come one, come all! By the Committee of Arrangements.

A crowd of these white savages numbering about six hundred assembled, and were addressed in an inflammatory speech by a man named Brock, who stated that the question whether the country was to be given up to white men or Chainamen must be settled within the next two months. He advised the extermination of Chinamen and the punishment of any one who employed Chinese labour. He had heard that the Pacific Mail Steam-ship Company had made arrangements to land 25,000 Chinamen in San Francisco by October next, and advised the blowing up of the ships. He then stated his willingness to lead his audience in a raid against Chinatown, but the hoodlums' courage would not carry them this far, as it appeared they had a wholesome fear of the reception they might there meet with. Other speakers got up and endeavoured to counteract the effects of Mr. Brock's appeal, but they were hooted down, and one was roughly handled. The first named speaker then again took his stand on the platform and managed to excite his hearers to such a pitch of bravery, that they started on a raid against the Chinese laundries, fortunately deserted by their proprietors. The van of the rioters was led by small hoodlums of fourteen and fifteen, followed by hoodlum youths, the grown ruffians carefully sneaking in the rear. They managed to batter down the doors of many Chinese laundries and completely wreck the houses, throwing all the linen into the streets, and also set fire to and destroyed one or more Chinese dwellings, in one case an unfortunate inmate being either killed by the crowd or burnt. Owing to the prompt action of the council and the citizens, there is little chance of the mob in its present proportions doing much more damage. As the *Bulletin*, from which we take our information, remarks, San Francisco is about the worst city in the States for a mob. It has a faculty of organizing its reserve power which is observable nowhere else. The spirit of order which in former times faced worst social disorders than the present is thoroughly aroused. There is no leaning on the official arm for protection, but every man is falling into his place and uniting in determined battalions. There are 202 policemen, 1200 militia, 5000 organized citizens, a force of marines and sailors of the *Pensacola* and troops in the fortifications. There are besides one Gatling and four Parrot Guns, 4000 stand of arms ready and any necessary number behind. The Chinese are also supposed to have organized themselves for vigorous defence, so that it would seem that a strong hand can be laid on a riotous mob, and we trust, if unfortunate necessity arise, that this strength will be summarily used.

A determined attempt was made to fire the Pacific Mail Wharf, but the conflagration was fortunately confined to a lumber yard and some surrounding buildings, resulting in a loss of about $80,000. The Committee of Safety have given orders to the guard to shoot down any person discovered demolishing property or interfering to prevent the extinguishing of fires; also any one who attacked them or the police with stones or weapons, while the latter are instructed to use their pistols *without*

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

regard to the expense for cartridges. A notification has also been issued earnestly cautioning the people of San Francisco against being abroad after nightfall, unless in connection with their duties as members of any organized company. Parents are warned to keep at home all boys under age, as it may be necessary to use the most rigorous measures to suppress the riotous proceedings, and innocent parties might suffer serious consequences if these warnings are not attended to.

Belgravia contains a brightly written paper on life at a Japanese watering place. Hakoné is the place described, and the account is free from any of those ludicrous errors which too often mar similar descriptions. It is evidently written by one to whom country trips in Japan are thoroughly familiar, and we are very much mistaken if it does not emanate from the pen of our old friend "Braganzio the Brigand." The writer very properly calls attention to the massacre of pheasants by so called "sportsmen."—Heaven save the mark—which goes on all the year round. Pheasants can be, and are, largely bought at any time. Only a few days ago a pack horse came in laden with seventy birds. We look upon the purchasers as far more blameable than the slaughterers, and the Japanese Government would earn the gratitude of all true sportsmen if they would put a stop to this wanton destruction of game.

We have to acknowledge the receipt from the Statistical Department of the Inspectorate General of Customs at Shanghai, of the Returns of Trade at the Treaty ports in China for the year 1876, together with statistics of the trade at each port.

We would call the attention of the native authorities to the dangerous state of the roads in various parts of the Bluff. Gravel has been heaped up, apparently to repair the road, and allowed to remain untouched for many days, causing great inconvenience to carriage traffic, and in one case what might have proved a serious accident by the upsetting of a trap. A word from the authorities would quickly remove the obstructions complained of.

The *Nichi Nichi Shimbun* states that the Japanese residents in London have formed in that city a kind of club (or debating society), which meets twice a month, when discussions are carried on in Japanese and English on alternate occasions.

The *Chôya Shimbun* has a paragraph to the effect that the wife of His Excellency the French Minister is to have an interview with Her Majesty the Empress on the 20th instant.

Elsewhere we have touched upon the impending changes in the establishment of the Supreme Court of China and Japan, and append below some remarks on the same subject which appeared lately in the *North China Daily News*:—

Rumours have long pointed towards some change in the constitution of the Supreme Court of China and Japan. The delay in appointing a Chief Judge, and other circumstances, indicate that the subject is under consideration. It is a matter of very grave importance, and we shall watch with great interest and anxiety to see what course Her Britannic Majesty's Government will take.

When the Supreme Court was established, the whole trade of China was on a very different basis from that on which it now stands. The work had outgrown the powers of a Consul who had extraordinary capacities for labour, and the introduction of new administrative machinery was imperatively called for. The Government having perceived the want, proceeded to fill it, and began to spend money with a freedom that was very unusual with them. They started on a very large scale. They had a number of highly-paid officials, and began to erect large and costly buildings. The new Court was to be the great power in China. The time had arrived for the gorgeous Ea-t to become acquainted with the wisdom of Blackstone. The rough and ready decisions of Consuls were held up to the ridicule of an ever increasing Bar. Thenceforth things were to be done in a fashion that never had been heard of before. The "old days," which men had a habit of speaking of with affectionate regret, were stigmatized as days of anarchy and violence. The reign of law began.

For several years the Court worked well. There was plenty to do. Money passed freely into the legal pouch. Many decisions of great importance were given, and the "Model Settlement" improved under the new *regime*. One blunder, that of the registration tax, was never forgiven; but it served as a standard topic for grumblers and proved a good safety valve through which irritation found vent. The frank kindliness of the head of the Court and the thoroughness with which he sympathised with the wants of the community, gave popularity to the institution; and its erection was regarded as a boon to the foreign communities in the Far East.

But misfortunes rained thick and fast on the residents in China, and they began to feel the pinch of narrowing means. They naturally took a less lenient view of things than in the rose-coloured days of prosperity. Lawyers' bills were large; judgments of great length and elaborate argumentation were appealed against. Above all, the gloss and sheen of novelty vanished from the proceedings of the building with the Royal Arms over the door.

When legitimate attractions fail, theatrical managers often try to draw by putting on "a dress piece;" the Court in like manner strove in its latter days to furbish up its dignity by arraying itself in scarlet and ermine. The effect, however, was not so impressive as it deserved to be.

But the real cause of the change which we believe to be imminent, must be sought for elsewhere. The Court was an *imperium in imperio*. Cases are continually coming before the Supreme Court in China, which have a political side. The exceptional position we occupy in this country renders the functions of the legal tribunal peculiarly liable to cross the functions of the Diplomatist. The Judge of the Supreme Court is called on to deal frequently with questions of international law. The definition of Treaty Rights is a portion of his judicial *rôle*. There was the difficulty. There was the weak place.

The point of contact between the functions of the Judge and the functions of the Minister was so delicate, that any one might have foreseen on the first launching of the legal bark very serious impending difficulty. Given a Judge with a taste for diplomacy, and the risk of trouble was doubled. With the experience of the past then, we think the Government would be wise if they in some sense subordinated the Court to the Minister. Nothing can be worse than to have an accredited diplomatist with distinct power at Peking, and a second official with indistinct powers roving from port to port, and criticising the action of the responsible agent of Government. The task of a Minister at a semi-barbarous Court like that of China is always sufficiently arduous, and it is unfair to the interests of the nation he represents, to impose additional difficulties upon him by erecting an independent functionary of nearly equal rank, who may take opposite views of important questions, and who will speak on these questions with a quasi-authority which must hamper diplomatic action.

The *Hôchi* states that the *Belgic* or her last arrival brought a large quantity of silver, which is destined for the Osaka Mint.

Many of our readers will no doubt remember a courageous act performed by the Queen of Portugal some three years ago. While bathing at Cascaes two of her children were suddenly swept away by a wave, when she at once plunged into a heavy sea to save them and nearly lost her life in the effort, being rescued with great difficulty by the watchman of a neighbouring lighthouse. By recent papers we learn that the Societé d' Encouragement au Bien in Paris has conferred its medal on Her Majesty for the heroism displayed on that occasion.

The P. & O. Company have agreed to make a reduction of 15 per cent. on the passage money of any officials travelling in the Company's steamers on Government business. Officials connected with National Exhibitions, either in this or foreign countries so travelling, will be allowed a still further reduction of passage money.

The U. S. sloop-of-war *Alert* returned from Noshima yesterday evening, having on board the spars, sails, chains, etc, which were salved from the wreck of the American three masted schooner *Roving Sailor*. Nothing more can be done to the wreck, which the next gale of wind is likely to break up entirely.

Mr. Nomura Yasushi, the Governor of Kanagawa has through the press thanked all those gentlemen who exerted themselves in rescuing the crews of a native vessel and the Yokosuka steam dredge during the storm of the 26th July last.

From the "Japan Mail Daily Advertiser."

Monday, 13*th*.

A large number of people assembled to witness the second display of fireworks on the Sumida-gawa on Saturday evening last. Everything passed off successfully and the display was concluded by half-past nine o'clock.

The Japanese man-of-war *Tsukuba Kan* arrived in port yesterday morning from Kagoshima. During the time she was there seven of her crew were killed by the rebels. The loss of the navy generally in killed and wounded has been very trifling. When the *Tsukuba Kan* left Kagoshima the populace who formerly

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

fled to Sakurashima had all returned, and had commenced rebuilding the town. The place is plentifully supplied with provisions and sickness is rare.

The Mitsu Bishi steamer *Kworio Maru* arrived from the South yesterday morning at 7 o'clock. She brought back 516 policemen, who have been engaged in the southern troubles. The steamers *Genkai Maru*, *Massilia*, *Hiogo Maru*, *Sumida Maru*, *Kiushiu Maru*, *Tokai Maru*, and *Horai Maru*, were laying in Tanoura harbour when she left, under orders to convey some 5,000 more of the police force from that place. The *Genkai Maru* and *Massilia*, however, will carry their troops to Kobe, whence they will be transported by other steamers.

The Agent of the Great Northern Telegraph Company received information yesterday afternoon that the Russian land lines are again in working order.

The *Bombay*, with English Mails on board to the 6th July, left Hongkong on Saturday evening, the 11th instant, at six o'clock.

From the *Mainichi Shimbun*.

Forty-five thousand *koku* of rice were sent by the Government from this port to Kagoshima a few days ago, and five thousand *koku* have also been sent from Osaka.

From the *Chôya Shimbun*.

The Government is now extensively strengthening the reserve forces. The number of recruits who arrived at Tôkiô on the 9th instant was one thousand, and since then another thousand have arrived.

The Government enlisted in all 14,304 policemen for the *Shinsen-rio-tan* (newly enlisted forces), of whom 4,108 are now at the seat of war.

According to returns made at Kumamoto by Police Inspector Takayama, about three thousand rebels had surrendered themselves up to the end of last month, and about one thousand have been taken prisoners.

The steamer *Glamis Castle* is still delayed here by the sickness of the Captain and many of the officers and crew, but we are unable in our present issue to make more particular reference to the matter.—*Hiogo News.*

Tuesday, 14th.

By the *Sumida Maru* which arrived in this port yesterday, 990 troops returned from Kumamoto.

From the *Nichi Nichi Shimbun*.

There are prospects of a good harvest this season in the province of Ômi. In Etchigo the crops in several districts, including Kambara, have been damaged by rain, but as the crops in other districts have been unusually good, the harvest in the province on the whole will no doubt be a fair average one.

A telegram despatched from Osaka at 7.25 a.m. on the 11th instant, announces that the second division of the police forces advanced from Kishino and crossed the Mimizu-gawa on the 9th instant. The advanced guard of this body had already entered Tomitaka-shimmachi on the 8th instant. Hososhima has also been taken by the Imperialists. Rains prevent the conveyance of provisions to the field, of which the Imperialist are in want.

From the *Akébono Shimbun*.

The rebels have been so driven into a corner that it was expected they would make some desperate attempt to break through the Imperial lines, but as neither official nor press telegrams have been received for some days past, we conclude that the rebels are so situated that they will starve to death, and no attack be made upon them by the Imperialists.

From the *Chôya Shinbun*.

Okura Kihatchiro, the director of the mercantile firm called Okura-Gumi which has been established in Corea for the purpose of promoting trade between the two countries, has consulted with the Japanese merchants in Corea and issued the following advertisement to the eight provinces of that country, concerning a periodical fair which it is proposed to institute:—"Since the time the famous Chinese Emperor Shinno commenced trade and the Emperor Kenen invented carts and boats, for thousands of years have the people of our country been benefited by commerce. Though Corea and Japan are two distinct nations separated by the sea, yet the customs of the two countries very much resemble each another. Trade has been opened between Corea and Japan for hundreds of years, yet there has not been by any means a close intercourse between the two countries. Thus the respective Governments made a treaty last year for reopening trade under better regulations. Without an Exhibition our productions of both countries, whether natural or manufactured, cannot be thoroughly known, and while our resources are thus kept in the dark trade can never flourish.

Now that Japan possesses steamships, and is of thereby able to transport her commodities to distant countries, we intend to open a commercial fair (or exhibition) in this port, and exhibit our productions such as cloth, metal, porcelain, lacquer-ware, cast or wrought iron machinery, implements for farmers and artizans, various kinds of grain and plants, together with articles from foreign countries.

We therefore request the people in this country to come to our exhibition for the purpose of seeing or buying, and also to bring the productions of their several provinces, in order that trade may be promoted between us.

This action will be in accordance with the wish of the Governments of our respective countries, for it is their desire that trade should prosper and closer intercourse be fostered.

The Exhibition will be opened on the 1st October and close on the 30th of the same month, and will be repeated every year. During the time that the fair continues all articles will be sold cheaply. We send advertisements to all who pursue the same calling as ourselves. We request that they will honour us at the time appointed by exhibiting the production of their various provinces.

JAPANESE MERCHANTS RESIDING IN FUSAN."

July, 1877.

SECOND NATIONAL BANK.

(Dai-Ni Koku-ritsu Ginko.)

Statement for the week ending 11th August, 1877:—

Total Amount of notes (dollars) received by us from the *Shihei-rio*		Dols. 1,200,000
On hand	677,040	
In circulation	522,960	
	Dols. 1,200,000	
Reserve Fund		Dols. 522,960
In Foreign money:—		
In dollars	Dols. 335,952.89	
In Bank notes and cheques	52,007.11	
Deposited with Foreign Banks	50,000.00	
	437.960.00	
Do. in native currency	85,000.00	
	Dols. 522,960.00	

Wednesday, 15th.

The German frigate *Elisabeth* returned to port this morning. She left here some days ago in search of Dr. Hermannauz, who was reported to be seriously ill somewhere near Morioka. The *Elisabeth* proceededed to Yamada where the Staff Surgeon of the vessel and Mr. Gebauer of the German Legation landed. After a search of three days these gentlemen found Dr. Hermannauz in the hospital at Morioka, where he had been kindly cared for by the Japanese. He was thence carefully removed to Kamaishi, information of this movement being sent to the *Elisabeth*. The frigate then went round to Kamaishi, took Dr. Hermannauz on board and returned here.

The Doctor is in a great state of debility through the want of proper nourishment, having for a long time, while travelling in the country, subsisted on Japanese food. His case is so bad, in fact, that his recovery is a matter of anxiety.

The U. S. corvette *Alert* arrived in port this morning. She left Nagasaki on the 10th instant under orders to proceed to Nosimasaki, the scene of the wreck of the *Roving Sailor*. The *Alert* tried to tow the wreck off the rocks, but had to abandon the attempt as it was found that the back of the schooner was broken.

The *Nagoya Maru* left Kobe for this port yesterday evening at 6 o'clock. She will bring back a number of troops who came up to Kobe from the South in the *Atago Maru*.

The British barque *Semantha* was towed into harbour from Yokoska yesterday afternoon.

The P. & O. steamer *Sunda* left for Hongkong this morning taking 371 bales of silk, the largest shipment as yet made this season.

The *Nichi Nichi Shimbun* says that a few days ago five thousand *koku* of rice had to be shipped from Osaka to the seat of war in a great hurry but sufficient coolies could not be obtained to convey it to the wharf, to the dismay of the officials responsible for the due shipment of the rice. A happy idea struck a *kocho* named Okajima,

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

however, which got them out of their difficulty. The *kocho* laid the facts of the case before Miyakonotake, the chief of a body of wrestlers in the city and asked his assistance. This was at once cheerfully given, and soon the Osaka citizens were witness of the novel sight of about two hundred and fifty stalwart wrestlers bearing off the grain to the jetty for shipment, some of them carrying at one time as many as six bags each weighing one picul. The work was finished in an extraordinarily short time.

From the *Hôchi Shimbun*.

Wolves are very numerous in the Kuribara district of the province of Rikuzen (Miyagi *ken*) and frequently destroy human beings and cattle. Travellers are in consequence afraid to pass through the district, so now the local authorities have issued a notification to the effect that they will reward all those who destroy these animals at the following rates:—For a she wolf *yen* 7.53; for a dog wolf 7 *yen*, and for young wolves 2 *yen* each.

From the *Akébono Shimbun*.

The Imperial Horse Guards are to be regularly exercised in swimming their horses in the river at Riogoku, Tôkiô, for four weeks commencing on the 19th instant.

From the *Nichi Nichi Shimbun*.

The rebel leader Machida Keijiro, a noble by birth, is said to have committed *seppuku* in Satsuma upon meeting with several reverses after the retreat of the rebels from Kumamoto.

From the *Mainichi Shimbun*.

The *Daijôkuan* is to-day to be removed to the Imperial Palace at Akasaka.

Thursday, 16*th*.

The U. S. S. *Alert* left port yesterday evening to pay another visit to the wreck of the *Roving Sailor*, in order to bring away such of the gear as was saved by the mate and others before the wreck was sold by auction.

The *Takachiho Maru* arrived from Hakodate this morning. When she left that port on the afternoon of the 13th instant the *Audacious*, *Vigilant* and *La Clocheterie* were in harbour, but no merchant vessels at all. The *Takachiho Maru* brings down a horse, a pair of ponies and two bulls from the Kaitakushi farm in Yezo, which are to be sent to the farm at Shimosa.

The *Nagoya Maru* brought up 1104 policemen from the south, and the *Genkai Maru* is expected in to-day with more returning troops.

From the *Mainichi Shimbun*.

Muramatsu and Fuji, two members of the *Risshisha* who were recently arrested in Tosa and brought to Tôkiô, have been already frequently examined in Court. Muramatsu would not answer any of the questions put to him by the judge, but Fuji, on the other hand, spoke out freely, saying, such and such is the opinion held by Itagaki, or such and such is the opinion held by Goto, and confessed that he went with Muramatsu to Hiuga and had an interview with Kirino at the request of Mr. Hayashi, a prominent member of the *Risshisha*. He seems to have told everything whatever. The judge then pointed out to Muramatsu that Fuji had confessed fully, and then read over to him all Fuji had said. Muramatsu replied that he knew nothing about it. The judge then decided to bring them together, and Fuji was sent for while Muramatsu was present in Court. The latter accused Fuji of having talked nonsense, and said that his conduct had been unworthy of a *samurai*. Fuji acknowledged that he merited Muramatsu's reproaches, but for the future would give no more information to the Court. Since that time neither of them will answer a single question put to them by the judge, which causes great inconvenience.

From the *Hôchi Shimbun*.

H. I. H. Arisugawa-no-Miya has set out from his head-quarters at Miyako-no-jô on a visit of inspection to the various Imperial camps.

From the *Nichi Nichi Shimbun*.

It was intended that the *Gaimusho* should be removed to the building formerly occupied by the *Daijôkuan*, but on account of its want of suitable accommodation this intention has been abandoned.

From the *Akébono Shimbun*.

All the Government officials who remained in Kiôto when the Mikado left are expected to return to Tôkiô in a day or two.

Friday, 17*th*.

The Agent of the Great Northern Telegraph Company received information late yesterday evening that the Russian land lines are again interrupted—this time between Busse and Khabaroffka.

From the *Mainichi Shimbun*.

The rebels now occupy a very limited part of the country. They only number from seven to eight thousand, and amongst them there are but few effective men.

A telegram despatched from Ôsaka at 11.25 a.m. on the 15th instant, says that a report has been received from Colonel Ozawa at Miyako-no-jô stating that the Imperialists at Shimmachi advanced to Suginoki-tôge at 4 a.m. on that day and captured all the rebel batteries on the hill, numbering over twenty, and then pursued the rebels to Sogi. After crossing the Sogi-gawa fighting was still continued.

From the *Nichi Nichi Shimbun*.

We hear that a section of the *Daijokuan* will be devoted to the management of the affairs of the Imperial Household.

From the *Chôya Shimbun*.

The rebels seem to be much in want of ammunition, as the projectiles they use for their small-arms seem to be irregular sections of bar iron covered apparently with solder, which are, of course, ineffective. The rebels are also short of fire-arms, and have no means of supplying themselves with more, as they left all their small-arms machinery at Miyako-no-jô when they evacuated that town. The rebels now occupy a tract of country about 10 *ri* square, and Saigo is said to be with them there.

From the *Hôchi Shimbun*.

Orders have been given to forward Hayashi, the prominent members of the *Risshisha* who was lately arrested at Kiôto, from that city to Tôkiô as quickly as possible.

Saturday, 18*th*.

The American barque *Cremona* arrived in port yesterday evening, having made the passage from New York in 115 days. On the 15th May one of her crew, an ordinary seaman named Charles Henderson, fell overboard and was lost.

From the *Hôchi Shimbun*.

A telegram from Major Yamazaki at Hososhima, received at 10 a.m. on the 16th instant, announces that at 8 a.m. on the 14th instant Nobeoka was taken, and the rebels retreated toward Kumada. The Imperialists followed in pursuit.

A telegram despatched from Kagoshima at 1.30 p.m. on the 16th instant, announces that two sergeants and sixty policemen arrived that day from Hiroshima, but that as peace is gradually being restored no more policemen are now required.

From the *Akébono Shimbun*.

The telegraph having been completed as far as Kagoshima, official messages have been transmitted since the 10th instant.

From the *Chôya Shimbun*.

A telegram which left Osaka at 5 p.m. on the 15th instant, states that a message was received from Lieut. General Nodzu, dated the 12th instant, to the effect that on the night of the 10th instant the Imperialists succeeded in conveying large guns over the Tsunase-gawa, and after placing them in favourable positions kept up a hot fire on the rebel entrenchments. The infantry made a general attack at the same time and the rebels were driven out and put to flight. The Imperialist pursued them, and also took Hotsuki, Hirano and Sacho.

The defeated rebels eventually made a stand at Kainoki-tôge, where a desperate engagement ensued, but the Imperialists were again successful and drove the insurgents from their position at the point of the bayonet. The Imperialists subsequently advanced their lines to Suyehata.

IMPERIAL GOVERNMENT RAILWAYS.

YOKOHAMA STATION.

Statement of Traffic Receipts, for the week ending Sunday, 12th August, 1877.

Passengers, Parcels, &c.	$8,077.96

EMIGRATION FROM JAPAN.

A Mr. Wilton Hack some time ago appeared in this country on a mission from the Government of South Australia, to persuade the Japanese Government to facilitate the emigration of Japanese subjects to that colony. At first Mr. Hack seems to have met with some success, but finally, and in our opinion very properly, the Imperial Government came to the conclusion that it was not advisable to encourage emigration. We suppose the emigrants were to have been employed as field labourers on the extensive wheat lands of South Australia, or at all events that their services were required for agricultural purposes of some sort. But what advantages were to accrue to Japan from thus lending to Australia those who might till her own lands, we cannot conceive. The population of this country, even if there be no exaggeration in setting it down as thirty millions, is not a whit in excess of the requirements of the Empire, or more numerous than their labour can produce the necessary food for. Indeed, it may safely be said that the country is well able, without taking more land into cultivation than is already available for that purpose, to support a population of double the actual extent. We are not aware what were to be the conditions of service or the rate of wages to be offered to the proposed emigrants, but we doubt very much whether their general position would in any very marked degree have been improved by their transference to a new field of labour. The exportation of gangs of Asiatic labourers has in every instance resulted in what is nothing less than slavery in a modified form. The individual coolie, no doubt, has certain rights guaranteed to him, but he is practically almost powerless to assert them. He contracts to work for three, five or ten years, and seduced by the immediate advantages offered him, never stops to consider what the real meaning and effect of his contract is. If he becomes home-sick, if the nature of the work is repulsive to him, if the climate or surroundings do not suit him, he has no power to terminate his engagement, and must continue to perform what daily become more distasteful and irksome to him until the time of his contract expires. Even had he power to throw up his employment he would be little better off, for he would find it impossible to procure a free passage back to his own country, and his scanty savings would be exhausted if he paid for his berth out of his own pocket. At the same time he finds himself differently situated from the white labourer, who has the legal right to work when, where and as long as he likes, and can only be made liable in damages for a breach of any contract of service, which in his case (save in some very exceptional instances) cannot be punished by imprisonment or—in the colonies we believe—even by fine. In fact, throughout the civilised world the notion of forcing upon white labourers what lawyers term specific performance of contracts of service is being rapidly abandoned, but with coloured labourers, yellow or black, it is still thought proper to exact the pound of flesh.

It is curious that while in the southern colony of Australia the presence of Japanese labourers should be desired, in the northern colony of Queensland every means short of absolute exclusion should be sought of checking Chinese immigrations. This question of the yellow Mongolians is felt to be a very serious one in our colonies and in America, and the problem this or the next generation must solve in regard to them is one of no ordinary difficulty. Absolutely to exclude the Chinese from Australia or the Pacific States would be tantamount to a confession, that the Saxon descended populations of those countries fear lest they should be unable to resist being swamped by a peaceful invasion of the sons of Ham. To limit their numbers by special legislation is contrary to the fundamental principles for the establishment of which we and our kin have suffered so much, and there seems at first sight no possible escape from the dilemma. But a closer examination of the subject will show that the facts have been greatly exaggerated. So far as Chinese immigration is the result of the temptations offered by the gold fields it is of a temporary nature, and constitutes a transitory element merely in the population. So far as it is due to a deficiency of ordinary labour it will last only to such extent and so long as the deficiency may exist and endure. These two are the sole noteworthy causes of Chinese immigration. The first is not one which need excite any apprehensions either in Australia or California, for the conditions of gold mining in both countries are at the present day very different from what they were when the Chinese first began to show themselves, and are not such as to afford any serious inducement to the Celestials to quit the shores of the Flowery Land. The second cause will cease to exist as the demand for labour becomes satisfied through the increase of the white population by immigration from Europe and by indigenous multiplication. There are no facts showing the fecundity of the Mongolian race to be superior to that of the various nations of the Germanic stock. Nor is the Chinaman more hardy than the man of European origin or descent, though he lives a simpler life and has less taste and desire for luxury.

If, however, from climatic conditions or from other causes the increase of the white population should be checked, the introduction of labour from without will be a necessary antecedent to the full development of the countries which now complain of that aid. But as the need for the Chinaman lessens he will disappear. Again, as the enormous area of his own country and of Central Asia becomes opened up to enterprise, an outlet will be found in that direction for the teeming population of the coasts of the Middle Kingdom. It is doubtful whether the ordinary Chinaman is of a naturally roving turn. No considerable immigration has ever taken place at any point over the Chinese frontier. The trader, it is true, has been driven by his commercial instincts to seek a footing outside of his own country, but the Chinese peasant has shown no such tendency. Where the latter has appeared in a foreign country he has rather been brought as a mercantile speculation on the part of his importers, than been impelled by any such sentiments as actuate an ordinary European immigrant. Even the Chinese trader, it would seem, only began to spread himself in the countries adjacent to his own after European trade with China had assumed considerable proportions, and then, as since, it has always been in the wake of the western merchant that his Celestial rival has made his appearance—a fact not always remembered, but one depriving the dreaded competition of much of its importance, at all events when viewed as the symptom of any kind of inferiority in mercantile energy on the part of the former.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

In the dread of being swamped by the Chinese labourer—a dread which, in our opinion, is felt much more deeply and widely than the facts warrant—his inestimable value must not be lost sight of as a patient, orderly, thifty and persevering son of toil. There are many parts of the world of which the climate forbids continous physical exertion to the man of European descent. In such countries the negro thrives well but he will not work, the Indian coolie neither flourishes nor works, and of the Kanaka man experience is too recent to enable an opinion of his value as a labourer to be arrived at. But the Chinaman both thrives and works, and from a mere economical point of view his introduction into the warmer parts of America and Australia cannot be looked upon as other than a great benefit to those countries. From a political stand-point, however, an extended immigration of Chinese must be differently regarded. In the first place it may tend to create a class of landowners or manufacturers who may avail themselves of Chinese labour to such an extent, as to make themselves practically independent of their less fortunate countrymen. Thus a quasi-aristocracy might be established, and the distinction come to exist that not many years back so sharply divided the white population of the Southern States into aristocratic planters and mean whites. Such a result would entail evils that would more than counterbalance any economical advantages the presence of the Chinese labourer brings with it, and would moreover be in direct opposition to the principles upon which the political system of the United States, and though in a far less degree, the constitutions of our own colonies are founded. This we think is the real evil to be apprehended and guarded against. What other questions are raised by the advent of Chinese labour seem to us of much less importance. Any serious infraction of public order is not in the least to be feared, neither need any apprehensions be entertained of John Chinaman being seized with any velleities to enter the arena of politics. His gambling tendencies and his immoralities do harm almost wholly within his own circle and among his own countrymen, and are, after all, mere matters of police. His competition with the white man as a labourer and craftsman is of course a real difficulty, but is a less serious one (economically) than that which results from continual European immigration. The exact mode of surmounting or removing this difficulty we do not of course pretend to have discovered, but it is not a new one, neither is it made less capable of solution by the mere fact that it is the competition of a yellow skin and not of a white one. One thing is quite certain. It will never be solved by violent breaches of the laws, but by just application of the laws duly amended so as to meet the circumstances.

Over Chinese immigration as at present conducted we think exceptional control may fairly be claimed to be exercised. The immigrants are brought over in gangs collected together by speculators in China, whose headquarters, we understand, are at Hongkong. They are not altogether free agents, and are often, no doubt, brought over against their will. If measures could be adopted in concert with the Chinese and British authorities to put an end to this gang system, and to replace it by one which should secure to each emigrant the free exercise of his individual will, there would probably be fewer emigrants, and those of better quality. If such a reform is not practicable *in toto* something in the nature of it, no doubt, might be effected, and the semi-slavery system, upon which the wholesale exportation of ignorant Chinese peasants by their more astute countrymen as at present practised, abolished.

THE SUPREME COURT FOR CHINA AND JAPAN.

THE English Government has for many months past had under its consideration the question of the reconstruction of the Supreme Court and the revision of its powers and mode of procedure. Nothing, however, appears as yet to have been definitely settled, although the authorities at home have for a long time been in possession of all the necessary knowledge to guide them in arriving at a decision. It can only be supposed that the grave questions arising out of the political state of Europe absorb the entire attention of the Government, preventing that consideration being given to their interests which British residents in the East have a right to look for. But a continuance of the present state of things is greatly to be deprecated, and it is full time that the changes contemplated in the Supreme Court should be made known and the state of uncertainty under which we suffer be removed.

British residents in Japan are perhaps more earnestly interested in the matter than their fellow countrymen in China, inasmuch is the former country chafes more under ex-territorial jurisdiction than the latter. While whatever demands the Japanese Government may make for its abolition cannot at present be listened to, we are free to admit that it is gradually rendering them more and more justifiable; and in framing a new Order in Council and the Rules of Procedure which carry out its provisions, the progress made by the Nation in late years should not be lost sight of. We are, indeed, inclined to adopt the opinion we have heard more than once expressed by competent persons, that a separate Order should be issued in the case of Japan, under which—at all events where Japanese complainants are concerned—the people of this country should be treated with a generosity which possibly the Chinese are not in a position to claim at our hands. Under the existing system such complainants are treated with downright injustice The Order of 1865 and the Rules under it seem hardly to contemplate the possibility of suits or complaints other than those arising between or made by British subjects themselves. A Japanese plaintiff cannot, indeed, claim, as a right, to be heard in a British Court at all, for by one of the sections of the Order of 1865, the judge can, at his discretion, entertain or reject any suits or proceeding from any one not a British subject. The terms of the treaty are equally unfair, for under them a Japanese complainant has no right to lay his case before any other judicial officer than the Consul, and from the decision of the latter he has no right to appeal. Again he can be forced to give security for costs; in other words not only is he deprived of the protection and assistance of his own tribunals in respect of claims against British subjects, and compelled to pay for that of a foreign Court, but he is obliged to pay in advance, or secure payment by deposit of a very considerable sum,—in many cases utterly beyond his power to find,—against the possibility of an adverse judgment. Residing in his own country, he is subjected to harsher treatment by a British Court, than he would receive from a similar Court were he resident in British territory.

Then he is practically compelled to content himself

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

with whatever decision may be rendered. If he desire to appeal he must go a thousand miles to China, or more than half round the globe to England. At every step he is met by demands for fees and costs, and all those charges so dear to law, or to find security for their payment. Now this must seem to him monstrous. No doubt it is deplorably unjust. He is offered justice, it is true, but the better its quality, and Tantalus like, the nearer he wishes to approach it, the further it recedes from him.

Frequently, too, the native complainant has to submit to decisions which cannot be all convincing. The provincial courts are presided over by men who act from the purest motives and with the best intentions, but it cannot be allowed that they have in every case received that legal training and judicial experience which enables them to deal satisfactorily with cases presenting more than ordinary difficulties. They may possess a perfect knowledge of the principles of law, but they may sometimes misapply them, as a man possessed of a knowledge of the principles of painting may err in their application until practice shall have taught him unerring facility.

No doubt all this was inevitable when Japan was first opened, and England is not to be blamed for having adopted a system that had long been followed without ever being challenged. But granted that the adoption of the system was necessary then, the same necessity does not exist for its continuance, at all events without such modifications as altered circumstances call for. Most of us from long familiarity and old associations have come to look upon exterritorial jurisdiction as a part of the natural order of things; to regard it as a sort of palladium of our liberties, and its abolition for the present as perilous to our interests. We fear that we shall be compelled so to regard it for a certain time longer. But that it entails hardships and inconveniences upon the Japanese people we must admit. This is the expiation that the Government and people are called upon to undergo for their long isolation from the rest of the world. But that expiation is not to be eternal, and it depends entirely upon the progress and continued good faith shown by the Japanese Government when its term shall cease. Meanwhile it seems the duty of those who enjoy the exceptional privileges accorded them in Japan, and in accordance with the national love of justice, to insist upon the necessity of the contemplated new order of things being framed with at least as much regard to the interests of Japanese as of British suitors.

We should be trespassing upon professional ground, and run the risk of exhibiting incompetence, if we attempted to show the legal imperfections of the existing Court and its procedure, or offer technical suggestions for improvement. What under the present system is felt to be most objectionable by suitors is the mode of appeal. An intermediate appeal to a single judge cannot command much confidence, or be expected to afford much satisfaction. The appeal to the Privy Council involves such expense and delay that it is rarely resorted to, and there has not been, we believe, one single instance of such an appeal from Yokohama. A cheap and ready appeal to Hongkong, where a fairly strong Court could be mustered, would meet all our requirements, and we should be glad to know that such a mode of procedure is to be provided for in the new Order. We are inclined, indeed, to go further, and to recommend that in all cases where the parties desired it, the evidence alone should be taken in the Provincial Court, and the question of law referred at once to the Court of Appeal.

SPIRIT OF THE JAPANESE PRESS.

On Decorations.

("Komin Shinshi," 8th August.)

Some six months ago Saigo Takamori, Shinowara Kunitoshi and Kirino Toshiaki at the head of several tens of thousands of their fellow *samurai* marched against Kumamoto. Being possessed of much power they have desolated large tracts of country and caused the death of large numbers of our countrymen. This war has doubtless been productive of an enormous of amount of harm.

When the rebellion broke out the Government lost no time in sending an expedition to chastise the insurgents, composed of troops of the six garrisons, and about ten vessels of war. These were supplemented by a large police force, the reserves and new recruits. The Imperialists succeeded in relieving the castle of Kumamoto, in driving the rebels out of Hitoyoshi, in repulsing those who entered Bungo, and in getting possession of Kagoshima. The insurgents now occupy but a portion of Hiuga; the powerful forces of Saigo no longer possess the strength they had at the commencement. Moreover Miyako-no-jô has been taken from them, and it is only through the energy of Kirino that they hold Nobeoka.

This is the state of affairs at the present moment, so that though the rebel forces are not destroyed the suppression of the rebellion may be looked upon as certain. It cannot therefore be considered out of place to discuss what is likely to occur on the termination of the war.

Questions such as the manner in which Government will meet the expenses that have been entailed by this war, the compensation to be rendered to those whose lands have been devastated and property destroyed, will be dealt with by economists. For ourselves, we desire to discuss another subject, and that is whether decorations should be given to the officers and men who have rendered meritorious services during the war.

As the expedition was undertaken for the protection of the people we think it undoubtedly right that some reward should be given, but on no account should any decorations be bestowed. Civil wars are the private concerns of a nation. If decorations be granted to those who aid in its suppression, it would appear to foreign nations as though Japan honoured those who slaughtered their brothers, or suppressed by force a political enemy. Decorations are supposed to be the outward marks of honour, but if used for such a purpose they could only be looked on as the outward marks of disgrace. For this reason those who succeeded in America in suppressing the rebellion were never rewarded with decorations.

Foreigners cannot but suppose that there must have been some mismanagement on the part of a Government to cause the people over whom it rules to rise in arms against it. No rebellion, whatever may be its nature, can be other than a disgrace to a Government, and its suppression can bring it no honour in the eyes of foreign powers. It is all very well for the Government to bestow some reward, but in this case decorations cannot be regarded as honourable.

An Answer to the above.

("Osaka Nippô," 11th August.)

A writer says that civil war arises from mismanagement of the administration of a country, and is therefore a disgrace to the Government; that therefore, although those who took part in its suppression may be rewarded by money or such like, no decorations should be bestowed on them. Decorations are marks of honour and certainly should not be granted for the slaughter of brothers, for it would seem like advertising the country's disgrace to foreign powers. The writer adduces as an example the civil war in America, and asserts that on no account should any decorations be bestowed.

Now I think that in this case the writer has expressed his views without due consideration. There are several kinds of civil wars and we must discriminate between them. There are rebellions which are stirred up by those who aim at Imperial power, by those who seek to expel corrupt officials. There are some that have for their object the gratification of private hatred or revenge for personal wrongs. In some cases they arise from conservative notions, or disagreement with the mode of administration. It

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

cannot therefore be maintained that civil wars are caused by mal-administration. Let us reflect earnestly, and look for the causes to which the present rebellion owed its origin. It arose entirely from Saigo's anger against the Administration and not from any mismanagement on the part of the Government. Let us see for a moment what would occur if the Army and Navy failed to suppress the rebels. Much trouble and misery would be caused to the people and the consequence would be that we should become as fools in the eyes of foreign powers. A spirit of general discontent would prevail in Japan than which nothing could be a greater national disgrace. But as the Army and Navy were both up to their work, they have nearly succeeded in suppressing the war, and the people being thus protected and the Government having performed its duty we are spared the scorn of other countries. It therefore seems to us that bestowing decorations on those who have aided in suppressing the rebellion would not be by any means advertising our disgrace. The writer says that rewards of money might be given, but surely it would be just the same if rewards took the form of decorations. He moreover writes as though the Government were seeking to carry on mal-administration by the aid of military power, but I am of exactly the contrary opinion. I am entirely unacquainted with the intentions of the Government but I think that there can be no objection to the bestowal of decorations.

The Daijô Daijin.

(From the "Kinji Hiôron," 13th August.)

The *Daijô Daijin* is the right arm of Emperor, as he directs all other officials and controls the administration. In our country, indeed, he holds the same position as the Prime Minister of foreign nations. This office, therefore, being the most important in the Empire, the holder of it should not be appointed solely on account of his noble birth, but should owe his position to high acquirements and exceptional ability.

In ancient times the right of holding this office was confined to a limited number of noble houses. At the time of the Restoration, and since that event, many old customs have been swept away, but the principle of appointment to the highest offices in the Empire having been in vogue for so many hundreds of years, it was natural that no great change in it should be made, and therefore immediately after the Restoration the principal posts under the Emperor were held by the *daimios* and *kuges*, while the *samurai* held subordinate offices under them. But this exclusive rule did not last long, as not only were the *samurai* permitted to hold superior official posts, but even the *heimin* were considered eligible for civil and military appointments, such as those of Ministers or Vice-Minister of Departments, and Generals or Colonels in the army. Such appointments are generally approved of by the people, but yet the office of *Daijô Daijin* is still exclusively confined to those of noble birth. Why this anomaly should exist it is difficult to say.

His Excellency Sanjô Saneyoshi, our present *Daijô Daijin*, for a long time during the existence of the Shôgunate, was a prominent and staunch upholder of the cause "Honour for the Mikado" and "Expulsion of Foreigners," for which reason he was exiled to Kiushiu by order of the *Bakufu*, and there made to suffer the hardships of banishment. Fortunately for him the Restoration took place, and he was then appointed to the high office which he now holds. His merits are great; he is liked by the Mikado and respected by the *samurai* and *heimin*. On account of his noble birth and his meritorious services on behalf of the Emperor, none have expressed any opposition to his appointment.

But Japan is now beset with internal and external difficulties. Even in the piping times of peace it is unadvisable to appoint men to the highest offices solely on account of their noble birth, and how much more objectionable does this become at a crisis like the present. The wisest and most experienced man in the country should rather be selected to discharge the important functions of the office of *Daijô Daijin*.

Though His Excellency Sanjô is undoubtedly an able man among the nobles, he could not reasonably object to give way to another of greater ability, whoever he might be, or by determining to hold his position by right of birth, to prevent the advancement of one more qualified to rule the state.

There are, undoubtedly, among the *Sangi* many men remarkable for talent, who perhaps are exceeded in worthiness by others of their body. Surely from these one might be selected possessing the requisite qualities to effectually discharge the duties of *Daijô Daijin*, the more so, as in reality, by virtue of their position, they advise and direct the administration. It is true that Notifications are issued in the name of the *Daijô Daijin*, but yet we constantly hear it currently reported that such and such a law was instituted by such and such a *Sangi*. Thus the title of *Daijô Daijin* is but nominal, while the power rests with others. This will never do, as it is not in accordance with the views of the Government expressed after the Restoration. The *Daijô Daijin* should possess a real and not a nominal power, and be responsible for all acts of the Government, so that blame or praise may attach to him as his actions deserve.

If the accident of birth, and not merit and ability is to govern the appointment to the office of *Daijô Daijin*, there is no knowing what calamities may befall this country.

SUMMARY OF THE FOREIGN TRADE OF JAPAN FOR THE YEAR 1876.

On summarizing the Foreign Commerce of Japan for 1876, as given in the Reports of Her Majesty's Consuls for the various Treaty Ports, the Total Trade of the year is shewn to have amounted to the following value.

	Dollars.
Imports	24,087,515
Exports	27,669,466
Total.....	$51,756,981

This total was distributed in the following proportions among the various Treaty Ports.

	Imports. Dollars.	*Exports. Dollars.*	*Total. Dollars.*
Kanagawa.....	18,841,880 ...	21,431,879 ...	40,273,759
Hiôgo & Osaka.	4,155,056 ...	3,500,952 ...	7,656,008
Nagasaki.....	1,063,199 ...	1,959,673 ...	3,022,872
Hakodaté	27,380 ...	776,962 ...	804,342
Total	$24,087,515	$27.669,466	$51,756,981

On comparing the Trade of 1876 with that of 1875, it will be seen that the Imports of 1876 exhibit a Decrease of $5,379,552, while the Exports, on the other hand, increased to the value of $9,654,576; consequently, the Total Trade of the year shews an advance in value on that of 1875 of $4,275,024. Thus:—

Year.	*Imports. Dollars.*	*Exports. Dollars.*	*Total. Dollars.*
1875.....	29,467,067.....	18,014,890.....	47,481,957
1876.....	24,087,515.....	27,669,466.....	51,756,981
	$5,379,552.....	$9,654,576.....	$4,275,024
	Decrease	Increase	Increase.

Imports.

On the examining the Import Trade of the year, the Decrease above-mentioned will be found to be apportioned among the various classes of goods to the amounts given in the following Table:—

Imports.

Decrease.		*Dollars.*
Woollen Manufactures.....		402,142
Mixed Cotton and Woollen Manufactures.....		1,185,971
Metals.....		216,311
Miscellaneous, Foreign.....		3,225,736
Eastern Produce		435,446
		5,465,606
Increase.		
Cotton Manufactures.....	78,671	
Arms.....	7,383	86,054
Total Decrease, Imports.....		$5,379,552

It will thus be seen that the Import Trade of the year has been characterized by those fluctuations which usually mark the course of the Foreign Trade of Japan. In 1875 the Imports ($29,467,067) were more than five millions of dollars in excess of those of 1874; in 1876 they exhibit as great a decrease on those of 1875. The increase in 1875 was common to all classes of goods; the decrease in 1876 is equally general. It is chiefly observable, however, in Woollens, Mixed Cotton and Woollens, and Miscellaneous Goods,—these being the classes which exhibited the principal increase in 1875.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Woollen Manufactures declined from $3,846,636 in 1875 to $3,444,494 in 1876, while Cotton and Woollen Manufactures fell from $2,026,532 in 1875 to $840,561 in 1876. It is evident, therefore, that the heavy importations of those goods in 1875 were not met by a corresponding consumption, and that the stocks of that year had to be passed on to 1876.

Cotton Manufactures form an exception to the above remarks, as the total importations of this class of goods shew a slight increase in value ($78,671) on those of 1875. The Transactions in the two staple articles Cotton Yarn and Shirtings—exhibit a satisfactory advance, but a fall occurred in the less important articles, as is shewn by the following Table :—

	1875.		1876.	
	Quantity.	*Dollars.*	*Quantity.*	*Dollars.*
Cotton Yarn...	137,253 piculs	4,057,850	147,099 piculs	4,151,514
Shirtings.....	46,637,309 yards	2,616,723	56,387,194 yards	2,997,595
Other Cotton Goods	—	2,299,464	—	1,903,599
Total.....		$8,974,037		$9,052,708

The class of goods which apparently experienced the greatest decline is that of Foreign Miscellaneous, the Imports of which in 1875 amounted to $8,546,835 as against $5,321,099 in 1876. It was shewn, however, in the Summary of last year that the first-named sum included importations on Government account to the amount of $3,547,546, and that the value of Miscellaneous Goods imported in the way of Trade was therefore $4,999,289. The importations of 1876 included articles on Government account to the value of only $806,801, and those which entered in the course of Trade amounted therefore to $4,514,298. This sum, when compared with the Imports under the same head in 1875 (after deducting articles on Government account) exhibits a decline of $484,991, which shews that the actual trade in this class of goods fell in 1876, as in the case of Imports, to nearly the amount of the trade of 1874, which was $4,485,272.

The goods which are classed under the head of Miscellaneous Foreign are given in detail in the Consular Returns, but the following Table shews that rather less than half of the Miscellaneous Goods imported in the way of Trade in 1876 were composed of the ten under-mentioned items :—

	Dollars.
Kerosene Oil	455,792
Leather	248,129
Drugs and Medicines...	246,290
Provisions and Stores...	244,033
Machinery	235,454
Paper and Stationery	202,833
Beer, Wines, and Spirits	200,939
Tea Lead	163,683
Clothing and Haberdashery	153,799
Watches	144,631
Total... ...	$2,295,583

The heading termed Eastern Produce comprises the Raw Materials imported into Japan from China and neighbouring countries, the trade in which is almost entirely carried on by Chinese merchants.

As compared with the Imports of 1875 there has been a fall in Sugar and a rise in Cotton, to the amount shewn in the following Table, the result being a diminution under this heading in the Trade of 1876 of $435,446.

	1875.		1876.	
		Dollars.		*Dollars.*
Sugar	741,796 piculs*	3,482,588	655,438 piculs*	2,743,820
Raw Cotton.....	26,680 ,,	364,977	47,850 ,,	724,911
Other Eastern Produce...	—	1,015,923	—	959,311
Total.....		$4,863,488		$4,428,042

* 1 picul = 133⅓ lbs. av.

The experience of the Import Trade of 1876 furnishes another proof of the limited character of the Japan market, and shews that no great extension of that Trade is to be looked for. The power of Japan to purchase must of course depend upon her power to produce, and a review of the Exports of the country during the last five years shews that these have not increased. Although, for some time past, Foreign Goods have been supplied to the Japanese at very low rates, and often at less than cost price, the average of the importations of the last five years proves that during that period there has been no increase in the consumption of those Goods. The following Table of Imports (from which Eastern Produce has been deducted) for the period above named shews that any advance in one year has been followed by a decline in the next, and that the average of the five years is $22,198,485, or more than half a million less than the Imports of 1872. The average value of Japanese Exports for the same period is $22,128,304.

Foreign Imports, exclusive of Eastern Produce.

IMPORTS.

	Dollars.
1872	22,827,521
1873	24,580,226
1874	19,321,628
1875	24,603,579
1876	19,659,473
Average for five years ...	$22,198,485

EXPORTS.

Turning to Exports, we notice the gratifying result that these have been larger in 1876 than in any previous year, the total value being $27,669,466 while the average of the eight preceding years—1868 to 1875—was $18,652,610. This is chiefly owing to the large export of silk which in 1876 amounted in quantity to 26,684 piculs (including Noshi, Floss and Waste) and in value to $13,775,504. The shipments of the other staple export, Tea, fell on the other hand considerably below those of 1875 and 1874.

The following Table shews that the Exports of Silk, Silk-worms' Eggs, Cocoons, Dried Fish, Rice, Seaweed, Camphor and Miscellaneous Articles increased in 1876 to the extent of $11,511,069, while the Exports of Tea, Copper, Tobacco, Wax, and Coal declined to the amount of $1,856,493.

EXPORTS.

Increase.		*Dollars.*
Raw Silk		8,036,813
Silk-worms' Eggs		1,427,350
Cocoons.....		276,724
Dried Fish		258,941
Rice		793,669
Seaweed		344,326
Camphor		46,404
Miscellaneous		326,842
		11,511,069
Decrease.		
Tea.....	1,488,474	
Copper	135,452	
Tobacco	117,652	
Wax	8,846	
Coal	106,069	1,856,493
Total Increase, Exports.....		$9,654,576

The Export Trade of Japan may be classed under the three principal divisions of Silk (including Silk-worms' Eggs and Cocoons,) Tea, and Miscellaneous Produce ; and the following Table exhibits the fluctuations in value which occurred under these general heads in 1875 and 1876.

	1875. *Dollars.*	1876. *Dollars.*
Silk	6,467,834	16,208,721
Tea	6,915,692	5,427,218
Miscellaneous, or all other Produce	4,631,364	6,033,527
Total.....	$18,014,890	$27,669,466

Thus the Export of Silk *increased* in value in 1876 to the amount of 150½ per cent., that of Tea *decreased* in value by 21½ per cent., and Miscellaneous Produce *increased* to the extent of 30¼ per cent. The quantities of the Export of Silk and Tea in the two years are given in the following Table.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

	1875.	1876.
Raw Silk	11,813.87 piculs.*	18,641.67 piculs.*
Noshi	1,229.03 „	1,539.93 „
Floss	357.54 „	588.58 „
Waste	3,006.60 „	5,913.81 „
Silk-worms' Eggs	727,463 cards.	1,018,525 cards.
Cocoons	3,755.50 piculs.	5,442.81 piculs.
Tea	212,870 „	203,351 „

* 1 picul = 133⅓ lbs. av.

The great demand for Japanese Raw Silk occasioned by the partial failure of the crops in France and Italy in the spring of 1876, gave the Japanese growers an opportunity, which had for some time been withheld from them, of realizing unusual profits. It may be hoped that this will have the effect of encouraging a branch of industry which is doubtless the most important one that the country possesses, and to which too great attention cannot be given by the Government and people. In 1875 the average value obtained by the Japanese for their Raw Silk was $459 per picul; in 1876 it was $708, or an advance on the former of more than 54 per cent. Such an advance is of course exceptional, but it should induce the Japanese growers and dealers to study the subject closely, and to persevere in their efforts to produce silk of a quality which will continue to raise the reputation of the Japan product in the foreign markets. The demand for Raw Silk naturally affected the price of Silk-worms' Eggs and Cocoons. The average value realized on the former in 1875 was 65 cents per card; in 1876 it was $1.86 cents. That of the latter was $67.69 cents per picul in 1875, and $97.55 cents per picul in 1876.

The decline in the value of the Export of Tea from $7,792,244 in 1874 and $6,915,692 in 1875 to $5,427,218 in 1876 shews that there is a limit to the demand for Japan Teas, the market for which is almost entirely confined to the United States. This decline is partly attributable to faulty preparation, and it is evident that the Japanese must pay more regard to the quality of what they place upon the market, if they are to compete successfully with Chinese growers. Even if the taste for the Japan leaf should be maintained in the United States, it seems probable that the consumption there will not exceed twenty millions of pounds per annum. This demand has been exceeded during the last two years by the Exports, the total of which amounted in 1876 to 27,113,466 lbs. and in 1875 to 28,382.666 lbs. The English market is not only amply supplied from China, but is deriving an annually increasing stock from the plantations in British India, which appear to be steadily increasing in favor. Although it is only about 20 years since the cultivation of Tea commenced in that country, the Export has already reached the large amount of thirty-four millions of pounds.

The increase in the value of Miscellaneous Exports of nearly two millions of dollars, as shewn in the preceding table, is chiefly traceable to the demand which exists in China for certain raw productions of Japan, such as Dried Fish of various kinds, Seaweed, Isinglass, Mushrooms, Ginseng, etc., and to large shipments of Rice which amounted in value in 1876 to $810.760 against the trifling value of $17,091 in 1875. In 1874 Rice was exported to the value of $839,619. The dealings in this article continue, however, to be subject to so much official restriction, and so many uncertain influences, that it cannot yet be regarded as an ordinary commodity of export. The trade in the native industries such as Lacquered-Ware, Porcelain, Fans, etc., does not increase as could be desired. It may be interesting to give the values of the export in 1875 and 1876 of some of the articles above referred to.

	1875. *Dollars.*	1876. *Dollars.*
Seaweed	354,890	679,216
Mushrooms	222,700	343,231
Isinglass	201,483	307,165
Ginseng	177,303	181,212
Lacquer Ware	162,802	115,225
Porcelain and Earthenware	113,168	59,748
Fans	113,664	132,498
Total	$1,326,010	$1,818,295

It is to be regretted that the export of Minerals exhibits a decline. Only two articles have to be noticed, Copper and Coal. The former fell from $425,160 in 1875 to $289,708 in 1876; and the latter during the same period fell from $871,795 to $765,726. Thus the mining resources of the country, from which much was at one time expected, fail to exhibit my development, and the coal of Japan will now have to compete with the increasing yield which is being obtained in China, where a commencement has been made in Formosa in working the mines with foreign machinery.

The following table compares the total value of the Import Trade (including Eastern Produce and Articles imported on Government account) and the total value of the Export Trade for the last five years, and shews an average excess in the value of Imports of $4,153,840. This excess has had to be met by an export of Treasure

	Imports. *Dollars.*	Exports. *Dollars.*	Total. *Dollars.*
1872	26,188,441	24,294,532	50,482,973
1873	27,444,068	20,660,994	48,105,062
1874	24,223,629	20,001,637	44,225,266
1875	29,467,067	18,014,890	47,481,957
1876	24,087,515	27,669,466	51,756,981
Total	$131,410,720	$110,641,519	$242,052,239
			$131,410,720
			110,641,519
Excess of Imports over Exports			$ 20,769,201

Giving an average of $4,153,840 per year.

Treasure.

The Returns of the Japanese Customs under this head differ materially from those rendered by some of Her Majesty's Consuls, but it has been thought preferable to use the former for the purpose of this summary. According, therefore, to the first-named Returns, the following amount of Treasure was Imported from and Exported to Foreign Countries in 1876:—

	Imported. *Dollars.*	Exported. *Dollars.*
Kanagawa	6,214,684	8,673,979
Hiôgo and Osaka	1,855,597	1,781,817
Nagasaki	244,547	241,851
Total	$8,314,828	$10,697,647

or an excess of Treasure Exported over Treasure Imported of $2,382,819.

In view of the circumstance that the value of all the Goods Exported from Japan in 1876 exceeded the Total Value of the Imports by $3,581,951, a somewhat different result to the above might have been expected.

It is satisfactory to note, however, that the above-mentioned excess of Treasure Exported is $3,892,657 less than the average excess of the last five years, as shewn by the following Table:—

	Treasure Imported. Value in Dollars.		Treasure Exported. Value in Dollars.
1872	12,204,891	.....	9,577,169
1873	10,099,503	.....	13,081,485
1874	1,018,589	.....	15,278,256
1875	335,287	.....	14,715,921
1876	8,314,828	.....	10,697,647
Total	$31,973,098		$63,350,478
Average excess of Treasure Exported, for the five years			$6,275,476

It has been shewn above that the average value of all Imported Goods during the last five years exceeded that of all Exported Goods by $4,153,840, and it would thus appear that an average annual amount of Treasure of over Two Millions of Dollars has been required to meet other indebtedness than that caused by the above-mentioned adverse balance of trade.

Tonnage.

The shipping returns shew the following large decrease in the total foreign tonnage of 1876 as compared with that of 1875.

	Tons.
1875	951,523
1876	680,557
Decrease	270,966

This decrease is accounted for by the transfer from the United States flag to that of Japan of the line of steamers running between Yokohama and Shanghai. These steamers have consequently ceased to be entered in the foreign tonnage, although they are as largely employed as hitherto in carrying foreign freight. Owing to this transfer, the United States tonnage was reduced from 617,331 tons in 1875 to 286,995 tons in 1876, but the general tonnage—or that not employed in carrying mails—increased from 42,687 tons in 1875 to 51,264 tons in 1876. The British tonnage, on the other hand, rose from 252,146 tons in 1875 to 302,039 tons in 1876—or an increase of 49,893 tons; the amount of mail tonnage (included in the above total), being 26,659 tons, or nearly the same as that of 1875. The tonnage under all other flags advanced from 82,046 tons in 1875 to 91,528 tons in 1876, being an increase of 9,482 tons. The following Table distinguishes between the amount of mail steamer tonnage and general tonnage employed in the trade, and shews the difference of each in the two years:—

Mail Steamer Tonnage.

	1875.	1876.
American	574,644	235,731
British	26,232	26,659
French	43,694	44,355
	644,570	306,745

Decrease in 1876..... 337,825 tons.

General Tonnage.

	1875.	1876.
British	225,914	275,380
American	42,687	51,264
All other countries	82,046	91,523
Total	350,647	418,167

Increase in 1876.....67,620 Tons.

The general result is thus shewn to be satisfactory, and British Tonnage, which has been second to that of the United States since the establishment of the Pacific Mail lines, exceeded the latter in 1876 and now heads the list.

Number of Foreign Residents.

The Return of Foreign Residents, when compared with that of 1875, shews an increase of ninety in the number of individuals (which includes most of the persons in the employment of the Japanese Government) and a decrease in the number of firms, shops, or commercial concerns of all classes,—some of which are very small,—of thirty-six.

	Residents.		Firms.
1875	2,583		257
1876	2,673		221
Increase	90	Decrease	36

Twenty-nine English establishments, six German and five Dutch appear to have withdrawn from business in 1876; and four additional American establishments appear to have been opened. The following table compares the number of the Residents and Firms of the various nationalities for the two years:—

	1875.		1876.	
	Residents.	Firms.	Residents.	Firms.
English	1,282	109	1,242	80
American	353	30	410	34
German	279	43	274	37
French	254	42	286	42
Dutch	142	12	126	7
Ten other nationalities	273	21	335	21
	2,583	257	2,673	221

The following Table shews the distribution of the Residents and Firms between the five open ports, and Yedo.

	Residents.		Firms.
Kanagawa (Yokohama)	1,521	...	158
Hiôgo and Ôsaka	379	...	43
Nagasaki	239	...	10
Hakodate	27	...	2
Niigata	21	...	2
Yedo	486	...	6
	2,673		221

It should be observed, however, that the means of making up a Return of all the Foreign Residents are too imperfect to admit of accuracy, and that the term "Firm" is liable to a different interpretation at different ports. All the Foreigners employed by the Japanese Government in the interior are probably not included in this Return. The Chinese have been omitted, for want of information, but it is probable that their number exceeds that of all the other Foreigners combined.

The Port of Niigata remains unvisited by foreign ships, and therefore only contributes to the annexed Tables a Return of Foreign Residents. The want of a proper harbour is the cause of the failure of this Port, which is to be regretted, as it is the outlet of some of the most fertile provinces of the country, the commercial capacities of which are clearly described in the comprehensive Report of Mr Vice-Consul Troup.

H. B. M.'s Legation,
Yedo.
July 31, 1877.

(For Tables see page 718.)

The sickness on board the steamer *Glamis Castle* turned out to be a remittent fever, contracted probably at Saigon, but not contagious. The steamer left last night for Shanghai, with as many of the crew as were sufficiently recovered—some other hands having been shipped here in place of those still remaining under treatment.—*Hiogo News.*

As a sign of the times, we notice that besides the Akunora Iron Works, the premises recently known as Messrs. Boyd & Co.'s foundry are engaged in the manufacture of shot and shell, having been let to Japanese who have commenced work in earnest. Several shops in the town are employed in working on war material, so that although the insurrection is reported as nearly at its last gasp, the authorities are determined not to fall short of supplies of every form. One native smith's place had a contract for the supply of large old-fashioned nipples as used originally in percussion guns, which the men were hard at work on.—*Nagasaki Rising Sun.*

As the *Hiroshima Maru* was proceeding up from Kobe with the Mikado and suite on board, a small pyrotechnic display took place in the shape of rockets and blue lights. No doubt it pleased the passengers who looked on, and as an amusement in itself would have been innocent enough, but it happened that H.M.S. *Egeria* was her way down to Kobe, and the officers on board seeing the rockets, etc., very naturally mistook them for signals of distress, from some vessel probably damaged by the recent storm or otherwise requiring assistance. The result was that the *Egeria* had a somewhat lengthened chase, after what was but of the wild goose order, but a length it fortunately occurred to some one on board that distress was not the cause of the fireworks, on which the *Egeria* resumed her course for Kobe. So far so good, but it may happen that, on the principle of "once bit, twice shy," the same man-of-war may at some future time disregard some urgent appeal for help on the inference that those on board are but amusing themselves with what should, on the ocean, be only exhibited with discretionary care.—*Nagasaki Rising Sun.*

Clouds of locusts have recently passed over certain portions of the district between Shanghai and Woosung. Small bodies were seen crossing the Railway on the 26th ultimo, but the main swarm did not arrive till next day, when the numbers were so large that the fields on both sides the line, the line itself, and the very air were filled with them for an almost incredible distance. The flying army is said have been so numerous that, as the trains sped along, the engine-drivers caught the insects by handfulls. But slight damage, however, appears to have been done to the crops; though that is possibly to be attributed to the fact that the insects did not settle, those which halted taking wing again almost immediately. Some stragglers were found, it is said, in the Public Garden and elsewhere in the Settlement.—On Saturday, smaller flights were again seen "crossing the line," and all appeared to be coming from the same direction and making for the same destination, wherever those unhappy extremes may be.—*S. C. & C. Gazette.*

COUNTRY TRIPS, BY A VICTIM.

No. 1.

"Hackney'd in business, wearied at that oar
"Which thousands, once fast chained to, quit no more,
"The statesman, lawyer, merchant, man of trade,
"Pants for the refuge of some rural shade,
"Where all his long anxieties forgot
"Amid the charms of a sequester'd spot
"He may possess the joys he thinks he sees."

"Can you eat roots and drink cold water?"

Yes! it is quite true! I did feel utterly sick and tired of this broiling, baking, white-hot settlement. I hated the dusty streets, watered only by the heavy drops of perspiration wrung from toiling *jinrikisha* men. I hated the lethargic thoroughfares and torpid shops. I hated the desolation of Main Street and the overpowering sadness of its untenanted stores. I hated the unfrequented Bund with its day after day unchanging view of a blue sea sizzling in the sun's fervent rays. I hated the conventional drive along its stony dreariness; I hated the conventional ride "round the road" with its sunset solitudes and Cologne like odours. I hated the agricultural operations which were carried on, to that organ's intense disgust, under my very nose. Most assuredly Heaven's breath does not smell wooingly in these verdant plains. I hated the broker's traps that met me, to my body's peril, at every corner; I hated the prosperous merchant as he issued forth arrayed like Solomon in all his glory for an evening ride or drive. I hated the fiery midday walk to tiffin up the camp hill and oh! how I hated the coming down again to office. In the morning I longed for night and all night long I cried would that it were morning. I hated the coolies who will stand under my office window, and hold a parliament, where they discuss altogether, and with tongues even as trumpets for loudness, the general evil-mindedness of foreigners, as shown in only paying them twice what they get from their native constituents. I hated the man who sells newspapers and gives an unceasing summary of their contents in theatrical monotone. I hated with a deadly hatred,—and I find that this is a feeling shared in by many—the persistent Chinese bill collector; I loathed the sight of my own chits; while the industrious but irrepressible Celestial ones who entering noiselessly inquire smilingly. "You wanchee shumaker?" or state blandly "My belong calpenter," approached me at the risk of their lives, and left hurriedly, vanishing with a terrified "gooby." Even social observances were hateful

Original from UNIVERSITY OF CALIFORNIA

to me. I hated the dinners given to welcome new comers. I hated more the farewell suppers to dear old friends. I hated the old old songs. "For he's a jolly good fellow" sounded like a lament for past friendships and "Auld lang syne" was the dirge sung at their graves.

I had in fact got into that dissatisfied condition to which the Anglo-Saxon mind and body is especially liable. It may arise from liver or spleen or indigestion or any other offending cause as doctors shall agree, but I maintain that it is peculiarly an English complaint. Its symptoms are utter dissatisfaction with everything appertaining to that state of life to which it has pleased Providence to call you. A desire to leave the beaten track of every day existence with its dreary round of monotonous duties. An irresistible impulse to cut loose from civilization, and to go out figuratively into the wilderness, and play at being something that by the circumstances of your birth you were never intended for. When this Anglo-Saxon idiosyncracy—or disease if you will—is developed in an excessive degree it makes of men Captain Cooks, or Mungo Parks or Livingstones, or Bakers or Burnabys. When it assumes a milder form it urges a man to go to the top of Fujiyama in order to see in how short a time he can come down again, and thus have something to argue over at dinner tables for many succeeding months. To make overland trips to the uttermost limits permitted by treaty; to risk the perils of Katase, and the tremendous descent to the cave of sea-swept Yenoshima; to undertake the hazardous climb to the thumb of mighty Daibutsu; to go somewhere by some road no foreigner has ever before attempted, and thus be placed in positions fruitful of singular discomfort. To lie on flea-teeming mats in a shut-in and odoriferous tea-house when at home he has a bed fit for Somnus himself in the airiest and cleanest of bed-rooms; to lose his epidermis in exposed places by the sun and in unexposed places by riding in *kagos* and on pack-horses, when at other times the most protective of helmets aided by an umbrella shields his precious complexion, and the softest of couches is pressed by his becoddled body. It is this alone which so vitiates his healthy tastes as to make him pronounce Japanese *saké* equal to dry sherry, and to assert—at the time of eating it—that there is no delicacy in the world comparable to raw fish.

When the disease first makes itself known to its victim he generally tries to obtain relief by some medicinal or dietetic means. He drinks Frederichshal and walks for an hour before breakfast. He expresses firm belief in the virtues of "Apollinaris." He eschews sherry as too heating and bilious. Coffee affects his nerves and tea is provocative of acidity. He turns in sudden horror from the old familiar brandy and soda, and lectures his dearest friends on the sinfulness of ice. He rises early and takes cold douches and is proportionately boastful and intolerant to all men who use tepid water and glory in matutinal laziness. This is all preparatory to his coming to the conclusion that nothing but a trip in the country will do him any good. That the system requires a thorough change which can only be accomplished by change of scene, change of diet, change of habit, and change generally from everything which makes life enjoyable to all that renders it, what certain divines who habitually take a gloomy view of this fleeting world, are fond of calling a howling wilderness.

I had caught a bad attack. The demon of restlessness had laid hold of me and and the evil spirit of wandering had me in full possession. I felt that I could not "mind my wheel, mother," that the commonest rules of arithmetic went wrong, that seven times eight made sixty three, and that six several additions of the same column of figures produced as many different results. I plainly perceived that my brain was refractory, and that little as I possess, it was not emulating the busy B and improving each shining hour. When sympathizing friends tried to raise my spirits by telling me, by Jove, how seedy I looked —an unpleasant mark of affection peculiar to friends—I was silent and smiled no clad response. When they told me that joy would again illumine my sorrowful visage with the return of cool weather, I put on a Byronic look of woe and replied in the impressive words of a modern poet,

"Oh! tell me not that Joy's bright flower
Upon this cankered heart may bloom,
Like toadstools on a time-worn tower,
Or dandelions on a tomb."

When they expressed a hope that "things"—their vague way of putting it—would improve, I continued the quotation,

"I mourn departed Hope in vain,
For briny tears may nought avail,
You cannot catch that bird again,
By dropping salt upon its tail."

As I have already said, I was sick to death of it all, and not having the wings of a dove I said I will go in a *jinrikisha* and flee away somewhere into the interior and be at rest for a while.

Now in a evil hour for myself, I happened to mention to an acquaintance that I was going to take a trip in the country. "The very thing he was going to do himself. We would go together. That would be jolly. Where was I going?" Well I wanted to go off the beaten track; to leave far behind me the hated traces of my countrymen. To go anywhere, anywhere out of the world of Yokohama. To get beyond the "Doko maro's" and the "tempo sinjos"—of which phrases with their variations eked out by "arimasu" and "arimasen" all globe-trotters must imagine the Japanese language solely to consist—to say nothing of the more forcible but less innocent expressions, which the Japanese *gamin* picks up parrot-like from a certain class of foreign excursionist, and like that unscrupulous bird frequently employs at unfitting seasons. Now this idea also suited my friend. He was going to have a month's holiday, and by his account of what he intended to accomplish in that time I judged that he must be the possessor of the seven league boots. I explained to him that quantity was not so much the object of my journey as quality; that I preferred remaining for some days in quiet enjoyment of whatever natural beauties I might come upon, to trying to rival Weston, and seeing how much unaccustomed exertion I could undergo without killing myself. That I had a gentle taste for sketching, and that sometimes liking to take out and air my feeble talent, I would sit down and spoil a sheet or two of paper in tracing what was humbly supposed to be a representation of the admired view. These performances I may remark—if you will permit the dissertation—were sent home to weak minded cousins and a maiden aunt (strong minded, but wealthy and well disposed) from whom they elicited rapturous praise, and on one occasion when shown as great art-treasures by my fond relative, to an unsuccessful artist, brought forth the remark that, judging from the sketches, Japanese scenery was "a thing to shudder at, not to see." My friend who is one of those selfishly-jovial, slap-you-on-the-back, knock-the-wind-out-of-you, every-thing-to-every-body sort of men, with the frame of an ironclad, the appetite of a Daniel Lambert, and the digestion of an ostrich (good men and true are they, men of this kidney, but terribly prone to prove bulls and play sad havoc with that fragile crockery, the nerves of weaker friends), cordially assented. Then with one of his great laughs, and a thump between the shoulders that made me feel for a moment as though I had somehow got in the way of the eighty ton gun, he expressed an opinion "that we should get on capitally together." I had some few disturbing doubts, but I am one of those timid men who never like to stand up boldly in defence of their own wishes, and frequently fall into great grief thereby. So it was settled that we were to take our holiday together, and on plea of failing health the necessary Government permits were obtained, although what conscience any doctor could have that would permit him to sit down and deliberately state that my robust friend was in need of immediate change, I have never been able to understand. One would have thought that the extent of liberty applied for, and the necessary hardships incurred by undertaking such a journey, would have been sufficient to rouse the suspicions of the Japanese authorities that the grave was not yet yawning for its prey. Nothing of the kind. Permission was at once granted to traverse the route laid out which embraced a tour of about half the Empire.

I am compelled to admit that I am not endowed by nature with the digestion of a coal-heaver or a Japanese. I find myself seriously reading the wonderful effects of camomile pills on a gentlemen who, judging from his testimony, seems

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

by their use to have reduced his former tempestuous existence to a condition of perfect calm. I gather comfort from the virtues of Jamaica ginger, and pensively ponder upon the peculiar properties of pepsine. The least trangression of diet brings swift and terrible punishment, and for any little extra indulgence I am doomed to suffer feelings that can only be likened to having swallowed a Dutch cheese whole, which remains for many days in unimpaired heaviness underneath my waistcoat. I feel it necessary to be thus candid, in order that those who live at home at ease may the better appreciate the "entire change" that my system was hereafter to be called upon to undergo, and be more ready to extend to me their generous sympathy.

When I said to my friend that we should require large stores of savoury soups and meats and a carefully selected stock of pleasant liquors, he laughed me to scorn. "Greatest mistake in the world," said my friend—he's so horribly positive, and contradicts me outrageously—"Greatest mistake in the world to go to all that trouble and expense. Coolie hire mounts up horribly."—Although on pleasure bent he was a frugal mind.—"No! no! we will go in thorough Japanese style. Always able to get plenty of rice and eggs, and a fowl or two. What you want is thorough change of living. We will go on Japanese *chow*, and you'll find you'll like it wonderfully and get as strong as an ox. I can always eat my five meals a day in the country. Yes! a couple of bottles of whiskey if you like in case of illness, but nothing else." Again my fatal timidity prevented me from entering any protest against this mode of travelling, and I weakly assented, feeling all the time that I should'nt like it, that I should never want five meals a day, and that I should probably become as weak as the proverbial cat. However the promise was given; the die was cast! Thinking that possibly an unknown diet might stimulate my jaded digestive powers, and willing to forget all hazy doubts in the delight of getting away from dust and heat and dinners, (how hereafter I longed for one dish from those tables I had in my pampered pride ungratefully scorned!) and all things made hateful by long familiarity, I started off upon my country trip.

Law Reports.

IN H. B. M.'s COURT AT KANAGAWA.

Before H. S. WILKINSON, Esq., *Acting Law Secretary.*

Saturday, 11th August, 1877.

IWASAKI YATARO *v.* PHILIP H. COLOMB.

JUDGMENT.

This is a motion for an enlargement of the time allowed for filing a petition of appeal, and in support of that motion the counsel for the defendant has filed an affidavit in which he states that for the reasons there given it will be impossible for him to prepare the petition of appeal within less than six months. The reasons assigned may be stated as follow:—

1.—That the decision appealed against was partly founded upon precedents of which full reports are not to be found in Yokohama, and he is of opinion that the full reports of such cases would not warrant so much of the decision as is founded upon the mere rubrics of them which are cited at the hearing of the said demurrer.

2.—That he requires to consult his client, the defendant; that since the delivery of the judgment the defendant has in the course of his service, left this country, and that he can only communicate with him by letter.

3.—That the decision appealed against materially affects the interest of the British Admiralty, and of Her Britannic Majesty's Government, and that without reference to, and instructions from, the proper officers of Her Majesty's Government resident within the United Kingdom, it will be impossible for him adequately and completely—and so as duly to show and defend the rights of Her Britannic Majesty's Government—to set forth and support by argument the grounds of appeal.

4.—That the questions of law and fact involved in the said appeal are numerous, and many of the questions of law are, in his opinion, of the highest importance and of an entirely novel character.

I think the motion cannot be substained on the ground first stated. Unfortunately the reports of cases to which it is possible for the profession to refer are very limited, but the embarrassment, by reason of this, is felt in nearly every case of any considerable importance, and the administration of justice would be seriously prejudiced, if counsel were entitled to obtain time to refer to text books in England. However unsatisfactory the results may be, I am of opinion that counsel as well as judges must make the most of the materials at hand.

The second ground urged, it appears to me, cannot be sustained in the circumstances of this case. The only point upon which there is any appeal is a point of law, and on such a point it does not appear any further consultation with his client ought to be necessary. It appears that the defendant has given instructions that the appeal be made; and beyond that it does not appear what instructions counsel should require. Counsel referred to the case of *Byng v. Clark* [13 Beavan, 92], in which after two successive applications for additional time had been granted by the Master, three subsequent successive applications were made to the Court. Of the three applications made to the Court two were on the ground of insufficient instructions having been received; but there is a distinction between that case and the present one. In that case time was wanted to prepare an answer to a bill of upwards of nine hundred folios, and discovery was required in minute detail from the defendant. Information upon the fact was required by counsel to supply the particulars required. In the present case, as already stated, the appeal is on a point of law, and although it may be more desirable to have one's clients at hand at all stages of the proceedings, Counsel has failed to show how communication with his client would aid him in arguing a point of law.

The third ground, moreover, cannot, it appears to me, be sustained. Her Majesty's Government has not been made a party to the case, and has not sought to be made a party. Counsel, who now moves, at the hearing declared to the effect that Her Majesty's Government was not pecuniarily interested in the result; he has not stated that he has now any different instructions, and no way has been shown in which Her Majesty's Government can directly or indirectly be made legally liable to satisfy any judgment given. The only way in which it has been shown Her Majesty's Government is interested in the appeal, is so far as it may decide the liability of Her Majesty's Naval Officers to be sued in Her Majesty's Courts in these countries. Counsel states that he is instructed by Admiral Ryder, the Admiral on the station, to watch the case on behalf of the Admiralty and of Her Majesty's Government, but he admits that he is not authorised to enter any appearance on behalf of the Admiralty or on behalf of Her Majesty's Government. His application for time to consult the authorities at home is therefore an application for time to consult persons who have not appeared and have not authorised him to enter any appearance, and ascertain whether they wish to appear or to take any steps in the matter. I do not think that counsel watching a case like the present by direction of one of Her Majesty's officers, is entitled to ask proceedings to be stayed until such officer can communicate with Her Majesty's Government, and ascertain whether Her Majesty's Government wish to intervene. Such a principle would often work great injustice, while the public interests are, it appears to me, sufficiently secured by the provisions of the Act 34 Will. IV., C. 41, S. 4, by which it is enacted that it shall be lawful for the Crown to refer to the Judicial Committee any matters whatsoever as His Majesty shall think fit. There is another object stated by counsel for applying to Her Majesty's authorities at home, which is to ascertain what the law or practice is in cases like the present. But this stands on the same footing as reference to legal books at home, and I am of opinion that counsel is not entitled to time for this purpose.

As to the fourth ground, it does not appear to me that there are numerous or questions of fact involved in the appeal, but the points of law raised are no doubt such as do not ordinarily arise in practice, and any difficulty which Counsel may experience on such grounds ought certainly to receive every consideration.

While holding, then, that Counsel instructed to appeal is not entitled to have time enlarged to enable him to consult an absent client on the preparation of a petition of appeal when that appeal is against a decision upon a question only of law—a question raised and argued by the same counsel and while holding that he is not entitled to have time enlarged to enable him to consult reports of cases in England, or to enable him on behalf of one of Her Majesty's officers to ascertain whether Her Majesty's Government wish to intervene, I do think that he is entitled to have an enlargement of time rendered necessary by the nature of the question upon which he has to argue, and I shall therefore give four weeks' further time from this date.

Following what appears by *Daniell's Chancery Practice* to be the practice at home on a first application for time, the costs of this motion will be costs in the cause.

Before RUSSELL ROBERTSON, Esq., Consul.

Monday, August 13th, 1877.

Asaman, a Malay, was charged with stabbing Kitcho, another Malay, on board the *Sunda*.

James William Eakin, Surgeon, sworn, stated that a little after ten o'clock last night he went on board the *Sunda*. He was informed that a man had been stabbed. He went to see the man and found him suffering from a punctured wound on the right side under the last rib, close to the spine. On examining the wound he found it apparently about two inches in depth, extending downwards. There was a complete loss of sensation in the right leg. The wounded man did not appear to be suffering very much. Witness dressed the wound. The wound was so far dangerous as it affected the nerves of the leg. It had evidently been caused by a knife. The injured man would be sent to the hospital to-day.

Percy William Case, Chief Officer of the *Sunda*, was sworn, and said that about a quarter to nine last night he was sitting on the quarter deck and heard some one cry out. He thought some one was overboard. He went forward and found a man lying down by the pump, having been stabbed. He gave orders to have the wound bandaged, and asked who had committed the deed. He was informed that the man who had done it had gone aft and down the gangway ladder. Witness ran aft and saw the prisoner pulling away in a boat. He shouted to him to come back, which he did. Witness

Original from UNIVERSITY OF CALIFORNIA

then caused him to be handcuffed. The prisoner had been fighting with his victim during the day.

The evidence was explained to the prisoner by Mr Bishop, who acted as interpreter The prisoner said he knew nothing about the crime he was charged with.

The proceedings, at this stage, were adjourned till Monday 20th instant at 10 a.m.

Henry Botens, a seaman belonging to the *King Richard*, was charged with being drunk and stealing an umbrella.

A Japanese gave evidence to the effect that, yesterday afternoon, when near the Railway Station, he saw the prisoner, who was drunk, and who walked deliberately up to witness and took an umbrella out of his hand, kicking him at the same time, after which he went away.

On His Honour questioning prisoner as to his nationality, prisoner said that he was an Italian, whereupon he was discharged, the Court having no jurisdiction.

Peter MacNulty and Richard Worthing, were charged with being drunk and incapable. The charge being fully substantiated, the prisoners were each fined one dollar and costs, or in default, two days imprisonment.

Friday, August 17th, 1877.

R. A. Francis was charged with using threatening language towards Alphonse Langelie, a Frenchman.

The prisoner pleaded guilty, under provocation.

Robert Bishop, sworn, said: Both parties were in my office this morning, and I tried to arrange their case. Finding this could not be done, I told them the case would have to come before the Court. As the parties were leaving the room, I heard Francis say he would shoot Langelie like a dog. The behaviour of the prisoner was altogether disrespectful. What passed between the two men before they entered my office I cannot say.

To prisoner: Langelie said in my presence that what you said was a lie. That was during the discussion and before you left my office.

Alphonse Langelie, sworn, stated: I told the prisoner that he was telling a lie when he said he did not owe me the money. He then said he would shoot me like a dog.

The prisoner admitted having used the words complained of, but pleaded, in extenuation, that he would not have used them if Langelie had not called him a liar and rogue.

His Honour remarked that he could not allow such language within the precincts of the Court, and fined the prisoner $3, or, in default, three days imprisonment.

ALPHONSE LANGELIE *v.* R. A. FRANCIS.

The Plaintiff claimed $45, money lent to the defendant.

Defendant admitted owning $35 but no more.

The evidence of the plaintiff was to the effect that he lent the money at various periods on the promise of having it returned when defendant received his salary. He did not pay, so plaintiff asked him for a promissory note, which he agreed to give, the arrangement being that he should pay in April and May $3 and $8 or $10 every month after until the debt was liquidated. Altogether he had received 15 *yen*. In June plaintiff lent him $12, and defendant gave as security a winter coat and some other articles of clothing, promising to return the money in July with $1.25 interest.

The defendant stated that in April, last year, the plaintiff lent him various sums of money amounting to $35; and in March this year he, defendant, gave him a promissory note. On the 5th of April he paid $3 and in May and June paid the second and third instalments. The remainder of the defendant's evidence was confirmatory of the plaintiff's statement.

Plaintiff produced two promissory notes, one for $7 and one for $5, which the defendant denied having given.

His Honour said that he could see no reason for disturbing the arrangement existing with regard to the promissory note, except that the instalments should be paid in dollars as agreed upon and not in *satsu*. Plaintiff was entitled to receive any difference in respect to exchange on the instalments already paid. The verdict would be for the plaintiff in the sum of $12 with costs.

IN THE U. S. CONSULAR GENERAL COURT.

Before Gen. T. B. VAN BUREN, Consul-General.

Monday, August 13th, 1877.

Martin Wilson, seaman belonging to the *Etta Loring*, was charged with being drunk and disorderly, and with destroying property belonging to Japanese.

After hearing the evidence if a Japanese policeman His Honour fined the prisoner $3, and ordered him to pay $1.70 for the damage done by him to some glass.

Thursday, August 16th, 1877.

(Continued from Tuesday, August 7th.)

ALEXANDER CLARK *v.* RICHARD CONNOR.

Plaintiff claimed $150 on two promissory notes granted by one William Anderson, carpenter, and given by the said Anderson to plaintiff. Defendant refused to acknowledge the bills on the plea they were given in part payment of a boat built for him by Wm. Anderson, which had not been properly finished.

Frederick White, sworn, stated that Mr Anderson called upon him some time ago relative to getting some money, the sum of $300, balance due for building a pilot boat. At Mr Anderson's request, witness went with him to Mr Ness, who had sent for Anderson. Mr Ness was acting for Mr Connor, and he said that the money would be paid half in cash and half in two promissory notes. The money and notes were sent to witness the following day; Mr Ness at the same time said that he would see the notes paid when due.

To Mr Connor.—I remember speaking to Mr Ness, but do not recollect taking the contract to him; wont swear I did not; dont think so. Mr. Anderson did not pay me anything. I guess the Consul does not pay me for giving other people advice. I advised him as a friend, because he was a poor man and in a difficulty.

To His Honour:—I saw the boat several times while building. The last time I saw her was two or three days before her delivery, but I did not examine her, and do not know what condition she was in. When I received the notes from Mr Ness I immediately sent word to Mr Anderson and requested him to hand over the boat.

This concluded the evidence for the plaintiff.

Benjamin Robert Stanford, sworn, said that he was a shipwright. He had been engaged to superintend the building of the boat for Mr Anderson. He witnessed the contract and understood its conditions. Mr Anderson sublet the contract to a Japanese, who refused to obey witness' orders as to how the boat should be built and the material that should be used. The boat was to be galvanized fastened. Mr Anderson said that galvanized fastening were not used. The Japanese contractor used iron staples, to which witness objected. The thickness of the deck varied from an inch and an eighth to an inch and a quarter. The boat was to have been launched, then beached and painted. Mr Anderson refused to allow the defendant to beach the boat and would not do it himself. The boat was not completed when delivery was given. Sundry bolts and other things, too numerous to mention, were wanting. At the request of defendant witness did a lot of work to the boat after she was delivered. The repairs mentioned in the bill were all that were needed. They did not include the painting. It took about three days to finish the boat. The hawse-pipes used in the boats, both plaintiff and defendant said belonged to the defendant, and he was to the credited for them. Some bolts and other things were supplied by the defendant.

To the Court.—I know nothing about the notes.

R. Connor sworn, stated that the contract produced was the one for the construction of the boat in question; and it proved that he had fulfilled his part of it. The sum of $200 was paid on the signing of the agreement, $100 when the boat was planked up, $200 when the boat was launched; and the last $300 were to be paid in three instalments. This was changed into two notes of $150 each because there was a flaw in the contract and in consequence Anderson

Defendant continued his statement, remarking that he had not a reasonable opportunity of inspecting the boat before taking delivery.

His Honour said that there were many difficulties in connection with the case There was no question but the boat was not built according to contract. But then the defendant evidently knew that, and then, after all, took delivery of the boat.

Defendant:—I did not know that iron spikes were used until after the boat was taken delivery of. There is a difference between spikes and bolts. When I went to see the boat, galvanized spikes were used, but after I went away, ordinary iron spikes were used.

His Honour:—There are some queer things about this affair; and some great fraud in the building of the boat, but I scarcely know how to get at it. They only thing to decide is whether Connor has not covered the matter up by taking possession of the boat. The subletting of the contract was a fraud in the first instance, then the using of iron bolts and spikes instead of galvanized bolts and spikes was another instance of fraud. The sole question was whether the defendant ought to be allowed anything in consequence of the spikes and bolts not being according to contract.

Mr Clark made a statement to the effect that the remark the defendant had made that he had, Clark, been turned out of Mr Ness office was untrue.

His Honour reserved judgment.

could keep the boat until all the money was paid. When witness took possession of the boat, she was not completed. Possession was taken on the 30th of December, 1876, and it was the 18th of January before the boat was completed. The boat was to be completed in 70 days, and when that time expired, witness wrote to Anderson and told him that he should charge $5 a day for every day the boat was detained, according to the terms of the contract. When the promissory notes were given to Mr Ness, witness was under the impression the boat was completed. The items mentioned in exhibit 3 Anderson agreed to do to the boat after she was taken over, but he did not fulfil his agreement, and witness had to get them done himself. Witness debited Anderson with $5 a day for 18 days, which time was occupied in doing the work and in delay caused by Mr Anderson. Several articles supplied by witness he was to have been credited for. Mr Clark was well aware when the notes were given and the conditions, as he attended Mr Ness' office at the time and was ordered out for interfering with the business. Galvanized spikes would last much longer than iron spikes, as the latter rust very quickly and the former do not rust at all.

To Mr Anderson:—The hawse-pipes were not given to you in part payment for building a dingey.

The evidence of the plaintiff and Anderson, taken at a former hearing, was read to the defendant.

Saturday, August 18th, 1877.

JUDGMENT.

The plaintiff claims to recover upon two promissory-notes of $75 each, given by defendant to Wm. Anderson, and by the latter transferred to plaintiff.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

The defence is that the notes in question were given in part payment for a pilot boat built by Anderson for defendant, which boat was defective and not according to contract, and that the notes were transferred to plaintiff after they became due, he having full knowledge of all the circumstances surrounding them.

The defendant also filed a bill of items showing the amount paid by him to complete the boat and the loss sustained by her non-completion by Anderson.

I am satisfied from the evidence that the plaintiff, Clark, if the owner of the notes at all, took them with a full knowledge of the circumstances under which they were given, and of the fact that the boat was incomplete and defective,

I find also that Anderson promising in writing at the time the notes were given, which writing was drawn by Clark, the plaintiff, to immediately make the necessary repairs and additions to the boat. This however he failed to do, although often requested by the defendant, and the latter after sustaining serious loss by the delay was obliged to have the work done himself.

I also find that the boat was not built according to contract, but that, in several particulars, the work done and materials used were in fraud of the defendant. Especially was this the case in the spikes used, being of common iron, while the contract called for "galvanized spikes."

The evidence shows that Anderson represented to his foreman that the galvanized article was too expensive, and having sub-let the contract to a Japanese, the latter carried about his person both the common iron and galvanized spikes, the latter of which he used only when the defendant happened on board the vessel. The iron spikes used were concealed by paint and it was not until after use and exposure to the air, that the fraud was made apparent.

The defendant testifies that use of these iron spikes is a very serious damage to the vessel. The exact amount of such damage in money it is, however, difficult to arrive at. The boat was to be built according to the terms of a written contract and to be completed within (70) seventy days from date of the writing—the builder to forfeit $5 00 per day for every day after the seventy during which she should remain incomplete. The seventy days expired on the 19th of December 1876. The vessel was not delivered to defendant until the 30th of that month, and when delivered she failed in several particulars, of filling the terms of the contract. These deficiencies however in so far as they were apparent, and the forfeiture of the $5.00 per day for non complation within the 70 days, were condoned by the defendant's acceptance of the boat and giving the notes upon which this action is founded.

The contract called for several payments to be made by defendant during the building of the boat, amounting to $500, and the balance in three monthly payments after she should be launched. The $500 was duly paid and receipted for, but Anderson refused to deliver the baat unless the defendant paid $150 in cash and gave the notes now in suit. To obtain possession of the boat, and save the $500 already paid, defendant felt compelled to comply with the terms dictated. By so doing however he condoned defects, and such apparent ones as he provided for by an additional agreement on the part of Anderson.

Under this state of facts I am strongly inclined to dismiss the complaint and declare the notes of no value, but upon consideration have concluded to allow the defendant seventy five dollars ($75.00) for the damages and expenses proven.

I do therefore adjudge that the plaintiff recover of the defendant the sum of seventy five dollars ($75.00), being the balance of the sum claimed, with interest at 10 per cent. per annum from the 1st day of March, 1877, and costs of suit.

IN THE ITALIAN CONSULAR COURT.

Before Chev. P. Castelli, Consul.

Monday, Aug. 13th, 1877.

Henry Botens, who was brought before the British Court this morning and discharged because he said he was an Italian, was charged with drunkenness and with stealing an umbrella.

A Japanese witness testified to the stealing of the umbrella, and Police Constable Hazel to the fact of the prisoner being drunk.

His Honor considered the case proved and sentenced the prisoner to three days' imprisonment.

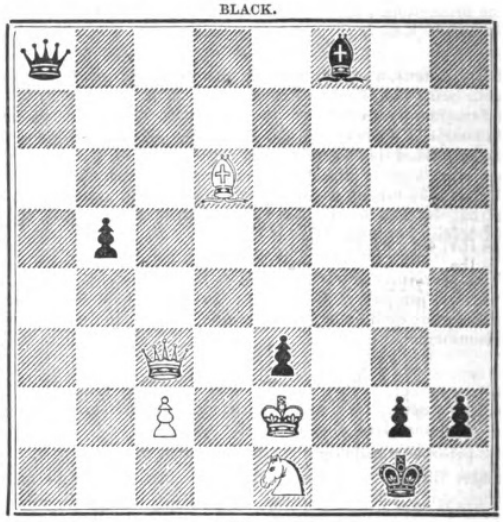
REUTER'S TELEGRAMS.

London, 17th August, 1877.

The British Parliament has been prorogued, and stated that its relations with the Foreign Powers were friendly and that England will observe a neutral attitude so long as its interests were unaffected.

Despatches from newspaper special correspondents announce that the Turkish troops have massacred and burnt Christians in Rumelia.

London, 13th August, 1877.



The Russian Forces have evacuated the Balkans and transferred their Head Quarters to Bulgaria.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—*Yarns* are in demand but goods quiet. 16/24 and 28/32 low and medium spinnings are still in good request and are firm at last prices. Water-twist are rather neglected and slightly weaker. In *Shirtings* small transactions are reported and in most instances prices are nominal, except 9 lbs., which maintain their preference. *T. Cloths* are dull, and for *Velvets* there is less demand.

Grey Shirtings:—						
7 lbs.	38½	yds.	39 in.	per pce.	$1.40	to $1.70
8 lbs.	38½	yds.	44 in.	,,	1.80	to 2 30
8 lbs. 4 to 8½ lbs.	38½	,,	39 in.	,,	1.55	to 2 35
9 lbs.	38½	,,	44 in.	,,	2.05	to 2.60
T. Cloth 7lbs.	24	,,	32 in.	,,	1.40	to 1.60
,, 6lbs.	24	,,	32 in.	,,	1.10	to 1.25

White Shirtings:—						
60 to 64 reed 40 yds. 35 in.	per pce.				2.20	to 2.40
Turkey Reds 24 yds. 30 in. 2—3 lb.	per lb.				0 67½	to 0 82½
Black Velvets					7.00	to 8 85
English Drills 14/15 lbs. 40 yds, 30 in.					2.45	to 2.75
Taffachelass	12	yds,	48 in.	(noml.)	1.70	to 2.15

Yarns.—

No. 16 to 24	per picul...	$28 50	to 31.50
No. 28 to 32	per picul...	$32 00	to 34.50
No. 38 to 42	...per picul...	$35.00	to 39.25
Reverse Twist 16-24		—	

Woollens.—We have again a very quiet week to report, transactions having been on a very limited scale. Prices remain nominally the same as last quoted.

Plain Orleans	40—42	yds.	32 in.	5 50	to	7.00
Figured Orleans	29—30	yds.	31 in.	4 25	to	5.25
Shimagoro	30	yds.	30 in.	4.00	to	5.25
Italian Cloth	—30	yds.	32 in.	0 24	to	0.32
Camlet Cords	29—30	yds.	32 in.	5.75	to	6.00
Camlets Asstd.	56—58	yds.	31 in.	16 50	to	17.50
Lastings, Japan	22—30	yds.	32 in.	12.00	to	13.00
Plain Mousselines de Laine	—30	yds.	30 in.	0.16⅔	to	0.18

Figured Mousselines de Laine	30	yds.	30 in.	0.24	to	0.28
Multicolored ,, ,,	30	yds.	30 in.	0.28	to	0.36
Cloth, all wool plain or fancy	48	in.	to 52 in.	0.80	to	1.20
Presidents	54	in.	to 56 in.	0.60	to	0.65
Pilots	54	in.	to 56 in.	0.45	to	0.55
Union	54	in.	to 56 in.	0.60	to	0.75
Blankets, scarlet & green 6 to 8 lbs.	per lb			0.40	to	0.46

Sugar.—There has been little or nothing doing in this article since our last, but quotations remain the same. Stocks still consist of about 80,000 piculs.

Sugar:—Takao in bag	(nom.)	per picul	$4.90
,, in basket	,,	,,	$4.80
Taiwanfoo in bag		,,	$4.75
do. in basket		,,	$4.65
China No. 1 Ping-fah		,,	None
,, No. 2 Ching-pak		,,	$8 30 to $8.60
,, No. 3 Ke-pak		,,	$7.70 to $8.10

China No. 4 Kook-fah	per picul	$7.00	to $7.50
,, No. 5 Kong-fun	,,	$6.30	to $6.80
,, No. 6 E-puk	,,	$5.70	to $6.10
Swatow Brown	,,	None.	
Daitong	,,	$3.90	
Japan Rice	,,	$2.20	to $2.50
Kerosene Oil	,,	$2.90	

Kerosene Oil.—Forced sales have been made at $2.90, of which dealers have not been slow to take advantage for the purpose of replenishing their exhausted stocks. The *Cremona* from New York, with 13,970 cases, arrived on the 17th instant.

EXPORTS.

Silk.—The demand for Hanks has somewhat fallen off since last week, and prices are easier. Oshius are quite nominal, and only a few bales of Filatures have changed hands at a slight decline.

Settlements are 275 bales of Hanks, and 35 bales of other sorts. Stocks are about 800 bales new, and 350 bales old Silk.

		In London at 4s. 0½d. per lb.	*In Lyons at f. 5.10 per kilo.*
Hanks, Best No. 1 & 2	$510 to 530	18/8 to 19/4	51.50 to 53.50
,, Good No. 2	$480 to 500	17/8 to 18/4	49.00 to 51.00
,, Good all round No. 2½	$460 to 470	17/ to 17/4	47.00 to 48.00
,, Medium No. 3	$430 to 450	15/11 to 16/7	44.00 to 46.00
,, Common to inferior No. 4 & 5	$390 to 410	14/7 to 15/3	40.00 to 42.00
Oshius, Good... (Nominal)	—	—	—
Kakeda, best ... (,,)	—	—	—
Filature Silk	$570 to 680	20/8 to 24/4	57.00 to 67.50

Tea.—Business continues in much the same condition as reported in our last issue, operations being confined to one or two commission houses. Holders are not over anxious to realise, and ask prices far above the value of the wretchedly inferior stuff which forms the bulk of stock to hand. Settlements for the week amount to 800 piculs, while the stock is large, probably exceeding 12,000 piculs.

Common	$ 8.00	to	$11.00
Good Common	$12.00	to	$14.00
Medium	$15.00	to	$17.00
Good Medium	$18.00	to	$21.00
Fine	$23.00	to	$27.00
Finest	$28.00	to	$32.00
Choice	$34.00	nominal.	
Choicest	—		

EXCHANGE AND BULLION.

Exchange.—Business during the week has been extremely limited, and rates generally have remained steady.

Rates close as follows:—

Sterling—Bank 6 months' sight		4s.
,, Bank Bills on demand		4s. 0⅜d.
,, Private 6 months' sight		4s. 0½d.
On Paris—Bank Sight		4.95
Bank 6 months' sight		5.05
,, Private 6 ms. sight		5 1
On Hongkong—Bank sight		1½ % dis.
,, Private 10 days' sight		2 ,,
On Shanghai—Bank sight		74½

REPORTS.

The *City of Peking* reports:—Left Hongkong on the 4th instant at 4 p.m. On the 5th and 6th experinced a very heavy gale in Formosa channel, wind N.N.E. veering to Eastward, Barometer 29.20. Thence to port light winds with smooth sea.

The *Kworio Maru* experienced thick rainy weather at Oosima; thence fine weather to port, making the passage from the Bungo channel in 2 days 20 hours.

The *Tsukuba Kan* left Kagoshima on the 6th instant, had strong N. E. breezes off the Kiushiu coast to Oosima, thence moderate easterly winds to port. Arrived at 1 a.m. on the 12th instant.

The *Ching Too* reports having left Hakodate on the 3rd instant. Had light winds and foggy weather throughout the passage. The brig *Otto* and schooner *Aarhuus* left Hakodate for this port respectively on the 1st and 4th of August.

The *San Francisco* reports:—Left Taiwan-foo on the 22nd July. During the first eight days of the passage had S. W. winds with fine weather, and for the remainder light N. E. winds. The brig *Sophie* was loading Sugar for this port when the *San Francisco* left.

The *Otto* reports:—Left Hakodate on the 1st August. Had light Southerly winds to Inaboyé; thence light N. E. and East winds to port.

The *Caroline* reports:—Left Takao on the 52nd July. Experienced fine weather with light easterly winds during the passage, and a strong current setting to the westward off the Kii channel.

The *Aarhuus* reports:—Left Hakodate on the 4th August. Had light variable winds and calms to Inaboyé. Experienced a strong current setting north-eastward off Nosima-saki; thence fresh S.E. breezes to port.

The German brig *Sophie* reports: Left Taiwan-foo on the 26th July; had fine weather and South Easterly winds to the Linschoten group. While to the eastward of these islands, on the 6th of August, experienced a severe gale from the eastward, with a heavy, S. E. sea running, lasting until the 9th instant. On the 12th August, in Latitude 32.17 N., and Longitude 134.50 E., passed a full rigged ship, seemingly of English build, steering S.W., with the numbers H.P.K G. flying. Thence to port had moderate Southerly winds and intermittent rain showers.

The *Belgic* reports: Sailed from San Francisco July 27th at 6.30 a.m., with moderate to fresh N. W. winds and fine weather; from 30th July to August 11th, light Easterly winds and calms with smooth sea; 12th and 13th fresh N E winds; 14th to port light variable winds and cross swell. On the 10 h passed a barque in latitude 42½°. N., longitude 68½°. E., bound East. Arrived at Yokohama August 16th, 1877, at 9 a.m. Passage 19 days 3 hours.

The *Volga* reports: Left Hongkong on the 9th August at 7 a.m.; experienced strong N.E winds in the Formosa Channel; thence moderate winds and fine weather to port.

The American barque *Cremona*, reports: Left New York 23rd April and had light and variable N. E. trades. Crossed the Equator May 18th in long 29° W. Had the S. E. trades light and variable, and heavy westerly winds while running to the eastward. Passed Anjer July 22nd; had light variable winds through the China Sea to port; arrived August 17th, making the passage in 115 days.

MISCELLANEOUS.

In the U. S. Consular General Court at Kanagawa, Japan.

J. M. BATCHELDER,

Against

THE PROCEEDS OF THE SALE OF THE BARQUE

"CAYALTI."

TO THE FORMER OWNER OR OWNERS OF THE SAID BARQUE AND ALL OTHERS WHOM IT MAY CONCERN. GREETING.

WHEREAS an action has been brought in this Court by the above-named Plaintiff against the proceeds of the sale of the Barque *"CAYALTI,"* now in the hands of the UNITED STATES CONSUL-GENERAL for Japan, praying that the said proceeds may be paid to him on account of monies advanced and transportation and supplies furnished to the crew and coolies belonging to the said Barque *"CAYALTI."*

Now therefore take notice, that unless answer be filed therein within three months from the date hereof, judgment will be taken by the said Plaintiff according to the prayer of his Petition.

Given under my hand with the Seal of said Court affixed, this 28th day of May, A.D. 1877.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omissonto renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person bv whom they are sent.

Yokohama, 25th June, 1874.

BIRTH.

On the 19th August, at the International Hotel, Yokohama, the wife of Captain J. STURROCK, late commander S.S. *Montgomeryshire*, of a daughter.

On the 23rd August, at Mikawadai, Tôkiô, the wife of Lieut. C. W. BAILLIE, R.N., of a son.

DEATH.

At No. 6, Tanaieke Reinansaka, Yedo, on the 20th instant, Surgeon Major THEOBALD ANDREW PURCELL, Principal Medical Officer of the Department of Public Works of the Imperial Japanese Government,—aged 36 years.

Notes of the Week.

DEPARTED FROM THIS WORLD UPON THE 20TH DAY OF THE 8TH MONTH, THE STORY TELLER OF "OUR NEIGHBOURHOOD."

This is the heading chosen by their graceful writer, for the last of those sketches, which by their delicate humour and tender pathos have so often charmed the readers of this journal. Like his own bright creation,—the Old Story Teller,—Theobald Andrew Purcell has passed away, and the words he wrote above an imagined grave but a few weeks ago, may now stand above his own. Our own words are too poor to express the regret that we, in common with his many friends, feel at his early death, and we fall back on those which closed the last page of the final chapter of his sketches. "We have lost a beloved friend. Hand in hand with him, it might be said, we trode our path in life. A dull and common-place round at best, but immeasurably so deprived of his good company."

The last ten days seems to have brought unvarying success to the Imperial forces, terminating with the fall of Nobeoka and the utter rout of Saigo and his troops. According to native accounts over ten thousand of the insurgents have surrendered since the taking of this last stronghold, while Saigo and Kirino, accompanied by a few of their most devoted followers, have broken through the Imperialist lines and made their escape to parts unknown. Still all would not seem to be over as far as regards fighting. The latest reports announce that hostilities are expected to recommence in Owake *ken*, and it is also feared that Kumamoto will again become a battlefield. From the statements that come to us from the native papers, it is impossible to arrive at any clear idea of the present state of affairs, and useless to hazard conjecture. It is quite possible that large scattered bodies of the insurgents will be enabled to keep up a guerrilla warfare for some time to come, but there can be little doubt that, for the present, the worst is over. There is again rumoured agitation in Tosa and the following prominent men of that province have been arrested and sent to Tokio for examination. Kataoka Kenkichi, the writer of the famous *Risshisha* Memorial, which we lately published and reviewed at length in our columns. Iwasaki Naga-akira, Hiroda Nobutake, Ikeda Osuke, Tani Shigeki, Nozaki Masatomo, Ogasawara Tadatomo, Ikezoi Yoshiyu, Midzuno Torasaburô, Mayeno Masanaga, and Yamada Masayemon. The coast of Bungo is also being carefully watched, probably with a view of preventing the escape of Saigo or any of his followers into Tosa.

The latest reports in the native papers state that a telegram despatched by Police Inspector Murata from Owaka, at 10 p.m. on the 24th instant, announces severe fighting to the east of Mitai on the 23rd. Heavy firing was heard also from the direction of Nanatsuyama, which was supposed to indicate a general attack by the Imperialists. In such a case Saigo has probably again concentrated his forces at that point.

The Minister of Foreign Affairs received yesterday a communication from the Japanese Agents in Korea to the effect that a treaty has been completed with the Korean Government relative to the treatment of the crews of vessels wrecked upon that coast.

The fifth regiment of the *Shinsen-rio-tan* was disbanded yesterday, and already three hundred and fifty of the men have received their travelling expenses and returned to their homes.

Like all country people the simple inhabitants of Kiushiu are ready to find out signs and wonders in heaven and earth in these disturbed times. The planet Mars, which is now singularly bright, is supposed by them to be the star of Saigo Takamori, or rather the star in which the spirit of the once great General has taken up its abode, for, say they, by aid of a telescope we can see his figure therein dressed in full uniform. The *Chôya Shimbun* has devoted an article to this reported phenomenon, and instead of throwing any discredit on the statement, boldly professes its belief in its truth. It is not, it says, the first instance of human beings being changed into stars, or of stars appearing as omens, and why therefore should any wonder be expressed at the translation of Saigo Takamori? We will not argue the matter with our native contemporary, for we remember the time when we believed in the man in the moon. The *Hôc i Shimbun*, however, has an equally singular statement to the effect that a new breed of frogs has appeared in Kiushiu, which seems to put those which plagued

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Egypt entirely in the shade. They are quick at finding out the presence of a human being, and attack him as soon as they set eyes on him. If any attempt is made to beat them off, they grow more furious and only cease their attacks when they are killed. It is supposed that the spirits of the dead rebels who are buried in these parts have entered into frogs, and have imbued them with their courageous nature. We have ourselves seen the star, and are willing to admit that there may be something in it, but for the frogs we have only the account furnished by the *Hôchi*.

We publish elsewhere a letter from a correspondent which has a peculiar application to the condition of this country, and for that reason we commend it to the special attention of our Japanese readers. We have frequently referred in this journal to the necessity for good roads in Japan, as the only sure means of rapidly developing her natural resources and improving the condition of her people, and this is a theme which has been constantly touched upon by all those writers on Japan who have shown a sincere desire for the advancement of this progressive portion of the globe. Let the mineral wealth of Japan be what it may, it is not to such a source that she has primarily to look for prosperity. The development of better means of communication between country to town which might be easily brought about, would at once create an internal trade that would increase year by year to the advantage of both buyer and seller.

The report of some virulent choleraic complaint having broken out in certain parts of Kiushiu need not, we think, give cause for any serious alarm. With an insufficiency of proper food and the absence of those sanitary precautions which have, perforce, been neglected in certain of those districts ravaged by the opposing forces, combined with the great heat, it could hardly be expected but that the certain follower of war, epidemic disease, would make its appearance. We believe that, if strict inquiry were made, it would be found that similar forms of complaint exist almost in our neighbourhood. Recently, out of a family of five, four died within two days of some choleraic siezure, at a house but a few *ri* distance from Yokohama, and we are informed on native authority that equally sudden cases have been by no means uncommon in Tôkiô during the summer. Certainly in some parts of the capital, and for that matter in some of the more crowded portions of this native town, every inducement seems to be held out to cholera to come and reign supreme. There are filthy gutters and heaps of decaying matter. Houses rotting over loathsome stagnant pools, whence at night arise fœtid, sickening vapours. Unripe and stale fruit is largely consumed by all classes, so that the comparative freedom of the natives from any epidemic is in the highest degree surprising, and completely upsets all medical theories. Doubtless the Japanese authorities will take all proper measures to prevent cholera being introduced or spread by ships arriving from suspected ports. But they have even a more urgent duty to perform, and this was plainly pointed out in a very sensible letter, that appeared some weeks since in one of our contemporaries on this subject. The writer Dr. Faulds, referred, as we have done, to the condition of some portions of the poorer districts in Tôkiô, and his remarks will doubtless hold good of all large towns. It is admitted by the highest medical authorities that "when a case of cholera is imported into any place, the disease is not likely to spread, unless in proportion as it finds locally open to it certain facilities for spreading by indirect infection." Let the Japanese Government therefore lose no time in cleansing out those foul places where the poisonous disease would rapidly germinate and spread its deadly seed in all directions. If a man is afraid of fire and yet allows to accumulate in his house every kind of inflammable and combustible substance, it may avail for a time that he permits no one to enter therein with a naked light; but some day a spark flies in from a neighbour's chimney, or haply the mass takes fire spontaneously, and before he can stop the flames his whole dwelling is in a blaze. As we have said, we do not think that there is any special cause for alarm in the reports from Kiushiu, but there seems to be—if we may be allowed the expression—choleraic tendencies and influencies in many parts of the East, and we would earnestly impress on the Japanese Government to lose no time in making such preparations as shall reduce the power of the scourge—should it come—to a minimum; a course which would, in any case, be conducive to the preservation and improvement of public health.

The Amateur Dramatic Corps contemplate giving another Promenade Concert in the Bluff Gardens on Friday next, the 31st instant, as through the kindness of Captain Young and the officers of the *Tennessee*, the band of that vessel has been placed at their disposal. Judging from the success of former concerts we feel sure that this announcement will be gladly welcomed by the public, and that the gardens on Friday next will be crowded.

In the London *Mail* of the 4th July, we find the following:—"The Japanese papers have opened subscriptions for the Russian wounded, on the ground that Japan must follow the example of Europe, and Russia is its neighbour and friend." We have made close inquiries but can discover nothing that can in the least account for this extraordinary statement. If subscriptions are to be opened for wounded, certainly in Japan, charity should begin at home. Her own wounded will need all the generous help that she can so ill afford to give, but which will doubtless be forthcoming, and she will find it enough to do her duty to her own children who have a far greater need of her assistance than those of her "neighbour and friend." The loss and destruction, the misery and destitution of those portions of the Southern provinces where the civil war has been raging are very terrible, and the labour of many years will be required to repair what a few short months have swept away. Let the people of Japan follow the example of the Northern States of America at the termination of the war of secession, and do what they can, by liberal gifts of money and material, to repair to some extent the ravages caused by the late outbreak. A man struggling with poverty, and on whose household sore misfortune has fallen, cannot afford to extend sentimental charity to a rich and powerful neighbour who has rashly engaged in a law suit without counting the cost.

We publish to day a letter addressed to us by a former resident of Yokohama, who was one of the passengers on board the Messageries Maritimes steamer *Meikong*, at the time of her loss off Cape Gardafui on the 17th June last, which gives the most graphic and detailed account of the wreck that has yet appeared.

In these days of keen competition in every walk of life when young fellows find that there is no place for them in England, and that if they want to make a home and achieve an independence they must labour in less crowded fields, it is hard to know where to go or what to take up. Of late years there has been a widely spread conviction that if a youth could obtain any position on a tea plantation in Assam, or on a coffee estate in Ceylon or Central America his fortune was made, and that not only would he have a life of luxurious ease, but in a few, very few, years, he would be able to return to England rivalling the old Indian Nabobs in wealth. The following clever letter has just appeared in the *Shanghai Courier*, and is evidently written by one who has "been there," and found out the difference between the reality and the cherished ideal of the life of a sucking planter.

A FEW WORDS ABOUT COFFEE PLANTING BY A PLANTER.

Coffee-planting like most other "callings," or professions now-a-days is overstocked. Young fellows of good birth and education are sent by their parents to Ceylon or South India, and they, as well as the aspirants to coffee, are under the impression that planting is such a *splendid* opening! Let me tell you what this splendid opening is, in nine cases out of ten.

In the first place the would-be planter has to pay his own passage, which, by the cheapest route, will not be less that £50. This is only to Madras. From Madras to Bangalore will cost him by train about Rs. 20, from Bangalore to Mysore or Frusupelt by bullock transit Rs. 50.,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

and the rest of the journey he will have to ride, and either hire a horse, or borrow one from a friend. He will require an outfit, and perhaps it would not be *a propos de bottes* if I said a few words on this most important subject. A planter who knows nothing about the life he will have to lead—and the employers take precious good care not to enlighten him, generally goes to a London outfitter and spends a lot of money on articles, chiefly of apparel, which are perfectly *useless* in planting life. The following articles are all that is necessary:—an Express Rifle, a saddle and bridle, two or three dozen of flannel shirts, six or seven tweed suits, two or three dozen of porpoise-hide boots, the necessary linen, plate, a writing desk, a safe and a collection of books. A planter—we will call him Mr. Shrub—came to South India, and previous to his departure from Europe invested largely in patent-leather shoes, checks, finest linen shirts, two or three dress suits, a blue frock coat and a "topper" hat. He was a man with what is called, and very properly, "side." He was a man of good birth and education, refined in tastes, used to dress for dinner every night, go to the opera, theatre, etc., and, in fact, was quite the "man about town."

I remember he was quite shocked because he met an old schoolfellow, a planter too, and just as well connected as himself, dining in a flannel shirt, no collar, and "pyjamas." This, of course, was in the man's own bungalow, in the midst of the jungle thirty miles away from the small station of Fuzzepore (so we will call it). Mr. Shrub used to "flash his linen," cosmetique his incipient moustache, wear an eye glass and it is needless to add, did not turn out a good planter or a good fellow either. A man who goes in for planting must be willing to *rough it*, put up with many unpleasantnesses, deny himself society, risk his health, in performing his duties. There was a friend of mine who composed a parody of the Christy Minstrel style of song. It went like this and was sung to the air, "I'm off to Charleston."

"Oh!" yes it is an awful life—
An awful life indeed:—
To watch the coolies all day long
Together prune and weed.

Oh! yes it is an awful thing
To be a "Chic Doree:" *
And move the coolies all day long
And ne'er go on the spree.

Occasionally to ride to * * *
Without an S. and B—
To rise each morn at half past four
For "chota hazarree."

A planter's life is this. He has to rise at six a.m.; eats his chota hazarree, reads the "roll"—coolies names,—distributes the work or the different fields called either by native names, numbers, or English ones. He visits the work and is expected to stay there till 10.30 a.m. we will say Then he has breakfast, smokes a pipe, allows himself an hour or so in the bungalow, mounts his pony, goes out again and stops till the gong is sounded by his boy for the coolies to knock off work. When he arrives at his Bungalow he has to take the report of the work from the maistries. They salaam him, and he probably orders a bottle of beer and a pipe—he deserves both. In crop time there is work at night. A superintendent is expected to stay two to three hours in the Pulp House in case anything goes amiss with the Pulper. He has to read "check roll" the same time next morning; and this sort of thing lasts from January to March. It depends on the crop. Then he has to attend to the accounts of the estate, pay the coolies not *en masse* or through the maistries, but individually. His pay for all this work and exposure to the sun, and the excessive rain in the monsoon months, and leading a hermit's life, is not more than Tls. 120 per month. He has a furnished house allowed him by the estate. The furniture consists of a table, a few broken chairs; a bed-stead without a mattress; a set of crockery of various patterns, sizes and conditions; a ruler, an inkstand without ink; and a few printed forms. He will probably see lying in front of him, two "check roll" books, a cash book and some old reports of former "Chic Dorees" who were, to judge by the handwriting and composition, rather good office men than otherwise.

He is allowed a house cooly, three bazaar coolies a week, has to pay for his own medical attendance and buy his own horse.

Dost thou like this picture my would be coffee planter? Do you think the game is worth the candle? Do you think exposure to the sun and jungle fever is worth ~~Rs~~ 100 a month and no society. *No!* Stick to your £100 a year in an office at home. Dine at a chop-house, smoke a pipe, go to the "Pit," patronize the Music Halls, but leave coffee planting alone. Confine yourself to drinking it, and remain in perfect ignorance as to how it is cultivated and as to the life of the cultivators. Planters as a rule draw the long bow at home, lead you to imagine that they like planting—it is "a jolly independent life; any amount of "shooting you know, old fellow. Coffee pays £100 a ton. Lots of riding, "Clubs—certainly not much ladies society, but that doesn't matter."

This kind of man, it is more than likely, has been enjoying a splendid salary of ~~Rs~~ 150 a month, lived on curry and rice, kept one servant; an "old screw;" occasionally shot a Jungle fowl; but had not *any money in coffee at all.*

* *Chic Doree* is the native name for an assistant on an estate. "Chota hazarree" is the early breakfast.

We are indebted to Mr. Cook, of No. 72, Main Street, for a very clever serio-comic War Map of Europe for the year 1877. The relative positions and outlines of the various countries are preserved, while each is represented by an allegorical figure emblematic of the position it occupies in the present political struggle.

From the "Japan Mail Daily Advertiser."

Monday, 20th.

The *China Mail* says that the *Oceanic* met with some very rough weather while being towed down to Hongkong by the *Amoy*, though the wind being in her favour assisted rather than impeded her. The *Oceanic* frequently forged ahead of the *Amoy*.

A large number of police returned from the South by the *Genkai Maru* on Saturday evening.

From the *Chôya Shimbun.*

A telegram from Osaka despatched at 2.25 a.m. on the 18th instant, announces that Major General Yamagata has reported from Nobeoka that after the entry of the Imperialists into that town on the 14th instant, it was decided to march against Kumada, the present headquarters of the insurgents. Leaving a garrison in Nobeoka the Imperialists advanced on the 15th, captured several villages, and finished by taking up their position on the summit of Nagaoyama at noon on that day. Throughout the fighting on the 15th instant, the rebels stationed themselves in favourable positions, and making desperate attacks tried to retake Nobeoka. Saigo and Kirino commanded the troops in person, and the struggle was altogether the most desperate that has recently taken place.

Tuesday, 21st.

The *Nichi Nichi Shimbun* says that the High Priest of the West Sinshiu sect of Buddhists recently made a tour in the northern provinces. Everywhere he was engerly welcomed by members of the sect, male and female, young and old travelling great distances—upwards of twenty *ri*—to behold this venerable personage pass. To such an extent did the crowd assemble that extra police were stationed on the line of route in order to prevent accidents. Bridges were voluntarily repaired by the people, and roads mended, so that His Reverence might travel comfortably. Between the towns of Fukui and Ono in Etchizen is a very steep and difficult mountain pass—Hanaoka-tôge—which horsemen and pedestrians could only get over with difficulty. But on the approach of the High Priest thousands of the country people from the neighbourhood of Ono set to work, and in twenty-four hours reduced this rugged pass to a convenient road available for *jinrikishas*. Between Ono and Katsuyama another difficult and rocky part of the road was cleared. During rainy weather the Kutsuriugawa in this neighbourhood is generally impassable, and on this occasion was so much swollen that the ordinary ferry was useless, but rather than the High Priest should be detained on this account, hosts of willing workers constructed a bridge of boats the evening before His Reverence arrived, by which he crossed the river. All these improvements had been under the consideration of the local authorities for a long time, without any reconstruction having been achieved, and yet were effected by the country people, in their devotion to the head of their religion, within a few days.

The editor of the *Nichi Nichi* concludes his account of this progress by the remark that "Religion has indeed wonderful power." He might have suggested that if the High Priest of this sect—and indeed those of other sects,—would only make continual trips into all parts of Japan, the country would largely benefit by their visits, if, as in the above instance, they led to such great improvements of the roads.

From the *Nichi Nichi Shimbun.*

On the 18th instant the head-quarters of the Imperialists were removed from Miyako-no-jô to Miyazaki in Hiuga. A branch office of the Kagoshima *Kencho* has been established at the latter town, and was opened on the 3rd instant, and a branch office of the Kiushiu Special *Saibansho* will also be shortly opened.

Shimadzu Saburo and his son have requested the Kagoshima *Kencho* to give rice to those who were rendered destitute by the war.

Wednesday, 22nd.

From the *Mainichi Shimbun.*

The trial of Oyama Tsunayoshi, the ex-Governor of Kagoshima *ken*, has been concluded, he having stamped his confession with his nail according to Japanese custom.

From the *Nichi Nichi Shimbun.*

Hayashi-Yuzo, a prominent member of the *Risshi-sha* who was arrested some time ago, is daily undergoing examination.

On account of the scarcity of water at the time of planting out the young rice, great doubts were felt as to the prospects of the crop this year, but reports have now been received from various provinces announcing that there is every expectation of an abundant harvest. Among other provinces the crops in Yamagata *ken* (Shonai) are exceedingly good.

From the *Chôya Shimbun.*

A telegram from Police Sub-Inspector Hagiwara at Kumanoyoura in Hiuga, despatched at 11 p.m., on the 19th instant, announces that the Imperialists have gradually advanced and driven the rebels into Hiô-ro-mura and Mushika-no mura, so that they now occupy a tract of country only one *ri* square.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

From the *Hôchi Shimbun.*

When the special envoy of the Mikado went to Kagoshima at the commencement of the rebellion and ordered the former *Daimio* of Satsuma, Shimadzu Tadayoshi (the son of Saburo), to proceed to Kiôto, the latter was unable to comply with this order on account of ill health, but sent his son to represent him. Tadayoshi having now recovered is making preparations for a visit to Tôkiô.

A telegram dispatched from Osaka at 4.20 p.m. on the 19th instant, says that a report has been received from Major General Yamagata to the following effect:—On the 17th instant a general attack was made upon the rebel stronghold (? Kumada) and the insurgents completely defeated. Saigo and Kirino, attended by a few hundreds of their men, escaped with difficulty, and making their way over Ino-také fled in a westerly direction. The Imperialists are in pursuit. Several thousands of rebels surrendered on this occasion.

Thursday, 23rd.

The M. M. Steamer *Tibre*, with French Mails on board to the 14th July, left Hongkong this morning.

H.I.H. Yamashina-no-Miya, the uncle of the Mikado, left by the *Nagoya Maru* yesterday. His Imperial Highness is about to visit the tomb of his father at Kiôto.

From the *Mainichi Shimbun.*

His Majesty the Mikado reviewed five regiments of the *Shinsen Riotan* (newly enlisted police forces) at Fukiage at 8 a.m. yesterday, and graciously announced that each man would be presented with the sum of 15 *yen* on his return home.

From the *Osaka Nippo.*

The following letter was addressed by the rebel Commander Saigo Takamori to his followers. He seems at last to have concluded that the war must very soon come to an end:—"Through your determination and bravery we have fought for the past half year. At first there was every prospect of our success, but our strength having gradually failed, we are now in a state of great distress, having hardly any position where to make a stand. Our troops have been as effective as those of our opponents, but we have been overmatched, and hence the present crisis. The enemy will not let this present opportunity slip, but will undoubtedly advance against us in order to try and crush us. Therefore make up your minds for still further zeal in our cause, die in advancing and not retreating, so that no taint of disgrace may be attached to our names hereafter. This is my earnest advice.

5th August. "SAIGO KICHINOSUKE."

From the *Hôchi Shimbun.*

A telegram has been received at Tôkiô to the effect that Saigo, together with several hundreds of his followers, broke though the Imperialist lines at Okugawa and escaped. Great diligence should therefore be shown in searching for him, as there is no knowing where he may next appear. The above despatch was received on the 21st instant.

From the *Akébono Shimbun.*

A telegram from Police Inspector Murata at Owake *ken*, despatched at 10 a.m. on the 21st instant, announces that Saigo, with other commanders and about three hundred men, fled toward Mitaino-o on the 18th instant. On the 19th instant he changed the direction of his flight towards Miyagasaki in Hamagono. On the 20th instant an engagement took place at Horikawa, but as the Imperialists are so strong and well prepared for any assault, there is no occasion for anxiety as to the result.

From the *Chôya Shimbun.*

A telegram despatched from Osaka at 0.40 p.m. on the 21st instant, announces that a report was received on the 20th instant to the effect that an engagement had taken place at Horiyama between the Imperialists and rebels who had stood their ground when Saigo retreated. A further report has been received to the effect that the Imperialists have since been defeated. In consequence of this reverse Lieut.-General Soga marched from the coast of Bungo and Takashima from Higo, while Tani advanced from the interior through Bungo, together with the troops under Nodzu, and concentrated their forces on Mitai.

Over ten thousand rebels have surrendered since the fall of Nobeoka.

Friday, 24th.

One hundred convalescents from Nagasaki hospital returned by the *Hiroshima Maru* yesterday.

The *Ene* from London reports:—Left the London Docks 25th April, and had light N. E. trades to the equator. Crossed the equator 31st May in long. 26.38 W. Had light southerly winds to the meridian of the Cape on 2nd July, in lat. 40 S. Thence experienced easterly winds to St. Pauls; afterwards strong westerly winds to lat. 25 S. and then fresh S. E. trades to Anjer, arriving off there 1st August. After leaving Anjer had strong S. W. monsoon to the Bashees, and thence light variable winds to port, making the passage in 120 days.

From the *Nichi Nichi Shimbun.*

One thousand policemen have been keeping order in Kagoshima *ken*, but now that the rebels have been driven into one corner of the country, the extent over which these policemen have to do duty is so much increased, that a reinforcement of seven hundred will be sent down from Osaka and Kiôto.

From the *Hôchi Shimbun.*

There are two godowns full of fire arms (mostly match-locks) and ammunition which have been captured from the rebels, and also more than one godown full of swords.

At the battle of Kashida the Imperialists lost about twenty thousand *yen* worth of arms, ammunition and provisions.

Between six and seven thousand rebels in all surrendered themselves at Kagoshima, and a similar number both at Miyazaki and Nobeoka when those places were captured.

We hear from a reliable source that the rebel leaders Hemmi Jurô, Murata Shinsuke, and Kishima Kiyoshi committed *seppuku* at Sadowara.

From the *Osaka Nippô.*

Major General Saigo will, we hear, return as far as Osaka by the first steamer.

From the *Akébono Shimbun.*

H. E. Okuma, the Minister of Finance, will visit the hot springs at Atami for change of air, in order to recruit his health.

Saturday, 25th.

From the *Mainichi Shimbun.*

All the men-of-war which were stationed on the coast of Hiuga, off Nobeoka, have proceeded to the coast of Bungo off the town of Saiki.

The coast between Saiki and Saganoseki in Bungo is also being closely watched by smaller steamers (? Is trouble expected in Tosa).

The officials of Owake *Kencho* and the branch at Oka, are preparing for a resumption of hostilities.

The people of Kumamoto are in a state of great anxiety, fearing that the town will again be the scene of fighting.

From the *Hôchi Shimbun.*

The rebels being driven into one corner of Hiuga, are said to be divided in opinion. One party declares for fighting to the very death, and the other party is inclined to surrender.

As some agitation appeared to prevail in Kôchi *ken* (Tôsa), strict investigation was made and eleven suspicious persons arrested, who arrived yesterday in Tôkiô for further examination.

It is expected that H. I. H. Arisugawa-no-Miya will very soon return to Tôkiô.

From the *Nichi Nichi Shimbun.*

A telegram despatched from Kumamoto at 0.20 p.m. on the 23rd instant, announces that the rebels who had advanced to Mitai conveyed their supplies to Iwato, and having constructed stockades at Oshikata are defending that place. It is further said that the rebels are also expected at Miyata, about two and a half *ri* from Mamihara in Higo, so the Imperialists are prepared to obstruct their passage.

Another telegram despatched by Police Inspector Murata from Owake, in Bungo, at 2.40 p.m. on the 23rd instant, says:—The rebels who fled to Mitai have taken Koshiu and are advancing toward Mamihara. Two companies of troops have been sent against them from the Kumamoto garrison. Lieut.-General Soga arrived in Owake last night (the 22nd).

SAIGO.

THE knell of a brave, if not mistaken and unfortunate man is in the air. With the 'gros bataillons' as usual rests the final victory, and the very Government which in great measure owes its existence to the courage, energy and perseverance of SAIGO, now proclaims him an outcast and sets a price upon his head. The bitterest enemies of the great partisan chief will not deny him the virtues of a hero; fearlessness in danger, constancy in adversity, fertility of resource when beset with difficulties, a gallant front shown when the inevitable end draws nigh. Fighting against immense odds ever since the movement he headed began by the raid into the Kumamoto *ken* in the early part of the present year, the Satsuma chief has had to discharge the difficult duty of conducting what was in truth nothing less than a retreat almost from the first. He has not less skilfully than bravely disputed every inch of ground, and the Government troops merit all the praise that attaches to a victorious campaign against a wary and resolute enemy. The qualities that have enabled the former implacable antagonist of the *Bakufu* to defy the whole power of the Empire for so many months, are those which contributed so greatly to the success of the Imperial cause in the struggle against the Shôgunate. This devotion to the Emperor impelled him at an early age to join the KIRINO party, of which he soon became one of the principal supporters, and without even faltering for an instant, he pursued the path he had marked out for himself as a youth until he had restored to the MIKADO the power and authority of which the dynasty had, by force or fraud or both, been so long deprived. In July, 1868, he received the well merited encomiums of his Imperial master, and was ordered to accept the reward for services which his modesty had at first led him to decline. In August, 1877, he is proclaimed an outlaw, and accepting with simple heroism the penalty of defeat, tells the remnant of his followers that nothing remains for him and them but to expiate their fault by death upon the battlefield. Rebellion is only justifiable by success according to the political creed of the day, and those who rise up in arms against an existing Government should recollect that they hold their lives in their hands. SAIGO's last proclamation shows that neither he, nor the few who still adhere to his fortunes, shrink from the consequences of their acts; but a readiness to pay the forfeit, if unsuccessful, does not sufficiently excuse, politically or morally, the originators or promoters of civil war. Desperate diseases may require the application of desperate remedies, but only when these have a certain chance of success and when no others can be resorted to. We doubt whether these conditions were fulfilled when Saigo undertook to reform the Government of his country, by rising in rebellion against the administration he had so materially aided to establish. The price to be paid even in the event of success should not have been lost sight of, and the amount of useless suffering engendered by a civil war that fails in its object should have been anxiously compared with the necessity of the movement and the chances of a fortunate issue to it. We fear these considerations were not very present to SAIGO when he assumed the leadership of the rebellion, but when we remember what Japanese history has for so many centuries been—a confused jumble of private wars—we do not think we can with justice very seriously blame him. We have the less right to do so, in that no constitutional means exist of effecting a change in the policy of the country, and public opinion is yet too weak to have much influence upon the conduct of public affairs, even if it were allowed freedom of expression. Under these circumstances, a political party, honestly of opinion that a change in the administration is indispensable to the existence or welfare of the country, appears to be condemned to one of two courses—continual inaction or rebellion, and so far as SAIGO may have been actuated by a sincere desire to effect a reform which he judged absolutely necessary, his conduct, if he had any reasonable chances of success, may be fairly held to have been excusable. But we are obliged to confess to some doubts as to whether mere personal motives had not some share in influencing his policy. He seems to have retired from the Government in dudgeon because of their refusal to organize a raid upon Korea, and from the moment of his retirement to have devoted himself to the establishment of a so called military school at Kagoshima, upon a scale which showed that his real object was nothing less than the creation of an armed force devoted to himself. The subject of complaint put forward by him or on his behalf—the edict against wearing swords, the refusal to declare war against Korea, the cession of Saghalin and the capitalisation of the pensions of the samurai are—with the exception of the last—mere trivialities, and the last, though possibly a well founded cause of complaint, hardly warrants the dreadful alternative of civil war—the most terrible of all war, because success on either side is equally fatal to the country. SAIGO may have been, probably was, influenced by other and nobler motives, but we do not know that he has ever sought, in any public manner at least, to justify his conduct by reference to them. The true history of the rising we shall never know. It will be written by the winning side, and though SAIGO will long live in the recollection of his countrymen as a generous and valiant leader, he will probably be recorded in their annals as simply a traitor and a rebel. We must not, even yet, apply an European standard to Japanese matters, and whatever the errors of SAIGO may have been he was not, in any proper sense of the word, a traitor. What he did he did openly. He took up arms, not against the MIKADO, but against what he conceived to be a bad Government, and in endeavouring to effect a change in the policy of the Empire by force, he only followed a practice which the history of his country showed him to be sanctioned by long usage. Nor must it be forgotten that Satsuma was a semi-independent province, collected and distributed its own revenues, and managed, almost without interference from the Tôkiô Government, its own internal affairs. No troops, munitions or monies belonging to the Government were employed by SAIGO, and he may, with some show of reason, have deemed himself justified in using the resources of his own province for the purpose of bringing about a reform which he conceived indispensable to the welfare of his own country and of the Empire. His principal errors were that he entirely miscalculated the strength and resources of the Government he was opposing; that he counted without sufficient grounds upon the support of the discontented *samurai* of other provinces than his own, and—chiefest and most pernicious of all—that he raised the standard of revolt to redress grievances not—so far as we know—of sufficient gravity to justify so dire a remedy, and of which some,

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

at least, seem to have been personal to himself. Such errors are doubtless of great magnitude, and no Government can afford wholly to overlook them. But it would be no less politic than generous on the part of the Govern- to take into consideration the great services rendered by their fallen opponent at the time of the Restoration, and to refrain from visiting upon his head the full consequences of his conduct. His name is almost a household word in the mouth of the people, who view him as the incarnation of all that is lofty in the national character, and too severe a treatment of their hero might convert him into a martyr, render his cause sacred, and make of him a dangerous model to the disaffected. No charge of oppression or cruelty has, to our knowledge, ever been alleged against the Satsuma chief, and this circumstance will surely be allowed to plead strongly in his favour. Finally, let the worst be said of him that can be said, he still remains a gallant Japanese gentleman, a grand type of the old school that with all its failings has many claims to our admiration, and we feel sure that the Government would earn the gratitude of their people and the applause of the world, by extending to the unfortunate man a clemency that would destroy, more effectually than the sword, all desire on the part of the men of Satsuma further to resist the complete incorporation of their province with a powerful and progressive Empire.

THE CASE OF De BUSSCHE *V.* ALT.

THE judgment of Vice-Chancellor HALL in the case of De BUSSCHE *v.* ALT can hardly have caused surprise even to the defendant himself. The undisputed facts of the case—so far as the details of the action can be gathered from the judgment—show that Mr. ALT, while agent or delegated agent for the sale of a ship of which Mr. De BUSSCHE was proprietor, effected a transfer of it under an arrangement which put a handsome profit into the agent's pockets, over and above commission and charges, for which he did not account to his principal. An agent making a profit in his capacity as an agent, and upon a transaction of which the subject matter is the property of his principal, must expect to be called upon to refund his gains unless he can show circumstances that render the ordinary rules of law governing the relations between principal and agent inapplicable to his conduct. Mr. ALT, accordingly, attempted to defend the transaction which had resulted so advantageously to himself, by alleging the existence of a custom of trade, which he sets forth in the twelfth paragraph of his first answer in the following words:—"It is "the common practice when ships or other valuable arti- "cles of commerce are consigned by merchants residing "in England to their foreign agents for the purpose of "sale, for the principle or consignor to fix a limit or re- "served price as the minimum amount for which such ship "or other article is to be sold, *and to merchants in Japan* "*as the minimum at which such may be taken over or* "*taken and purchased by the merchants*..... And "such principal or other person agrees thereto, in which "case the agent is wholly relieved from any and every "such obligation (namely to dispose of the article for the highest obtainable price not below the limit, and account for full proceeds of sale) as aforesaid and has simply to "pay or otherwise satisfy the price or sum named, like any "other purchaser, and deals with and disposes of the ship "or other article as he best can and thinks most desirable "for himself and his own benefit." The italics in the above quotation are our own, and mark the gist of the alleged custom. Whether any, or if any, what evidence was given of the existence of such a usage either in Japan or elsewhere we do not know; but so far as Japan is concerned we cannot recollect that we ever so much as heard of such a one. Such a custom indeed appears to us so absurd on the face of it, that its mere statement sufficiently refutes its existence. By no process of logic that we are acquainted with, can instructions to sell not below a certain limit be construed as implying a consent to a purchase by the agent at that limit. The agent stands in the place of the principal, and is intended to act as much for the interests of the principal as the latter himself would do if present. For this he receives remuneration in the shape of commission. He does not discharge his duty properly if he sells at the limit to a third party when a higher price might be obtainable, and *a fortiori* when he sells to himself at the limit. No doubt he can buy from his principal, but only with his principal's consent, and after full disclosure to the latter of all circumstances that might influence him in determining upon the price at which he might be willing to sell. The alleged custom, in cases where a limit is named, abrogates all these well-known and useful rules in favour of the very person against whose possible misconduct they were intended to provide, and clothes the agent with the power, altogether incompatible with the fact of agency, of becoming a purchaser at a particular price without any previous reference to or consent from his principal. As the Vice-Chancellor very pertinently remarked, it would require extremely strong evidence to substantiate a custom so utterly at variance with the accepted rules of law, and placing the principal so completely at the mercy of his agent. To argue that a power to sell at a certain limit includes a power to buy at that limit, is to reason from a minor premiss to a conclusion without reference to a major premiss, and if the conclusion is a true proposition, it must be shown as a matter of fact that it is *included* in the minor. That such should be the case is not of course an impossibility, but it is, to say the least, in the highest degree improbable.

Mr. ALT's legal advisers do not seem to have placed much reliance upon the custom as such, for after stating it they add, "and such principal agrees thereto (*i. e.* the custom) *in which case* the agent is wholly relieved"..... from all the ordinary duties of an agent. In what case is he so relieved? In the case of the 'custom' being agreed to by the principal, that is, of its being in the first place known to him and in the second place accepted by him? This, no doubt, is quite true, but then the 'custom' is no longer treated as such, but as part of a special agreement binding, of course, upon to the parties to it. Had Mr. ALT shown that any such special agreement had been entered into by Mr. De BUSSCHE, or even that the alleged custom was distinctly known and accepted by him as the basis of the transaction, the defence would have rested on perfectly tenable grounds, but there is nothing in the judgment indicating anything of the sort. Another defence of Mr. ALT, that made by his second answer, was that having guaranteed the limit price he was justified in selling on his own account at a higher price on credit, taking upon himself the risk attaching to the credit. In other words,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

he asserted that he might make two sales, one to himself on his principal's account for which the latter was charged commission, and another on his own account, the latter being on credit. If the alleged custom should hold good, be it here remarked parenthetically, the agent had the right to take over the property entrusted to him at the limit, having before him a cash offer at a higher price, charge commission on the limit price and pocket the difference between this and the price actually realised. We can see no force in the arguments based upon the sale at the high price being on credit. No doubt Mr. ALT thereby took a certain risk upon himself, but as the Vice-Chancellor points out, he must have thought the risk worth taking in his own interest, and if so, why not have taken it in the interest of his principal. The embarrassment in which the defendant's conduct placed him is well summed up by the Vice-Chancellor :—"The difficulty in the position of the "defendant was this, that for him to discharge a duty in "endeavouring to find a purchaser for cash and at the same "time to be looking out for a purchaser on his own account, "which would give him a profit if he did take over the "ship at the price, were two such inconsistent things "that it is impossible to consider that a purchase under "such circumstances by the agent or deputy agent was "such a transaction as could stand at all according to the "view of this Court."

We may add that it is impossible to conceive of such a custom coming into existence as would sanction such a transaction, and difficult to conceive that a court of law would pay much attention to any evidence alleging such a custom. We quite agree with the Vice-Chancellor's exoneration of Mr. ALT from all moral blame in the matter. It was under an erroneous impression, possibly created or strengthened by the action of Messrs. GILMAN & Co., that Mr. ALT acted as he did, and we do not for a moment doubt his good faith throughout the entire transaction.

SPIRIT OF THE JAPANESE PRESS.

ILL CONSIDERED REFORMS.

("Chôya Shimbun," 19th August.)

Change and reform of the titles and functions of Government departments and officials are frequently rendered necessary by the changed state of the times, when the old established rules are no longer found to hold good, and it is seen that improvements can only be made by such measures. But when in a single day the established forms of years are swept away, confusion, though it be but temporary, is the natural result.

Such reforms are not free from evils, one of which is the compulsory dismissal of numbers of officials, and a certain anxiety among those that remain, not knowing when their turn may come, which prevents their putting all heart in their work. Now as there result from reforms both good and bad effects, hasty and ill-considered change should be avoided. If it appear necessary that some reform should be made in a certain existing law or institution, it should only be carried into effect when it has been well considered and when it seems likely to be permanent in its effects. It is impossible that a Government can properly carry out its duties if it is constantly making experimental reforms on the principle that if this or that will not answer it must be changed and changed again.

Only ten years have passed since the Restoration, but reforms innumerable have taken place in the various departments of the Government in that short space of time. We are willing to admit that such changes have been made with due consideration, but to the ignorant classes it must seem as though the officials were very fickle and did not know their own minds.

The reform which took place in February last, abolishing the *Rio* and uniting certain *Sho*, caused the dismissal of a large number of officials and general changes throughout the Government. This was the effect of the Imperial decree of the 3rd of January last, when it was decided that the expenditure of the Government should be reduced. Now the Government cannot intend to weaken the confidence placed in it by the people, and yet before a year has elapsed we hear that further great changes are contemplated, and that the Government is about to amalgamate the Departments, though we are not in a position to state whether the rumour is correct. The amount of money expended on the suppression of the present rebellion is immense. In order to make up the deficit, it is evident that it will be necessary to reduce the annual expenditure of the various departments. Such reforms as shall be actually required to carry out this design must therefore meet with our unflinching support, but at the same time we cannot refrain from expressing our surprise at the frequent changes that have been made by the Government in dividing, amalgamating and abolishing departments, nor can we help remarking the evil effects that have arisen therefrom. If we remove and replant a tree day after day, both morning and evening, it will soon wither away, and this is the effect that is perceived in the changes made in the various departments, which are the roots that nourish the Government. Better leave matters as they are than make rash changes. We can only trust that we shall see no more notification of changes, issued before the ink is dry in which the reformed law was written.

Ranks, names and titles should remain unchanged. Judges were at first divided into *Dai-Hanji, Gon-dai-hanji, Shô-shô-hanji, Gonshô-hanji.* Afterwards they were divided into classes; now they are all *Hanji.* The Ministers' Secretaries were formerly named *Daijô, Gondaijô, Shojô,* and *Gonshôjô.* Afterwards they were divided into two classes, *Daijô* and *Shojô.* Then they were changed to *Gon.* This was finally abolished and latterly they have been called *Dai-shokikuan, Gon Dai-shokikuan, Sho-shokikuan* and *Gon sho-shokikuan.* But this change of names does not change the natures of the officials, and when such apparently useless changes are made, people are apt to think that the Government is doing what there is no need for.

THE KING CAN DO NO WRONG.

("Kinji Hiôron," 23rd August.)

Daijin (by which term is meant the Prime Minister, *Sangi* and Heads of Departments,) are supposed never to make any mistakes in their administration. But this can be by no means assented to, for if it were so we should find all men of lower rank continually in the wrong, and we know certainly that such is not the case.

Every human being is prone to certain errors, and thus laws have to be enacted to ensure the peace of the nation. The nature of laws may differ; they may be too lax or too exacting; desirable or the reverse; but in some form or other they have existed at all times in all countries. True that a greater amount of evil exists among the lower classes than among the *Daijin.* But the wrongs done by the former affect principally their own persons or their own families. The wrongs committed by the *Daijin* make their evil effects felt throughout the country.

In China, in accordance with anciently established customs, the greatest reverence and respect is shown toward the *Daijin.* But even in such a country as that it is appointed by the laws of the Ming Dynasty that the *Daijin* who shows partiality in the appointment of officials shall be beheaded. Relatives of the *Daijin* cannot be appointed by him to any office without special permission of the Emperor; should he not act in conformity with this law he is beheaded.

Now although we admit that such an edict is entirely too severe, we agree with the Chinese idea of reserving to themselves the power of exercising some restraint over the acts of the *Daijin.*

In Europe and America, where Parliaments and Constitutions exist, their members have full right to question or complain of the acts of the chief Ministers, and although the effect of such censure depends entirely on the power possessed by the Parliament or Assembly, the right to express it is cherished as one of their most precious privileges. It has frequently happened, when a Minister has violated any constitutional right or been guilty of any offence against his country, that he has been impeached and tried for his crimes. In England, in the reign of Charles 1st, the House of Commons impeached and tried Strafford, and he suffered capital punishment. In France, in 1830, after the great war, a Minister who fell under the censure of the Upper Assembly was imprisoned for several years. Even in the United States, President Johnson was impeached by Congress.

Now although such events have not frequently occurred, yet

Original from UNIVERSITY OF CALIFORNIA

when it is recognised that the Parliament possesses such power, the Ministers are not only restrained from evil deeds, but are constantly striving to do their best so that no calamity may fall upon themselves. But in looking over the laws of our country we can nowhere find the existence of any such privilege. Directly after the Restoration an office called the *Danjo-tai*, which had the power of censuring the conduct of officials, was established, but it was very quickly abolished. Last year a law was passed for the purpose of regulating the conduct of officials, but it only provided for the punishment of the lower by the upper, and did not in any way control the actions of the *Daijin*. It would thus seem that the Heads of State can do no wrong, and it is true, indeed, that at the present time we are governed only by wise and reliable administrators, who assume no airs of arrogance on account of their former position, and who would not on account of their former position act despotically. In the present state of affairs it may be said, therefore, that no such laws are required.

But we must not admit that because there is no present need for them, that they should not exist. We cannot tell who may come to power in future years, and if such laws were at present enacted, it would certainly not be labour in vain. Though neither Constitution nor Representative Assembly have been established, we have the *Genro-In* and the *Daishin-In*. We have also an established code of laws, and though we are not acquainted with the abilities of the members of the *Genro-In*, this institution ought to possess the power to censure the acts of the *Daijin*. The people should also be permitted to bring their complaints before the *Genro-In*, and the latter should possess the right to redress them if it see fit. By such means the Government and the people would be brought to understand each other, and peace prevail throughout the country. In granting such powers to the *Genro-In*, its members should be appointed to office for a certain number of years, so that they could not be summarily dismissed at the will of the Government, for had the *Daijin* the power to dismiss them, it would interfere with the discharge of the functions of their office.

Look for a moment at the present civil war, which, though opinions may differ on this point, arose from a wish to bring certain grievances to the notice of the *Daijin*. It is against the *Daijin* that both pen and sword are turned. This arises from the extremely responsible position of the Ministers. But were there laws which obliged the *Daijin* to answer for his actions there would be no more pretence for armed rebellion.

Saigo Takamori arose in arms against the Government alleging that he had certain complaints to bring forward. Now if there were a direct road for bringing complaints to the Throne there would no longer exist such excuse for insurrection, while the *Daijin* would be more circumspect in the performance of their duties. This would indeed be an excellent system.

We have to warn the public against receiving certain bad dollars which appear to be at present in circulation in Kobe in large numbers. They are "sun" dollars and all, so far as we yet know, dated 1873 or 1874, followed by the letters M.H. They appear new, have what has been declared to be a spurious "chop" on one side, and not only may, but have already during the past few days deceived many people. They are nine grains too light; defective in tone when rung (though not perhaps to the extent which might be expected from their real badness); in many, if not all cases, very imperfectly circular; and in most again, if not in all, the D of the "Libertad" on the cap is bad—generally either too faintly impressed or of rather smaller size and leaning over at too great an angle, as if the die cutter had hardly allowed himself room to complete the word. In our office may be seen, in four phials, the result of the reduction by similar acid of portions of a good dollar, of a Japanese 5 cent piece, of pure copper and one of these bad dollars. The solution in the first two instances is a very pale green, in the case of the copper pure blue, and in the case of the bad dollar approaching so closely the dark colour of the copper solution as to show roughly how much of that metal is present. There can also be seen half of the particular bad dollar which was operated upon. It is much to be feared that many of these dollars have been taken lately by unwary persons before the fraud was detected, for it is already tolerably clear that the swindle has been conducted upon an extensive scale. At present, however, we confine ourselves to placing the public on their guard.—*Hiogo News*.

The locusts have found their way to Wuchang. Surely the Hanyang magistrate who has sent down a thousand ducks to consume them, is worthy of a statue, or such special honours as public benefactors in Cathay have accorded to them by the powers that be. We hope our correspondent will not fail to inform us as to the success or otherwise, of this ingenious experiment.—*Shanghai Courier*.

REVIEW.*

Inishihe no kokoro kotoba wo shiran to omofu ni ha, inishihe uo uta ni narenan to su. (Mabuchi.)

The volume before us is a striking exemplification of Lord Chesterfield's dictum, that "last editions are always the best." If the first edition of Mr. Aston's "Grammar of the Japanese Written Language" introduced us to the clever scholar, the second edition shows us the mature one, who not content with producing at the first trial a work which (to say nothing of its practical utility) proved him to have penetrated at a glance into the inner mechanism of the Japanese tongue, has held it incumbent on him to spend years of labour in testing his conclusions, in studying the voluminous writings of the classic age as well as in re-reading their modern commentators and the works of the grammarians of the last hundred years, and in collecting from these various sources a host of examples and illustrations, by whose means every rule may be established and every apparent irregularity explained. The result is a work which, if not altogether perfect, may yet confidently be pronounced to be one of the best grammars that have ever been written of any language, and one which cannot, we think, but be perused with pleasure by all lovers of linguistic science,—even by such as have no intention of acquiring a practical mastery over Japanese.

While offering the learned author this tribute of admiration, we would not, however, be understood to hold that there are no points whatever on which he has erred. What we *do* mean to say is, that these points are so few and so unimportant that they do not affect the whole in any appreciable degree, and, indeed, require to be looked for very closely before they can be discovered. For example, we find (p. 81). the word ***sashi*** given as the auxiliary numeral for mackerel. Now ***sashi***, we submit, is the auxiliary numeral for such mackerel only as used to be sent as a yearly tribute to the Shôgun from the daimiate of Kaga, and which were specially termed ***sashi-saba***, while all other mackerel simply take the auxiliary numeral ***hi***, which is applied to fishes in general. This perhaps, is what the French would call "une misère." But there are two or three slightly graver points on which we cannot yield our full assent to Mr. Aston's views. They are the following; and if (as is very probable) it is we who err, and not he, we trust that he will not take our observations amiss, but be so kind as to enlighten both ourselves and other students of Japanese:

I.—(p. 47). He regards such words as ***takami***, ***hayami***, etc., as being in all cases abstract nouns and nothing more, and explains the phrases ***miyako wo tohomi***, ***yama wo ohomi***, etc., as meaning 'its distance from the capital,' 'a plenty of mountains,' etc., This is doubtless often the meaning. But to our mind, there are numerous cases in which it is impossible to render such phrases otherwise than as '*on account of* its distance from the capital,' '*on account of* the plenty of mountains,' etc. What sense, for instance, but this of "on account of" can be given to the ***mi*** or ***wo mi*** of the following verses from the Kokinshiu?

Yama takami
Tsune ni arashi no
Fuku sato ha,
Nihohi mo ahezu
Hana zo chiri keru.

And again:

Yo wo samumi
Koro mo kari-gane
Naku nabe ni,
Hagi no shita-ba mo
Utsuroki ni keri.

How the termination ***mi*** (preceded or not by the particle ***wo*** according to the necessities of metre) came to have this signification, we do not pretend to explain.

II.—Our author, in discussing (pp. 113 and 154) the adjectival forms in ***keki*** and ***keku***, tells us that "no such form exists as ***samukeki***," for that ***keki*** "simply changes "an uninflected word into an inflected word.....and never "follows the root of an adjective." Instances of ***keki***

---

* *A Grammar of the Japanese Written Language*: by W. G. Aston, M.A., Assistant Japanese Secretary, H B. M.'s Legation, Yedo, Japan, 1877. Second Edition, London: Trübner & Co., Ludgate Hill. Yokohama: Lane, Crawford & Co.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

following an adjectival root are, doubtless, rare in the extreme. 'Still, we find an example in p. 27, Vol. IX of the *Riakuge* edition of the *Manyōshiū* in a long ode on Mount Tsukuba:

atsukeki ni ase kaki-nageki, &c., &c.

And this can scarcely be a misprint, for (apart from the fact that the *Riakuge* is singularly free from such errors), the reading in the *Shiūhoshō* edition is the same. It should, however, be added that the original *mana* writing gives, in this case, no clue to the pronunciation, as we find merely the two characters 熱爾. The author of the *Chimachi no Nukiho* also quotes the forms *samukeki* and *samukeshi*, but without giving his authorities.

III.—(p. 181). The verb *kanuru*, 'to be unable,' does not belong exclusively to the later language; for, not to bring forward other instances of its use by the ancient poets, there are two in the 'Legend of Urashima,' quoted and translated in our author's second appendix.

Such are the points on which we differ from Mr. Aston, after stating which we would proceed to make a few suggestions towards the preparation of the third edition, which may, we hope, soon succeed the second. Though totally disused in the classic period, might not the archaic future ending in *na* (e. g. *sena, taworana, yukana*, for *sen, taworan, &c.*,) as also the mediœval futures in *auzuru* and *euzuru* (commonly followed by the words *nite safurafu*, and which furnish a good instance of the vocalization into *u* of the letter *n*), find a place in the grammar? Might not the occasional exceptional grafting of the particles *te* and *tsu* on to the *conclusive* form in the case of the two verbs *tamafu* and *notamafu* be noticed? Also, the archaic poetical nouns obtained by adding the syllable *sa* to the conclusive form of verbs (e. g. *kusa, yukusa*), and such poetical negative potentials as *wasuraezu* and *koraezu* (for *wasurarezu* and *korarezu*), which offer another instance of that dropping of the letter *r* to which our author so frequently refers? We should likewise be glad to see some notice of the irregular poetical form of the negative imperative, where the final particle *so* is omitted, as in the following ode from the *Manyōshiu* (*Riakuge* Edit. Vol. IX., p. 25):—

Waga yuki ha
Nanuka ha sugiji;
Tatsuta-biko,
Yune kono hana wo
Kaze ni na chirashi!

We think, too, that a paragraph might be inserted mentioning the frequent appearance in some of the more ancient prose classics,—for instance, the *Taketori Monogatari*, which Mr. Aston has evidently very carefully studied,—of the attribute form of verbs at the end of a sentence where everything would lead us to expect the conclusive; and, last of all (though any full discussion of such a matter would perhaps be out of place in a grammar), we should advocate the insertion in the chapter devoted to syntax of a paragraph drawing the attention of the student to the fact that there are in Japanese many sentences which do not hang together, and which it were therefore mere waste of time to attempt to analyze in the manner to which the rigidly logical sentences of the modern European languages will have accustomed him. Examples of this peculiarity occur at intervals in the *Taketori Monogatari*, and cannot well be referred to corruption of the text. We may instance a sentence in the letter of *Kaku-ya-hime* to her adopted father previous to her return to the moon.
